Centennial History of American Methodism. By John Atkinson, D.D. Phillips & Hunt.

Dr. Atkinson's title-page is of the old-fashioned sort. It describes his book so copiously that if we quoted it in full our occupation would be gone. But it does not describe his book so accurately that the reader will not be seriously disappointed to find that he has not written a history of a century of Methodism, but only a history of "its ecclesiastical organization in 1784, and its subsequent development under the superintendency of Francis Asbury, with sketches o the character and history of all the preachers known to have been members of the Christmas Conference" of 1784. What Dr. Atkinson, however, has given us is much more interesting than a history of Methodism from 1784 till now could possibly have been within the limits of five hundred pages. The necessary condensation would have been fatal. What we have, in reality, is a very brief introduction, which treats of the origin of Methodism in the United States, then an hiatus of some fifteen years, next quite a full account of the years from 1784 to 1790, and finally several brief chapters on the ensuing six and twenty years—*i.e.*, to Asbury's death in 1816. Dr. Atkinson makes no definitive settlement of the much-mooted question whether American Methodism originated in Maryland in 1763, or in New York in 1766. The date of the New York beginning is easily verified; that of the Maryland beginning is veiled in doubt. It is certain that the New York beginning was much more important, and soon attracted the attention of Wesley. In 1769 he sent over two missionaries, and in 1771 Francis Asbury and Richard Wright. Others followed, but it was Asbury who gave the enterprise assurance of success. If Wesley himself had come, it would not have been so well, for Wesley's sympathies were with the mother country during the Revolution, as Asbury's were not. Most of the preachers that Wesley sent over sympathized with him, generally to the ruin of their usefulness. Nevertheless, in 1784, the new sect had eighty ministers and some 15,000 members.

"The Christmas Conference," which met in Baltimore in 1784, was the means of organizing the American Methodists as an Independent

Church. Wesley had not intended this, and his chagrin at the result was unmistakable. He had appointed Asbury and Coke joint superintendents, expecting them to be subject to him and to the Church of England, from which he had never severed himself. Asbury declined the appointment from Wesley, but agreed to accept it from the American preachers. The Conference of 1784 was summoned to act upon this matter, one of the heralds riding twelve hundred miles in six weeks to summon the preachers. Dr. Atkinson's second chapter gives an excellent account of the make-up of the Conference, with brief sketches of the more prominent members. His third chapter deals with the relation of Wesley to the new church. He makes it plain enough that Wesley's intentions were frustrated by the Conference, not less effectually because unwittingly. Asbury wrote after his death: "I can truly say for one, that the greatest affliction and sorrow of my life was that our dear father from the time of the Revolution to his death grew more and more jealous of myself and the whole American Connection; and it appeared we had lost his confidence entirely." But the subjection of the American Methodists to Wesley was not denied by the Conference of 1784; only their subjection to the Church of England. In 1787 Wesley's name was dropped from the minutes as a superintendent with Asbury and Coke, and this action, Coke insisted, hastened his death.

Dr. Atkinson's fifth and sixth chapters, reciting the early conquests of the newly-organized Church, tell a story of missionary zeal and heroism and endurance to equal which we must go to Parkman's 'Jesuits in North America.' No wonder the increase of membership in six years was from 15,000 to 57,000, and of preachers from 80 to 227! All that Asbury expected from his preachers and itinerants he embodied in himself. It is impossible to overestimate the debt that American Methodism owes to him. In 1799 he wrote that his labors obliged him to ride about 6,000 miles annually, to preach from 300 to 500 sermons a year, to write 1,000 letters, to station some 300 preachers, and to spend many hours each day in reading and important conversation. Dr. Atkinson gives an entire chapter to him, but his whole book is virtually his monument.

The subjects of other chapters are: "The Old Itinerancy," "The Sunday-school in Methodism," "The New Church and Education," "Thomas Coke," who had no such aptitude as Asbury for the work in hand, "The Preachers of the Christmas Conference," "The Old Camp-Meetings," etc., etc. In 1806, when Asbury had still ten years to live, the Church had 130,000 members and 450 preachers. In speaking of this growth and of the means by which it was accomplished Dr. Atkinson's tone is warm, but not without excuse. The Methodists whose triumphs he records deserved them well. In an Appendix there are tables tending to refute the charge that Methodism has had less success in large cities than elsewhere. There are other tables giving the names of 102 educational institutions now existing under Methodist control. They have in them nearly 30,000 students, and their buildings and endowments are valued at nearly $15,000,000. But these magnificent statistics do not begin to be so elevating and inspiring as the earlier portions of the book.

BOOKS OF THE WEEK.

Addie's Husband. A Novel. D. Appleton & Co. 25 cents.
Bancroft, G. History of the United States, from the Discovery of the Continent. The Author's Last Revision. Vol. VI. and last. D. Appleton & Co.
Barr, Amelia E. The Hallam Succession. A Tale of Methodist Life in Two Countries. Phillips & Hunt. $1.
Blaisdell, Dr. A. F. Our Bodies, or How We Live. An Elementary Text-Book of Physiology and Hygiene. Boston: Lee & Shepard. 60 cents.
Brennan, M. S. A Popular Exposition of Electricity, with Sketches of Some of its Discoverers. D. Appleton & Co.
Buchanan, R. M. A Tale of the Caravan. D. Appleton & Co., 25 cents.
Chandler, Mrs. W. Anthè. Phillips & Hunt. $1.
Cherbuliez, V. Olivier Maugant. F. W. Christern.
Dickens, C. A Dictionary of the University of Oxford. Macmillan & Co. $1.
Ebers, G. Serapis. A Romance. W. S. Gottsberger.
Farjeon, B. L. Great Porter Square: A Mystery. Harper's Franklin Square Library.
Farrand, Elizabeth M. History of the University of Michigan. Ann Arbor: Register Publishing House.
Fish, D. T. Cassell's Popular Gardening. Illustrated. Vol. I. Cassell & Co. $2.
Hoffmann, E. T. W., Weird Tales. With a Biographical Memoir, by J. T. Bealby. In 2 vols. Charles Scribner's Sons.
Holland, F. M. The Rise of Intellectual Liberty, from Thales to Copernicus. Henry Holt & Co. $3.50.
Kalisch, Rev. I. Ha-Tapuach: The Apple. A Treatise on the Immortality of the Soul, by Aristotle. *American Hebrew.*

HAVE READY:

The Rise of Intellectual Liberty from Thales to Copernicus. A History. By Frederic May Holland. 8vo, $3.50.

Representative German Poems. The original texts, with close English versions by various translators. Edited by Karl Knortz. 8vo, $3.50.

Guide to the Civil Service of the United States. Edited by John M. Comstock, Chairman of the Board of Examiners of Customs, New York. 12mo, $2.

IMPRESA DI VENDITE,

IN ITALY.

MILAN, 37 Corso Victor Emmanuel;
ROME, Salles Dante;
FLORENCE, 10 Corso Victor Emman.

On the 14th April, 1885, will be sold by auction in MILAN, 37 Corso Victor Emmanuel, the splendid collection of works of art of M. le COMTE I. B. LUCINI PASSALAQUA, containing PAINTINGS of ancient masters—Luini, Moroni, Breughel, Ruthard, Bloemen, Cuyp, Bril, etc., etc.; SCULPTURES, classical and of XVth century; ANTIQUE FURNITURE; FLEMISH TAPESTRY; MAJOLICA of Gubbio, Pesaro, Urbino, Caffagiolo, etc.; BRONZES of XVth century, PORCELAIN of Saxony, Frankenthal, Capodimonte, etc., and other objects of curiosity.

Immediately after the preceding date will be sold the gallery of paintings, principally of Italian masters of XVth and XVIth centuries, painted on wood, belonging to M. le MARQUIS COSTABILI, of Ferrara.

Catalogues will be delivered *gratis* by Mr. J. H. Bates, 41 Park Row, New York, or at the Impresa di Vendite, MILAN.

An edition *de luxe* of the Passalaqua collection, with 25 phototype plates, will be sold at the price of 20 francs.

SCHOOL BOOKS IN FOREIGN LANguages. Miscellaneous Books in Foreign Languages. Catalogues on application. Foreign Periodicals.
CARL SCHOENHOF, Importer, 144 Tremont St., Boston.

One of the most Important Religious Works of the Age is

EVOLUTION
AND
CHRISTIANITY;

Or, an Answer to the Development Infidelity of Modern Times. By Benjamin F. Tefft, D.D., LL.D., formerly President of Genesee College, New York. With an Introductory Letter by Bishop Simpson. 484 pages, bound in cloth, price, $1.50.

Says Bishop Simpson: "I think such a work ought to have a very large circulation. Very many minds have been affected by the superficial statements of evolutionists, and they have had neither time nor opportunity to conduct the requisite investigations for the removal of wrong impressions. Allow me to say, then, that I wish you great success in your labor, and a very wide circulation for your book."

Sold by all booksellers; or mailed, postpaid, on receipt of price.

LEE & SHEPARD,
Boston.

The New Englander,

MARCH, 1885.

Art. I. The Lords and the People, D. B. King; II. Life of S. Wells Williams, Henry Blodget; III. Sanitary Training in the Public Schools, A. W. Leighton; IV. The Christian Consciousness, Henry M. Goodwin; V. First Common Schools of New England, G. Gary Bush; VI. Poems of Sidney Lanier, D. H. Chamberlain; VII. The Poetry of Commonplace, Marion Wilcox.

Educational Topics: I. Report of the Treasurer of Yale College, Mason Young; II. The Classics and the Yale Curriculum, Tracy Peck; III. Williston Seminary, Robert P. Keep; IV. Professionalism in College Athletics: Cause and Remedy, Walter Irving Badger; Notices of New Books.

Price, $3 a year; single number 50 cents. Address

THE HARVARD UNIVERSITY CATALOGUE FOR 1884-'85

Is for sale by CHARLES W. SEVER, Cambridge; CUPPLES, UPHAM & CO., 283 Washington Street, Boston; and F. W. CHRISTERN, 37 West 23d Street, New York.

Price, 50 cents; if sent by mail 60 cents.

A MANUAL OF HOMŒOPATHIC Veterinary Practice. Designed for all Domestic Animals. Second Enlarged Edition, Illustrated, Large 8vo, substantially bound, Price, $5.

This book is specially written for the Stock-raiser, Fancier, Livery-stable man, and Farmer. The directions for treatment are plain, concise, and reliable. Sent free by mail on receipt of price. Address, BOERICKE & TAFEL'S HOMŒOPATHIC PHARMACIES at New York, Philadelphia, Baltimore, Chicago, Pittsburgh, and Washington.

Business Established in 1835.

WRITE FOR REPORT OF EXECUtive Committee with full information regarding the movement and form of petition to Legislature for preservation of scenery of Niagara, to J. B. HARRISON, Cor. Sec. Niagara Falls Association, P. O. Box 105, New York City.

The Nation.

NEW YORK, THURSDAY, MARCH 5, 1885.

The Week.

GOVERNOR CLEVELAND'S letter to Congressman Warner on the silver question brings prominently forward a fact of the utmost gravity, known to all bankers, but not known or not appreciated by the public generally. In the event of the depreciation of silver by even a fraction of 1 per cent., "gold would be withdrawn to its hoarding places, and an unprecedented contraction of the currency would take place." This statement corresponds with facts already known to the custodians of money in Wall Street. When the business community were alarmed a few weeks ago by the premium on New York (gold) funds in Boston, many large depositors in this city took steps to draw their money in gold and lock it up in safe places. They were persuaded not to do so by assurances from leading bank officials that the crisis was not yet at hand, that they should receive ample warning of the existence of danger, and that they would then have the coöperation of the banks to protect them against loss by depreciation in the value of their deposits. Governor Cleveland "hit the nail on the head" when he drew attention to this dangerous condition of the money market. His letter to Mr. Warner is the first authoritative exposition of his views on financial affairs. It proves not merely that the new Administration is for honest money, but that it has a perfectly clear view of the reasons why honesty in finance is the best policy.

President Arthur seemed to be bent on satisfying the country in these last days that it was not a high sense of duty which made his Administration as decent as it has been, but simply a disinclination to face public indignation. Any abuses of trust which seem not likely to attract much public attention he commits with great abandon. The paymasterships in the army are well-paid life positions, to which old officers look forward as resting-places in the latter years of their service, and of which it would seem as if any one ought to be particularly hardened and unscrupulous to deprive them. President Arthur, however, had no hesitation in giving one of them to a young man from civil life, son of his old political "pal," the notorious John F. Smyth, the Albany politician. One of young Smyth's earliest official acts was to disappear with $5,000 of the Government money. He turned up, however, after a week or so, and restored the money, having gone off with it on a drunken spree. What was done with him we are not quite sure, but we believe he was, instead of being brought to justice, allowed to resign quietly. Emboldened probably by the immunity from criticism which this little effort enjoyed, the President picked out from civil life the young man Wright, a dropped West Point cadet, whose case we have already commented on, and, "to oblige a friend," disregarded the regulations, and gave him a commission which enabled him to outrank two classes of graduates. One would think these were enough for one three months, but he afterwards appointed another paymaster from civil life, one Henry J. Haynsworth, his own brother-in-law, who has been a clerk in the Insurance Department at Albany since 1874. As he is fifty years old, he will soon be placed on the retired list, so that he is really receiving a comfortable retreat for his old age. One of the most painful features about these jobs is the readiness with which the Senate connived at them.

The last sign made by Mr. Arthur's Administration was the announcement that Spain had been persuaded to extend the time for ratifying the Cuban commercial treaty until May, 1886. The next to the last was an argument from Secretary Frelinghuysen against the binding force of the Clayton-Bulwer treaty and in favor of our own special canal through Nicaragua. The next or ante-penultimate stroke was a letter from Mr. Frelinghuysen showing how erroneous was Senator Morrill's conception of the true principles of reciprocity. The Administration disappears, like the obstinate dame in the story, exclaiming "Scissors" with its latest breath. Its parting gift to Mr. Cleveland—the extension of the Cuban treaty—is probably the one thing in its power to bestow which could be most easily dispensed with, and for which the smallest modicum of thanks will be returned.

Secretary Frelinghuysen contends, in his letter in defence of his Nicaraguan treaty, that Great Britain's rights under the Clayton-Bulwer treaty "have lapsed by neglect," inasmuch as no canal has been constructed under it. This, the New York *Times* points out, does not dispose of the provision of the Clayton-Bulwer treaty which declares that the two Powers, in entering into the treaty, "not only desired . . . to accomplish a particular object, but also to establish a general principle." A "general principle" once established does not suffer from "neglect." It cannot be got rid of except by formal disestablishment. Moreover, the Secretary's plea that Great Britain had directly violated the treaty by erecting a colony in British Honduras, even if ever true, which we deny, was disposed of by President Buchanan's declaration in 1860 that all disputes over the treaty "had resulted in a final settlement entirely satisfactory to the Government." So that of anything which occurred prior to 1860 we are estopped from complaining, and since then Great Britain at worst has only been guilty of "neglect," which, as we have said, cannot damage a principle. In fact, Secretary Frelinghuysen's letter leaves the matter just where he found it. What is the object of his discussion it is difficult to see. Nobody pretends that the Clayton-Bulwer treaty is eternal in its obligation, or that it cannot be abrogated by either party. All that Mr. Frelinghuysen's opponents ask is, that if it is to be abrogated, it should be abrogated formally, after notice and discussion, according to the custom of honorable civilized Powers. Getting rid of it by secret agreement with a third party, in direct violation of it, and then offering to fight anybody who complains of the transaction, savors a little of the way in which conventions are brought to an end by rival mining adventurers in New Mexico.

The Treasury Department seemed in haste to do something to purify the Government service in this city before the fourth of March, but the task was a heavy one, and had been too long delayed to be accomplished so quickly. As a first step two of the special agents, whose sole duty it was to assist the Government in detecting and punishing frauds on the revenue, and two special examiners, were summarily dismissed on a preliminary report, presumably for conduct so grossly improper that their cases needed but little consideration. This is a bad indication of what the actual condition of the service is. Even the preliminary report shows such a disgraceful state of affairs that it is considered advisable not to make it public. The Assistant Inspector of Hulls, too, after being asked for his resignation and having requested and being allowed opportunity to answer the charges made against him, has been ordered dismissed. For a President who, having been Collector of the Port, must have been familiar with the workings of the Government service in this department, it is not a very creditable showing that his Secretary of the Treasury had to make such wholesale dismissals of officials in the last week of his term. The extreme anxiety to hasten this investigation to a conclusion before a change in the Administration, creates a suspicion that it was not as thorough as it should be, and may necessitate an investigation of an investigation at the hands of the incoming Secretary.

The testimony of the ex-Commissioner of Pensions, Colonel Dudley, affords an interesting glimpse of the attitude of a true "worker" toward his official duties. Colonel Dudley admits frankly that he was absent from his post fifty-seven days, during which he drew his salary, while attending entirely to partisan campaign work. He justified his conduct in this respect by saying that while on duty it was his custom to work twelve hours a day, though the clerks under him worked only six and a half hours a day. In his opinion the rules which regulated the leaves of absence among subordinates were not applicable to heads of bureaux; and when asked if he thought it exerted a "healthy influence on his bureau to have it known all over the country that its head had quitted his post and gone into the country and staid fifty-seven days looking after his party's political interests," he was able to reply that in his judgment "it should have no deleterious influence upon the office." One other question seems to have been too severe a tax on even Colonel Dudley's "judgment." When he was asked why, if he could take 57 days with pay, could he not take the whole 365, he was forced to reply: "Well, that is a question in ethics which I cannot answer." The Committee also gave it up, and so do we.

A majority of the members of the sub-committee of the House, which has been investigating the operations of Marshal Wright, in Cincinnati, at the election of last October, have made a report recommending his dismissal, and the institution by the Attorney-General of legal proceedings for the recovery of the money illegally paid out by him. One member of the sub-committee dissented. The majority state that Wright appointed as deputy marshals a much larger number of men than the necessities of the case warranted; that in most cases the deputies prostituted their office to partisan ends; that many of them were notorious criminals of known vicious and brutal habits; that, acting under Wright's orders, they aided, abetted, and encouraged fraudulent voting and intimidation of voters, and committed gross outrages upon the elective franchise and the rights of honest voters; that their employment and payment were without legal warrant; and that the Marshal's proceedings were in many ways an unwarranted abuse of official trust. There is no doubt about the entire truth of this indictment. The facts were notorious at the time of the election, for they were committed in the firm belief that Blaine would be elected, and that such service would be handsomely rewarded by him. The Marshal's tactics were so successful that there was talk of imitating them in all the larger Northern cities in the November election, and nothing but the outburst of popular wrath which came from every quarter prevented this from being done.

The positions taken by Senators Hoar and Sherman, in their remarks on the Swaim court-martial, could only be justified if they really believed that General Swaim was innocent of the charges of "wrong" and "deception" of which he was found guilty by the court. Whether the acts which he committed are called by these names, or by the original and more appropriate ones of fraud and falsehood, really makes no difference in the forum of morals, and ought to make none in the forum of the Senate. Yet we find these eminent Senators, who are perhaps as fairly representative of the tone of Republican politics as any two men in public life, discussing the verdict upon grounds of the mere technicality, ignoring the moral features of the case altogether, and casting their influence in a way which can have no other end than the demoralization of the army, and by example that of every other branch of the service and of society as well. How much of their zeal for the independence of courts-martial proceeds from a desire to shield the memory of the late President Garfield, who put General Swaim in his present position, and with whom he was on terms of close intimacy, we do not know, but we presume that this relationship must count for something in the case. None the less are their influence and example most deleterious to public security and unfavorable to their own standing as party leaders. Nobody in the wide world would hold President Garfield accountable for the acts committed three years after his death by an appointee. His reputation was in no way involved in the punishment visited upon Swaim. But even if it were so, the demands of public decorum would be no less imperative, and the reputation of eminent Senators, like Mr. Sherman and Mr. Hoar, would be none the less degraded by carping criticisms upon the President and the Attorney-General.

But it is chiefly as a sign of what ideas have crept into the highest public councils and found encouragement and endorsement among our foremost public teachers, that the attitude of these Senators calls for particular examination. In the recent campaign, both Senator Sherman and Senator Hoar thought that Mr. Blaine's railroad transactions while he was Speaker of the House did not disqualify him for the highest honors of the republic. The exigencies of politics were supposed to require them to go through thick and thin at the behest of their party. No such exigency confronts them now. They are under no party obligations to General Swaim. The solid South does not serve them as an excuse for saying in public what they would scorn to avow in private. Yet we find them as callous to the common principles of veracity and honesty as presented in the Swaim court-martial as they were on the hustings in the late campaign. It is true that they did not directly defend lying and cheating in the army, but by casting aspersions upon the President for his endeavors to maintain the standard of rectitude in the military department of the Government—endeavors which were strictly within the line of his duty—they have, to the extent of their influence, made "wrong" and "deception" compatible with the highest stations in the military service. It was once said that no liar could graduate at West Point. Is it possible that we have changed all this?

In a lecture delivered last Saturday in Washington on the "Diplomatic and Consular Service of the United States," Mr. Eugene Schuyler, our late Minister to Rumania, Servia, and Greece, pointed out some features of our consular service which just at this time it is important should be attentively studied. At every change of Administration there has always been a great number of changes in our diplomatic and consular corps. Already Washington is full of men anxious for a consulship or mission, who have "petitions" of formidable length to present to Mr. Cleveland. It is well for all—office-seekers and office-givers—to listen to Mr. Schuyler, who better than any other person probably in this country is qualified to speak of our peculiar consular machinery. In the first place, our consuls have, because of our tariff laws and regulations, an extraordinary amount of labor to perform. To enumerate their duties would be tedious, but it may suffice to say that duties of an unusual character, duties which consuls of other countries are not required to perform, are in themselves enough to consume all of the time of an able-bodied, conscientious officer. For this amount of labor they receive compensation which is not only ridiculously small, but which is apt to be changed or even altogether taken away in the most remarkable manner. Mr. Schuyler exposed one of the most glaring abuses of our system of committee government by declaring, in his lecture last Saturday, that a consul earnestly engaged in the business of the United States is some day quietly informed by the State or Treasury Department that his pay ceased some six months ago, owing to a failure on the part of Congress to make an appropriation for his post. No other servants of the Government have their compensation reduced or withdrawn by this practically retroactive legislation.

The International Conference has closed its sittings at Berlin, all the delegates signing the documents, fourteen in number. What the United States gets out of the affair commercially, under the free-trade régime which has been established, or under the political régime which they cannot support, will doubtless be explained some day. We are sorry Secretary Frelinghuysen will not remain long enough in office to do it. According to his political economy, the Africans, being very poor, are just the kind of people we could trade with profitably, but all the rest of the world is let into the market, so there is no chance for us. The Foreign Committee of the House has in the meantime adopted a resolution regretting the participation of the Administration in the Conference, inasmuch as it is recognized "as a departure from the policy which forbids the Government of the United States to participate in any political combination or movement outside of the American Continent." We do not think, however, any harm has really been done. Messrs. Kasson and Sanford have had a chance to make a good many speeches, but we shall probably hear no more of the American share in setting up the new State.

The latest scheme for raising money of the Irish dynamiters in this city is the enlistment of a "brigade" to join the Mahdi, and help him to destroy the British forces in the Sudan. They are to go 250 strong to Cairo or some place in that neighborhood, and one Mr. Joseph D. Clarke, a member of the Executive Council of the Irish National League, says to "lay torpedoes in the Nile and Red Sea" on their way. But he honestly confesses that "how an Irish force can get to Khartum, when the English can't get there, puzzles him." Capt. Denis Brewer, of Clinton Street, Brooklyn, is more confident, for he says twenty men of the new arrivals "will show the Mahdi how to break the British square quicker than he ever dreamed it could be done." This being so, the Mahdi will doubtless send for the contingent down to the Red Sea and take them up to his residence in four-horse omnibuses. The mode of getting to Khartum is, however, a mere question of detail. Captain Brewer very properly declines to say when the expedition will start. Were we in command of it, we would not stir out of Brooklyn as long as the subscriptions came in. There is a good deal of money in the scheme. But we ought to warn the contingent that the Mahdi is very particular about having his force composed of true believers. He allows no infidels among his followers if he can help it, and if 250 Irishmen appear in his camp, he will convert every mother's son of them to Mohammedanism, with all that the name implies. On this point he permits no trifling. We

advise them, therefore, to keep threatening to go, but not to go without information—more information than they are ever likely to get.

The first freight train that goes to the site of a new town on the line of a railroad in Dakota or any of the newer Western States, will probably carry stuff to start a lumber yard. Shelter of some kind is the first necessity, and the sod hut of the homesteader will not serve for a village. Then, after the first boom of speculative building is over, there are apt to come several years when few if any new buildings are called for. If later on there is growth, it is of a more solid kind, and the coarse lumber that met the first call will not give satisfaction. So the main demand for cheap, coarse stuff is when a new road is opening fresh territory. During the recent years of railroad expansion there was an almost unlimited demand for lumber to build temporary structures, and it is not wonderful that mills were multiplied, even though almost all the logs that came to them were of an inferior quality. Now that the business of building railroads in new territory has almost come to a standstill, there is an immense falling off in the demand for the poor stuff which constitutes the great bulk of the lumber turned out by the mills. In many of the older parts of the country there was last year a good deal of building which called for the very best material, and the result has been that, notwithstanding the almost entire collapse of the prices for the lower grades, the report from every leading market has been that the rates for the higher grades were very firm. At from $45 to $65 per thousand, all the really good white pine has found quick and easy sale, notwithstanding the hard times, while the stuff which the mills have been pouring out in an Amazon tide has gone begging at from $7 to $12. These figures are the best answer to those who deny that the exhaustion of white pine is near.

British trade returns for the year 1884 show a small loss in the *value* of exports, and a small gain in the quantity, as compared with the previous year, the loss and gain being about 1 per cent. in each case. The total exports were £232,928,000 in value. These exports, reckoned at the prices of the previous year, would have amounted to £242,531,000. The actual exports of 1883 were £239,799,000. The principal loss in exports is due to the shrinkage of trade with the United States. British imports fell off £32,633,000 in value, and £10,109,000 in quantity, nearly the whole shrinkage consisting in articles of food—the lessening of imports being accounted for by the superior harvest of 1884 in the United Kingdom. The quantities of wheat imported from the Atlantic ports of the United States during the year were a fraction greater than for the year 1883, but the values were £1,024,398 less. From the Pacific ports of the United States there was a decline of 3,600,000 quarters in quantity, and of £2,400,000 in value. Imports of flour from the United States fell off 900,000 barrels, and the value was less by £1,500,000. Imports of wheat from India fell off 3,200,000 quarters in amount and £2,100,000 in value. It appears from these returns that the Atlantic ports of the United States not only are able to compete with India in supplying grain to Great Britain, but have still a small but appreciable advantage in that market.

In spite of all the jangling and fighting in England over the Egyptian question, everybody seems delighted with the army. Lord Wolseley, in particular, receives the highest praise and utmost sympathy from all parties. Mr. Goschen, who is a somewhat severe critic of the Ministry—too severe, it is now said, to suit the Edinburgh constituency—uttered a eulogy on him, in one of his late speeches, such as few commanders have ever received. But our esteemed contemporary the *Sun* is still implacable about him, and insists on replacing him by General Roberts, and in fact announces that it will do so as soon as it has put Lord Salisbury in power. It declares that Roberts would have made a rush for Khartum with 5,000 men from Gubat after the fall of Khartum, and have promptly recaptured the place, because "Arabs have always been observed to fight badly behind walls." But our esteemed contemporary ought to have remembered that Wolseley's opportunities of "observing" how Arabs fight behind walls have been very limited, because the Arabs have not for ages had any walls worth mention to fight behind. If the *Sun* has been observing their behavior under these circumstances in any of the numerous wars it has carried on, it ought to have let Wolseley know, or have sent word to Roberts, who would have passed it on to Wolseley. It also says that "it finds it not easy to resist the suspicion that Wolseley's sudden abandonment of his aggressive programme . . . was due to panic." But why resist it? Why not give way to it, and be happy? There is no more innocent or cheaper pleasure for a newspaper strategist than suspecting a very cool old soldier three thousand miles away of having lost his head.

The latest news about the relations of England and Russia is rather startling, and shows what diplomatists call a very strained condition, but there is every reason to believe that, England having shown her teeth, the matter will not at present go farther. The cause of all the trouble can hardly be understood without a glance at the map. When the Russians occupied the oasis of Merv in the great Turkoman desert two years ago, it brought them within fifty miles of the Afghan frontier, and within about 200 of the historic city of Herat, which, though feebly fortified, has always in Anglo-Indian history been known as "the key to India." It stands in the only road by which an invader from the north can turn the great mountain chain of the Hindu-Kush and pour down into the Northwestern provinces over the great plain of Kandahar. All classes of English politicians, aggressive and non-aggressive, have always agreed that the one thing which Russia must never be allowed to do was to get possession of Herat. In fact, it has been a cardinal point in British policy that no Power but Afghanistan must even be permitted to hold it. In 1838, the Persians, then under Russian influence, attempted to seize it, but were beaten off after a memorable siege, in which the defence was conducted by a young officer of the Anglo-Indian army, Eldred Pottinger. The city, with the province of the same name, is a part of Afghanistan, ruled by a governor sent from Kabul.

When the Russians seized Merv and came into control of the great Turkoman desert, they were for the first time brought into contact with Afghan territory, the precise limits of which on the Turkoman side had never been defined. It then became necessary to define them, and on the proposal of England, accepted by Russia, a joint Boundary Commission was organized, to be composed of representatives of England, Russia, and Afghanistan. This Commission has been at work on the ground during the past year, but on one excuse or another the Russian Commissioner has not actively participated in the survey. The reason of this is now apparent, for Mr. Lessar, the expert geographer employed by the Russians, has made a demand as to the tracing of the line, which, it is said in England, would give Russia "a wedge of territory thrust in between the two principal rivers of northwestern Afghanistan, and effectually commanding the road from Herat to Meshed." These rivers are the Murghab and the Heri Rud, and they both take their rise in Afghanistan, and, flowing nearly parallel till lost in the sands of the Khivan desert, enclose a strip of territory about fifty miles wide, which contains all that is most delicate and difficult in the work of delimitation. The Russians wish naturally to push their line up in it as far as possible, and base their claim on ethnological grounds—that is, that they are entitled to all territory occupied by Turkomans. This, it is said, would give them the town of Panjdeh, about fifty miles up the Murghab from the frontier. The dispute has a serious look, as it seems as if the Russian demand were based on the theory that the engagements of England in the Sudan would paralyze her in Afghanistan.

Russia is hardly in a condition to force a quarrel with England in Afghanistan. She is, at Merv, 500 miles from her base even on the Caspian Sea, across a desert, and would be met on the frontier by the Afghans themselves, no mean antagonists, as English experience has shown. Owing to the wise policy pursued by Lord Ripon, too, the relations between the Amir and the Indian Government are of the friendliest sort, and the whole strength of the Indian Empire can now be thrown into Afghanistan by railroad which goes as far as Peshawur, to meet any force entering along the Murghab. Of the fidelity of the native Indian troops in any such contest there is no reasonable doubt. The rapidity with which the resources of the Russian Empire are drained by a distant war against a powerful antagonist is too recent an experience to make a struggle with England in Asia just now probable. But that Russia has her eye on Herat probably everybody believes and will believe. It must be admitted, too, that it would be a great thing for the people of Herat if she owned it, just as her presence at Merv is a great thing for Persia, whose border population she has delivered from the awful curse of Turkoman raids.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, February 25, to TUESDAY, March 3, 1885, inclusive.]

DOMESTIC.

PRESIDENT-ELECT CLEVELAND gave out on Friday for publication his letter to the silver advocates in Congress. Among its notable utterances are the following: "I hope that you concur with me and with the great majority of our fellow-citizens, in deeming it most desirable at the present juncture to maintain and continue in use the mass of our gold coin as well as the mass of silver already coined. This is possible by a present suspension of the purchase and coinage of silver. I am not aware that by any other method it is possible. It is of momentous importance to prevent the two metals from parting company; to prevent the increasing displacement of gold by the increasing coinage of silver; to prevent the disuse of gold in the custom-houses of the United States in the daily business of the people; to prevent the ultimate expulsion of gold by silver. Such a financial crisis as these events would certainly precipitate, were it now to follow upon so long a period of commercial depression, would involve the people of every city and every State in the Union in a prolonged and disastrous trouble. The revival of business enterprise and prosperity so ardently desired and apparently so near would be hopelessly postponed. Gold would be withdrawn to its hoarding places, and an unprecedented contraction in the actual volume of our currency would speedily take place. Saddest of all, in every workshop, mill, factory, store, and on every railroad and farm, the wages of labor, already depressed, would suffer still further depression by a scaling down of the purchasing power of every so-called dollar paid into the hand of toil. From these impending calamities it is surely a most patriotic and grateful duty of the representatives of the people to deliver them."

President-elect Cleveland left Albany for Washington on Monday evening at 6:40 o'clock, arriving at his destination at 7:20 A. M. on Tuesday. He was accompanied by a number of his relatives, Daniel Manning, and Daniel S. Lamont. He spent the day in quiet at his hotel. A strong protest was presented to Mr. Cleveland from Connecticut, New Jersey, and Indiana against the appointment of Judge Endicott or any Massachusetts man to the Cabinet. The protest urges that Connecticut, New Jersey, and Indiana ought not to be neglected, and Massachusetts given such an honor. The capital was crowded with visitors on Tuesday and the prospects for a very brilliant inauguration were promising.

President Cleveland's Cabinet will probably be as follows: Secretary of State, Thomas F. Bayard, of Delaware; Secretary of the Treasury, Daniel Manning, of New York; Secretary of War, Judge W. C. Endicott, of Massachusetts; Secretary of the Navy, W. C. Whitney, of New York; Secretary of the Interior, L. Q. C. Lamar, of Mississippi; Attorney-General, A. H. Garland, of Arkansas; Postmaster-General, W. F. Vilas, of Wisconsin.

The public debt was reduced $3,204,975 during February.

The Senate on Thursday passed the Legislative Appropriation Bill. Mr. Sherman, in a speech on the Anti-Silver Bill, said he preferred boldly to proclaim the purpose of the United States to maintain bi-metallic money, even if we stood alone among the nations.

On Friday the Senate passed the Naval Appropriation Bill substantially as reported by the Senate Committee, with an amendment appropriating $112,000 for the purchase of Ericsson's *Destroyer*. It also confirmed the nomination of President Arthur's brother-in-law, Mr. Haynsworth, to be Assistant Quartermaster.

In the House on Thursday the Fortifications Bill was reported. It appropriates $955,000. Of this sum $300,000 is recommended for the expenses of a board, to be appointed by the President, which shall examine and report at what ports fortifications or other defences are most urgently required, and the kind and character of defences best adapted for each. An appropriation of $450,000 is recommended for the purchase and competitive test of specimens of the various kinds of machine guns now in use, and of any others which may be presented and deemed worthy of consideration; for the armament of sea-coast fortifications, including the manufacture of heavy guns and carriages, and for the purchase or manufacture of multicharge guns, and testing the same. The House on that day defeated a motion to suspend the rules and pass the Sundry Civil Bill, containing the provision for suspending silver coinage. The vote was: yeas 118, nays 149. Fifty-four Democrats and 64 Republicans voted yea, and 116 Democrats and 33 Republicans voted nay. Mr. Randall subsequently withdrew the silver clause.

The House on Friday passed the Sundry Civil Appropriation Bill, and, as a substitute for the River and Harbor Bill, passed a bill appropriating $5,000,000 to be expended under the direction and with the approval of the Secretary of War, for the continuation and completion of works designated in the last River and Harbor Law.

Mr. Eaton has been instructed by the House Committee on Foreign Affairs to report that, in view of the continued proscription of American pork and additional burdens on wheat and rye from this country, imported by Prussia, and the measures now threatened hostile to American petroleum, the President be instructed to take the necessary steps to secure to the United States the same benefits with other nations as to products of the United States, under the most-favored-nation clause of the treaty of 1828 with Prussia, now in force between the United States and the German Empire.

At a meeting of the House Committee on Foreign Affairs on Saturday a resolution prepared by Representative W. W. Phelps relative to the Congo Conference was adopted by a vote of 6 to 4. It asserts that "no prospect of commercial advantage warrants a departure from the traditional policy of this Government, which forbids all entangling alliance with the nations of the old world; and that the participation of the delegates of the United States in the so-called Congo Conference, while carefully guarded, as your Committee is informed, in the purpose to confine their powers to the consideration of commercial interests exclusively, is unfortunate in so far as it is a departure from the policy which forbids the Government of the United States to participate in any political combination or movement outside of the American Continent."

The majority of the House Committee that investigated United States Marshal Wright, of Cincinnati, report "that the President be respectfully requested to immediately remove Wright from office, and cause the Attorney-General to institute such proceedings in the courts as may be deemed necessary in order to recover the sums illegally paid out by him, and to institute such criminal proceedings against him as the facts in the case may require."

Statistician Sawyer, of the Pension Bureau, before the Warner Committee of the House, on Friday, submitted a report of the work done and the expenditures for three years of Commissioner Dudley's term and three years prior thereto. He showed that under Dudley the expenditures were increased 196 per cent., while the results of work accomplished showed an increase of but 8 per cent.

The Swaim court-martial verdict attracted a great deal of attention and comment in Washington. Some persons think it is likely to cause a new departure in the administration of military justice, since Congress will be called upon to modify materially the existing law. The comments are directed to Swaim, to the court-martial, and to the President. To begin with, the opponents of Swaim think he is fortunate in escaping dismissal. His friends insist that he is the victim of an outrageous persecution. The President, in his reflections upon the court, has succeeded in making every member of it very angry. The court is composed of some of the highest officers of the army. Mr. Ingalls (Rep., Kan.), in discussing in the Senate, on Wednesday afternoon, a clause of the Army Appropriation Bill as it came from the Conference Committee, took occasion to arraign severely the President, not by name, however, for his course in returning and commenting upon the findings of the Swaim court. Mr. Ingalls regarded the proceedings as a disgrace to civilization.

The report of the Treasury Commission investigating the New York special agents' office is now known to have recommended the removal of only four persons for complicity in the charges which were investigated. But it also set forth that the force of the office is extravagantly large, and that of the nine fraud-roll employees—six special customs inspectors and three detailed men—one-half can be dismissed.

The last hours of Congress were spent in a hurry to reach agreement upon the appropriation bills so that an extra session would not be necessary. The situation at midnight on Tuesday was as follows. The Legislative Bill was all agreed to except the provision for clerks to Senators; the Sundry Civil Bill was agreed to, except provisions for public buildings; the Post-office Bill was reported back to the House with non-concurrence on the Pacific Mail subsidy clause, and the House sustained the report, but afterward accepted the amendment; the Indian Bill only lacked concurrence on the Oklahoma provisions; the Naval, Fortifications, and Deficiency Bills were ready for or in conference. An extra session did not seem probable.

It became known on Saturday that General Grant was really suffering from cancer of the tongue, and that, though his life may be prolonged for several months, his ultimate recovery is hopeless. Previous reports to this effect had been denied.

The Illinois Senatorship contest was complicated on Thursday by the sudden death of Representative Robert Logan (Rep.), in the capitol at Springfield.

At a meeting of the New York Yacht Club on Thursday evening, the English challenge to a contest for the American Cup was accepted. The challenge is for a race with Sir Richard Sutton's *Genesta*, and, if that vessel is beaten, with Lieutenant Henn's *Galatea*. It is further proposed that the matches with the *Genesta* shall be sailed between August 20 and September 1, and those with the *Galatea* before September 17. It was agreed that the boat to compete with the English yachts should be built under the direction of Commodore Bennett and W. P. Douglas.

The National Theatre at Washington was burned early on Friday morning, entailing a loss of more than $150,000.

Admiral George Henry Preble, retired, nephew of the famous Commodore Preble who distinguished himself in the war with Tripoli, died suddenly on Sunday in Brookline, Mass., at the age of sixty-nine. He was appointed to the navy in 1835, distinguished himself during the Rebellion, was commissioned Rear-Admiral in 1876, and made his last cruise in 1878. He was the author of a 'History of the American Flag,' published in 1872.

FOREIGN.

Lord Salisbury, in debating the motion of censure in the House of Lords on Thursday, said that the Conservatives would insist that the influence of England should be kept prominent in Egypt. They were determined that a consistent policy was absolutely necessary. Without it there was no safety; but it could not be expected from a Ministry so hopelessly halting as the present one. If it were continued in power, Eng-

land must expect to lose her prestige in the eyes of the world, and be drawn to irreparable disaster and disgrace which could never be effaced. This declaration was practically in favor of a protectorate over Egypt, and an indefinite occupation of the Sudan. In the House of Commons the debate was continued, Sir William Vernon Harcourt defending the Government.

The debate in the House of Commons was brought to a close on Friday evening. Mr. Forster (Liberal) opposed the Government. Lord Hartington made the closing speech for the Government. The voting then began. Mr. John Morley's amendment in favor of the evacuation of the Sudan was rejected, 455 to 112. Lord George Hamilton's amendment to Mr. Morley's motion, to the effect that the Government had failed to indicate a policy justifying the confidence of Parliament or of the country, was rejected by a vote of 299 to 277. Sir Stafford Northcote's motion of censure was rejected by a vote of 302 to 288. The Conservative vote is normally estimated at 245. The increase consisted of Irish members, Mr. Goschen, and other Whigs. In the House of Lords the Marquis of Salisbury's motion of censure was adopted by a vote of 189 to 68. The Peace Radicals supported the Government in the House. The majority of 14 is the lowest which the Government has received on any important question.

On Saturday many rumors were current as to the probable course of the Ministry. The London *Times* said the Government escaped, technically, but morally it was defeated, discredited, and condemned. The Cabinet met at 2 o'clock and continued in session for more than four hours. It is believed that the Ministry decided not to resign until the Redistribution Bill had been passed. It is possible that they will appeal to the country in November.

A British Blue Book was issued on Wednesday, which contained diplomatic correspondence concerning New Guinea and Samoa. This contains a report from Sir Edward Malet, the British Minister at Berlin, which gives an account of an interview between him and Prince Bismarck. It shows how Bismarck endeavored to get England's alliance in his policy of colonial extension, and how he failed of satisfactory assurances. When England finally expressed her intention of coming to an understanding, Bismarck informed her representative that he had already come to a complete agreement with France, and thus precluded further alliance.

Another interesting document in the Blue Book is a despatch from Earl Granville to Sir Edward Malet, dated February 7, 1885. In this the British Foreign Secretary takes occasion to combat the assertions of Prince Bismarck that England was influenced by jealousy of Germany's colonizing policy. Far from this being the case, Earl Granville asserts that both his statements and those of Mr. Gladstone have always been favorable to the development of a colonial policy on the part of Germany. The last despatch in the Blue Book on the Samoan question is one from Earl Derby to the Governor of New Zealand. This is dated February 18, and directs the Governor to instruct the British Consul in Samoa not to countenance any movement looking toward the annexation of the islands by Great Britain.

Another Blue Book was issued on Thursday filled with the correspondence relating to the Cameroons country in West Africa. From this it appears that at various times during the years from 1879 to 1883 the native chiefs in that quarter petitioned for British protection. England at that time decided to grant their request, but no steps were taken to put this decision into effect. In a despatch dated August 23, 1884, Earl Granville, Secretary of State for Foreign Affairs, informs the German Government that England has given instructions to Mr. Hewett, the British Consul at Cameroons, to annex that territory to the British possessions. Six days after the date of this despatch Earl Granville received news that Dr. Nachtigal had already annexed the district in the name of the German Empire. The Cameroons chiefs informed the British agent that they had long been waiting for an answer from England to their requests for protection, but none had come. As they wanted rum and tobacco, they had, therefore, given their country to the Germans. They were very well satisfied with their bargain. Prince Bismarck in December complained of England's conduct in annexing territory in close neighborhood to the Cameroons. Earl Granville replied that England had not made such annexations, and, moreover, the policy of England was to recognize the German position at Cameroons.

In reply to further complaints by Bismarck, Earl Granville on February 21, 1885, sent a despatch justifying the British Consul (Mr. Hewett) in annexing the territory between Ambas Bay and Lagos, saying that this was done in accordance with orders sent from London long ago. Earl Granville distinctly reserves the right to claim damages from Germany for the losses incurred by British subjects through the action of the German forces.

A London despatch on Monday said: "It is not doubted in some circles that war with Russia hangs by a thread. The negotiations between Russia and England respecting the Russo-Afghan frontier are said to have reached a very delicate stage. M. Lessar, the Russian Commissioner, has urged such sweeping demands that England cannot accept anything approaching them, and a complete collapse of the delimitation project and an early advance of the Russian troops toward Herat are expected."

There was great alarm in London on Monday and Tuesday over the Afghan frontier difficulty It was rumored that Earl Granville had sent an ultimatum to Russia, but this was denied. In the House of Lords on Tuesday, Earl Granville admitted that the Russian troops had been advancing in the disputed territory of Afghanistan, and, when requested by England to withdraw from their advanced posts, they refused to retire. Sir Peter Lumsden had advised the Afghans not to retire before the Russian troops, but to dispute every inch of ground, and said that the British Government would uphold them. He also said that the Russian outposts now occupied Tulfikar Pass about twenty miles south of Pulikhatum. A post of Turkomans was also stationed a few miles distant from Panjdeh. Lord Granville said that Russia had been earnestly pressed to give stringent orders to her military commander against any forward movement which would be likely to bring about a collision between the Russian and Afghan outposts. Negotiations for a settlement of the trouble are in progress.

The *Journal de St. Pétersbourg*, in the course of an important and evidently inspired article, published on Friday, had the following concerning the Afghan difficulty: "It is to be hoped that the Earl of Dufferin, who is instructed to confer with the Ameer of Afghanistan, will give the latter wise counsel. If England and Russia are to regard Afghanistan as a buffer to prevent friction, the Ameer must not make of it a brand of discord, nor interfere with the delimitation of the frontier. The fact that the Ameer is to have an interview with the Earl of Dufferin shows that the Ameer is dependent on British policy. Therefore British policy is the more responsible for the acts of the Ameer. It is to be hoped that the moderation and prudence of the English Cabinet will prevail in the settlement of the frontier dispute, despite the clamor raised by the English politicians."

England has protested against the French action in declaring rice a contraband of war. Orders have been sent to the French Admiral Courbet not to interfere with rice cargoes bound to Hong Kong and Canton.

The latest news received from Agig and Tamai confirms the report received several weeks ago of a great victory by friendly Arabs over the Hadendowah tribe. About 3,600 of the latter were killed, among them Sheikh Moosa. The Kassala garrison is reported short of food, and must soon surrender unless relieved. The difficulty of the garrison at Kassala has been increased by the appearance of the Italians at Massowah. This interferes with the authority of Major Chermside, who was preparing an immense convoy of provisions, munitions, and money for Kassala. These measures of relief for the beleaguered city are now at a standstill. Kassala is the second city in the Sudan. It contains 20,000 inhabitants and has a garrison of 3,000 men. It is the keystone in the line of frontier strongholds.

Despatches from Assab Bay, received on Monday, stated that the garrison of Kassala, who have been defending the place for a year, recently made a sortie, but were repulsed by the rebels with a loss of 28 officers and 630 privates killed. The situation of the remnant of the Kassala garrison is very critical.

The British War Office has sanctioned a plan for conveying water along the Suakim-Berber route by means of a pipe-line, similar to those used in America for transferring oil.

The activity of the rebels on Wednesday and Thursday nights about Suakim was great and effective. They succeeded in wrecking three advance redoubts, and they managed to do this without exploding the mines which the naval brigade and engineers had prepared in each one of them. The rebels removed 3,000 sandbags, and caused much other damage.

General Brackenbury has destroyed the village of Habed. Suleiman, with 500 men, women, and children, passed through that village on February 17th, flying northward from the left bank of the Nile.

A despatch from Korti on Thursday stated that Gen. Sir Redvers Buller with his whole command had reached within a day's march of Gakdul Wells. The retreat from Abu-Klea, where he had been intrenched, was effected without the loss of a single man. The sick and wounded of his column were doing well. Gen. Buller reached Korti on Sunday. Part of his force, which remained at Gakdul, will gradually withdraw and destroy the wells.

A letter received at Korti from a nun who was captured at Khartum confirms the first accounts of the horrible massacre of 2,000 soldiers and peaceful citizens.

Zebehr Pasha has declined the request of Sir Henry Gordon to parley with El Mahdi for the return of General Gordon's papers to the General's relatives.

A terrible explosion occurred on Thursday afternoon at the Royal School of Gunnery at Shoeburyness, England, while a number of artillery officers and scientists were testing a new patent fuse. Three men were killed outright, and a number of others were fatally wounded, five of whom have since died.

The Congo Conference was brought to a close at Berlin on Thursday. Prince Bismarck paid a tribute to the conciliatory spirit which the delegates had displayed. He announced that the African International Association had signified its adherence to the decisions of the Conference. The delegates then signed the fourteen documents, and the Conference was closed.

The French Chamber of Deputies on Wednesday, by a vote of 316 to 175, agreed to fix the duty on corn at 3f. The Chamber also adopted a proposal to impose a duty of 6f. 60c. on corn not grown in Europe imported into France from European entrepots.

Victor Hugo's eighty-third birthday was celebrated with great enthusiasm in Paris, on Thursday.

The Federal Assembly has resolved to expel from Switzerland a large number of Anarchists who have taken refuge in the country for the purpose of making it a hatching-place for plots to be executed abroad. Twenty-three arrests were made on Friday, owing to the discovery of a plot to blow up the Federal Palace at Berne.

THE VOTE ON SILVER.

THE vote taken in the House on Thursday, on the silver-coinage question, although adverse to the cause of honest money, is encouraging and full of promise. Its chief significance lies in the fact that the campaign has opened, the first gun has been fired, an issue has been made, the ground has been cleared. This is what the opponents of the eighty-five-cent dollar have long desired. They have asked that a vote be taken so that the friends and enemies of the silver tax may be ranged and counted. This, thanks to Governor Cleveland, has been done. The vote shows a majority of 32 in the present House in favor of the eighty-five-cent dollar. The majority was composed of 118 Democrats and 32 Republicans, the minority of 54 Democrats and 64 Republicans. In the present House the Democrats have a majority of 75 members. In the next House they will have a majority of 38. They will be weaker by 37 members than they are now, and the Republicans will be stronger by that number. A change of 16 votes will reverse the majority, and there is very little doubt that this change has already been effected in the composition of the new House. The vote shows that of the Republican members present exactly two to one were in favor of suspending the coinage. If this proportion holds good as to the new members, there will be a net gain of twenty-four members to the anti-silver party, and a net loss of twenty-four to the other side, leaving the vote 142 to 126 in favor of honest money. The Republicans, it should be observed to their credit, remained, for the most part, true to their monetary convictions, and did not avail themselves of the opportunity to embarrass the new Administration.

We conceive it to be of the highest importance as an earnest of victory in the next Congress that Governor Cleveland has put himself on the record as the unflinching friend of an honest dollar. The Reagan-Bland faction have raised an outcry against what they call the interference of the President-elect in the affairs of legislation. Although it becomes his duty to recommend measures which he deems needful for the public welfare at any time after the 4th of March, they hold it to be presumptuous in him to express any opinion before that time, even in response to their own petition. In other words, they hold that he alone, of all private citizens, should observe a neutrality upon a question vitally affecting the administration of the public finances. It is sufficient to say upon this point that every new President exercises the right to indicate in general terms the policy he intends to pursue before his inauguration. President Lincoln did so in reference to secession, President Grant did so in regard to reconstruction, and President Hayes did so in regard to the pacification of the South.

Governor Cleveland's letter in reply to Congressman Warner's silver petition has won "golden opinions" from all sorts of people. While the argument which it offers in favor of discontinuing the coinage of silver is convincing and unanswerable, still the chief merit lies in the act of volition which led to the writing of any letter at all. The Warner petition did not call for an answer. It is not customary for Presidents to answer petitions in writing, still less is it customary for Presidents-elect to do so. It was quite optional with Governor Cleveland to reply or not to reply. The fact that he has replied is the significant thing. It shows that he is prepared to "take the bull by the horns." Regarded as a political move merely, nothing could have been more fortunate or timely. The people instinctively attach themselves to a man who has the courage of his opinions; and when the opinions themselves are right, when they bear the stamp of honesty as well as of courage, the political effect is apt to be very deep-seated and far-reaching. The respect with which the Republican press has been inspired for the author of the letter is perhaps the strongest testimony to its value. Their "cue" has been generally to represent Governor Cleveland as a small man, of feeble and muddy intellect, elevated by chance to a position in which he is sure to make himself and his supporters ridiculous. This theory, which has been honestly entertained by the great majority of Governor Cleveland's political opponents, was greatly shaken by his letter on civil-service reform, and has now been suddenly ruined by his letter on the silver question. The clear conception which the letter gives of the financial dangers involved in a change in the standard of value, and the intrepidity which prompted its publication directly in the face of an adverse vote from his party friends, have made an impression on thinking men in the Republican party which has found its unmistakable echo in the Republican press.

If the silver faction in the Democratic party think that they can afford to make trouble for the new Administration by fighting for the eighty-five-cent dollar, or for fiat money in any form, the way is undoubtedly open to them; but for every vote which they take away on this issue there will be a corresponding gain from the body of intelligent public opinion, and the change thus effected will be vastly to the advantage of the Administration, as it is always an advantage to gain an educated and well-grounded supporter in place of an ignorant and slippery one. But the danger of losing any considerable support by reason of taking a stand against the silver delusion is very trifling. The Southern people, who have constituted the major part of the silver faction, will be called upon to choose between a cordial support of the Administration and the alternative of a Republican victory in the next Congressional elections; for if the Democrats become responsible for a financial crisis, or if a crisis for any reason comes while they hold the reins of government, they will go out of power with a rush. This would be a calamity, from their point of view, far transcending any supposed advantages to be gained from an eighty-five-cent dollar. These advantages are wholly mythical and delusive, since the gain, if any, from the coinage of false dollars accrues to the Treasury and not to individuals. The Government allows nobody to take a silver dollar for less than one hundred cents. The law requires that the fifteen cents of real or supposed gain shall be deposited in the Treasury of the United States, and there is not the smallest chance that this feature of the law will ever be changed. Nobody who sells his labor or his property for silver dollars can get these dishonest tokens for less than one hundred cents each for a long time to come, if ever. When the Southern people find themselves compelled to choose between such a will-o'-the-wisp on the one hand, and a manly support of the Administration which they called into existence on the other, their better instincts will compel them to abandon the former and adhere manfully to the latter. They will never find in the seductions of bad money any compensation for the political calamities which would flow from financial disaster occurring during a period of Democratic rule. Governor Cleveland has put himself on "bed-rock" and cannot be disturbed. His position on silver is no longer open to dispute.

AN EXPENSIVE BLUNDER.

THE question of what we are to find for the convicts in our State prisons to do, now that we have decided to abolish the contract-labor system, is a very perplexing one. Several solutions of it are proposed at Albany, but the legislative mind is evidently in an almost hopeless muddle on the whole subject. The only point which is clear enough for everybody to see is, that the State is certain to be taxed heavily for several years to come to pay the expenses of its prisons. The Superintendent of Prisons says that the outlay necessary for this year alone will be $730,000; that next year $1,800,000 will be required; that the year after that the sum necessary will be $2,500,000—making more than $5,000,000 within three years. This will be necessary in order to establish a new system and to pay the expense of supporting the convicts while the change is being made. There is no pretence that after the new system has been agreed upon and adopted, the State will be able to pay expenses on an investment so large as that.

The various steps by which the State has been led into this unfortunate position are striking evidence of the harm which a few demagogues can accomplish. Previous to 1877 our State prisons were a heavy burden upon the taxpayers, costing nearly a million dollars a year above their earnings. In 1877 the contract-system of labor was adopted, and under that the earnings of the prisons steadily increased while the expenses diminished, so that in 1884 the prisons were more than self-supporting, earning $10,657 above expenses. In 1883, however, the professional friends of labor started the cry that this contract convict labor was injuring the honest workingmen by reducing the price of commodities, and consequently reducing wages. It was an old cry revived in a new form. For many years bills used to be introduced at Albany restricting in various ways the kinds of work which convicts were to be allowed to do. Some of these declared that a convict should be allowed to work at no mechanical trade other than the one he had worked at before sentence; others specified that no convicts should be permitted to do any work which came in conflict with free labor except stone breaking and quarrying. They all ignored the idea that the prisons were in any sense reformatory institutions, wherein a convict might learn a trade by which he could earn an honest

livelihood after his discharge. The attack upon the contract system was made in the same spirit. It was made in the Legislature of 1883, when the fear of the labor vote was especially aggravated, and the result was that a bill was passed providing for submitting to the people the question of abolishing the system. The proposition was not a constitutional amendment, as the *Tribune Almanac* erroneously calls it, but simply a ballot on the question. The total vote of the State in that election was 903,641. The total vote on the contract-labor question was only 673,254, of which 405,882 was for abolition and 266,296 against. Less than a majority of all persons voting favored the change, and it is entirely probable that many thousands of those favoring it had no intelligent idea of what they were doing. The vote was, however, taken by the Legislature as a popular instruction which was not to be disregarded, and at the session of 1884 a law was passed abolishing the system at the expiration of existing contracts.

In every way the abolition was a step backward. Not only had the contract system made the prisons self-supporting, but it had also proved of great and unmistakable advantage in reforming the lives of the convicts. All authorities upon prisons agree that the recommitment of men who have acquired trades during their sentences is very rare. In the four New York State prisons, which now have 3,334 inmates, only 13 per cent. are recommittals. Out of 1,758 convicts discharged from Auburn prison during the past five years only 47 were returned. Out of 788 discharged from Sing Sing in 1881 only 38 were returned, and out of 1,415 discharged from three prisons in 1880 only 53 were returned. The contract system, instead of confining the prisoners to work in stone quarries and at other irksome employment, has taught thousands of men who became lawbreakers simply because they had no honest means of earning a livelihood, a trade by which they could support themselves honestly and respectably after discharge. The agitators who have overthrown this system are now urging the adoption of one which will distribute the convicts throughout the counties of the State to work in gangs on the highways and in stone quarries, thus making it inevitable that at the end of their imprisonment they will be thrown upon society as incapable of earning an honest living as they were when sentenced. No surer way of keeping a man who was once a criminal always a criminal and always a burden upon the State could be devised. The excuse given for it is of course the old one that free labor is injured by the competition of unpaid convict labor.

Statistics fail to show that this excuse has any foundation in fact. There are, in the penal institutions of the whole country in which productive labor is performed, including men, women, and children, only about 53,000 persons. Of this number fully one-half are employed in work about the prisons, which in no way competes with free labor. The other half, say 26,000, do work in about thirty different varieties of trades. A very interesting table, showing the percentage of the competition between convict and free labor in each of these trades, was presented recently to the Assembly Committee on Prisons, at Albany, by Mr. John S. Perry, a stove manufacturer and prison contractor. By this it was shown that in these thirty trades there were more than 1,000,000 free laborers employed against 26,000 convicts; that the average ratio of convict to free labor was but about 2½ per cent. when account was taken only of the free labor employed in establishments which annually produce over $500 of goods; that when the thousands of citizens employed in small shops were included together with the thousands of skilled mechanics arriving yearly as immigrants, the ratio of convict to free labor was so small as to be inappreciable; that the annual output of the million or more free laborers in these trades was $1,576,526,682, against the output of 26,000 convicts producing less than 12,000 free laborers—the average output of a prisoner being only about one-half that of a free man. The idea that competition of this sort can have any influence upon the rate of wages or upon the price of commodities, taken as a whole, is absurd. It is possible that in certain localities the wages of a few workmen may be reduced by prison competition, but suppose they are? Shall the whole State be taxed to support the prisons because if convicts are made to support themselves a few laborers outside the prisons may possibly receive lower wages? Shall we tax a thousand farmers in order to keep up the wages of one mechanic? and shall we at the same time make the tax perpetual by refraining from teaching the convicts to labor intelligently and honestly? The proposition is as selfish as it is absurd. We have said that the competition of prison labor may "possibly" affect the wages of free labor, but we do not believe it does affect it otherwise than in a merely local and limited way. The amount of any article furnished by prison labor is so small when compared with the total product of the country as to be of little account.

What the Legislature will do to lighten the burden which the people have been misled into taking upon themselves is uncertain. There are several bills pending, but only two solutions of the problem are proposed which are worth consideration. One of these is called the State account system, in which the prisons become State manufactories, the prisoners working for the State and the State selling their products. In order to limit the competition with free labor, the number of convicts employed in any one trade is limited to 5 per cent. of the whole number. This plan makes it necessary for the State to lay out large sums for the purchase of machinery, which, under the old system, was furnished by the contractors. The second plan is known as the "piece price" system, by which the State would furnish the labor and machinery, or labor alone, and manufacture from materials furnished by outsiders, receiving a fixed sum per piece for the product. It is difficult to see how these two plans differ in principle from the old. They are just as likely to interfere with free labor as the old was, and the difficulty of regulating them so as to avoid such interference will be too great to be surmounted. They will cost the State thousands of dollars where the old plan was self-supporting, and that is likely to be the chief result of the change.

THE MUSSULMAN BUGBEAR.

THE straits to which some of the most conscientious and peace-loving politicians in England are reduced in order to find an excuse for approving of the prosecution of the war in the Sudan even after Gordon's death, are curiously illustrated in the case of the *Spectator*. This journal, which makes a point of applying not only morals but even religion to politics, said in its issue of February 7th that the arguments, both moral and political, were about equal in favor either of continuing the war or abandoning it. A week's reflection, however, and the subtle influence, doubtless, of the rising tide of popular wrath, made it say on the 15th of February:

> "But before it is achieved [the capture of Khartum], thousands of English homes will be desolate and every English house will be poorer; and when it is achieved, but one thing will have been gained that was worth gaining. We shall have acquired no new empire, and no prestige that is worth having—think how the world forgot the fall of Theodore—and no satisfaction to our consciences; but we shall have checked, perhaps stopped, that extraordinary revival of aggressive and martial Mohammedanism, Mohammedanism with its old offer of conversion, submission, or the sword, which once more threatens the progress of civilization, and may, if it is not stopped, throw Western Asia, India, and Northern Africa centuries back upon their path. That is the sole reason for attacking the Mahdi."

The truth is, that everybody in England who is restrained by moral or religious sentiment from declaring in favor of a war of simple vengeance—which is what most of the Jingoes demand—and yet advocates a continuance of the attempt to "smash the Mahdi," is compelled to shelter himself behind this bugbear of a Mussulman revival. There is no sign anywhere of a revival of Mohammedanism as a conquering faith. Anybody who believes in it is really the victim of a hallucination, and this, we imagine, is the case of the *Spectator*, which has long had Mahomet on the brain, if we may use the expression. After the massacre of Hicks Pasha's force it fairly revelled in terror over the prospect of a new Crescentade. "Either," it said, "we misread the Arabs altogether, or in a month the French will be fighting for their lives from Gabes to Morocco." The Mahdi was to send the news to the Tunisians and Algerian Mussulmans by "swift dromedaries," and there was to be a general rising against the infidels all through North Africa. We ridiculed this at the time, saying that "the notion that there was enough Mussulman fanaticism left anywhere in the East to produce a formidable movement is a chimera. Whenever this fanaticism during the last forty years has been tested for warlike purposes, it has been found all but dead." This view has been fully confirmed by events. There was no rising or sign of rising in any of the French possessions, or in any part of the Mussulman world, in consequence of anything which occurred in the Sudan. The Mahdi has shown no disposition to leave the region in which he has the support both of an oppressed population and of ruined slave-traders. If he were now left alone in his dominions, we should probably hear little of him during his lifetime, except from enterprising travellers.

In order to convince the British public that they have a good excuse for "smashing the Mahdi," the seat of aggressive Mussulman fanaticism has been transferred, by those who believe in it, from Africa to India. It is now

the India Mussulmans who, on hearing that the Mahdi has taken Khartum, are to rise in a terrible revolt. Nobody who knows India well, and has a cool head, has, however, come forward to sustain this idea. The Indian Mussulmans are numerous, but they are the most cowed and dejected portion of the Indian population. They not only have been deprived of their old power, but have been left behind by the other creeds in the race for distinction under British rule. The mutiny in 1857 was essentially a Hindu mutiny. The great military races who now make the bone and sinew of the British native army—the Rajputs, and Sikhs, and Ghoorkas, are not Mussulmans at all. Moreover, the Indian Mussulmans did not show the slightest disinclination to serve against their brother Mussulmans, either in Afghanistan in 1879, or in Egypt in 1883, and are now volunteering readily for service in the Sudan. The greatest living alarmist about the future of British India is Vámbéry, the Hungarian traveller and savant, but it is the Russian terror, from the North, which he preaches.

The truth is, that the only place in which Mohammedanism to-day shows signs of revival is in Central Africa, where it is making many converts among the negroes and other non-Arab races. The reason of this seems obvious enough. The Arabs are the superior and warlike race, from whose slave raids all the other tribes within their reach have suffered for ages. To become a Mussulman is to rise to something like an equality with them in the social scale, if not to secure protection against slaughter or slavery. Southward, therefore, among the savages, Mohammedanism retains something of its old impetus. Everywhere else it is, from the mundane point of view, a dying creed. All the great Mohammedan states of the world which fanaticism once built up are dead or declining. The Mogul Empire has perished within the last century. Tunis and Algiers have been wiped out of existence under the eyes of this generation. Tripoli exists till Italy likes to seize it. Egypt is held by four or five English regiments. The Ottoman Empire, the most powerful embodiment of Mussulman zeal and capacity the Western world has seen, is slowly disappearing. It is almost extinct in Europe. Any Christian Power could to-day kill it by a blow. The Grand Signor of the Venetians reigns in Constantinople by sufferance. What is more striking still is, that the far-off and mysterious land from which Tamerlane and Genghis Khan issued forth at the head of immense hosts, conquering and to conquer in the Prophet's name, and which no infidel could until our own day penetrate without danger to his life, is almost within reach of Cook's tourists. Russia owns Khiva, has Bokhara and Samarcand under her control, and will probably, in a few years, have the Mussulmans of Central Asia as mild, and peaceable, and submissive as the once terrible Tartars of the Crimea. Persia, too, barely keeps alive; whether it can survive closer contact with Russia is one of the problems to-day of Oriental politics. The Afghans are fanatical, but their fanaticism is not aggressive, and asks only to be let alone in their mountains.

In fact, the most impressive political change of the last two centuries is the deliverance of Christendom from the Mussulman terror, through the rapid decline of Mussulman energy. The true believers for nearly a thousand years excelled the Christians in the art of war. They have, since the siege of Vienna, been rapidly falling behind them, and repeated defeats and retreating frontiers have killed their old faith in the sword; so that any use of a Mohammedan revival to-day to justify a war in Central Africa is almost grotesque in its absurdity. It is somewhat like the French use of the Krumirs as an excuse for seizing Tunis, which was sadly exposed by the inability of the invading force to find a well authenticated specimen of these dreaded and fanatical marauders.

RICE AS CONTRABAND.

THE despatches with regard to the declaration of the French Government of its intention to treat rice as contraband of war have been rather confusing. It is not easy to see how a Government which has not formally proclaimed war, and will not admit that it exists, can issue a proclamation asserting rights which can only be derived from a state of war. Nor is it, on the face of the matter, any easier to perceive how even a country at war can forbid a neutral to export provisions from a belligerent country.

The law of contraband is very simple in principle. It is not right or just that a country like England, or Germany, or the United States, professing to be entirely neutral, should furnish either France or China with the means of carrying on war against the other. Such an act is clearly a violation of neutral good faith. To prevent such breaches of faith two remedies are provided by international law, one the rule (of which we availed ourselves in the *Alabama* dispute) that the neutral government must prevent any use of its territory as a basis for hostile expeditions against either belligerent, must stop the enlistment of men, arrest the departure of war vessels, and in short prohibit any direct participation by its citizens in the war; the other the rule that the citizens of the neutral must not carry into the belligerent ports articles which directly conduce to the promotion of the war—*e. g.*, cannon, guns, and arms of any kind, powder and shot, warlike instruments or materials from their own nature fit to be used in war. All such things are called contraband of war, and are liable to seizure and confiscation by the belligerent. This remedy is one which is in the hands of the belligerent. If the goods are contraband, they are liable to seizure by his war-vessels, and to condemnation in the prize-courts of the captor. The decision of such courts is a finality, and hence, in the absence of treaties governing the subject, we must generally look to the decisions of such courts to ascertain what is and what is not contraband of war.

Articles may become contraband under certain circumstances which would not be contraband under others. As Lord Granville very clearly put the matter at the commencement of our civil war, in the course of a debate in the House of Lords, "What is contraband of war must vary from time to time according to the character of the war which is carried on. There are certain articles which are clearly contraband of war, but there are certain other articles the character of which can be determined only by the circumstances of the case, as, for instance, the ports for which they are destined, and various other incidents which can be properly judged of only in a prize-court. The decision of such a court, *unless there has been a flagrant violation of international law*, all those who have recognized the rights of the belligerents must accept." In other words, the merchant of a neutral nation who undertakes to carry on trade with a belligerent does so at his peril. If he is caught by the belligerent carrying in what the latter thinks is contraband, he finds out whether the belligerent is right by the decision of the belligerent to confiscate his cargo or to let it go. As a rule, he is in exactly the position of the Irishman on trial, who said that he could not tell whether he was guilty or not until he heard the verdict. It will be noticed that Lord Granville excepts the case where there has been "a flagrant violation of international law." When there has been such a flagrant violation—as, for instance, if the belligerent were to seize and condemn all cargoes indiscriminately, or to declare contraband some article trading in which could clearly have no effect on the war—then this would be an offence against the citizens of a neutral nation, which their Government itself would take up and demand indemnity for.

All these principles are undisputed, and the case which we have just suggested actually arose between this Government and England during the troubles with France in the last century. England, then a belligerent, did not dare actually to confiscate all American cargoes of American provisions destined for France, but, by an order in council, issued in April, 1795, instructed its cruisers to stop all vessels laden with corn, flour, meal and other articles of provisions, and bound to any port in France, and to send them to such ports as might be convenient, in order that the cargoes might be purchased on behalf of the Government. At the close of the war the question of the legality of this order came before a mixed commission, and the whole subject of the right to confiscate provisions when there was a prospect of reducing the enemy to terms by famine, and when consequently provisions would conduce to the prosecution of the war, was fully considered, and the Commissioners decided that the owners of the American vessels and cargoes must be fully indemnified.

From all this it will be seen that it is a most unusual thing for a neutral government to interfere in advance to prevent a belligerent from seizing and confiscating contraband. It would only be done in a very flagrant and obvious case. The fact, therefore, that an active correspondence is going on on the subject of the proclamation against rice between the English and French Governments shows that such a case, in the opinion of the former, has arisen, and why this is so it is not very difficult to see. Not only has there been no regular declaration of war, and not only does the decree take the question out of the hands of the courts and decide in advance that a certain article is contraband, and that article a species of provisions, but the article is not

something which neutrals are generally engaged in importing into China, but is a Chinese *export*. The latest despatch on the subject gives the following explanation of the exact nature of the decree: "Lord Lyons, the British Ambassador, replying to a communication from Premier Ferry, saying that the French prohibition of the carrying of rice to or from Chinese ports applied only to ports north of Canton, refused to admit the right of France to treat rice as contraband of war on any part of the coast of China, and gave notice that France would be held responsible for indemnities claimed by English shippers."

If this gives an accurate account of the correspondence, it would seem as if the decree were in some way connected with the alleged blockade of the Island of Formosa which France insists upon. Under the declaration of Paris, made in 1856, and the universal practice of modern civilized nations, a blockade (which keeps out not only merely contraband, but all commerce), to be recognized by a neutral, must be effective—that is, if France is at war and is blockading Formosa, the blockade has nothing to do with contraband, and no decree in France about rice or any other article of commerce can make it more or less effective. A blockade is enforced not by decrees, but by ships of war. On the other hand, if the question is one simply of contraband, there are all the objections to making rice contraband that we have mentioned above, and one more, that it is made contraband in one part of China and not in another, and is applied to exports from as well as imports into China. Taking all these facts into account, it looks as if the case of a "flagrant violation of international law," suggested twenty-five years ago, had arisen, and it is most fortunate for the interests of all neutral nations that Earl Granville should have taken an early and positive stand about it. The high-handed course pursued by France in China is something in which all civilized commercial nations have a direct interest.

ENGLAND AND ITALY.

PARIS, February 12, 1885.

THE Germans, who are very scientific, have lately introduced an astronomical expression into political language: they give the name of constellation to a group of Powers united, if not by formal treaties, at least by a certain community of interests; and as these interests may be changing, or opposed by other and stronger interests, the constellations may change at times in the political sky. We have now before us in Europe a constellation which may be called of the first magnitude—it is the constellation of Germany, of Austria, and of Russia; a recent interview has again shown it to the world, "et nunc erudimini gentes." We know that in this aggregation of imperial Powers Prussia is the centre of gravity; Austria at first was somewhat reluctantly drawn into it, but since the journey of Prince Bismarck to Vienna, the alliance, founded on the sentiment, if not of German unity, at least of German solidarity, has become the most important factor in European politics. It is felt that in certain emergencies Germany would bring together such a host as has never been seen since Napoleon invaded Russia with the "grande armée"; from the Baltic to the Adriatic there would be an overwhelming obstacle opposed to all effort coming from the west or from the east. This alliance is so formidable that, by the mere force of gravity, as it were, Russia has been drawn into the German constellation. The Slavophiles have struggled in vain—in vain have appeals been made to the national sentiment by enthusiastic generals, by writers, by journalists; these spasmodic efforts have been futile. The leading minds in Russia have, so to speak, disarmed; they understand that Russia, irresistible and perhaps invincible at home, has no great offensive powers. She has an inexhaustible supply of men, but, in one sense, she is still in the inorganic state. "On the frontier of Germany," a Russian once said to me, "we can open a door and let out any number of horsemen; we can make a sort of inundation of men, but where? In enormous and thinly-inhabited provinces. It will be like a river spreading over an immense plain. We cannot get possession of any vital points, and should soon have to retire as the water recedes after an inundation and disappears by evaporation." In Russia there is a sort of electric light at St. Petersburg, a very powerful light, which throws its rays to a great distance: it is the court, the central Government, the guard, the great powers of the state; but outside of the circle of this electric light all is obscurity, silence, and death. Immense regions remain in a sort of social and political darkness. Germany is now, as it has always been, the civilizing element. The Russians like to quarrel with their civilizers, as a boy likes to quarrel with his master; but, after a while, the court influences, the ruling powers, always incline again toward Germany. The late interview of the three Emperors did not place Russia exactly on the same footing as Austria in the great Continental constellation: Russia remains a little in the background. Her hands have been tied; she has made sacrifices, and in return she has obtained distinct promises.

What the arrangements of Skierniewice may have been remains a mystery; it is, however, safe to say that they have tended toward the consolidation of peace in Europe, and toward a settlement of the Eastern question. Many rumors are abroad, but they are mere rumors. It is said that Russia has been allowed to extend herself to her heart's content in Central Asia and in Asia Minor; that Austria is free to extend her influence in the direction of Salonica, and of the Ægean Sea; that in case Salonica should fall into her hands, the character of Trieste might be changed, and this great port might become more German than Austrian, perhaps by a new boundary of Bavaria. This question of Trieste brings us naturally to consider the rôle of Italy. There was a time when Italy expected to be drawn into the German constellation. There had been approaches made by her and to her. The old feud with Austria seemed to be forgotten, guarantees had been given against "Italia irredenta," the names of Trentino and of Trieste were no longer to be pronounced. This was the time when, to the great disgust of Italy, France set foot in the province of Tunis. It seemed as if Rome had been despoiled of Carthage, as if Italy had been robbed of one of her legitimate possessions. The ill will against France took the form of friendship for the Germans. These Germanic demonstrations, however, had not much effect; Italy wasted her time, and she felt angry and disgusted on finding out that her alliance was not more valued by the great Continental Powers. She was not deemed, perhaps, a very safe friend; the Germans did not think enough of her navy or her army; it was perhaps thought necessary in Berlin to spare the feelings of Vienna, and a close alliance with Rome would certainly have offended Vienna. Whatever the reasons may have been, the German enthusiasm of the Italians was allowed to cool down. But as Italy is quite determined to have her influence felt, and as she can change her position very rapidly, she soon remembered that England could be no more satisfied than she was herself with the existence in the midst of Europe of a nucleus of political forces, almost overwhelming in their united strength. England seemed to be ignored, like herself, by the new arbiters of the Continent. It seemed as if she was put out of Europe. Italy remembered that though England had given to her neither men nor money in her great struggle for independence and unity, she had always lent her moral support. Gladstone, Lord Palmerston, Lord John Russell, had been her warmest friends. They had found fault with Napoleon III. when he made the peace of Villafranca. England had encouraged all the annexations—of Parma, of Modena, of Tuscany, of the Papal States, of the Kingdom of the Two Sicilies. Garibaldi had been received in England with enthusiasm. In short, England and Italy were natural allies. They had the same cause, they were both liberal kingdoms, they were both hostile to the preponderance in Europe of old-fashioned despotic military kingdoms and empires. The Italian newspapers are full of sympathy for the English; a specialist paper, the *Esercito Italiano*, writes, for instance:

"The battle of Abu-Klea, which resulted in such severe loss to General Stewart's column, has shown that the English soldier has in no way degenerated, and that he does not stop to count the number of the enemy when the hour for battle has struck. . . . We see that even a small army under commanders well trained in the art of war, and who are determined to conquer or to die, may, when called upon, rout an adversary much superior in numbers, as the English army has shown in all the wars fought by it during this century in Europe, in Asia, and at the two extremities of the African continent."

The question now arises, Is there a distinct understanding between England and Italy, or does Italy seize the opportunity of England's troubles in Egypt to offer her help and to take a part of the spoils? This question has been asked in the Italian Parliament and has not been distinctly answered. One thing is certain: Italy has taken possession of a point on the coast of the Red Sea, she is making great preparations at home, she is arming her heaviest ships. It seems as if she was undertaking a great task, still undefined and obscure. The tone of the English press with regard to this action on the part of Italy is not precisely amiable. The first impression was: "England *farà da se*." I met an Englishman a few days ago, and on remarking to him (it was just after the news of the fall of Khartum), "So, the Italians are going to help you." "Yes," replied he, "if we let them."

Those who know the Italians well, however, maintain that Italy has been watching her opportunity; that ever since the conquest of Tunis by France she has been looking round, "quærens quem devoret." They remark that in the long and irksome negotiations about the Egyptian finances, Italy has alone stood on the side of England. They say that she is far too prudent to enter the Red Sea without some secret, distinct, and written agreement with the English Government. Time will show if this view is correct; I confess that, for my part, I am very much inclined to share it. At any rate, if the constellation of England and Italy is still in the nebulous state, everything tends to show that it will soon take a visible form. Italy will not wound the pride of England, and she will say that England is quite competent to take care of her own affairs single-handed. This will not prevent her from making pretensions of her own and eventually the interests of the two countries will be more and more entangled.

Under ordinary circumstances it would be natural that France—a Republic, a Government apparently founded on liberal principles—should

fall into the constellation of England and of Italy. But who can say what will happen in France? The question of Tunis has made a wide breach between her and Italy. The energies of France are spent in a distant enterprise in Tonquin, which has not been looked upon with much favor by England. If we regarded only appearances, nothing would be more unlikely than a triple alliance of England, Italy, and France; at the same time, it would be clearly the advantage of France to emerge from her present isolation. The Continental alliance of the Emperors is directed especially against her, it is like a dagger perpetually aimed at her head. The frivolous encouragements of Germany, her caresses, her demonstrations on all colonial questions, cannot blind a serious mind to the brutal fact that sooner or later there must be a new trial of strength between France and Germany. It would be therefore for the interest of France, without committing herself to any important course, to draw nearer to England and to Italy, since England and Italy are allied by necessity. The difficulty for France, however, is, not to have a good policy, but any policy. Parliamentary government has become too blind, too narrow; the leaders think only of to-morrow, for "to-morrow, we die."

Correspondence.

THE TOCSIN.

To the Editor of The Nation:

Sir: Mr. Cleveland's letter upon the silver question rings like the sound of a trumpet, and justifies the hope that we have at last a President who dares to have an opinion of his own. Now we shall see whether an appeal to the nation by its chosen leader to come to the rescue of its endangered currency, has any power against a knot of silver-mine owners, who, through the intrigues of the lobby, are determined to make all the other interests of the country minister and pay tribute to theirs. But the significance of the letter is much wider than its relation to the coinage of silver, however important that may be. It declares in effect that the Executive has a right to a policy and a national policy—as opposed to that of Congress, which must always be powerfully modified, if not wholly determined, by local influences.

For the development of this position, the tariff offers a golden opportunity. We may imagine the President in his opening message to Congress saying something like the following: "The condition of the tariff imperatively demands attention, whether from the point of view of surplus revenue, involving temptation to extravagant expenditure, or from that of the commerce and manufactures of the country. A question so complex cannot be settled by a simple aye-and-no vote, and the interests which have been created or modified by the fiscal conditions of the last twenty years are too vast to be dealt with by any single comprehensive and radical measure. The proper treatment of the subject demands a course of careful, continuous, and detailed experiment. The only authority which officially represents the interest of the nation as a whole in this particular is the Secretary of the Treasury. It is respectfully submitted for the consideration of Congress, whether the public interest would not be promoted by the admission of the Secretary to a share in the public discussion of the subject on the floor, or in the House of Representatives."

Possibly it may appear to some persons an impertinence thus to put words in the mouth of the President. But since so many of his friends have kindly given their time and thoughts for the last two months to making up his Cabinet, others may regard it as a delicate attention to offer to furnish him with a policy. G. B.

Boston, February 28, 1885.

CONGRESS IN PARALYSIS.

To the Editor of The Nation:

Sir: You were once good enough to let me say a word in the *Nation* about and against letting the Cabinet have seats in Congress. I want to withdraw that word. I have been several times in Washington since I wrote, and there and everywhere one cannot fail to see that Congress is in a state of paralysis, and cannot control or discharge its function of law-making. Mr. John A. Kasson a year ago expressed to me his utter disheartenment at the utter incapacity of action Congress persisted in. He seemed to think, as I recall it, that an amendment of the rules was necessary; but surely there is little help in that. A prominent parliamentarian of the House told me lately that one of the well-known leaders of the House said to him, in talking of the rules, that it would never do to have it so the body of the members could pass any bill they chose, or words to that effect. Any one in Washington, at any part of the present session, would soon find that the great body of the members were in an angry frame of mind because four or five men were controlling, in a repressive way, the work of the House. If it had been an acknowledged dictatorship, with affirmative and directing power, it would have been better, but it was unacknowledged, indirect, negative, and merely obstructive. A Democratic friend suggests to us a constitutional amendment directing that the Cabinet shall be chosen from the Congress and continue members thereof. If that is done, or if Cabinet members are chosen outside of Congress and admitted to seats and debate by act of Congress (which is probably the better and more attainable way), Congress should concurrently with that use the power given it by Section 2 Article II of the Constitution to place the appointment of all Federal officials not therein named in the courts, or leave it to the President or the heads of departments, with such clear and specific civil-service rules as would strip these appointments of any collusive or corrupting factorship in any possible relation between Congress and the Administration. This need would also be avoided if these offices were filled by election.

I do not abate reluctance to an increase of the power of the Executive over the Legislative, but I yield to the need that Congress shall be a law-making power, and not as now a body of sheer inanity. There must be some plan invented by which it and the country will know that it is in session for some specific purpose, and will do some specific work. It is now blind-man's buff, and disheartening and discreditable to this country when compared with the clear-cut ministry-directed work of the English Parliament.

S. M. C.

Keokuk, Iowa, February 17, 1885.

ATHEIST WITNESSES IN MASSACHUSETTS.

To the Editor of The Nation:

Sir: Your editorial paragraph referring to the debate in the Massachusetts General Court upon the bill to remove the restrictions upon the testimony of atheists, shows some misapprehension of the existing law upon the subject. The present rule does not absolutely exclude the testimony of atheists, as you would seem to imply, but merely provides that their credibility may be disparaged by the introduction of evidence as to their disbelief in God. The provision of the statutes is as follows (Pub. Stats. ch. 169, section 17):

"Every person not a believer in any religion shall be required to testify truly under the pains and penalties of perjury; and the evidence of such person's disbelief in the existence of God may be received to affect his credibility as a witness."

The clause is, at the best, sufficiently shameful, though not, perhaps, of great practical hardship to litigants. A jury is hardly likely to discredit the testimony of a truthful-appearing man simply because the Legislature has placed a stigma upon him. But as a matter of principle, the enactment would seem to be a vicious one, through which, at some time or other, the Legislature will draw the pen. R.

Boston, February 28.

To the Editor of The Nation:

Sir: In your admirable comment on the refusal of the Senate of Massachusetts to repeal the law by which witnesses may be discredited for unbelief, it is said that "The principle that religious belief has nothing to do with, and ought to have nothing to do with, a man's credibility as a witness is now acknowledged in the jurisprudence of most civilized countries, including twenty-eight States of this Union." Permit me to say that the number of such States and Territories would be more correctly given as eighteen, namely: Arizona, California, Colorado, Florida, Idaho, Kansas, Michigan, Minnesota, Mississippi, Missouri, Montana, Nevada, New York, Ohio, Oregon, Wisconsin, Texas, and Vermont. In Massachusetts, as in the District of Columbia, Georgia, Indiana, Iowa, Maine, Nebraska, and Utah, atheists and agnostics can testify, but are liable to be discredited, the provision in this State being the same as against convicted criminals.

A jury at East Cambridge was recently persuaded, on account of a physician's acknowledging his atheism, to disbelieve his testimony to the incompetency of his patient, Miss Caira Robbins, to make a will. Here, as in the Swaim court-martial, where De Akers was forbidden to testify on account of agnosticism, the real wrong was to parties not known to be heterodox. All such proceedings violate the equal right of every citizen to have his life and property protected by the laws. F. M. Holland.

Concord, Mass., February 28.

DEGREES AT THE UNIVERSITY OF VIRGINIA.

To the Editor of The Nation:

Sir: Please permit me to correct the statement made in No. 1025 of the *Nation*, that "one cannot by mere length of attendance, or even by high attainments, secure a degree from the University of Virginia, but only by 'standing' all of the examinations for which a *formal application* is made," and that "comparatively few students make this formal application."

As a former student and a graduate of the University of Virginia, I can say from actual observation that very few of those whose attainments are sufficient to give them any hope of success in "standing" the examinations in their respective schools fail to make the requisite formal application. In nearly all of the schools in the University there are, during the academic year, two examinations—the intermediate, held near the middle of the session, and the final, held at or near the close. For leave to stand the intermediate examination no application has to be made; and it often happens that the failure of the student is so great in this that he does not think it worth while to stand the final examination, and conse-

quently does not "apply." Nevertheless, it is frequently the case that, even in those schools in which the examinations are most difficult, and the degree of graduate hardest to obtain, a very large proportion make formal application and stand the final examination. For example, in the school of Latin, during the session of 1878-9, certainly one-half, and perhaps more than two-thirds, of the senior class of that school "applied" and were examined for graduation, while only between twenty and twenty-five—about one-third of the whole class—were successful. The exact figures are not before me, but my statements are substantially correct.

At the University of Virginia, as at other schools, high attainments outside the course of study required for a particular degree do not count for one who is seeking to obtain that degree. But there is no school in the country which affords less ground for the complaint that high attainments do not tell. The courses of study for which degrees are conferred are numerous and entirely elective; and if the student desires a higher title than that of "graduate," which belongs to all who have been graduated in any of the schools of the University, he need have little difficulty in finding a course of study which will satisfy his desire for a degree, and, at the same time, give him full scope for his tastes and aptitudes, and an opportunity to display his "high attainments," if he has made any. The formal application to "stand" examinations is a very easy and simple matter, and, as it saves the professors the annoyance of looking over some worthless examination papers, is a very reasonable regulation. As it is merely a matter of form, and may be made at almost any time, and does not even bind the student making it to attend his examinations, it is very generally made even by many who do not fully intend to attempt their examinations when they make the application. Away from the University, "I didn't apply" is doubtless often made to cover a multitude of sins, etc. J. B. M.

Wilmington, Del., February 20, 1885.

PROHIBITION AND LICENSE.

To the Editor of The Nation:

Sir: In commenting, in your last issue, on a letter from Bangor concerning the results of the prohibition law in Maine, you say:

"The statistics show that the prohibitory law, instead of suppressing the liquor traffic, forces it to be conducted quietly. Undoubtedly it acts as a strong check upon it, but an equally strong check would be exercised by a high-license law, by which the State would gather a revenue."

In one aspect of the case this is quite true, and it is nowhere better illustrated than by the experience of the city which has for the largest periods tried both systems. The following table, founded on the reports of the Police Commissioners of the city of Boston, and on C. D. Wright's Statistics of Labor, shows the comparative proportion of the cases of intoxication coming under the notice of the police in that city under the two systems known as prohibition and high license:

Year.		Number of cases of arrest or assistance for drunkenness to each 1,000 of population.	Average weekly wage of all employees.
1869,	Prohibition	88	
1870,	"	84	
1871,	"	75	
1872,	"	64	$11 00
1873,	"	61	
1874,	"	57	10 98
1875,	License	51	10 05
1876,	"	45	
1877,	"	41	
1878,	"	39	9 51
1879,	"	43	
1880,	"	51	9 45
1881,	"	56	10 40
1882,	"	51	
1883,	"	49	

These figures are significant, not only because they prove your statement that neither law acts as more than a check on the liquor traffic, but also in showing that the abuse of liquor (and undoubtedly its use) varies much more in accordance with the rise and fall of wages than with any alteration in the law.

From 1869 to 1878 the cases of arrest or assistance for drunkenness fell off steadily under both prohibitory and license laws, as the rate of wages went down. From 1879 to 1881, as wages increased, the number of cases rose with equal steadiness under the same license law. Since 1882, again, the same law has seen the decline of wages, which then began, followed by a decrease of drunkenness. Evidently the average workman does not take to drink when he gets out of work.

So far as can be observed, the same variations seem to have taken place in Maine under a continuous prohibitory law.

But is there not one aspect of the question which you have omitted? Your statement that no law can stop drinking is true, not because of any peculiar fallacy in the prohibitory law, but simply from the nature of men in general. Whatever a man intensely wants and craves, that he will in some way contrive to get, in spite of any prohibitory laws, whether it be liquor or dynamite, a Bible or a church. The drunkard will get his liquor under either prohibitory or license laws.

But is it not equally true that, while a license law may check unlawful selling, it must, in the long run, inevitably increase the general consumption of liquor at public bars, simply because it increases for the general public and the young men yearly coming to the front the ease of obtaining liquor and the attractions with which it may be presented? And this, not because of any inherent defect in any license system in particular, but because of the general law, that not only does a demand create a supply, but a supply of anything in itself agreeable creates a demand—a law which has been so amply illustrated in our day by the increased demand which has followed the supplying of cheap fruits, the extension of railways, the building of tramways, the cheapening of books, and the multiplying of newspapers. Is there anything to show that the drink problem presents any exception to this otherwise universal law? Have you considered this side of the question? An Observer.

Boston, February 21, 1885.

COPIES FROM THE OLD MASTERS.

To the Editor of The Nation:

Sir: What is said about copies of paintings in the communication of Mr. Salomon Reinach, published in your issue No. 1026, indicates some important misconceptions which, as you did not refer to them in your editorial comments, I beg to submit a few remarks upon.

It is by no means so easy to obtain good copies as your correspondent supposes. The production of a copy which shall faithfully render the copyable qualities of a masterpiece requires a preliminary training—in addition to natural gifts—such as young painters do not generally receive at this day anywhere in Europe. The aims and methods of the present European schools (whatever be their merits) are totally different from those of the great schools of the past. There is little in the instruction now given at Paris or Munich which tends to quicken a student's understanding of the excellences of Italian painting. As a consequence, the students of these schools do not usually appreciate what is best when they go to Italy. I have had abundant confirmation of this in observing what things the majority of them give their attention to there. The inadequacy of present Continental training in this respect is sufficiently shown by those same copies, sent to Paris by the *Prix de Rome* men, which Mr. Reinach characterizes as "excellent." They are very far from excellent. They are entirely wanting in expression of those refined qualities which are peculiarly Italian—as any discerning person may see who will visit the Gallery of Copies at the École des Beaux Arts, and will then pass over to the Louvre and compare the original work. The copies made by the majority of copyists who crowd the galleries of Europe have no educational value whatever, and the production of them is a sad waste of labor and material.

But very serviceable and even precious copies can be made; and galleries might be formed of them which would be of great value. They would be worth a great deal more than galleries of inferior originals, such as are now too rapidly forming in America. The qualifications requisite to enable a person to copy usefully must be acquired by a training in the principles and methods which prevailed in the schools whose works are to be copied. Such training can be obtained only by courses of study pursued chiefly in the galleries and churches of Italy. Courses of this kind, faithfully, intelligently, and sympathetically followed, are a means of real culture to those who engage in them, and copies produced by such persons may be a means of the best instruction to others.

But a trained and competent copyist cannot work for such low prices as Mr. Reinach names. The labor and mental strain (it is a profound mistake to suppose it a purely manual process) are much greater in copying than in original work. And for a good copy of Raphael's "Holy Family" on the scale mentioned by Mr. Reinach, an artist ought to receive at least five times as much as the 1,500 francs which he names as the price for which it may be procured.

Yours truly, Charles H. Moore.

Harvard University, March 2, 1885.

[What Mr. Moore says of the difference between the aims and methods of the present European schools as contrasted with those of the great schools of the past is perfectly true, as is what he says of the educational value of the "copyists who crowd the galleries of Europe," as a general thing; but from some others of his conclusions we are disposed to differ. The copyist requires not so much a preliminary training as a peculiar constitution. The training which will fit him for copying the old masters is in the practice of copying, and is not to be got in any other way; and the man (or woman) who makes the best copyist is generally devoid of any striking ability for original work. A painter of great individuality and original power will never be a good copyist, for even if he had the ability, he would not sacrifice the time and labor necessary to make himself an adept in a kind of work which would be slavery to him. He may now and then, for the sake of the training, make a thorough copy of a favorite master, but he will carry it no further. As a rule, the best copyists have little or no original powers, and for painters of this kind, who devote their lives to copying, the estimates of Mr. Reinach are not, in our opinion, too low. Of course, an American student going out to Europe would measure the value of his copy by the price he got for his original work at home, which is much in excess of that paid for better results to an experienced copyist by profession, to whom the "labor and mental strain" supposed by Mr. Moore are slight compared to those exacted from a painter whose

habitual work goes in another groove. As we know nothing of "the principles and methods which prevailed in the schools whose works are to be copied," except as we find them in the works themselves, it is only by copying them that they can be learned; and as modern work has nothing in common, as to purpose or ideal, with these works, it is only from the *professed* copyist that we can expect this devotion or the success we demand for an educational copy. It is useless, therefore, to expect our copies from the young artists sent out to study in Europe; and here Mr. Reinach, not knowing them, was mistaken.—Ed. Nation.]

PRODIGALITY AS A CURE FOR HARD TIMES.

To the Editor of The Nation:

Sir: I wish to suggest that "U. H. C.'s" plan of consuming large quantities of ice cream and champagne in times of undue prosperity was really tried on a great scale in the bubbling times of 1880 1. There were doubtless hasty and too large expenditures in increase of railroad and furnace and factory—though not very excessive after all; but the unproductive expenditure was immense. There can be no doubt that a large part of the inability of very many persons to spend freely now comes from their over-expenditure in those times on the very things that "U. H. C." would have had them spend on—on fine clothes, fine furniture, fine houses; on beautiful pictures and flowers and gardens and parks; on interior decorators and plumbers, and on extravagant living in general. This applied not merely to very rich people, but to the whole community.

Did the man who spent his income in building a railroad rather too far, for the moment, into the prairie, or who employed people to build a new mill and to carry it on, do more harm than the man who spent his income for needless luxuries? And, after all, what expenditure was more strictly unproductive than the building of certain superfluous factories and railroads?

Middlesex.

February 28, 1885.

THE SILVERITES OF THE CALIFORNIA PRESS.

To the Editor of The Nation:

Sir: A comparison of the past history of finance in California with the present attitude of the California newspapers toward the silver question is sufficient to make one doubt the sanity of their editors. But as an alternative view I offer the following possible explanation of the phenomenon.

During the whole seventeen years of greenback depreciation, the gold standard was maintained in California by the sheer moral force of the business community. Any man who paid his debts in the depreciated, albeit legal-tender, currency of the nation underwent a species of boycotting; he lost all business standing, he could henceforward obtain no credit; if he was a merchant, he was at once branded as the man who paid his obligations in greenbacks, and the community with rare unanimity let him alone—a record, by the way, which any State or nation should be proud of.

Now can it be that the newspaper clamor for the enforced coinage of the silver dollar is made with malice aforethought, for the mere purpose of securing a good market for California and Nevada silver, and with a deliberate confidence in the ability and purpose of Californians to repeat their former financial record, and still maintain the gold standard when silver shall have driven gold out of circulation in the Eastern States? Or is this crediting the California editor with an improbable sagacity?

Very respectfully, I. S.

Berkeley, Cal., February 23, 1885.

THE METRIC SYSTEM.

To the Editor of The Nation:

Sir: Apropos of some recent opposition to the introduction of the metric system into the United States, I should like to say a few words which would perhaps better find a place in a technical journal, were it not that the subject is one which is now before the tribunal of the lay public; the technical bodies of the United States being so overwhelmingly in favor of the system that the distinguished opponents of it (and there are a few such left) write rather bitterly, and with an evident sense of working for a lost cause, when they appear against it.

A recent article from one of them says: "One of the objections to attempts to introduce it here is that improvements that can be made in our present system (so called) [I say heartily Amen to the "so called"] are thereby delayed, such as the use of the ton of 2,000 pounds and the cental of 100 pounds." I hope the objections will continue until the ton of 2,250 pounds (1,000 kilograms) takes the place of that of 2,240 and the centner of 225 pounds (100 kilograms) supplants the hundredweight (!) of 112 pounds. The same writer calls us to reflect upon its "whimsical, unspeakable, polysyllabic Græco-Roman nomenclature." Something over ten years between my two visits to this country have sufficed to carry over what he would find a rather dull peasantry to the polysyllables referred to; which consist, in lineal measures, of the millimetre, centimetre, metre, and kilometre, in place of sixteenths, thirty-seconds, and sixty-fourths of an inch, inches, feet, yards, and miles. In weights, grammes, kilogrammes (generally called kilos), and tonnes, are used instead of grains, ounces, pounds, and tons, and in liquid measure the litre has practically supplanted gills, pints, quarts, and gallons. It is divided for ordinary purposes (*e. g.*, beer drinking!) binarily, into halves and quarters.

The same article says: "What the iron heel of a military despotism may have accomplished with the pauper laborers of an effete European monarchy is not worth a tinker's dam . . . as a precedent for a free people." I am inclined to think the said iron heel did not have to grind very hard on the railroad men of Germany in this instance, in spite of Mr. Coleman Sellers's statement that they told him they were forced into the system; since it substituted a single decimal system for some 12 or 14 duodecimal ones formerly used, with all of which they had to be familiar on account of car interchange.

The same opponent of the metric system exhibits the tonnage of the world as given at the Meridian Conference—

	Tons.
Tonnage controlled by Greenwich Standard	14,000,000
" " " Paris "	1,735,000

—as a proof of the greater extent of the English system of measurement. He does not compare the relative disturbance to this branch of trade to be produced by changing the 2,240 and 2,250 pounds tons in the table to his 2,000 pounds tons, with that produced by changing the English and American tonnage from the 2,240 lb. English to the 2,250 lb. French ton, with the advantage, in the latter case, of having the collective tonnage on a decimal system.

There are some points in the metric system which have been suggested to me by the ladies of my family—who after a short experience with it are its enthusiastic advocates—which I do not remember to have seen mentioned before. These are, the facts that our dry-goods houses are put to a good deal of extra trouble and expense in changing the metre folds of imported goods into yards, and that in selling very expensive goods by the inch with prices by the yard the figuring is rendered very complicated; whereas in selling by the centimetre nothing can be simpler than the calculation based on the metre price.

The old objections to the introduction of the metric system on the score of its throwing out of use great numbers of tools has always seemed to me unfounded; and I am confirmed in this view by finding that German shops use quantities of English tools, which they call 1 *zoll*, 2 *zoll*, etc., as being convenient names. So we can continue to use tools of the present sizes, continuing to call them 1 inch, 2 inch, etc.; it being understood that the dimensions of such tools are a given number of millimetres, whenever it is necessary to state them exactly.

A curious instance of the inconvenience of our subdivision into sixteenths and thirty-seconds is the general practice of mechanics of calling 25 thirty-seconds, for example, three-quarters and a thirty-second, as giving a better idea to the mind of what proportion of an inch it is. It would never occur to a mechanic under the other system to say 2 centimetres and a millimetre instead of 21 millimetres, since the very form of the figure shows him that the dimension is one millimetre over 2 centimetres.

The battle of English and French wire gauges has nothing to do with the metric system, since the English dimensions are very complicated when expressed in inches, and no more so in millimetres.

To our friends who are in the habit of calling their Government lands eighties or forties the same remark applies as to tools: they can go on doing so—only, when they want to express the area exactly, they would do so in *ares* instead of acres. The name of eighty or forty for a Government subdivision refers to the nature of the division of the section, and rarely expresses the exact area contained in the piece in question.

We who believe in the metric system do not wish to have it imposed upon those of contrary belief, further than to have Government officers transact their business with metric measures; in hoping for which, however, we do not disguise the hope that the country will go over to that system en masse within ten years after its adoption by Government offices.

Yours respectfully,

W. Howard White.

Frankfort, February 6, 1885.

Notes.

Joseph Thomson's account of his last remarkable excursion in Africa, 'Through Masai Land,' will be reprinted in this country by Houghton, Mifflin & Co. They also announce 'Pilot Fortune,' a story of Nova Scotian life, by Miss M. C. L. Reeves and Emily Read; and 'A Carpet Knight,' by the author of 'Cupid and the Sphinx.' A "Riverside Aldine Series" of American classics has been begun—handy volumes, choicely made, and sold at a uniform low rate.

Chas. Scribner's Sons will publish this month the tenth and last volume of the series of short "Stories by American Authors"; and 'American Presbyterianism: its Origin and Growth during the Colonial Period,' by C. A. Briggs. They have also in press 'Two Years in the Jungle,' by W. T. Hornaday.

E. P. Dutton & Co. issue immediately a new volume of poems by Miss Havergal, and 'Sermons,' by the Rev. Phillips Brooks, in two volumes, paper.

'The Countess Almara's Murder,' and 'The Trial of Gideon,' two stories by Julian Hawthorne,

are in the press of Funk & Wagnalls, as well as a new edition of the 'Library of Religious Poetry.'

Mr. Augustin Daly is preparing a privately printed edition of his original plays and skilful adaptations, including among the latter his late admirable revision of Farquhar's "Recruiting Officer," as neat and as difficult a bit of modernizing as Garrick's transformation of Wycherley's foul "Country Wife" into the lively and inocuous "Country Girl." For the despair of collectors we may record that there are twelve large-paper copies of each play.

Mr. W. M. Griswold adds a sixteenth to his series of "Q. P. Indexes," namely, 'An Index to the Leading British Reviews and Magazines for 1882, 1883, and 1884' (Bangor, Me.). He modestly offers it as a substitute for something better, such as the proposed Supplement to 'Poole's Index.' Some new devices for reference to author and magazine are here introduced. Of these, as of those which characterize the entire series, it may be said that they are defensible chiefly on the ground of necessary economy, and it is much to be wished that a better typographical taste entered into the production of these indexes.

White, Stokes & Allen have just reprinted the poems of Winthrop Mackworth Praed, with the memoir of the late Rev. Derwent Coleridge—two volumes in one. Gilt edges, an etching on the title-page, and some decorative endeavors on the covers make a presentable book.

As a new demonstration that a thing of beauty is a joy forever, we have the luxurious Christmas card now transformed into a birthday card, so that the pleasure-giving missive may be in season at all times. White, Stokes & Allen have issued a silk-fringed booklet, counterpart of the Christmas and Easter missives, as "Birthday Flowers"—six chromolithographic flower groups, with appropriate poetical quotations, the whole arranged by Miss Susie B. Skelding.

Beside a dictionary of familiar poetical quotations, there is always a place for one that gathers together extracts which chance has not made familiar, but which, on that very account, it is more desirable to cite. Such a dictionary may also, of course, be of great assistance in tracking an unassigned quotation. This rôle is tolerably filled by Bohn's topical 'Dictionary of Poetical Quotations,' of which his successors have just published a fourth edition (London: George Bell & Sons). The late Mr. Bohn's qualifications for such a task, measured by his own original verse sifted in amid the work of recognized poets, would not be thought great, and it should be pointed out that in this Dictionary the Victorian poets are hardly represented at all, and those of the Lake school and their contemporaries only sparingly.

From the same publishers come to us a new edition (still in the Bohn series) of Buchanan's 'Dictionary of Science and Technical Terms used in Philosophy, etc.,' with a supplement queerly edited by James A. Smith (*vide* the article on War); and an excellent brand-new edition of Coleridge's stimulating 'Table-Talk,' including the 'Omniana' and a few waifs and strays. Here one can enjoy both what is antiquated and what is still vital. For example (A. D. 1833): "Look at that head of Cline, by Chantrey! Is that forehead, that nose, those temples, and that chin akin to the monkey tribe? No, no. To a man of sensibility no argument could disprove the bestial theory so convincingly as a quiet contemplation of that fine bust." And again (same year): "Colonization is not only a manifest expedient for, but an imperative duty on, Great Britain. . . . But it must be . . . a colonization of hope, and not . . . a colonization of despair."

Roraima, the famous mountain in British Guiana, hitherto pronounced inaccessible by the few travellers who have ever seen it, has at last been ascended. An expedition was sent out last fall by the Royal Society and the Royal Geographical Society, under the lead of Mr. E. F. im Thurn, who has just telegraphed to Kew that he has succeeded in reaching the top. The mountain rises some 6,000 feet above the plain, the last third of the ascent being a perpendicular wall of rock. The top is a flat table-land about twelve miles long, covered with vegetation, from which flow streams of considerable size. From its isolated position, it is hoped that some primitive forms of animal and plant life still survive upon the summit. Mr. im Thurn's last despatches from the foot of the wall speak of the place as "a very garden of orchids and most beautiful and strange plants."

The Indian Government is about to publish an account of the remarkable journey through Tibet recently made by one of the native explorers of the Indian Survey. This man, known only as Pandit A——k, travelled as a merchant, his instruments consisting of a sextant, compass, barometer, thermometers, a Tibetan tea-bowl for a mercury trough a Buddhist prayer-barrel in which he concealed his field books, and a Buddhist rosary for counting his paces, a bead being dropped at every 100 paces. Though robbed and imprisoned again and again, and subjected to the greatest hardships, he managed to cross Tibet from south to north, and returned to India along the Chinese and Indian frontier after an absence of four and a half years. His field books, which, with his instruments, he had succeeded in preserving, contain a "continuous and unbroken route survey, with magnetic bearings and paced distances," of 2,800 miles, more than half of which, 1,700, were of entirely new country. His accounts of Lhása, where he was detained a year waiting for a caravan, and of the great central plain of Tibet, 15,000 feet above the sea level, and yet covered in summer with herbage and countless herds of wild animals, and of the various mountain ranges which he crossed, sometimes by passes 18,000 feet high, promise to be of great interest. It should be remembered that the ordinary stimulus for explorers, public recognition of their services and fame, is absolutely wanting to these men who for the past twenty years have been sent out by the Indian Government, since their names, even, are concealed so long as they are capable of active service.

We note the appearance of No. 2 of the 'U. S. Publications—Monthly Catalogue' (Washington: J. H. Hickcox), and shall be glad to learn of the assured permanence of this useful and conscientious undertaking. A full index at the end of the volume will contain in one alphabet the title of every U.S. Document, Report, and Law, thus avoiding the necessity of consulting the nine separate indexes of the series of Congressional Documents and Statutes. Moreover, a large proportion of the titles are those of important Government publications on scientific, historical, and mechanical subjects, never included in the series of Congressional documents.

Part 11 of the English-Spanish Technological Dictionary issuing by N. Ponce de Leon (42 Broadway) carries this comprehensive work along to the word *ply*. Some of the curiosities of international nomenclature are seen in these examples from under *pendulum*: "*grate pendulum:* péndulo compensador de Graham"; "*gridiron pendulum:* péndulo de Harrison." Here the non-inventive nation takes over the discoverer's name, which at home (or perhaps in the United States?) is displaced by the poetic designation, so to speak.

With the April number, *Outing* is to be enlarged by the addition of fifty pages a month, and the price will be raised to correspond with that of the other American monthlies. Mr. Sylvester Baxter is now its editor. In the same number will begin two new serial stories, one by Julian Hawthorne, under the alluring title of "Love—or a Name," and the other a translated novel.

Quite the most noticeable paper in the March *Magazine of American History* is Dr. Hammond's "Personal Recollections of Brigadier-General Nathaniel Lyon, United States Army." It is so good in its way that it suggests a new field for this writer's strong extra-professional literary predilection.

England's never-ceasing drum-beat in the revolving year is paralleled by the interminable production of encyclopædias in Germany. In the class known as 'Konversations-Lexikon' alone, we have the larger Brockhaus not more than half completed in its thirteenth edition before a condensed edition is announced. So it is scarcely two years since the third edition of that invaluable little treasury of knowledge, 'Meyers Hand-Lexicon' was published, and now there li s before us the first number of the fourth edition of 'Meyers Konversations-Lexikon,' the well-known rival of Brockhaus (New York: B. Westermann & Co.). At this stage of the present publication ther› is little to be said except to repeat the prospectus, which holds out all the necessary inducements on the score of scholarly collaboration, and promises 3,000 illustrations in the text, and 550 inserted plates, of which a large part will be colored. The plates first put forward are excellent in all respects—a colored map of Alpine elevations, a colored group of typical African races, colored examples of ornaments (Asiatic and other), and specimens of modern art work in bronze. The orthography is the so-called "new according to Duden"—a name bearing an ominous resemblance to that bestowed on some of our own reformers. The death of Edmond About, whose name occurs in this first instalment, is recorded betimes.

La Revue Félibréenne is the title of an outgrowth of a department of the *Revue Lyonnaise*, organ hitherto of the literary cultivators of the *langue d'oc*. To the first number, published last month, the poet Frédéric Mistral, to whom this linguistic revival is so largely indebted, furnishes a long poem. The editor sets forth his intentions, after reviewing the growth of local and national interest in the slumbering Provençal dialect. He also strives to explain the meaning of the terms *félibre* and *félibrige*, but adds nothing to what the curious will find under those titles in the Supplement to Littré.

M. Klinksieck, Paris, publishes a notice of the life of the late Charles Joseph Tissot, by M. Salomon Reinach. Tissot was one of those men—savants and diplomats at once, always ready to use their position for the good of science—whom the enlightened Government of France keeps in its service, and to whom we owe so many patient investigations and admirable discoveries. Tissot's African researches make a distinct chapter in archæological investigation, and had he lived we should probably have had all the light on Carthaginian history which the remains would or will ever give. The In Memoriam of M. Reinach is the tribute of a friend and devoted aid in his studies, made legatee of his materials, in part collected by their collaboration and under M. Tissot's direction.

The *Bulletin de Correspondance Hellénique* for December, 1884, records, in its memoir of Dumont, another loss to archæology. Dumont has been to the Balkan countries what Tissot was to the Carthaginian territory. Of the school of Athens he was almost a founder, and among the admirable Hellenists whose names have been identified with that institution that of Dumont will always be preëminent. Like Tissot, he paid

by the abbreviation of his years for his devotion to Science—one of her silent martyrs. Of especial interest among the other papers in the *Bulletin* is an account of the excavations in Delos of some houses of the second century, with plans, by Pierre Paris, and a study of a new description of vase from a specimen found at Myrina, by Rayet, *facile princeps* among those who have made Greek ceramics a specialty.

In the number of the *Revue des Deux Mondes* for February 1, Madame Th. Bentzon, continuing her studies of American literature, considers 'Le Roman de la Femme-Médecin,' and devotes herself chiefly to Miss Sarah Orne Jewett's 'A Country Doctor.'

Another long translation, or adaptation, from the English, reviewing the century of the London *Times*, marks *Le Livre* for February. The leading article discusses the original editions of Molière with sole reference to the illustrations, which are minutely analyzed and compared as to costume, scenic accessories, action and position of the characters, and even their possible portraiture of the dramatist. Several facsimiles of the designs accompanying the editions of 1710 and 1713 relieve the tedium of a necessarily dry inventory. In the miscellany we find mention of a new fortnightly *Revue Rétrospective*, sold only by subscription, which offers its readers "une anecdote inconnue, une erreur à rectifier," or some other "révélation instructive." We remark also the correspondence between François Coppée and M. Coquelin, upon the former's resigning his post of librarian of the Théâtre-Français. M. Coppée had recently been elected a member of the Academy, and, strange to say, some of the members of the administrative committee of the Theatre grudged him the added honor. In withdrawing from his post M. Coppée takes with him his new play, "The Jacobites," which he will bring out at the Odéon.

The University of Michigan is rejoicing over a very handsome addition to its Law Library, the gift of Mr. C. H. Buhl, of Detroit. The collection embraces some five thousand volumes, many of which, of course, are duplicates of works already in the Library; but a policy of exchange will readily dispose of superfluities and supply deficiencies, and the Law Library, as a whole, may thus easily be made the most valuable in the State, and one of the most valuable in the Northwest. The Buhl collection was but recently purchased, and the books are in excellent condition.

The American Society for Psychical Research, lately organized at Boston under very respectable auspices, has established a section in New York. Its object is not, as has been supposed by some, the study of supernatural phenomena; what it attempts is, to reduce to the laws to which they belong certain unusual conditions of mental action. These are chiefly those sensitive states, within the limits of health, in which some persons seem to have the faculty of apprehending simple ideas in the minds of others, independently of muscular contact and without the aid of the special senses. Beyond and possibly cognate to this are the hypnotic state and the clairvoyant condition, if the latter really exists. There are probably many "sensitives," as above described, in every community; and those interested in the furtherance of such scientific work would greatly oblige the Society by putting its secretary, at 58 Wall Street, in communication with any such subjects as are likely to be available for study by its committees. Directions, by the way, for experiments in "thought transference," are now procurable of the Society in its Circular No. 4.

The Council of the New England Meteorological Society have recently voted to extend the area of their investigations so as to follow natural rather than strictly political boundaries, and they therefore invite assistance in their work from observers in the Hudson Valley and on Long Island, as well as from New England, as heretofore. Any persons in these districts who will coöperate with the Society, are requested to address Prof. Winslow Upton, Providence, R. I., who will send in return blank forms for recording observations; temperature and rainfall being at present the subjects especially investigated. The Society's Bulletin, of which the fourth number is about to appear, is given in exchange for records thus obtained. Applications for membership should be made to the Secretary, Cambridge, Mass.

—The sixth and concluding volume of the revised edition of Bancroft's 'History of the United States' bears some of the marks of having been originally an independent work. The fifth volume, completing the original narrative, ends with the establishment of independence in 1783. The 'History of the Constitution' is rather a history of the establishment of the Union, and necessarily overlaps the older work. It traces the idea of union, and the successive attempts made toward its realization, from the early colonial period through the Revolutionary War, and gives interesting details of the inauguration of the Confederation in 1781, and the defects that were at once observed in its articles. Even before these articles went into operation the most sagacious statesmen were convinced of their inadequacy. Nearly the whole first book, 'The Confederation,' belongs to the period of which the military and diplomatic events have been already narrated in Vol. v. Book ii., "On the Way to a Federal Convention," extends from 1783 to 1787, and contains a very interesting sketch of the events and discussions that at last brought about the assembling of the Convention. In this period Virginia, the oldest, strongest, and proudest of the States, appears as the leader in the opposition to a stronger government; although it was Virginia statesmen, Washington and Madison especially, that were most influential in calling the Convention. But the fact is not always noted, which appears very plainly in these chapters, that it was Virginia who represented the State-rights doctrine in the early years of the Republic. It was not, we think, until Calhoun placed his doctrine in alliance with the slave interest, that South Carolina, originally a Federalist State, ranged herself at the head of the party of State rights, nullification, and secession. The volume contains three other books: "The Federal Convention"; "The People of the States in Judgment on the Constitution"; and "The Federal Government." This crowning work of an eminent historian is fitly illustrated with an excellent portrait of the author.

—Mr. John Bigelow's article in the March *Harper's*, on "Jefferson's Financial Diary," contains a good deal of curious and entertaining information. Those who think that there is always a close connection between a man's character and his politics, and to whom, at the same time, Jefferson's memory is not dear, will find confirmation of their view in the extracts here given. A passion for general principles without regard to the facts in which political principles find their root, is the reproach cast in the teeth of Jefferson by those of the opposite school; and in his private financial system we see perhaps an analogous peculiarity. Jefferson took the interest of a philosopher in arithmetic applied to household affairs; but his interest in the relation of fact between income and expenditure, for the ascertainment of which, in most people's minds, accounts are kept, was evidently very slight. He liked to have his accounts balance, though, as Mr. Bigelow says, he generally had to force his balances, and in one case we find an entry of the considerable sum of $766 51, which he explains as "probably" proceeding "from having set down the same article of expense twice in some cases"; adding, "Yet it is exact enough to give general ideas." In the same year he was obliged to borrow $4,361 to make the balance exact; but as this was a necessary means to an important end, he evidently did not regret it. Debt he seems to have regarded, as so many gentlemen of his day and generation did, with entire cheerfulness, as a necessary condition of existence; just as slavery was a necessary condition of life on his estates. It is a great mistake to infer, however, as in a commercial society we are so apt to do, that Jefferson's Micawberish turn of mind made him unscrupulous in his dealings with the public, or in his office. On the contrary, there is proof in this diary (never intended to be made public, and therefore all the better evidence) of great delicacy of feeling in these matters. For instance, we find Jefferson insisting on paying the duty on two hundred bottles of champagne, part of a quantity imported by the Spanish Minister, and consequently exempt, but afterwards presented to him. He appears also to have forced upon the Rev. Mr. Leland, who came to him bearing a gift in the shape of a monster cheese of 1,235 pounds, payment in full at the rate of 16 cents a pound, though Mr. Bigelow shrewdly suspects that the cheese was brought by the reverend gentleman in the hope that the acceptance of it as a gift would establish for him a "claim" of corresponding magnitude upon the Administration. This is a way of getting out of such a difficulty that cannot in our time be safely recommended to Presidents. If it were once understood that a gift not accepted would be bought at the market value by the Executive, the practice of present-giving would, in the present depressed condition of industry, be rather stimulated than repressed. The only safe method nowadays seems to be that established by Mr. Cleveland, of setting up a kind of returned-gift bureau as soon after election as possible, thus giving public notice that presents will not be received as such, still less bought in the Jeffersonian manner.

—In spite of railroads and telegraphs and the shifting character of the population in this country, the word Western, as an epithet of more than topographical signification, has not yet lost its meaning. The Correspondence University made a moderately modest beginning last year with its headquarters at Ithaca. This year it has been transferred to Chicago, and the following extract from its circular will show with what result:

"No one can fail to admire the magnificence of its aim and the grandeur of its purpose. But whatever of value it has lies chiefly in its faculty —and here its character is supreme and unapproachable. It was conceived in a spirit of philanthropy, and a high moral purpose and noble ambition to benefit others have united together seventy distinguished scholars in the most remarkable association of the age."

The danger of this is, that the low-toned Englishmen who help to make up the seventy distinguished scholars may not give sufficient emphasis to the distinction between Eastern and Western American arts of advertising. It is difficult to make due allowance for the smallness of the visual angle subtended by a distant object; and a distinction vital to us the Englishman, with his cloudy ideas of American geography, may easily overlook. So the quiet Americans pass through Europe unobserved, and the noisy ones, not bearing plain geographical labels upon their backs, give their character to the name; and so to the true Bostonian everything beyond Salem seems to be Down East, and only the traveller knows that however far he proceeds along the coast of Maine, there is a still remoter region for which that name and quality must be reserved.

—Late last year two reports were published giving valuable information on popular libraries in France, one by the Prefecture of the Seine, the other by the Mayoralty of Besançon. The substance of them was that in Paris there are 26 libraries supported by the city, containing 100,247 volumes, lending out, in 1883, 440,670 volumes, and, for use in the building, 109,670 more. Out of Paris the libraries are as yet very small; in this country we should hardly say more of them than that they were better than nothing. Amiens, for instance, has 18 libraries with an average of less than 1,000 volumes apiece; Lyons has 6, with 12,000 volumes in all; Bordeaux 2, with 7,770 volumes; Toulouse 6,000 volumes, Nancy 3,500 volumes. The great city of Marseilles has 6,120 volumes. To be sure, that is more than the great city of New York has. The oldest library is at Havre, founded in 1847; most of the others are of later birth than 1864. *Polybiblion*, commenting on these reports, compared the neighbors of France, and found them much better off. Fribourg has a library dating from 1813, with 25,000 volumes. Geneva has 11,000 volumes, Antwerp 12,000, Liverpool 118,000, Manchester 155,000, and Leeds, Birmingham, Bradford, Newcastle, Bolton, each five times as many as any provincial French library. But it is the American libraries that excite the chief admiration of the writer, not always justly. The New Yorker will smile on reading that in his city two *free popular* libraries have an endowment of $2,347,000; for he knows that "free" in this case does not mean ease of access and convenience of use, but absence of payment, and "popular" does not indicate any correspondence with the needs and wishes of the "people."

—It has been known for some time that a commission of Mexican archæologists and historians was engaged on a comprehensive history of Mexico, from the earliest times to our own day. The first instalments of the work are now issuing from the Spanish press, and Messrs. Requesens & Co., of this city, are bringing out an English translation of it, in their "Illustrated Universal Library," under the title, 'Mexico Viewed through the Course of the Ages.' They propose to publish the history in five volumes of fourteen parts each. We have received the first part of the first volume. Some idea of the great scope of the undertaking may be gained from the fact that the fifty-six folio pages of this first part are but one-seventieth of the whole history. The commission of editors has at its head General Riva Palacio, soldier, politician, novelist, and archæologist in one. With him are associated Señores Arias, Chavero, Vigil, and Zarate. It is probable, so we are informed, that their labors will yet extend through a period of three years. Certainly the history opens in a careful and deliberate manner, which gives promise of thoroughness and solidity in the work that is to follow. The first part under consideration is entirely taken up with an enumeration of sources: hieroglyphics, monuments, native interpreters, chroniclers, historians. In fact, the enumeration is not completed in these fifty-six pages. The attitude of the editors toward the Aztec histories, so far as it is indicated in the discussions of authorities, seems to be one of judicious scepticism. The extraordinary fulness of the materials at their disposal, and the evident maturity of the judgments which they have formed on all disputed points, go far toward assuring a permanent and substantial value to their work. If one may judge of the superstructure by the foundations, this new history of Mexico will far surpass any now in existence. We cannot, however, give much praise either to the publishers or to the translator, General F. F. Millen. The paper covers of this first part, which present, we suppose, some of the "illustrations in rich colors" of which the prospectus speaks, are, decidedly, specimens of cheap and tawdry magnificence. One is tempted to pardon this, however, on seeing the excellent paper and good type of the body of the work; but inspection discloses such a number of misprints—there are over sixty, most of them gross, in the fifty-six pages—that there seems to be no escape for the publisher from the charges of bad taste and great carelessness. Of the merit of the translation we are reluctant to speak, as we have not yet been able to secure a copy of the original. But there need be no hesitation in saying of the English which lies before us in the translation, that it is execrable. The very first sentence is ungrammatical, and thus fittingly introduces a book which swarms with impossible constructions, inelegant expressions, and wrongly-used words. A few specimens of the latter are the following: "likenesses," in the sense of signs; "nominations," in the sense of titles; "diverse," for divers; "foundation," for founding; "denouncement," for denunciation; "composed from," for of. One encounters, besides, such words as "progresses," "interpretated," "indigenes," "matricular"; and such phrases as "he slides into the fault," "luck has decreed," "the steely sword," etc. We sincerely hope that the remaining parts of this important work will be given an English dress corresponding to its deserts. The excellence of the history, great as it is, will not be able to carry the weight of such a translation.

— We find in the *Bulletin Critique* a notice of the fourth *livraison* published by the Société Historique de Gascogne. This is a collection of unpublished documents about the Huguenots in Bigorre. It shows in detail, what was well known in general, the fierce nature of the wars of religion. Some of the *obiter dicta* are quite as interesting as the documents that are confined to the subject indicated in the title. One, for instance, shows the existence of a sort of militia for mutual defence against marauding bands, that was called in Bearnese *Orde*, in Latin *Ordea*, from the Gothic word *wordea*, no doubt our *ward* and *guard*. Another document recounts the subscription of the inhabitants of a small town to replace the bell which had been ruined when the Huguenots burned the church, which bell was to be used by the monks for all their services and by the city authorities (consuls) to call together the city council and the town meetings, and to alarm this *Orde* in case of incursion of enemies, robbers, or other evil-doers, or in case of fire in the houses of the said city. The town meetings which they were to call (*vésiaux*, meetings of neighbors) were very curious. The inhabitants of each locality met in a public place to arrange such affairs as they had in common. Sometimes they dissolved the general meeting to deliberate by quarters or even by streets. Each quarter or street named a delegate and gave him imperative instructions. These delegates, with the city consuls, formed a council to decide the matter in question. This coexistence of a government resembling the town meeting with a government resembling that by a mayor and board of aldermen, we do not remember to have met with elsewhere.

—Students of historical geography and lovers of good maps will alike take delight in M. Longnon's 'Atlas historique de la France,' the first *livraison* of which has just been published (Hachette). The Atlas is to consist of thirty-five *planches*, and is published in seven *livraisons*, each at ten francs. The cost, therefore, is about half a dollar for a *planche*, or full-page map. Only one of the five sheets in the present number is, however, devoted to a single map, viz., No. 5, which contains the Empire of Charlemagne in the year 806, "which marks the apogee of the dominion of the new Cæsar." This map, embracing the entire empire at this date, contains all Germany and nearly the whole of Italy as well as France. The whole number of maps, large and small, in these five sheets, is twenty-three. No. 1 is a map of Gaul in the time of Cæsar, and a small map in the corner gives it as in the time of Augustus; the accompanying *fascicule* discusses satisfactorily the question of the sixty *civitates* of Augustus, and the sixty-four of Tiberius. No. 2 is for the date 400, and a small map gives the territorial distribution of the Roman tribes in Gaul so far as known—a very curious piece of information; only eight of these tribes have been traced in Gaul. Nos. 3 and 4 contain each nine maps, giving the several divisions of Gaul in the Merovinginian and early Carolingian periods; one of them is an ecclesiastical map. Here we find the only serious defect in the Atlas. The earliest of these eighteen maps is for 506, just before the victory over the Visigoths; but the century between this date and the one preceding (400) is one that very much needs illustration by maps. One would have thought that 481, the accession of Clovis, would be given at any rate; but the dates of settlement of the Visigoths (419), and of the Burgundians (443), within the limits of Gaul would also be very useful. Either one of these three dates would be far more serviceable to students of history than the majority of those actually given. Not the least valuable feature of these maps is the opportunity they afford of tracing the historical continuity from the original Gallic tribe through successive changes of the Roman and Frank occupation to the *gau* of Charlemagne's time. An accompanying *fascicule* of sixty-six pages contains an exhaustive discussion of every point of historical geography that appears to need elucidation for this period.

—The Orange Judd Company print for Gen. T. L. Clingman, of North Carolina, an essay, evidently written in good faith, upon 'The Tobacco Remedy.' If a tithe of its statements can be confirmed, the vile weed is a substantial rival of the tree of life. 'Consumption,' by Dr. J. M. W. Kitchen (Putnams), is a handsome little volume for popular reading. It is always an open question how far special information can judiciously be given to those not specially trained; but, skipping about a dozen pages of treatment, the possible consumptive or his friend might read this book with interest, and probably with advantage. Dr. G. H. Rohé has prepared a brief statement of the principles of preventive medicine that will probably justify its title as a 'Text-Book of Hygiene' (Baltimore: Thomas & Evans). He thinks the dangers of burial-grounds are generally overrated, but in other respects, as far as we observe, he presents the latest opinions. It is convenient for classes who do not require too much detail. 'Women, Plumbers, and Doctors' (Appletons) is an excellent résumé of domestic sanitary science prepared by Mrs. H. M. Plunkett for women who should be housekeepers as well as householders. It includes a good essay on kerosene, is illustrated and well indexed, and its author ought to be thanked by many a sister for this common-sense exposition of daily dangers and daily duties. The constant temptation to announce "what is good for" some disease has proved irresistible here where cholera and malaria are touched upon. But it remains true that prevention and cure are different problems. The veteran Dr. Frank H. Hamilton reprints from the New York *Medical Journal* a concise essay upon our present knowledge of cholera as he understands it, which laymen may read with comprehension. He does not accept Koch's comma bacillus as a proved cholera cause; and in this he is confirmed by very recent utterances of

Klein, the London authority. "The parliament of man, the federation of the world," is in a degree foreshadowed by the triennial International Medical Congresses, the last of which was held in 1884 at Copenhagen. One of the American delegates, Dr. D. Bryan Delevan, has written its 'Social History' (Appletons) very attractively. Danish hospitality, from the King's own through every step in the social scale, but with royal open-handedness on every side, outdid itself; and this account will be a pleasant souvenir for the participating guests, and a graceful testimony to the hosts that, at least across the water, they are gratefully remembered. The next Congress meets at Washington in 1887, and our medical men will have no easy task to discharge the gracious debt. Wm. H. Hudson's 'Sea-Sickness' (Boston: S. E. Cassino & Co.), the author says, "discloses for the first time the true cause and nature of" that distressful condition, and "if universally acted upon, sea-sickness would at once cease to exist." What an opportunity is presented to the philanthropist for its extinction by the gratuitous circulation of this teaching. "Mind is chemical affinity" and "expediency is the moral law" (pp. 2, 245), are the substantial conclusions which Dr. S. V. Clevenger reaches in his 'Comparative Physiology and Psychology' (Chicago: Jansen, McClurg & Co.). He acknowledges that there is an Unknown, but will not grant an Unknowable, and professes to examine the constitution of mind by an extension of Herbert Spencer's principles. In doing so he repudiates "the baleful influence of teleology," and develops man and man's mind from the amœba, whose assimilation of food is caused by chemical affinity to which locomotion and prehension are accessory. Doctor Clevenger would replace the *Cogito ergo sum* of Descartes by *Sum et cogito*, but he does not discuss the origin of matter. The book is a radical contribution to psychological science and is worth reading, notwithstanding certain infelicities of style; but its views are not likely to obtain ready acceptance. Mrs. Mary H. Hunt's 'Temperance Physiology' (A. S. Barnes & Co.) is an elementary exposition of the influence of alcohol and tobacco upon the healthy human body, with an outline of physiology as a peg upon which to hang it, for junior scholars. It has an "endorsement of scientific accuracy" in the preface by a medical gentleman, and in the main it is correct, but the illustration (fig. 22) of oval blood discs "in the blood of an animal" is misleading without the explanation that animals with oval blood corpuscles are exceptional. A scientific man would hesitate to make a microscopic distinction between human blood and that of the commoner animals, and if he did so he would not use form as a differential factor.

—The Brooklyn Philharmonic Society never accomplished a more ambitious and more commendable task than it did on Friday and Saturday by giving the first public performances in America of Liszt's oratorio, the "Legend of St. Elizabeth." Only those who are aware of the enormous difficulties of this work can realize how much praise is due the Society for the excellence of the performance, taken as a whole, and including the work of the soloists—Miss Emma Juch, Mme. Dossert, Messrs. Heinrich, Remmertz, and Morawski. The oratorio was evidently appreciated by the audience, for all the best numbers were vigorously applauded. In the last half-hour, however, the interest seemed to flag; and this was due to the anti-climax in the music. Mr. Thomas had made extensive cuts, but if the Legend is repeated, which we trust will be the case very soon, it would be well to make still further excisions, especially in the solo parts—those lengthy recitatives which are often unsupported by a rich symphonic accompaniment. Liszt himself apparently recognized that in these recitatives lay the weakness of the Legend, for in his next choral work, "Christus," he omitted them almost entirely, leaving only choruses and instrumental parts, with an occasional solo where it is required by the structure of the text. "Christus," indeed, marks as great an advance over the old form of oratorio as Liszt's symphonic poems do over the symphonic form, or as Wagner's music dramas do over the old-fashioned opera; and the "Legend of St. Elizabeth" occupies an intermediate position, comparable to some extent to that of "Tannhäuser." If the Brooklyn Philharmonic Society wish to deserve additional laurels, they would do well to produce "Christus" next year, and thus give their patrons an opportunity to observe the evolution of a musical form.

—The "Legend of St. Elizabeth" is remarkably well suited for musical treatment. In the form in which it is used by Liszt's librettist, it was suggested by Moritz von Schwind's six frescoes at the Wartburg, in accordance with which the oratorio is divided into six scenes. In the first scene the arrival of Elizabeth at the Wartburg is celebrated in a chorus of charming simplicity and gayety. The next scene represents a meeting of Elizabeth with her husband, the Landgrave Ludwig, just returning from a campaign. He had forbidden her spending her possessions in gifts to the poor, and, seeing her with a basket of provisions, asks her what it contains. She replies that it is filled with roses. He opens it to allay his suspicions, and actually finds it filled with roses, for a miracle had been worked to save Elizabeth from the sin of falsehood. Nothing could exceed the exquisite charm of the orchestral part at the moment the roses are discovered—their fragrance is literally translated into tones. This scene may be placed on a par with the Good Friday Spell in "Parsifal." It is followed by a stirring march and chorus of crusaders, in Liszt's best vein—a march which alone would suffice to place this "Legend" in the front rank of oratorios. The scenes following depict Elizabeth's leave-taking from Ludwig prior to his departure to the Holy Land; her expulsion from the castle by the Dowager Landgravine Sophie after the death of Ludwig; her death in a hospital, where she has sought refuge; and the celebration of her canonization by the assembled princes, ecclesiastic authorities, and the populace in the Marburg Cathedral. The expulsion of Elizabeth from the Wartburg is accompanied by a terrific storm, graphically illustrated by the orchestra. The final choruses in Latin text cannot fail to evoke in the hearer the feeling of sublimity associated with a ceremony in the interior of an imposing cathedral—that powerful æsthetic agent for quickening religious feeling. It is needless to go into further details regarding the music, which is characterized by Liszt's usual orchestral brilliancy and harmonic originality and depth, the general effect being, moreover, heightened by the use of leading motives. The text contrasts favorably in interest and structure with most oratorio libretti.

GRAY'S WORKS.

The Works of Thomas Gray, in Prose and Verse. Edited by Edmund Gosse, Clark Lecturer on English Literature at the University of Cambridge. 4 vols. A. C. Armstrong & Son. 1885.

Mr. Gosse is one of the most conspicuous of that band of students of our literature who unite what have too often been divorced, scholarship and taste. The present work will still further confirm a reputation already well established. In most respects it is a model piece of editing. The text has been printed, wherever desirable and possible, directly from Gray's own manuscript. Wherever that was lacking, or was not final, the printed edition having the best authority in its favor has been scrupulously followed. Nor has Mr. Gosse's activity been confined to doing better what has already been done before. He has collected from every quarter everything of Gray as yet unprinted on which he could lay hands. These additions, though not great in quantity nor of a character to advance the poet's fame, are necessarily of special interest to the student of English literature. Certain omissions are also to be put down to the editor's credit. He has relieved the text entirely from the alterations—some of them almost deserving the name of flagrant—made in it by Mason, Gray's first editor. He has cut out entirely from the poems the lines with which that tumid versifier botched the unfinished work left by his friend. He has also removed from the page that fungus growth of commentary which in Mitford's edition was not unfrequently the only thing conspicuous on it. In nearly everything, in fact, Mr. Gosse has performed, with unwearied industry and with thorough intelligence, the most exacting duties that fall to the lot of an editor. An elaborate index of over fifty pages is itself a signal illustration of the conscientiousness with which the task undertaken has been performed. There was little need of the modest hope expressed in the preface that the addition of matter hitherto unprinted would be deemed sufficient to justify the existence of this work, which besides would include what hitherto it has been necessary to obtain four distinct publications in order to secure. This edition will at once supersede the valuable one of Mitford as effectually as his has the dishonest one of Mason; nor does it seem likely that another one will be demanded in our time if ever.

No critic, however, could sleep the sleep of the just who failed to point out some faults in the work he was reviewing. If to these we seem to give disproportionate time and space, it is not because their existence modifies the views just expressed, but because oversights and errors in the editing of a great classic like Gray, however unimportant comparatively, can never be in themselves unimportant. The particular provocation, therefore, to undisturbed rest which we find in this work is the arrangement of the letters. As nearly everything to which we take exception occurs in the second volume, which carries the correspondence down to the year 1760, our criticism will not extend beyond that period.

The first fault to be found with the letters as they stand here is that they do not always appear in the order in which they were written. Gray's correspondence tells largely the story of his life, and the interest in it is accordingly a continuous one. It is, therefore, always annoying, and is sometimes apt to be misleading, to finish one letter and then follow it with another dated a month or so, and in one or two instances, the year, before. These misplacements are not frequent, but it is hard to see what justification can be found for their occurring at all.

More serious fault is to be found with the treatment of the undated letters, of which there are quite a number in the earlier correspondence of Gray. Mr. Gosse has not in this matter always displayed the care and intelligence which he has everywhere else brought to his task. He has in one or two instances failed to supply dates which were lacking in the letters, but which his notes presuppose the reader to know. Thus letter 44 has no year given; but a note tells us that Fielding's 'Joseph Andrews' was published "in February of that year." More than this, Mr. Gosse has in only one instance—that of letter 49—

corrected Mitford's conjectural dates when false and the conjectural dates which he adds himself are in some cases unquestionably wrong. The matter is so important that a detailed examination of the most serious errors seems desirable, for the incorrect dates that have been given to Gray's undated correspondence have proved always a sad puzzle to the students of the poet's life.

To begin with, letter 52, addressed to John Chute, is simply dated by the writer, "London, July." To this Mr. Gosse adds in brackets, "1745." The contents show that it belongs to 1742. Mention is made of the opening of Ranelagh Gardens, which took place in the spring of that year. Gray also speaks of the "Thurloe Papers" having lately been published, and these came out in May, 1742. Letter 54, to the same person, should precede letter 52 just mentioned. It is here dated 1746 with a query. There is little difficulty in settling the precise time at which it was written. It speaks of Garrick's playing at Goodman's Fields, and he never played there save between October 19, 1741, and May 24, 1742, nor was, indeed, that theatre used after the latter date. Mention is made, besides, of the intended opening of Ranelagh, and there is a reference also to the controversy which the old Duchess of Marlborough had succeeded in arousing by the pamphlet she had had published, giving an account of her conduct. This came out early in March, 1742. But, finally, a passage on current politics seems to fix the very day on which the letter was written. "Messieurs the Commons," says Gray, "are to ballot for seven persons to-morrow to state the public accounts." This is almost certainly a direct reference to the Secret Committee which on March 21 the House of Commons had voted to create for the purpose of inquiring into the expenditures of Sir Robert Walpole's administration. The balloting for the members of this committee—twenty-one in number, not seven, as stated by Gray—took place on Thursday, March 26.

The most singular misplacement, however, is that of letters 75 and 76; all the more singular because in Mitford's edition they are found in their right place. These are transferred to 1750, and that date is indeed added to the second one as if it were from the writer's own manuscript. But this does not seem possible. These two letters are addressed to Chute, and were written to him immediately after his return to England from Italy. This, we know from the Walpole correspondence, took place in September, 1746. But we should hardly need this direct evidence to make it clear that 1746 is the true date and not 1750. Gray writes in the second of these letters that he and Walpole are together again, and that it is about a year, he thinks, since Walpole wrote to him desiring to renew their friendship. If his words are to be taken literally, they seem to show that it was in November, 1745, that the reconciliation between the two took place, and not in November, 1744, as has been stated by Mr. Gosse in his 'Life of Gray.'

To go on with further details, letters 84, 85, and 86 are included among those of the year 1751. In this Mr. Gosse has followed Mitford. Letter 84, however, belongs to an early part of the year 1748. It is made up almost entirely of a criticism of Dodsley's 'Collection of Poems,' the first three volumes of which made their appearance in January of that year; and it is to these three that Gray's remarks are confined. The date is still further established by a reference to the ill-success of Lady Mary Wortley Montagu's 'Eclogues,' which Walpole had caused to be published in November, 1747; and also by the mention of Melmoth's 'Fitz-Osborne Letters,' the first part of which had appeared in December of the same year. Letter 85 should precede letter 84, for it belongs to the end of 1747. It criticises Lyttleton's elegy on his wife, which had come out early in November of that year, and also refers to the forthcoming collection of poems by Dodsley. Letter 86 is still earlier. It belongs to the close of 1746, both on account of its reference to the impeachment of Lord Lovat, which took place on December 11, and also on account of its reference to the possible mission of Sir Charles Hanbury Williams to Berlin, which was part of the political gossip of the end of that year.

An editor, of course, can say that he is not to be held responsible for the date given by the reader to letters which are left undated. But when these are put with the correspondence of a particular year, the inference will inevitably be drawn by everybody that they are placed there because they belong there. Thus, letter 132, addressed to Walpole, but undated, is included in the correspondence of 1757. It is mainly a criticism of "Rousseau's people," as Gray calls them. How many readers would be likely to know that the 'Nouvelle Héloïse,' here discussed, was not published till several years after 1757? The previous editor is the one really responsible for these mistakes. Mitford was an accurate and well-informed man, and generally to be trusted. But, like the rest of us, he was not infallible, and a too implicit reliance upon him has in these few cases led Mr. Gosse into error. One curious oversight resulting from following him without verification occurs in a note to letter 89, in which it is said that the edition of Bishop Hall's 'Satires,' criticised by Gray in the letter, was produced at Oxford in 1753. But the letter itself is endorsed December 19, 1752. The poet is therefore represented as speaking, in the text, of a work which, according to the commentary, was not in existence till the year after. As a matter of fact, the edition of Hall's 'Satires' mentioned was brought out at Oxford in November, 1752.

We are far from wishing to place too much stress upon these omissions and oversights. They are few in number, they are easily remedied when once attention has been called to them, and, compared with the positive merits of the work, they sink almost into insignificance. But Mr. Gosse is a scholar of exceptional knowledge and ability, and any errors which he chances to make or fails to correct will be accepted on his authority, unless promptly pointed out, will be widely propagated, and in all likelihood will be perpetuated. At the same time we doubt if the most malevolent criticism could detect any flaws, outside of the kind just described, in this edition, which includes everything extant that is known to have come from the pen of Gray. An unimportant exception, if indeed it can be called an exception, is described in the appendix to the fourth volume. A note on the posthumous poems at page 142 of the first volume gives also the title of several pieces once in circulation from mouth to mouth, but which have now dropped out of memory. Mr. Gosse has indeed gone forth in quest of poems reported to exist, and once perhaps existing, with the same ardor as the Knights of the Round Table set out to secure the Holy Grail; and unfortunately, as he tells us, with about the same success.

It may, therefore, be accepted that in this edition we have the whole outcome of Gray's literary life. The quantity must be conceded to be extraordinarily small for a modern author. It is inevitable, therefore, that in any consideration of his achievement the question should invariably come up why it was that he wrote so little. A favorite theory, perhaps the present favorite theory, is that this paucity of production was due to the character of the age and not to that of the man. The eighteenth century is steadily patronized by the nineteenth in a way which suggests to the doubting heart unpleasant possibilities as to the attitude which the twentieth century may take toward the nineteenth. In no one thing, however, does it hold its predecessor more responsible than for the character and extent of Gray's poetical achievement. He was, it is said, a poet in an age of prose. He was a sort of literary Robinson Crusoe, wrecked in the unimaginative, unspiritual, watery waste of the eighteenth century. This view has been lately enforced with his usual clearness and acuteness by Matthew Arnold; and to that author Mr. Gosse dedicates this edition of Gray in terms which seem to indicate that he too accepts this opinion. Still, the authority of any names, however great, can hardly convince us that this theory is true. It is by the nature of the man and not of the century that Gray's barrenness of production is to be explained. The causes that limited it do not seem hard to find. He never felt through life the pressure of necessity. He was not rich, but he had enough. He lived a life of lettered ease; and a life of lettered ease is not favorable to literary fertility, unless the love of fame acts as an unusually powerful stimulant. This in Gray's case could hardly be said to act as a stimulant at all. Moreover, while he had the genius of the poet, he had the tastes and inclinations of the scholar, or perhaps it would be truer to say, of the student. These, when strongly developed, are unfavorable in a high degree to original composition; for by those possessing them the luxury of the acquisition of knowledge will always be preferred to the toil involved in the creation of literature. Milton's case is in many respects analogous. He was everlastingly occupying his leisure with the compilation of histories, of systems of divinity, of Latin dictionaries; and had he not been prevented by blindness from indulging these tastes, it is surely among the possibilities that he would never have found the time to complete his early-planned but long-deferred great work. It is certain that, had he died at the age at which Gray died, his published poetical production would have rivalled the latter's in scantiness. In a similar way Gray was writing notes on classical authors, compiling chronological tables, and planning works never to be completed, involving study rather than genius; and no slight share of his literary labor was given up to the composition of Latin verse—an occupation which makes the pursuits of the schoolmen respectable.

In addition to all this, Gray was a consummate literary artist, and had all the fastidiousness and the self-dissatisfaction which go with the artistic nature. The same sort of feeling that led him to throw out one beautiful stanza which was included in the "Elegy" when first printed, acted, we may be sure, in a thousand cases of which we have no knowledge. Each of these reasons is sufficient to explain his silence without seeking for its cause in something outside of himself. The eighteenth century has sins enough of literary commission to answer for without making it responsible for sins of literary omission on the part of its individual members.

The further question arises here, if this paucity of production has not been on the whole a benefit to Gray's fame—at any rate to the universality of it. The bulk exhibited by his poetry may not seem imposing to the critic, but it does not frighten the reader. It is natural for us to wish that a writer of Gray's order of genius should have produced some one large work; not because size is essential to greatness, but because it is necessary to the display of invention on a grand scale, and to the development of passions and activities working through mighty agencies. Yet it is extremely doubtful if his fame would have been enhanced in the slightest measure if he had accomplished what it is so natural for us to desire. He probably knew the limits of his own powers better than his friends or critics. The

unpublished fragments which he left do not, on the whole, make us regret very deeply that he never completed long and ambitious works. They would certainly have contained many fine lines, and might have contained many fine passages; but the spread of his reputation would most probably have been hindered rather than helped by the weight it had to carry. In nothing was the wisdom of the ancients more clearly expressed than in the story of the Sibylline books. The value remained the same after two-thirds of them had been destroyed; and the surviving three would doubtless have been more frequently consulted than the original nine had they possessed the same existence in fact as in fable. Of the majority of even writers of genius, it can truly be said that they would be read a great deal more had they written a great deal less. Gray is one of the very few poets whose productions are mastered in their entirety; and the actual familiarity with them, so general among educated men, is due in no slight degree to their fewness. His fame might possibly have been more imposing, but it certainly would not have been broader than it is now, if he had been selected as the official mouthpiece of the muse of long-windedness.

TAINE'S 'GOUVERNEMENT RÉVOLUTIONNAIRE.'—II.

Les Origines de la France Contemporaine. Par H. Taine de l'Académie Française. La Révolution. Tome III.: Le Gouvernement Révolutionnaire. Paris: Hachette. New York: F. W. Christern. 1885.

The judgment which sound criticism ought to form of Taine's volumes depends entirely upon the standard by which he is tried. If he is to be considered as an advocate bound fairly to make out a crushing case against the eulogists of the Revolution, his book is absolutely past praise. It is, as a work of honest polemics, as notable a performance as has been produced throughout the history of literature. The case against the Revolutionists is put with such extraordinary strength and supported by such an accumulation of evidence, that all the defenders of Jacobinism—sophists, poets, or paradox-mongers—are put out of court. The illusions of fancy and the sophisms of rhetoric cannot for a moment stand against the accumulative mass of Taine's facts. But we can hardly conceive that a writer who spent years of toil in accumulating stores of information with reference to the most striking, if not the most important, era of modern history, will be willing to pass simply as an honest advocate who holds a brief against the defenders of the Girondists or the Jacobins. Taine cannot be content to claim no higher reputation than the fame due to a political controversialist. His great work is assuredly meant to be something much better than such a book as might, under favorable circumstances, have been produced by the research and the partisanship of Croker. Taine must claim to be, at any rate, a critic of history, and must surely intend his book to be taken as an historian's judicial utterance on the main problems suggested by the French Revolution. 'Les Origines de la France Contemporaine,' in short, must, in its author's eyes at least, be a work which has a right to stand side by side with De Tocqueville's 'Ancien Régime'; and it would be no compliment to Taine's undoubted merits if we tested his work by any lower standard than it is fair to apply to books which sum up the result of philosophical and impartial reflection.

If, however, Taine be judged by the same standard by which one tests the merits and defects of De Tocqueville, of Quinet, or of Carlyle, the consequence inevitably follows that the spirit in which 'Les Origines' is written, and the views which the book contains, are fairly open to severe criticism. Taine is much more than an advocate speaking from his brief, but his writings are colored by the faults of advocacy. He can write occasionally in the true historical spirit; but throughout great portions of his work, and especially in his concluding books, he reminds one of an honest *procureur-général* employed to establish the criminality of the Revolutionary heroes. His honesty appears in his care to confirm every accusation by reference to good authorities; he is quite innocent of invention. But the account of the accused, their acts and their motives, is often no more a complete history of the Revolution than is a prosecutor's version of a criminal and his antecedents a complete or satisfactory account of the prisoner's life. Taine lacks scientific disinterestedness, breadth of view, and insight. Hence the result of his labors has been to produce a store of materials for history rather than a satisfactory piece of historical criticism. That this judgment is not too severe will be apparent to any one who considers the three following features in Taine's account of the Revolution.

First. Taine never shows any real appreciation of the difficulties which beset every man who, from 1789 onwards, wished to secure order without sacrificing freedom. All Europe had, a century ago, lost the art of dealing with popular tumults. The citizens of London were as helpless when Lord George Gordon opened the prisons as was the Government of France when the mob entered the Bastille. In England, however, the friends of order could with ease rally round the King and his Ministers. No one feared that if the troops were allowed to fire upon rioters, their next step would be to dissolve Parliament by force. The Liberals of France were unable to rally round Louis the Sixteenth. No man so free from gross vices was ever so utterly contemptible. The idea of showing the nation that, in the words of George the Third, "there was one magistrate in the country at least who would do his duty," never occurred to Louis. And had the King been a person of more energy, it is difficult to see how any Liberal could have stood by the French monarch. It is easy enough for writers who have realized all the horrors which have flowed from the Jacobin triumph, to intimate or imply that by a little energy the moderate men who undoubtedly made up the majority of Frenchmen could have secured the blessings of constitutional government. Constitutional government without the King was impossible. But it is hardly doubtful that if Lafayette, and men of his quality, had headed the King to crush the mob of Paris by force of the army, the next step in the drama of reaction would have been the overthrow of the Constitutionalists by the court. Under the circumstances of France in 1789, Moderates must almost instinctively have felt that their only choice lay between revolution and reaction. And a generation, many of whom can recollect 1848 and 1849, must admit that the feeling which influenced the men of the Revolution was sound. In every country throughout Europe the reformers or revolutionists of 1848 tried with more or less success to avoid the errors of their fathers. In France, in Italy, and in Germany the friends of order rallied round the Government; the mob was put down, and, in every country except Piedmont, the hopes of the Liberals were ruined. That Victor Emmanuel should have deservedly become the hero of Italy simply because he acted like a gentleman and kept his word, is a lasting satire on the trustworthiness of royal oaths.

Once, however, admit that Moderates could not trust the King, and the calamities of the Revolution follow by something very like an inevitable sequence. Add, further, that the terrors of reaction lost none of their power when Louis had perished on the scaffold. There is every proof that a large body of educated Frenchmen wished well to the Girondists. The Jacobins, who ultimately destroyed the only true Republicans in the country, were, as Taine establishes, a small, a desperate, and a despicable faction. Yet the Girondists could offer no real opposition to their rivals. One cause of their weakness is patent: men will never conquer who fear success. The victory of the Girondists would, one may confidently say, have opened the road to reaction. If a Republican general had, like Cavaignac, fifty years later, rallied the army and the country in defence of the Republic and of order, he would have, like Cavaignac, found, that by reëstablishing order he had destroyed the Republic. The destruction, moreover, of the Republic meant in 1793 the dismemberment of France. Taine, we are aware, does not profess to write a history, and therefore is not bound to describe the resistance of the French nation to foreign Powers. But he is bound not to forget the connection between war abroad and terrorism at home. We certainly find throughout his pages no trace of his keeping before his mind the impression which must have been made, not only upon the fanatics of Paris but upon every patriot throughout the country, by the treachery of Dumouriez. His treason was the more fearful because it came within an ace of success.

Secondly. Taine's whole attitude with regard to the exploits of the French army is perplexing. One may perhaps even suspect that he himself is puzzled how to account for the success of French arms abroad at the very time when, on Taine's own showing, the Government at home was in the hands of knaves, fools, and fanatics. It may of course be said that the triumph of French arms was not caused by Jacobin terrorism, and we have not much doubt that this assertion is in a great measure true. If fear of death may occasionally have inspired a general to deeds of successful rashness, the dread of unjust and disgraceful punishment must still more often have deprived brave officers of nerve and judgment. But the difficulty is to see how, if the rule of the Terrorists and the Directory was marked by corruption and incompetence, the armies, which after all obeyed the Government, could have come out victorious in a struggle with combined Europe. Suppose, as is certain, that the armed forces contained with hosts of blackguards all that was best and most generous in the manhood of France; the question still recurs, How is gross tyranny and corruption at home compatible with enthusiasm and moral discipline among the troops who guarded and extended the frontiers of their country? Moreover, hateful as was the Directory, the soldiers appear, on the eighteenth of Brumaire, to have supported the Republican or revolutionary party. The army was not Republican, but was nevertheless enthusiastic for the Revolution. Robespierre was overthrown by the Assembly; there is not, so far as we know, a trace of evidence that the army were preparing to put an end to the Terror. Bonaparte generally pretty well knew where was the true seat of political power, and Bonaparte was, on the ninth of Thermidor, a friend and protégé of the younger Robespierre.

Thirdly. Taine, in his last volume at least, palpably overrates the merits of the *ancien régime*. All that he says in praise of the nobility, the middle classes, and of the clergy, is, we may believe, in itself true. The noblesse often exhibited a public spirit which is unknown to their descendants; the middle class possessed a kind of respectability which is not often found among their modern representatives; and we may well believe that, as stated nearly ninety years ago by Burke, the higher priesthood of France were, towards the outbreak of the Revolution, a body among

whom one would not be surprised to find a Fénelon. The society which the Revolution destroyed was a society the members of which often displayed many virtues, and still more often many charms. Any candid reader of Arthur Young's 'Travels' will feel that the liberal France which welcomed Young is scarcely represented in the France of to-day, and that no traveller who wanders, as the English gentleman-farmer wandered, from Calais to Luchon, will ever meet hosts as charming as the ladies and gentlemen in whom Young found not only acquaintance but friends. All this can be conceded to any admirer of old France. It may also be candidly admitted that, during the latter part of the eighteenth century, outrageous cruelty on the part, either of the court or the nobility, was almost unknown. A political régime of despotism and exclusiveness was mitigated by the humanity and urbanity of social life. But if from all this the conclusion be drawn that nothing but the fanaticism and folly of Revolutionists destroyed monarchical France, the inference is overset by one pregnant remark of De Tocqueville's, of which we give here the substance and not the words. "I find," he in effect says, "that by those who lived under the *ancien régime*, it was universally detested. And in face of this fact it is impossible to maintain that it was not detestable."

The force of this argument is confirmed by two considerations. Men who detested the Revolution dreaded nothing more than a return to the pre-revolutionary state of affairs. The admiration entertained for the English Constitution is the strongest condemnation which could be pronounced on the governments of Continental Europe. No rational observer can doubt that English institutions under George the Third were full of faults which, to an Englishman or American of the present day, would seem intolerable. And no observer can also doubt that, during the eighteenth century, the English Constitution, with all its faults, was the object of a kind of respect and wonder which the modern English polity, with all its merits, fails to excite. The reason is not far to seek. It is not absolute but comparative merits which are the object of wonder. In 1789 the English Constitution secured free national life, liberty of discussion, and supremacy of law. These elementary features of good government were at that date utterly unknown to France; they are now the characteristics of every civilized European state. Hence, a century ago the Constitution of England was admired as the one body of institutions under which personal freedom was combined with national power and national prosperity. At the present moment, England is governed under a far more humane and enlightened form of government than existed there in the reign of George the Third; but humanity and enlightenment are no longer the monopoly of England. Qualities which exist under the constitution of every civilized state cannot, from the nature of things, be regarded with the admiration due only to exceptional merit.

Nor is it only from the comparison with England that we may infer the defects of French government and society. Taine, in effect, forgets the misery which the *ancien régime* brought upon whole classes. Exclusion from honorable careers was an insult and oppression to many who, under no circumstances, would have risen high, say in the army or in the sphere of politics. The peasants saw in the landed proprietors a class who were oppressive without being powerful. Protestants and dissidents of all kinds felt that, even when not actually oppressed, they were always liable to oppression. The arbitrariness and the cruelty of the criminal law not only irritated all persons bent on ameliorating the condition of the country, but, what is a matter of great consequence, instilled into the people at once the habit of obedience to power, and the feeling that cruel and severe penalties were the right mode of punishing all attacks on the creed or the political institutions of the State. The priests like Carrier, and the advocates such as Robespierre, who were the authors or the servants of the Reign of Terror, may have thought that they deserved some credit for not making use of actual torture as a means of punishment, and, one may assume without a doubt, derived their notions of justice, or rather of injustice, from the habits of the very Government which they had overthrown. The Jacobins, as Quinet has well pointed out, were in reality reactionists; they secured the momentary triumph of the Revolution by adopting and exaggerating the spirit and procedure of the fallen despotism. When once it is clearly perceived that the *ancien régime* was detested and from many points of view detestable, we understand why it was that France which, ninety years ago, was certainly not republican, never really became royalist. But this is a matter which Taine never explains; he loses his way, so to speak, amid a mass of details which his industry has accumulated together, and neither can find himself nor supply to his readers a clue by which to escape from confusion into the clear light of truth.

The Cruise of the Brooklyn. A Journal of the Principal Events of a Three-Years' Cruise in the South Atlantic Station. By W. H. Beehler, Lieutenant United States Navy. Illustrated. Philadelphia: J. B. Lippincott & Co. 1885.

Lieutenant Beehler's handsome volume is partly designed as a record of the cruise of the *Brooklyn*, to be preserved as a pleasant memento by shipmates who had been long enough together to have a sort of family feeling for one another, and partly as a magazine of information with regard to the countries visited. The list of these is a long one, and the volume contains a great deal that is of interest in regard to parts of the world not often visited, as, for example, Madagascar, and to matters for which we should ordinarily resort (frequently, however, in vain) to a cyclopædia. The style is colloquial, or perhaps we should say journalistic, as the book has grown out of a newspaper published on board the *Brooklyn* by permission of the commanding officer, and called the *Brooklyn Eagle*. According to the preface, the interesting reception of Neptune on board the flag-ship upon crossing the line "created a demand for a periodical," and the author was selected to assume the editorial control. Happily the *Brooklyn* seems to have had among her stores a press, types, and printing-ink, and the *Eagle* became "a regular feature" of the cruise, and was furnished to subscribers at the moderate rate of 5 cents per copy, while contributors were encouraged by being allowed as many copies of the papers as they pleased for themselves. In a continued series of the *Eagle* was published a "History of the River Plate Republics," which the author intends to complete and publish in a separate volume. The 'Cruise of the *Brooklyn*' may fairly be called a unique publication; for probably there is no navy in the world but ours in which the commander of a squadron would think of allowing the tedium of a voyage to be beguiled by the publication of a newspaper conducted by a subordinate, nor any other in which such a publication would not be likely to lead to an early mutiny. The weekly distribution of *Saturday Reviews* among his crew by the kind commander of the *Mantelpiece* was nothing compared to the actual publication of a newspaper on board, in which the most natural material for "editorial comment" would seem to be the behavior and discipline of men and officers, the management of the ship, etc. All these difficulties were in the case of the *Brooklyn* successfully avoided, and the venture turned out a complete success.

The book contains a number of valuable illustrations and a track-chart of the cruise, showing that the *Brooklyn* between New York, South America, and the eastern coast of Africa, and Madagascar, made a record of 38,600 miles. The author wisely writes in great detail, and thus manages to reproduce very well the impressions made upon him by the various incidents of his cruise. In Montevideo, for instance, we have a graphic and minute description of the sports of the arena as developed by Spanish-American civilization, including not only an extremely perfect type of bull-fight—more complete and antique, we should infer, than any elsewhere to be found—but an extraordinary combat between a bull and what the author says the natives call a "Paraguayan tiger"—a sort of leopard, apparently. A very good description of the carnival at the same place is given. Mr. Beehler has a journalist's eye for what is most characteristic in places and scenes; and it will interest those who endeavor from time to time to naturalize the carnival in the north, to learn that the Montevidians have a carnival custom which might be cheaply and easily introduced in New York, though with us it would probably find favor chiefly among boys and girls rather than adults. This is the use of the *pomo* and *pomito*, which are small leaden flasks, something like the tubes made to hold artists' colors, containing perfumed water. This in carnival time, by a slight pressure between the fingers, is quietly squirted into the eyes and noses of the merry-makers, greatly heightening the gayety of the hour. Water is also used as ammunition in a variety of other ways, by means of paper bags, buckets, and, most effectively of all, a hose attached to a hydrant. The author notices one circumstance which probably explains why in Catholic countries the masked balls, which with us are so dreary, are the great event of the gay season—that it is only at them that the women have any liberty. At a carnival ball in South America a woman may do what she pleases—talk, walk alone with men, flirt, and otherwise enjoy herself. This with us she can do at any time without going to the trouble of putting on a mask or domino. All this gives an idea only of the lighter part of the contents of Mr. Beehler's entertaining volume. For the more solid portions we must refer the reader to the book itself.

Tenants of an Old Farm; Leaves from the Note-book of a Naturalist. By Henry C. McCook, D.D. Fords, Howard & Hulbert. 1884. 8vo, pp. 456.

In certain features—title, colloquial style, and illustrations in part comically adapted from nature—the present work recalls the now almost forgotten English 'Episodes of Insect Life,' and the more recent French 'Population of an Old Pear Tree'; but it is superior to both. While the professional naturalist will, in most cases, wish that the author had resisted successfully the advice of others as stated in the very frank preface, and had related his numerous and interesting observations upon spiders, ants, etc., in the most direct way, he will probably admit that what appear to him superfluities and almost impertinences, will make the scientific matter acceptable to a much larger circle of readers. Moreover, the plan adopted of stringing a series of observations by a single individual upon a slender thread of story, is perhaps the only one which would enable the author to confine himself almost wholly to what he has personally wit-

nessed either in the vicinity of Philadelphia or in Texas. It also enabled him to dispense with references in the text; but they might have found an appropriate and useful place in an appendix, and thus, along with the considerable number of contributions which are to be credited to Mr. McCook himself, the general reader and the student would have learned at least the names of the very small band of American workers upon ants and spiders. That the author is a clergyman is sufficiently, but not objectionably, manifest. His dealings with the troublesome topic of evolution, indeed, exemplify well the advantages that would follow the introduction of a certain amount of natural history into the preparation for the ministry.

The illustrations are numerous, and for the most part both artistic and accurate; even the amusing ones suggest the truths which masquerade, as it were, in harlequin attire.

BOOKS OF THE WEEK.

Lee, Vernon. Miss Brown. A Novel. Harper's Franklin Square Library, 20 cents.
Mackail, J. W. The Æneid of Virgil. Translated into English. Macmillan & Co. $1 75.
McLennan, D The Patriarchal Theory. Based on the Papers of the Late John Ferguson McLennan. Macmillan & Co. $4.
Olssen, Dr. W. O. Revelation Universal and Special. Thomas Whittaker. $1 25.
Orcutt, Dr. H. School Keeping, How to Do it. Boston: N. E. Publishing Co. $1.
Reid, J. S. M. Tulli Ciceronis Academica. The Text Revised and Explained. Macmillan & Co. $3 75.
Ward, T. H. Humphry Sandwith: A Memoir, Compiled from Autobiographical Notes. Cassell & Co. $2.50.

GOODHOLME'S DOMESTIC CYCLOpædia for Housekeepers. $2.50.

A Book for Thinkers!

Mind-Reading and Beyond.

By William A. Hovey, late Editor of the *Boston Transcript.* Price, 1.25.

*** This volume is based upon the remarkable investigations of the London Society for Psychical Research, which includes in its organization some of the ablest scientific minds of Great Britain. It aims to establish, with the aid of illustrative experiments and tests, that mind-reading is a fact. The book is one in the line of progress, and should be carefully read by all truth-seeking investigators.

Sold by all booksellers; or mailed, on receipt of price by the publishers,

LEE & SHEPARD,
Boston.

IMPRESA DI VENDITE,
IN ITALY.

MILAN, 37 Corso Victor Emmanuel;
ROME, Salles Dante;
FLORENCE, 10 Corso Victor Emman.

On the 14th April, 1885, will be sold by auction in MILAN, 37 Corso Victor Emmanuel, the splendid collection of works of art of M. le COMTE I. B. LUCINI PASSALAQUA, containing PAINTINGS of ancient masters—Luini, Moroni, Breughel, Ruthard, Bloemen, Cuyp, Bril, etc., etc.; SCULPTURES, classical and of XVth century; ANTIQUE FURNITURE; FLEMISH TAPESTRY; MAJOLICA of Gubbio, Pesaro, Urbino, Caffagiolo, etc.; BRONZES of XVth century, PORCELAIN of Saxony, Frankenthal, Capodimonte, etc., and other objects of curiosity.

Immediately after the preceding date will be sold the gallery of paintings, principally of Italian masters of XVth and XVIth centuries, painted on wood, belonging to M. le MARQUIS COSTABILI, of Ferrara.

Catalogues will be delivered *gratis* by Mr. J. H. Bates, 41 Park Row, New York, or at the Impresa di Vendite, MILAN.

An edition *de luxe* of the Passalaqua collection, with 25 phototype plates, will be sold at the price of 20 francs.

The Conventional Lies
Of Our Civilization.

BY MAX NORDAU.

The *Spectator*, London, says: "He deals some telling blows at obvious anomalies in our civilized societies in a trenchant fashion and with the aid of a style far more incisive and epigrammatic, even in the translation, than we expected to find in a German writer. . . . He compels our respect, though seldom our assent, by the sincerity and earnestness with which he propounds his views, even when they are the most startling. The translation, an American one, is excellent."

Price, paper, $1; cloth, $1.50. Sold by all booksellers, or mailed, postpaid, on receipt of price by the publisher,

The Nation.

NEW YORK, THURSDAY, MARCH 12, 1885.

The Week.

THE action of several Republican Congressmen and Senators, including Messrs. Hiscock, Millard, and Bayne, in calling upon President Cleveland and expressing their hearty approval of his inaugural address, and their willingness to support him in administering the Government in accordance with the spirit therein manifested, is highly commendable and significant. It shows that there are some men in the Republican party who are able to realize that the campaign is over, and that the country has interests which are higher than those of any party. What the country needs is a plain, honest administration of the Government; and if President Cleveland endeavors to give it that, he will not only deserve but will receive the support of everybody except those blind partisans who would rather see a bad Administration than have their plans for 1888 upset by a good one. We have had a surfeit of politics in the administration of the Government for the past eight years. The electoral controversy of 1876 and 1877 carried the partisan bitterness of the campaign far into the Hayes Administration, and almost into the campaign of 1880. The long wrangle over the New York Collectorship in 1881, culminating in the assassination of Garfield, had a similar effect. Partisan critics of President Cleveland are hoping for such a wrangle over his policy as will weaken his Administration, but they will be disappointed. The spirit of the time, as well as the character of the President, is against it. There is no marplot like Blaine in this Cabinet, and there are no signs of such a party quarrel as he brought on in the spring of 1881.

As a general rule, even those who opposed Mr. Cleveland most bitterly during the canvass are, now that he is President, treating him with respect, or at all events with civility. There are, however, some exceptions to this rule. On Wednesday there was a debate in the New York Senate over the proposal to adjourn in honor of the inauguration at Washington, which drew from Senator Gilbert a piece of campaign denunciation of the President, in which he spoke of his inauguration as a "disgrace" and "disaster." In Boston, a few days ago, that eccentric theologian, Joseph Cook, in a so-called religious lecture, delivered himself of a tirade still more offensive and indecent. We have received at this office within a few days a medal which some bitter Republican partisan has actually gone to the expense of having struck off simply for the purpose of inscribing on it insulting remarks about the President. All this only shows that a good many Republicans still feel very sore over their defeat. The number, we know, is diminishing every day, but nothing but time and experience of the new Administration will wholly extinguish their rancor. We refer to the matter now, however, simply for the purpose of reminding them that personal denunciations of the President are in these times somewhat dangerous, and that it is the duty of every good citizen to refrain from them, at all events in public. The lawfulness of "removing" obnoxious persons in power unhappily has become a very familiar idea in our day, and the country swarms with cranks and fanatics, in whose brain the incautious talk of sensible men may sow the seeds of murder or outrage. Moreover, in this country the old spoils system still has such a hold on the imagination of the worst portion of the population, that it furnishes tens of thousands with a reason for wishing to get a reforming President out of the way, which may any day, under the influence of liquor or disappointment, ripen into action. The excited people who thought the country would be ruined, and proposed to sell their property at fifty cents on the dollar, if a Democratic President came into power, are nearly all restored to their right mind, and are going on with their business as usual. Let the others who worked themselves into the belief that President Cleveland was a stupid profligate, if they cannot at once get over their delusion, at least keep a watch on their tongues.

The selection of Mr. Charles S. Fairchild as his First Assistant Secretary in the Treasury, is probably the very best answer which Mr. Manning could give at present to any doubts which have been inspired by his political antecedents, as to his fidelity to civil-service reform, and as to the principles on which he means to manage the Treasury. Mr. Fairchild, who has not been in office since he held the State Attorney-Generalship in 1876-77, is a man, in every respect, political, personal, and professional, of the very highest standing, a promoter of every good cause, a reformer through and through, and eminently qualified both by attainments and experience for the work of his new place in Washington. Mr. Manning would never have put Mr. Fairchild in it if he did not mean to purify the Treasury, and manage it on business principles. Both he and Mr. Whitney have a chance of honest fame which does not come to men once in fifty years, and we cannot help believing that they are aware of it and will use it.

A curious claim is put forward that President Cleveland ought to retain Collector Robertson in office because he has refused to use the patronage of his office in the interest of politics, and has administered it on civil-service-reform principles. The persons who make this claim seem to have short memories. What was the Collector doing at Chicago at the time of the last National Republican Convention? Was there in that city at that time a more enthusiastic or active Blaine man than he? What was he doing throughout the campaign but throwing all his influence in favor of Blaine's election? Not more than a fortnight before the election he was interviewed at some length by a *Tribune* reporter, and said that Cleveland had not a ghost of a chance for carrying New York; that everything was in Blaine's favor. He was a partisan from first to last. There was no civil-service reform in his appointments, and while he has been shrewd enough to conform outwardly to civil-service regulations in his administration of the Collectorship, he has been throughout his term quietly and faithfully devoted to the Blaine influences which put him in power at so great a cost to his party.

The Buffalo *Express* makes the suggestion that Mr. Evarts ought to be the Republican candidate for Governor this year, because he would be sure to be elected, and he would then be the most likely candidate for the Presidential nomination in 1888. There are several objections to this fine plan. In the first place, if he were elected Governor, it would deprive the Empire State of Mr. Evarts's services in the Senate, where great things are expected of him. In the second place, if he were not elected Governor, his defeat would be certain to depress him and thus detract from the brilliancy of his Senatorial work; and his Presidential boom, which we rejoice to say is now in a flourishing condition, would be prematurely demolished. And he would be very likely to be defeated as Governor from much the same causes which defeated Judge Folger. He would be "knifed" by the friends of other aspirants in his own party. It is a little early to start the campaign for 1888, as Mr. Evarts or any other candidate who makes the experiment will be certain to discover.

The position taken by Mr. Charles Francis Adams, jr., President of the Union Pacific Railroad, in his letter to Senator Hoar concerning the relations of that company to the Government, must impress fair-minded people as at once candid and businesslike. There is no ground for any suspicion that the company, under its present management, has made any concealments or has come short of a full statement of its capabilities, so far as the same are now known, for meeting its pecuniary obligations to the Government. The question is thus reduced to the simplest terms, viz.: Is it for the public interest that the Government should take the property and assume the liability of the prior lien, or fix such terms of payment as its earning capacity and the proper development of the adjacent territory will permit and justify? Care being taken that no security now held shall be lost or impaired, we think that intelligent public opinion will favor the latter policy very decidedly. The burdens imposed upon the Government are sufficiently extensive and onerous, without any unnecessary additions. The resources of statesmanship are already sufficiently taxed, and if ever there was a time poorly adapted to the enlargement of public functions and to new experiments in administration, that time is the present. The Democratic party should be in no haste to add railroading to its other responsibilities.

Ex-Secretary Teller's defence of his action in the matter of the Backbone Land Grant, if not entirely conclusive, is decidedly more respectable than the attack made upon him by

Senator Van Wyck. Since the wind began to blow against land-grants a few years ago, the Department of the Interior has repeatedly called the attention of Congress to the law and the facts relating to the so-called lapsed grants. The law has been settled by the Supreme Court in the sense that a Congressional grant of land remains in force, notwithstanding a failure of the conditions of the grant, until a forfeiture shall have been declared by law. To all intents and purposes, therefore, the Backbone Grant was in the condition of a grant where there had been no breach of conditions. The Secretary of the Interior was bound legally to see it in that light. Nevertheless, he had held back the patents some years, in order to give Congress the opportunity to pass an act of forfeiture if it should choose to do so. No such action was taken, but in place of it a petition was filed in the Department by certain members of Congress requesting the Secretary to withhold the patents still further. Such a request, Mr. Teller justly remarks, is entitled to no more consideration than a petition from an equal number of private citizens in any walk of life. The railroad company, which had finally earned the lands, had rights in the premises, and the question for the executive branch of the Government to consider was whether these rights should be still further denied or postponed at the instance of a few private persons. It is alleged by Mr. Van Wyck and others that the company claiming the grant was not the same one to which it had been originally made, and that the transfer from the old company to the new one was not valid. Upon this point the opinion of the Attorney-General stands opposed to that of Mr. Van Wyck. But even if the opinion of the latter be the better in point of law, it is not the one which the Secretary of the Interior is bound to follow. Very fantastic notions get abroad at times regarding the value of legal authority, but the framework of government has been constituted in such a way that the opinion of the Attorney-General must prevail over that of Senator Van Wyck in a case properly brought before him, in the same way and to the same extent that it prevails over that of Justus Schwab.

General Hazen has sent a request to the new Administration that the court-martial proceedings ordered in his case be not dismissed, alleging as an excuse that rumors had come to his ears that such action was contemplated. As nobody else has heard such rumors, there was no apparent cause for the General's uneasiness. He will have an opportunity to answer the charge against him of having been guilty of the extraordinary conduct of censuring his superior officer, the Secretary of War, both in official communications and in public interviews, and all for the purpose of removing from himself the blame for the failure of the Arctic Relief Expedition and the consequent death by starvation of a part of the Greely party. This blame was placed directly upon him by the court of inquiry, and if President Arthur had done his full duty promptly, General Hazen would have had his case settled by court-martial many months ago.

We trust that the court-martial will make a thorough examination of General Hazen's conduct in the relief-expedition matter and give a final decision upon it. The text of the charges seems to justify such a course. It was shown at the court of inquiry that his negligence, or wilful disobedience of orders, was the direct cause of the failure of the *Proteus* expedition to establish a relief station at the point where the subsequent experiences of the Greely party proved it to be most needed. General Hazen, instead of obeying directions and putting instructions for the establishment of such a station into his official orders to Lieutenant Garlington, merely slipped a memorandum for such instruction into the envelope containing the orders, and privately told Garlington to pay no attention to it. Having done this extraordinary thing, and having been exposed in it, he devoted himself to inditing official criticisms on the course of the Secretary of War, and to "working" the press of the country with whitewashing explanations of his conduct.

The deadlock over the Senatorial question in Illinois has reached the stage of turbulence and personal violence. Of course all hope of useful legislation has been abandoned while men's thoughts are excited by the opposing claims of parties and persons to the high office in dispute. It cannot be said that the controversy is any nearer settlement now than it was on the day when the Legislature assembled, since if Mr. Morrison and General Logan should both withdraw, the tie vote would still prevent an election. It has been surmised that some scaly Republican member might be bought with an office, or some corrupt Democrat with money, to give to one or the other party a clear majority. It is scarcely possible that such a transaction could be consummated in the blazing light which has been thrown upon the actors in the struggle, and we feel very sure that neither Colonel Morrison nor General Logan would be a party to any questionable methods for securing the prize for which they have been respectively nominated. The only outcome now discernible is a vacancy in the representation of Illinois in the Senate until a new Legislature is chosen by the people.

Word comes from Iowa that the Prohibition Liquor Law, which has been in force since July last, is confessedly not a success. It is enforced in only a few counties; in others it is openly disregarded, with no efforts on the part of the authorities to enforce it; in a few, spasmodic attempts are made to enforce it, but with indifferent success. Throughout the State liquor is sold openly, and in the larger cities and towns the number of saloons has increased rather than diminished. In some cities and towns the law is openly repudiated and a license law is really enforced in its place; but in nearly all parts of the State the liquor traffic is in full blast, with no check of any kind upon it, and no revenue therefrom accruing to the local treasuries. One result is that the municipalities are embarrassed for funds to carry on their governments. The benefits from this state of affairs are so small as to be scarcely perceptible. In a few strongly rural communities, public sentiment is enough opposed to liquor selling to secure the enforcement of the law, but everywhere else its presence upon the statute-book is a farce, the influence of which is demoralizing and harmful. This is the experience of every State in which a prohibitory law has been enacted.

Professor Felix Adler, in his ethical sermon on Sunday, made a sharp attack on the managers of the House of Refuge for teaching the inmates such Christian dogmas as the divinity of Christ, the power of the Holy Ghost, and the immaculate conception. He holds that although these dogmas may not be sectarian as between Christians, they are sectarian as against Jews, Unitarians, and Agnostics. He declares that there are twenty or thirty Jewish children in the Refuge, who do not accept these doctrines, and yet are compelled to listen to them, and whose parents would protest against them "with might and main," "if they thought their protest would meet with anything but bitter scorn." He admits, however, the inconvenience which would result from allowing each child to have the full religious service of his choice performed for his benefit, and he doubtless foresees the possibility that there would be in that case such frequent changes of faith among them that it would be very difficult to minister adequately to their religious needs. So he proposes that all religious teaching should be dropped, and that the young criminals should instead thereof be "taught noble ambition by reading good biographies," in combination "with a good reading-room, a well-drained playground, and a useful trade." We are afraid, however, this programme also would make a terrible rumpus. Who is to select the biographies? Would they include that of Christ, or Socrates, or Marcus Aurelius, or Spinoza, or Darwin, or Francis of Assisi, or Xavier, or Napoleon, or Luther, or King David, or Leo X., or Voltaire, or William Wilberforce, and if not, why not? They could hardly be confined to American "self-made men," who began by sweeping out a store, and ended by owning several millions of money in "gilt-edged securities."

The decision of the General Term of the Supreme Court that James D. Fish can be examined as a witness concerning his relations with the firm of Grant & Ward may lead to interesting revelations. The public will be greatly surprised if a sharp examination of Mr. Fish does not disclose a good deal of valuable information. He is pretty generally believed to know more about the extraordinary transactions of the firm than any other man except Ward himself, and if he can be induced to tell it, the whole community will be the gainer. If he is an innocent man, the opportunity to clear himself is now presented; but this theory of his relations to the firm is not sustained by the plea of his counsel that he ought not to be asked to testify, lest by so doing he may criminate himself. If we can get his full statement of the firm's operations, and then get Ward's for comparison with it, we shall be in a fair way to find out the true history of this memorable swindle.

News of trouble between Guatemala and Nicaragua growing out of the canal treaty with

the United States comes opportunely to justify the action of the Senate in rejecting it. It is stated in the *Herald's* Washington despatches that "President Barrios (of Guatemala) has practically declared war against Nicaragua, by insisting upon a course on the part of the latter State, with respect to a consolidation of the Central American republics, which Nicaragua cannot accept; and that the understanding at the State Department is that this attempt to stir up trouble with Nicaragua was prompted by the new relations which this nation has offered to assume toward the United States." Here would be a notable chance to initiate a spirited foreign policy, by sending a few regiments of soldiers, specially recruited for the purpose, to Central America to restore order and hold Guatemala in check. It might be supposed that Guatemala would come to order at the word of command from Washington, thus dispensing with the need of military force, just as France allowed herself to be beckoned out of Mexico without compulsory process. Such a conception would be entirely faulty, for the reason that among the Central American republics fighting is the national pastime, involving no more sense of responsibility than a "shindy" at Donnybrook Fair. If Guatemala has any real or fancied wrongs to avenge upon Nicaragua, the fact that the United States stands behind Nicaragua will have no more effect than the fear of punishment in another world. The distinction between theoretical and applied force has the same value in Central America that it has in the Sudan.

The debates in the House of Commons on the vote of censure pretty thoroughly disposed of the charge against the Ministry of having betrayed Gordon or failed him in any reasonable way. Mr. Gladstone showed that when Gordon was first sent out it was simply to report; that the subsequent extensions of his commission were made at his own request; that his understanding that no British expedition was to be sent to support him was complete; that he himself in his despatches from the first strongly denounced any attempt to hold the Sudan as impracticable; that his first suggestion of a permanent policy of any kind was the despatch of Zebehr, the old slave-dealer, to be Governor-General, a proposal which shocked public opinion, and which the Tories themselves condemned from the first; and that Gordon himself gave them every reason to believe that he was not till the end in any real danger in Khartum, as a retreat southward was always open to him. It was shown, too, that the expedition for his relief was started as soon as it became evident that public opinion called for it; and that the Nile route was adopted, after full discussion, not by Lord Wolseley only, but by the best military authorities in England. The Suakim route would have called for between 30,000 and 40,000 camels, and would have been most perilous for any large body of men, owing to the scarcity of water. On the Nile the expedition was carried up more than half way—that is, to Assuan—in Cook's steamers, and was sure of water all along. Finally, what brought about the treachery at Khartum was the near approach of the relieving force, and that would have precipitated it at any time—in October as readily as in January.

The Marquis of Hartington's speech was mainly directed to showing that the Ministry had in all they had done merely followed the current of public opinion, which changed from day to day, and, as usual, took little count of difficulties. This is to a large extent an excuse, but it is also a confession of shortcoming. What has brought the Ministry into trouble is their not having had from the beginning a distinctly defined policy of their own. When they decided that Egypt must give up the Sudan, they should also have decided to leave the garrisons to their fate, because, as they now acknowledge, there was no possible means of rescuing them. They ought not, therefore, to have allowed themselves to be bullied into making believe that they could be rescued, and sending Gordon out to see how it could be done. Out of this initial error all the subsequent woe has come. What makes it the more deplorable is that the garrisons have since generally gone over to the Mahdi, bag and baggage, and some of them are now fighting under his standard. There were in them a few, perhaps half a dozen, English and American officers, one of whom still holds out at Kassala, and one or two others away in the far south. The fate of these men is doubtless melancholy, but they were military adventurers, who took the risks of service under Egypt in the Sudan with their eyes open; and under any circumstances their lives were not so valuable as to be worth the hundreds already sacrificed, and the thousands still to be sacrificed in an attempt to save them.

Earl Granville has been explaining in the House of Lords that he meant nothing offensive when he said that he plumed himself lately in a debate with the Duke of Richmond on not having taken Bismarck's "advice" to seize Egypt, on the ground that he wished England to reserve her liberty of action under all circumstances. Lord Granville acknowledges that instead of "advice" he ought to have said "opinion." He denied, moreover, that there was anything confidential in either the advice or the opinion, as Prince Bismarck alleged. It was offered in "declarations which were not confidential." Besides this, Lord Granville expressed on behalf of the British Government all sorts of friendly feelings toward both Bismarck and Germany. Great efforts are apparently being made to put a stop to these recriminations and restore the old good understanding, and Bismarck, it is said, is going to play mediator in the Afghan difficulty, and get both the Russian and Afghan outposts to withdraw from the frontier.

It is not probable, however, that anything will now restore confidence in England except the repair and armament of the fortifications of Herat, and the occupation of the place by a very strong garrison. No matter what the Russians may say or promise, the fact has been brought out in a very emphatic form, that the occupation of Merv has exposed Herat to capture by a *coup de main* before the Amir could get any assistance from England, and that if the place were once in the hands of European troops, its recapture would be very difficult. Sir Henry Rawlinson pointed out ten years ago that "the place would be at the mercy of any European Power holding Merv." It possesses extraordinary natural advantages as a stronghold. The great high roads from Kabul, Teheran, Balkh, Bokhara, Khiva, Meshed, Seistan, and Kandahar all meet in it. It has a splendid climate, and lies in a fertile valley. What is of most importance is that it is surrounded by the greatest earthworks ever seen, the origin of which, like the origin of the place itself, is lost in remote antiquity. The town, which is a mile square, is surrounded by an earthen parapet, if one may call it so, which measures 250 feet at its base, and is 50 or 60 feet high, and surrounded by a wall 9 feet thick at the base and 18 feet high. In addition to this there is a wet ditch 45 feet wide and 15 feet deep. In fact, if the Russians got into Herat, it would be almost impossible to get them out. The Persians tried to capture it in 1838 under a Russian leader, Borowski, but were beaten off by the Afghans under Eldred Pottinger. In 1856, the Persians occupied it, also under Russian inspiration, but were compelled to evacuate it the following year, under pressure of a British invasion of Persia itself, in which the Persian army was ruined in a single engagement. Abdurrahman Khan, who is on very friendly terms with the English, will probably now be subsidized for garrisoning it with a heavy force, and be supplied with improved guns, or he will be paid for letting the British occupy it. Otherwise there will be no sleep for the unfortunate British taxpayer, for whom the morning news from every quarter of the globe is now so full of terrors.

The Afghans have brought together some force at Penjdeh, but, it is said, under orders to retire as soon as the Russians do. It is rumored that the Russians have agreed to retire, but it will probably be difficult to get them to execute their promise faithfully. They will continue to send troops down to Astrabad, their base on the Caspian, and to Merv, and gradually accumulate an army in these places, and keep the Afghans and British both in a constant state of alarm. Astrabad, by the way, they seized some ten years ago, although they did not deny it was Persian territory, and for a few years continued to promise to evacuate it speedily, but all the while kept fortifying it, and now have no more intention of surrendering it than of surrendering Khiva. The way the Foreign Office at St. Petersburg gets out of these difficulties is by pleading the difficulty of controlling officers in those distant regions, and, in fact, the necessity of leaving them a large share of liberty. The general in command of the force which has been getting up the present trouble is now set down as a "hot-headed Panslavist," and has doubtless been disavowed, but he will not be displaced. In the meantime the British are concentrating an army at Quettah, which, if the parties should come to blows just now, would be overwhelmingly superior in numbers and equipment to anything Russia can bring together, and the Ministry at home is evidently fully prepared to use it. This will perhaps have more pacific influence than anything else.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, March 4, to TUESDAY, March 10, 1885, inclusive.]

DOMESTIC.

INAUGURATION DAY, at Washington, was one of the most successful in the country's history. It was characterized by great and orderly crowds, splendid weather, a brilliant procession, and an elegant ball in the evening. It is estimated that 100,000 visitors were in Washington, and that 25,000 people took part in the procession. President Cleveland's inaugural address was enthusiastically received, and has been so extensively published that it is useless to summarize it here.

President Cleveland's Cabinet nominations were sent to the Senate on Thursday. They are the same as indicated in last week's Summary. The nominations were all referred to committees. Senator Riddleberger objected to the customary immediate consideration of the nominations of those who were members of the Senate. He made a few remarks, saying in substance that his objection to Mr. Bayard arose from the belief that he was un-American. This violation of "Senatorial courtesy" was severely criticised by both parties. On Thursday the Cabinet were unanimously confirmed by the Senate, Mr. Riddleberger concluding not to wage the fight single-handed.

One of President Cleveland's first acts in connection whith his official household was the decision to retain Mr. O. L. Pruden as assistant to Private-Secretary Lamont. Mr. Pruden was appointed by President Grant. His retention is heartily commended by members of both parties.

One of the first official acts of Mr. Manning as Secretary of the Treasury was the appointment of Mr. Charles S. Fairchild, of this city, to be First Assistant Secretary in place of Mr. French. Mr. Fairchild has held no public office since the expiration of his term as Attorney-General of New York, but as President of the State Charities Aid Association he has served the public in a most practical way.

Gen. John C. Black, of Illinois, has accepted the Commissionership of Patents. It was tendered to him in the following letter from Secretary Lamar: "The President thinks your official connection with his Administration will contribute to its success, and desires me to ascertain if you will assume the duties of Commissioner of Pensions. I cordially join in his request." General Black is a lawyer, was a Union General, and was the Democratic candidate for Lieutenant-Governor of Illinois in 1872, and the Democratic candidate for the U. S. Senate against Logan in 1879.

President Cleveland's first Cabinet meeting was held on Tuesday. It is understood that the session was devoted almost entirely to the consideration of Federal appointments. It is asserted on good authority that each member of the Cabinet submitted a list of appointments in his Department, held to be essential to the administration of public business under the present régime. The lists, it is understood, included only those offices in which a change was desirable at once, in order that the new Secretaries might discharge the duties of their offices without the least friction or embarrassment.

The last hours of Congress, from midnight to noon on Wednesday, were characterized by some exciting scenes. In the House during the discussion of the conference report on the Sundry Civil Bill, a disorderly scene ensued, in which amendments appropriating several hundred thousand dollars for public buildings were passed with undue haste. Mr. Randall protested, and at length succeeded in getting the bill sent to a final conference. Agreements on the other appropriation bills were speedily effected and an extra session avoided. At 11:30 A. M. Mr. Randall moved to suspend the rules and pass the Senate Grant Retirement Bill. After some filibusters on a contested election case had been satisfied by the seating of Frederick (Dem.), instead of Wilson (Rep., Iowa.), the bill was passed by a vote of 198 to 78 amid tremendous cheers. The House at 12 M. adjourned sine die. In the Senate the River and Harbor Bill was first increased from $5,000,000 to $10,000,000, and then laid on the table by a vote of 28 to 20. Before noon the Grant Retirement Bill, already passed by the Senate, was received from the House, which had just passed it, and was sent to the President, who immediately signed it, and nominated General Grant to be General on the retired list of the army with the full pay of such rank ($13,500). The Senate confirmed this in open executive session amid thunders of applause on the floor and in the galleries. A recess was then taken to attend the inauguration ceremonies.

In the conference on the Naval Bill in the last hours of Congress the House receded from its appropriation of $400,000 to complete the wooden vessel *New York*, and from the amendment to build a 6,000-ton cruiser. The Senate gave up the completion of the monitors. Mr. Randall agreed to the construction of two steam cruisers of about 4,000 tons each, one heavy-gun vessel of about 1,600 tons, and one light gun-boat of 750 tons, but on the condition that the Senate recede from the point which placed their design and construction under the provisions of the previous acts constituting the Naval Advisory Board, under whose direction the present cruisers are now building. The design and construction, therefore, are left in the hands of Secretary Whitney.

By order of President Arthur, the Interior Department on March 3 issued patents for the lands in Louisiana granted to aid the construction of the New Orleans and Pacific Railroad. These lands, comprising about 700,000 acres, are what is commonly known as the Backbone Grant, and it was in regard to them that several members of Congress sent a protest to the President a few days ago.

The resolution of Mr. Van Wyck (Rep., Neb.) relative to the issue of these patents was called up in the Senate on Monday. Mr. Van Wyck made an impassioned speech, reflecting severely upon the last Administration. He concluded: "Was it dangerous to trust the new Administration to do justice to the settlers? Was there danger that the rights of the settlers would be recognized, and the public domain protected by the incoming Administration? If so, the new Administration came in none too soon." Mr. Teller replied with a legal and historical statement of the case. He declared that Mr. Van Wyck was a "professional anti-monopolist and champion of the people," that his purpose was to pose before the public and to gain notoriety, and not to aid to do justice, or to redress wrongs.

Objection was made in the Senate on Monday to the swearing in of Mr. Blair, of New Hampshire, reappointed by the Governor. Mr. Saulsbury, of Delaware, made the point that a Governor has no right to make an appointment which will begin a term. Mr. Hoar said that a precedent had already been established in a similar case. He thought it would be an injustice to the State to refuse to have him sworn. Mr. Hoar offered a formal resolution that the oath be administered to the Senator from New Hampshire. Mr. Harris asked unanimous consent that it lie over till Tuesday, and this was granted.

The Governor of Mississippi has appointed Gen. E. C. Walthall to succeed Mr. Lamar as United States Senator. He is a lawyer, and was a Confederate Major-General.

The Illinois Legislature was the scene of a row on Thursday. One hundred and ten Republicans were present, and ninety-eight voted for Logan, the Democrats not voting. A Democratic Chairman then pronounced the joint session adjourned. Protests and blows followed, one member getting a black eye. Finally the houses separated without another ballot.

In the New York Assembly on Monday three amendments intended to weaken the State Civil Service Law were reported adversely, and all the reports were sustained.

The Assembly at Albany on Wednesday passed the bill which compels horse and certain other railroad companies to prevent their employees from working more than twelve consecutive hours, except in cases of emergency. The bill is limited to roads of ten miles or less in length. On Thursday the Assembly passed the Appropriation Bill with the $25,000 item for the Adirondack survey included. The Committee on Grievances have voted to report adversely the Woman Suffrage Bill.

Secretary of State Carr has requested S. N. D. North, managing editor of the Utica *Herald*, to superintend the compilation of the New York census.

Adolph Sonnenthal, the distinguished German actor, arrived in this country on Sunday, and appeared at the Thalia Theatre on Monday night.

Mr. T. S. Arthur, author and publisher, died in Philadelphia on Friday. His best-known work is 'Ten Nights in a Bar-room.'

FOREIGN.

In important despatches from the Russian Government presented to Mr. Gladstone on Thursday, M. de Giers, the Russian Minister of Foreign Affairs, denies that the Russian occupation of Akrobat, Zulfikar Pass, and Sariyuz was designed to forestall the decisions of the joint commissions on the Russo-Afghan frontier. He says that the advance of the Russians from Puli-Khatum was only ordered after the Afghans, in July last, during the negotiations for the organization of the Commission, had occupied Panjdeh, and in January had occupied Sariyuz, whence the Afghans withdrew on the advance of the Russians. M. de Giers did not maintain the right of Russia to hold the disputed outposts, but his Government refused to withdraw the Russian troops until the Commission presented its report on the frontier question.

Teheran advices on Saturday said that it was reported there that the Amir of Afghanistan was sending troops to protect the Afghan frontier against the Russians. It was also rumored that the British members of the Boundary Commission would soon return to India. Persia, it is said, will remain strictly neutral in any complications that may arise between England and Russia.

It was announced in London on Sunday that orders had been sent to Sir Peter Lumsden, the British Special Commissioner on the Afghan frontier question, to direct the Afghans to evacuate Panjdeh on the withdrawal of the Russian forces from Akrobat. Baron de Staal, the Russian Ambassador, has, it is said, promised that the Russian troops shall retire. Nevertheless, the London *News* on Monday said: "Although there is a possible hope of a peaceful solution, the condition of affairs is still critical. The British Government's demands that the Russians retire from the Afghan frontier, whether put in the form of an ultimatum or not, are final. The choice of peace or war lies in the hands of the Russian statesmen."

In a leading article on Monday, the London *Times* urged England to occupy and fortify Herat at once, and to check the Russian advance toward the interior of Afghanistan at any cost. It said that if Russia wished to fight, England was not only ready but willing, and Russia had only to say the word.

At a late hour on Tuesday the British Government had not received a reply from Russia to their latest overtures for a settlement of the Afghan question. The *Pall Mall Gazette* said it believed in the correctness of the news received on Monday evening, to the effect that the Russians had advanced their outposts in Zulfikar Pass further south, instead of withdrawing them north, as requested by England. The *Gazette* states that there can be no doubt that grave fears are entertained of a collision between the Russian and Afghan troops.

The total of the enrolled volunteers in Great Britain at the present time is announced as 215,000 men, the greatest number yet attained.

Dr. Blowitz, the London *Times's* correspondent at Paris, on Thursday wrote a strong letter attacking Prince Bismarck for indirection in his dealings with the British Foreign Office concerning the South Pacific Islands. In the Blue Book on this subject issued by the British Government on February 25th there is given a conversation which occurred early in February between Prince Bismarck and Sir Edward Malet, British Ambassador at Berlin. During this the German Chancellor read a despatch which he had sent to Count Münster, German Ambassador to London, on the 5th of the preceding May, and which purported to convey to England Bismarck's idea of how Great Britain could assist Germany in her colonization schemes, and his promise to reciprocate by helping English interests nearer home. The despatch as read urged England to fall in with the suggestions made, because in the event of refusal Germany would be compelled to ask France to perform the offices declined by England. The Chancellor told Sir Edward Malet that as Count Münster seemed to make no progress, it was feared in Berlin that he had not stated the points of the despatch with sufficient strength and precision, so Count Herbert Bismarck was sent to London to assure the success of the desired negotiations.

Dr. Blowitz accuses Bismarck of direct falsehood in these statements. He refers to the fact that Bismarck read the original despatch to Sir Edward Malet in Berlin as a proof that he really never sent it to London. Bismarck, Dr. Blowitz says, proceeded as if this despatch had been sent to London to form the basis of an alliance between England and Germany concerning colonial annexations; as if its rejection by England had been formally and deliberately made; as if this rejection were an endorsement by England of a German-French alliance and gave Germany certain liberty in the South Pacific; and then, when asked for explanations about his encroachments on British possessions, produced as his warrant the original of the very despatch. This production, Dr. Blowitz avers, was made nine months after the date of the despatch, and just when it suited Bismarck's purpose.

Earl Granville, Minister of Foreign Affairs, made a long speech in the British House of Lords on Friday, in explanation of the Bismarck controversy. He said that Bismarck had misunderstood his previous retort to the Duke of Richmond. He (Granville) did not mean that Bismarck had advised England to take Egypt; nor did he refer to private and friendly communications from Bismarck, but to later declarations, not confidential, expressing Germany's hope that England would represent Europe's interests in Egypt. "All my efforts," said Lord Granville, "will be exerted in favor of the conciliatory policy which Prince Bismarck has sketched out." The German Chancellor, he said, must have misunderstood him, for England, beyond any other nation, was gratified at Germany's greatness, and would spare no efforts to retain the friendship now existing between the two Governments." The German papers consider this an apology on England's part.

A letter from Lord Granville was read in the House of Commons on Monday night on the German diplomatic dispute. He says he has "good reason to hope that this friction is a thing of the past." He denies that he ever received Prince Bismarck's despatch of May 5, which, he says, was evidently private and intended for Count von Münster's guidance in dealing with the general political situation. The reading of Earl Granville's letter left a bad impression, as it was considered an inadequate exposition of his denial of the receipt of Prince Bismarck's despatch, and conveyed a hint that Count Herbert Bismarck, at that time Secretary of the German Embassy, had suppressed the communication. Nevertheless it was announced from Berlin on Tuesday that the Emperor William had formally congratulated Prince Bismarck on the success of Count Herbert Bismarck's mission to England, and that Bismarck would soon declare in the Reichstag that a complete reconciliation with England had been effected. It having been reported that the British flag at Victoria colony in West Africa had been hauled down and the German colors substituted, Germany officially informed the British Government on Tuesday that she disavowed such action, and would make necessary reparation if the report proved true.

The Berlin *North German Gazette* (Bismarck's organ) published on Wednesday a caustic criticism of the action of the British Government in publishing the private conversations of Prince Bismarck with Sir Edward Malet, the British Ambassador. It pronounces the printing in the Blue Book on the South African question of the personal remarks made by the German Chancellor to Sir Edward Malet "a striking and regrettable case of indiscretion." "Such conduct," continues the *Gazette*, "must put a stop to all confidential exchange of news between the statesmen of the two governments. If the object of these publications has been to make France distrust Germany, it has failed, but its malevolence remains inexplicable."

Advices from Cameroons, under date of January 19, say the situation there is still very much unsettled. Hickorytown, Lockprisos, Fosstown, Moskoko, and Belltown have been burned to the ground, and the natives have sought refuge in the bush. King Bell is afraid to return, although the Germans have tried to induce him to rebuild Belltown. The London *Daily News* says that the territory seized by Germany in eastern Africa is more than twice the size of Prussia. It surrounds Zanzibar, and the intention seems to be to make the Sultan of Zanzibar dependent upon Germany rather than England.

In the House of Commons on Monday night the Marquis of Hartington, in moving a vote of 3,000 additional men for the army, explained that the cost of the autumn expedition to Khartum would be included in the expenses of the next financial year, and would require another credit. He said that General Graham's forces would disperse the rebels, occupy Osman Digna's positions, and prevent the rebels from again concentrating. General Graham would then open the route to Berber as far as possible. If he reached Berber in time, he would coöperate with General Wolseley in his advance on Khartum. The Suakim Railway, the Marquis of Hartington said, would be purely a military structure, but would doubtless eventually lead to the establishment of a permanent railway.

In the House of Commons on Thursday night the Marquis of Hartington said the Government thought that any advance by General Graham from Suakim for the relief of the garrison at Kassala was impossible. He said the Government was unprepared to state the number of additional men they intended to enroll in the army. A motion to grant £330,000 for extra naval expenses was agreed to.

The garrison of Kassala has had another battle with the Haddendowahs, and been completely defeated. The Emir writes that unless speedily relieved the garrison will succumb to famine.

General Wolseley, on Friday, in an address to his troops at Korti, said: "The Queen desires me to express her admiration of your courage and self-devotion. To have commanded such men is to me a source of the highest pride. No greater honor can be in store for you than that I look forward to, of leading you, please God, in to Khartum before the year is out. On the river and in the desert you have borne hardships and privations murmurless. In action you have been uniformly victorious. You have done all that men could do to save a comrade, but Khartum fell through treachery two days before it could be reached. A period of comparative inaction is now expected. The army is not yet formed with a view to the siege of Khartum. We must content ourselves during this period and prepare for the autumn advance. You will, I know, face the heat and the work that remains for you to do with the same courage and endurance which you have displayed hitherto."

During the summer the main body of the British troops will remain in camp at Korti, with headquarters at Dongola. The Mudir of Dongola's army will remain at Meraweh with General Buller's contingent. Two movable columns under Generals Dormer and Brackenbury will be stationed between Debbeh and Handak in constant readiness for action.

The last convoy of the wounded from Gakdul has arrived at Korti. General Wolseley's headquarters will soon be moved to Dongola. The Mahdi will, it is said, soon remove his camp from Umderman to Metemneh or Shendy.

The rear guard of General Sir Redvers Buller's troops arrived at Korti on Monday in a terribly fagged condition. General Brackenbury arrived at Korti on Monday.

The Mahdi, fearing treachery, has gone to Abbas Island, 130 miles above Khartum. There is great dissension and famine among the rebels, and a rising against the Mahdi's uncle in Kordofan was announced on Tuesday.

The *Pall Mall Gazette* urges that the best testimonial possible to make for General Gordon would be the formation of a "Gordon Free State," upon the plan of the Congo Free State, formed by the International African Association, the new State to embrace the Nile country, and its object to be the holding of that waterway on behalf of trade and civilization.

It is reported that after the recent division on the vote of censure, Queen Victoria advised the resignation of Mr. Gladstone and a reconstruction of the Ministry on the basis of a thorough and consistent foreign policy. Mr. Gladstone declined to resign, maintaining that he held power under a commission from the people.

Edmund Yates, editor of the London *World*, was released from jail on Tuesday on account of ill-health.

The French Chamber of Deputies on Thursday, by a vote of 264 to 150, finally passed the bill raising the duties on cereals.

General Brière Delisle, the French commander in Tonquin, telegraphed on Sunday that he had relieved the beleaguered French garrison at Tuyenquan. He said: "We arrived on March 3 at Tuyenquan. The Black Flags and the Yunnan army had occupied the pass, the sides of which were inaccessible, and had built forts with three lines of trenches before Duoc. The fighting was severe. Our troops behaved more admirably than ever. The enemy raised the siege of Tuyenquan last evening, the French garrison having fought eighteen days. This siege should be counted among the most brilliant pages of our history. The gunboat *Mitrailleuse* actively assisted in the defence of Tuyenquan. General Négrier's column has been pushed rapidly northward since the capture of Langson. He has now destroyed the line of forts which guarded the Chinese frontier, and has blown up the fortifications which have been known as the gate of China. The magazines, containing large quantities of ammunition, have also been destroyed." The French attacking party's loss at Tuyenquan was 66 killed and 133 wounded; the garrison lost 50 killed and 33 wounded during seven assaults on the town by Chinese troops.

The French commander in Anam has learned that Chinese mandarins are intriguing with the Anam Court with a view to secure combined action between the Anamese and the Chinese for the overthrow of the French authority.

THE CABINET.

It is obvious from a glance at President Cleveland's Cabinet that we should have to go a long way back in the history of the Government to find one of which the average in both ability and character was higher, and it is by the average that Cabinets have, after all, to be judged. Seven such places cannot be filled in any country in the world with men of the first order of capacity, even if seven such men were easily found. All administrative work which has to be done in subordination to another will, or in consultation with other minds—which depends, in short, in any degree for its success on powers of persuasion, or on insight into character—calls for other things besides capacity. It needs a great deal of patience, of good temper, of judgment of men, and of experience of affairs, which persons of the highest capacity do not always possess. Consequently, Cabinets are usually to the eye of the outer world a mixture of materials of very unequal quality. Some of our best Presidents have made them up on the chemical plan of putting in alkalies to neutralize acids—that is, putting in men whom the rest of the world knew to be good, for the purpose of offsetting men whom the President himself knew to be bad.

It is the custom of the American public, however, to be very indulgent about the composition of a Cabinet at the outset of an Administration. It recognizes the fact that the Cabinet has to be, after all, a collection of agents to do important work, as well as a collection of political notables, and that in the choice of these agents a President must be allowed great freedom, and that a large number of the reasons, sometimes some of the best ones which govern this choice, must needs be unknown to the public. The first judgment on a Cabinet, therefore, unless there are notoriously bad appointments in it, must take it as a whole rather than in detail. People's first thought is rather how it will work as a unit than how its different members will manage their separate departments. In other words, the first impulse is to examine it as a sign of the President's policy and aims, of the kind of men with whom he likes to surround himself.

Looked at in this way, we are sure there will be general agreement that President Cleveland's average is very high. The three men whom he has taken from the South, Messrs. Bayard, Lamar, and Garland, cannot be surpassed, within the field of possible choice, for either character or capacity. The sole objection any one can make to them is that they are Southerners, but this objection will only come from that very small and rapidly diminishing body of persons who hold that the Government ought to be conducted on the theory that twelve of the States do not belong to the Union; that there are two grades of American citizens, the Northern and Southern; and that the latter should be allowed to participate in the management of national affairs only on condition that it always votes with the other. This theory has, however, been rejected at the polls by the majority of the American people. Even if President Cleveland had not so largely owed his election to the South, it would have been his solemn duty to save that greatest of all results of the war—the restoration of the Union—by treating the leading men of the South as American statesmen in the fullest and best sense of the term, and entitled to a fair share in all the honors and rewards which the triumph of their party may have won. Happily he has been enabled to do this, in the present case, by putting three men in his Cabinet who, in talents and integrity, would be a credit to any part of the country.

The work of selection at the North has been more difficult. Democrats have in this part of the world been excluded for twenty-five years from all share in the administration of national affairs—a circumstance which has operated in a very marked way either to discourage political capacity in the party, or to prevent its making itself conspicuous. Moreover, many of the older men of the party, who were prominent in public life when the war broke out, have been either discredited by their opposition to the war, or by their abandonment of the old doctrines of the party in dealing with the currency and the national credit after the war. There are but very few of these whose record has not been dimmed in one of these ways, and they are mostly too old to feel the importance of the issues which have been coming to the front during the last ten years. President Cleveland, who is himself the choice of the younger men of the party, had, in putting Northerners into his Cabinet, therefore, almost inevitably to select men but little known in the national arena, and known better for political activity than for administrative experience. But there is no test known to us of fitness for a Cabinet, except political conspicuousness, which Judge Endicott and Colonel Vilas will not bear. The President could not take as his advisers or agents two fitter representatives—one of what is best in New England, and the other what is best in the rising communities of the Northwest—than these two gentlemen. The facts of their biography, indeed, make all comment on their fitness unnecessary.

Mr. Manning and Mr. Whitney, from this State, are in fact the only selections which can call forth adverse criticism. The objections to them are obvious, and have found utterance in many quarters, and have been fully felt by us since they were first talked of. These gentlemen are both close personal friends of the new President, and were both largely instrumental in securing his nomination. It may be said, therefore, and will be said, that their offices are the rewards of their zeal at the Convention and during the canvass. Moreover, Mr. Manning is little known outside this State, except as a very able political manager, and people will ask and do ask wherein consists his fitness for the Treasury, the department of all which needs most rigid care from an Administration pledged to civil-service reform, and that through which any catastrophe in the financial situation would bring most discredit on the President. Mr. Whitney is also open to the objection that he is but little known outside the State, and that he has had no administrative or political experience in the national arena.

We feel the force of these objections as much as any one, but they are, it is to be observed, presumptive rather than positive. They are well calculated to excite prejudice and disappointment. They are not, however, a proper basis for distrust or hostility. There is nothing in them to forbid the hope that these gentlemen will make good administrators and sincere reformers. Of their capacity for anything they undertake we hear no question. Moreover, our confidence in Mr. Cleveland is mainly in his integrity of purpose. To suppose that he had put into the Treasury and the Navy Departments two persons on whom he did not believe he could count for absolute support of the principles of administration to which he stands pledged, would be to suppose him wholly unfit for his place. This, however, is a conclusion which even an enemy, if honest, would not allow himself to reach sooner than two years hence. We, for our part, prefer to believe that he has in all his appointments acted on better knowledge than we possess, and with the confident and well-founded expectation of making his Administration what his supporters at the polls looked for at his hands.

SIGNS OF PROGRESS.

President Cleveland may be said to have reached the really critical period in his Administration, as he has now to deal with the filling of the minor offices, a work full of traps and pitfalls for unwary feet. The Washington hotels are crowded with office-seekers, who either have never heard of civil-service reform, or who think the President's letter meant no more than the party platforms usually mean, and are bent on ignoring it. The difficulty which all Presidents hitherto have had in dealing with this crisis, has been the not unnatural difficulty of realizing what an infinitesimally small portion of the American people these office-seekers are, and how unimportant on the whole their claims and opinions are. When the rooms of the White House are packed with a few hundred of them, each telling of the awful consequences to the party of any mistake in the distribution of the spoils in his "deestreect," the President requires to be a man of strong nerves and vivid imagination to see beyond them the American people, toiling in field, and factory, and store, without any desire about offices except that they should be filled by competent men, and full of ridicule for the office-seeking trade and its troubles and disappointments. It is in fact only the Presidents who play the spoils game who need to treat the spoilsmen seriously. The latter cannot damage one who declares, in their own slang, that he is "out of it."

Great as is the rush for office, however, it is neither so great nor so eager as it was four years ago. If any one will take the trouble to turn back to the files of the daily newspapers for the four months of Garfield's Administration, he will find them filled with accounts of the doings of the crowds of office-seekers at Washington. He will read that they swarmed upon the President so persistently that he was unable to attend to his public duties, and that their constant appeals for "places" were seriously undermining his health; that, next to the President, Mr. Secretary Blaine was the greatest sufferer, because of his thousands of personal friends, all of whom had somehow come to understand that he was to

"give them something" when he came into power; that every member of the Cabinet was in a state of siege which made life for him a burden and the administration of the public business an impossibility. This condition of affairs was not limited by the first few weeks of Garfield's Administration, but grew worse and worse with each subsequent week, until it culminated in his murder by a disappointed office-seeker, whose weak head had been turned by the angry ravings of other disappointed office-seekers.

There is nothing so fierce as this struggle of 1881 in progress at Washington now. The office-seeker is there in force, and he is making a nuisance of himself as usual, but the President and the Secretary of State are not so badly persecuted as is the Postmaster-General. The solid South, which was expected to come to Washington in a body, is scarcely represented there at all. The chief rush is for the post-offices of the North and West, and this is likely to be over within a short time. The impression is getting abroad among all applicants for offices that the President "has gone back on them," and is going to keep his word about civil-service reform; that he is not in a hurry about making appointments, and that a week's sojourn in Washington may end in nothing but failure and the payment of a board bill. A struggle for office under these conditions is certain to have only one result—the gradual disappearance of the besiegers.

President Cleveland has only to be faithful to his professions in order to win. He has a great advantage over his predecessors in the shield which the Civil-Service Law gives him. So long as he stands inflexibly by that he is safe. No impartial observer, looking back now at Garfield's sad experience, can fail to see that every concession which he made to the office-seeking class added to his difficulties. Though there was no civil-service law in force when he came into office, he was a professed friend of civil-service reform, was pledged to carry it forward in his Administration, and had committed himself in his inaugural address in favor of a fixed tenure in office as a "protection against the waste of time and obstruction to the public business caused by the inordinate pressure for place." Yet his first important appointments were not such as to encourage civil-service reformers or to discourage the place-hunters. On March 23, while the pressure upon his Administration was as furious as it had been at the very outset of his term, he sent to the Senate a batch of fifteen important nominations, among which were the following: For Collector of the Port of New York, William H. Robertson; for Solicitor-General, William E. Chandler; for Commissioner of Indian Affairs, Thomas M. Nichol. In order to create a "place" for Mr. Robertson, General Merritt, whose term as Collector had not expired, was made Consul-General in London, and General Badeau, who was Consul-General in London, was made Chargé d'Affaires at Denmark. The whole country recognized in these appointments an abandonment of the civil-service-reform principle. One of them led to the most bitter factional quarrel in the history of the country, which did not end even in the death of the President himself. Another, that of Chandler, was rejected by the Senate. Their effect upon the office-seekers was unmistakable. They added to the heat of the struggle for place, and to the bitterness of the contending factions within the party itself. The appointment, about the same time, of Stanley Matthews to the Supreme Bench, after his appointment by President Hayes had been rejected, had a similar effect. Subsequently, also, a faithful and most efficient Commissioner of Pensions was removed to make a "place" for Colonel Dudley, who had been useful in "carrying Indiana"; and wholesale changes, based upon a similar recognition of value received, were made in the consular service. Every additional concession added fuel to the flame, and the host of office-seekers was almost as great three months after the inauguration as it was during the first month.

There is a lesson in this experience for President Cleveland and his advisers, and we are confident that it is scarcely necessary to call their attention to it. The short interviews which have been published with all the members of the Cabinet show them to be, without exception, cordially in sympathy with the President in his civil-service-reform attitude. Fortunately, we are in no doubt about his ability or his inclination to keep his pledges. His course as Mayor and Governor is a sufficient evidence of both. The hungry crowd in Washington are a very small part of the President's political party, and, as we have said, a still smaller part of the American people. They will find this out very soon and go home, for every slow-coming appointment will add, we are firmly convinced, to their disappointment.

THE NEW BI-METALLIC MOVEMENT.

THE recent stirrings of the bi-metallists in France and Germany have undoubtedly been prompted and pushed by Prince Bismarck. The success which has attended his reactionary policy in economical as well as political affairs has apparently emboldened him to take another step backward. That he has been a bi-metallist in principle from the beginning was made tolerably plain by the indiscretion of Mr. William D. Kelley, who published a private conversation which he had with Bismarck at Berlin on the subject in the summer of 1879. In this conversation the latter avowed himself a believer in the double standard, and indulged in some contemptuous remarks upon his own Finance Minister, which caused considerable irritation in official circles in Berlin. By way of appeasing this irritation and rebuking Mr. Kelley for his ill-timed zeal, Prince Bismarck refused to see the American bi-metallic Commissioner, Mr. George Walker, who had been sent abroad the same year by President Hayes to pave the way for a new International Monetary Conference; and when this Conference assembled two years later, the German delegates were instructed to say that they could not change their monetary system. None the less was it evident that Bismarck was personally a bi-metallist. The conversation with Kelley did take place. It was correctly reported. Its significance is only now becoming apparent. Bismarck is as much a reactionist in respect of money as he is in regard to corn-laws. The late movement for bi-metallism in the Reichstag was evidently inspired by the Chancellor, and, although decisively voted down, it will probably be heard of again. The project contemplated the coining of "full-valued silver money" under an international agreement. This would imply a silver dollar of about 490 grains, and a ratio of about 18½ to 1, in place of 412½ grains and a ratio of 16 to 1, and would of course not be acceptable to the Bland faction in this country, although it might serve as a step-ladder to bring them into political harmony with President Cleveland.

If the project of a new International Conference under Bismarckian auspices shall eventually ripen, the United States will, of course, take part in it; but antecedently to such participation Congress must pass a law authorizing the President to appoint Commissioners and appropriating money for the expense of the negotiation. The Finance Committee's bill which was pending in the Senate at the adjournment of the recent session contained a provision of this kind, accompanied by a condition that, in the event of failure to reach an international agreement by the 1st of August, 1886, the coinage of silver by the United States mint should definitively cease. The bill having expired, the subject cannot be resumed until the new Congress shall assemble, at which time there is good reason to believe that a majority of both houses will be in favor of suspending the coinage at once, and resuming, if at all, only after an international agreement shall have been reached.

The prospects of such an agreement are as dim and distant now as they ever were, notwithstanding Bismarck's adhesion to the principle of bi-metallism. The German Chancellor has been able to control European politics by virtue of the heaviest battalions. He has been able to enforce the protective policy by appealing to the selfishness of the land-owners. But it lies not in his power to control the nature of things, nor is it by any means evident that he can persuade the commercial classes of Germany to join in such a movement. Bi-metallism is monetary Quixotism. The Conferences of 1878 and 1881 demonstrated effectually that there was no place to begin free coinage on the ratio of 15½, since the silver of Asia would rush to Europe to be exchanged for gold. The next Conference, if it is held, will demonstrate the impossibility of agreement upon any other ratio. Nevertheless, if Germany shall see fit to call it, the fitting course for this country to pursue will be to suspend silver coinage before and not after the Conference meets, since if the ratio to be adopted is the market value of silver or any other ratio different from our own, it will be necessary to recoin all of our own dollars—an undertaking which will give full employment to our mints for many years to come.

ENGLAND: A POLITICAL CRISIS.

LONDON, February 21.

SINCE the days of the Indian mutiny in 1857, England has had no period of excitement and anxiety comparable to that of the last fortnight. The fall of Khartum, just at the moment when

the relief of its gallant defender seemed all but achieved, smote public opinion like a thunderbolt, scattering all our plans, revealing dangers hitherto unheeded, opening up a long vista of efforts and sacrifices. Nearly every following day has brought news of some fresh encounter or military movement, and although the behavior of both generals and soldiers has been all that could have been wished, the small number of our forces, and their positions dispersed along the Nile and in the desert, have caused lively apprehensions for their safety. The accounts of unexampled activity in the departments charged with military preparations, the departure of troops for the Red Sea, the rumors current as to the intentions of the Government and the designs of foreign Powers—above all, the arrival almost every hour of some fresh piece of intelligence from the seat of war, for which the newspapers issue a special edition, so that the streets echo all the afternoon and far into the night with the shrill cries of the news-venders—have brought England, and especially London, into a state of tension such as no one recollects. Single days of equal excitement there have been before, as when it was supposed, in 1878, that we were on the eve of a war with Russia, or on that memorable Sunday when the news of the Phœnix Park murders shocked all classes alike; but rarely or never so long a strain of eagerness and disquiet.

The first strong sentiment was, of course, of grief at the death of Gordon, which from the first was scarcely doubtful—a grief not unmingled with shame and self-reproach. His character had been so striking, his conduct so heroic, that the idea that too little should have been done for such a man was doubly painful. The next was that of anxiety as to the proper course to be taken in the changed position of affairs. As the expedition had been undertaken solely for the sake of rescuing General Gordon and his companions, his and their death seemed to leave it without any further purpose. The Government had all along declared in the strongest terms their objections to any permanent occupation of Khartum, or any other part of the interior of Sudan, and had notoriously abstained from making a railroad from Suakim to Berber last spring, after their battles with Osman Digna near the Red Sea coast, because they conceived that its construction would compel them to remain there and become responsible for the administration of the country. Their position even in Egypt proper is now apparently less assured than it then was, while the difficulty of reducing the Sudan to order is obviously far greater, because the Mahdi is flushed with victory and surrounded by larger forces. Why, then, it was asked, continue the war against him? Why attempt a task which was deliberately declined when it was easier a year ago?

On the other hand, the sense of grief at Gordon's death, the sense of self-reproach at the failure of our attempts to reach him, the apparent ignominy of turning round and marching back after having spent so much money and sacrificed so many lives in vain, urged some further action against those who had barred our path and killed Gordon. The mere impulse of revenge might have been resisted, because as soon as revenge was felt to be the motive, most consciences condemned it as unworthy or insufficient. But other reasons presented themselves. In the first place, it seemed improbable that our troops could be withdrawn without further fighting, and fighting of a serious nature. They are a long way up from the frontiers of Egypt, and, as the Nile is now falling rapidly, their return by boats will during the next few months be more difficult than their advance was. Possibly the only way of getting them out may be to march across the desert from Berber to Suakim; but Berber is held by the enemy, and would have to be taken in order to open this route. It is, moreover, all but certain that the Mahdi would move forward and attack the British troops on their retreat, while the mere fact that they were retreating would cause the tribes along the line of march to add their strength to his. As his claims are not limited to the Sudan, but to the leadership of Mohammedans generally, he may be expected to attack Egypt, and would have to be fought there if he is not fought sooner. These considerations, with the fear that our retirement would be taken all over the East, in Asia, as well as in Africa, to import our defeat and his victory, and thus give a shock to the security of British power both in Egypt and India, led a large part of the public, irrespective of party, to declare for a forward movement and the continuance of the war against the Mahdi. The Government, whether convinced by such reasonings, as may fairly be believed, or holding that the stream of popular sentiment in this direction ought not to be resisted, promptly announced their intention to attack the Mahdi, recapture Khartum, and break his power. They forthwith proceeded to give effect to this resolution by despatching to Suakim not only a strong force designed to move inland thence, but also by sending out the materials for the construction of a railway from that port to Berber. They have, however, so far, abstained from declaring whether they will ultimately hold Khartum and govern the Eastern Sudan or not, although indicating a disposition not to do so, but to revert, once the Mahdi's power has been broken, to their former policy of withdrawing to Egypt proper and the Red Sea coast.

Some more explicit declaration will doubtless have been made by them before these lines reach you. My present object is to indicate how opinion now stands. It is perplexed and divided to a degree rarely seen even in this country, where on questions of foreign policy it is usually as ill-informed and indefinite as it is clear and decided on domestic matters. Four views may be distinguished. There is, firstly, that of those who hold it our duty (and indeed a necessity for the safety of Egypt, the suppression of the slave-trade, and the vindication of our own strength) not only to retake Khartum, but to hold it, and to set up some stable government in the Sudan, placing garrisons in the more important posts. This is the view which finds favor with the Tory party and with a section of the Liberals, who ask what use there would be in going to Khartum if we are forthwith to abandon it. There is, secondly, the view, understood to be held by the Ministry, that although the Mahdi's power must be overthrown, and our armies kept in the country for ten or twelve months at least to effect that object, the Sudan ought to be subsequently evacuated. Then there is a third view, that the only objects we have to consider are the safe withdrawal of our troops and the protection of the Egyptian frontier, and that it is therefore desirable to avoid advancing against the Mahdi, unless military reasons should prove that only by attacking and defeating him can our retreat be secured. This view, which is pretty largely held among the Liberals, accentuates the importance of taking no step (such as the capture of Khartum or making of the railway to Berber) which can lead to ultimate annexation, and therefore disapproves the proposed action of the Government, while it recognizes the necessity of leaving to the generals on the spot a discretion as to the military movements necessary to facilitate withdrawal and protect Egypt. Lastly, there is the position of the more pronounced Radicals, which condemns altogether the prolongation of the war, and considers that there is nothing to be done but to evacuate the Sudan at the earliest possible moment. It is a view differing from that last described in insisting more strongly that immediate retirement is our main duty, and that military considerations must give way to this political necessity. That the line between these two views, and between them and that understood to be held by the Government, is somewhat ill-defined, shows how complicated and obscure the matter is, and explains how hard men find it to have a positive opinion. There can be little doubt that the general feeling among Ministerialists is to get rid of the war and get out of the Sudan; but people differ widely in their estimate of the extent to which military reasons should be allowed to determine the how and the when.

It need hardly be said that the effect of the catastrophe at Khartum, and the prospect of a long war with heavy expenditure, have gravely shaken the Ministry, to whose want of foresight, promptitude, and firmness many people on their own side of politics, as well as the whole Opposition, charge the misfortunes that have befallen. How far such blame is deserved I need not discuss; but it is noticeable that hardly any newspaper or public speaker does more in the way of defending the Cabinet than pointing out the extreme difficulty of the whole question, and the fact that the Opposition leaders, having indicated no counter policy during the last two years, would have succeeded no better, or perhaps, if their performances in 1876-80 are considered, even worse. It is commonly supposed that the Cabinet has been perplexed by internal differences of opinion; that Mr. Gladstone has been throughout opposed to any assumptions of responsibility in the Sudan, to the sending out of General Gordon, and to the despatch of the present expedition, while some of his colleagues have been able to guide the collective Ministerial policy to the steps actually taken, by insisting on the necessity of satisfying the popular demand for active measures.

Some day these things will become known; in the meantime the Government has been so seriously shaken that it would probably fall but for the peculiar circumstances in which Parliament finds itself. The Redistribution Bill has to be carried through this session, and a general election held within a few months, by next January at latest. Hence the Opposition have little wish to come into office until a general election shows whether they can hope to retain it; and the condition of domestic business in Parliament, as well as of foreign affairs, makes a change of Government undesirable and an immediate general election almost impossible. It is, therefore, understood that the Tory chiefs do not particularly wish to take office. But as they feel bound to condemn the conduct of the Government, Sir Stafford Northcote has given notice of a vote of censure, which will be forthwith debated in the House of Commons, and doubtless decided before this letter reaches you. As its terms indicate a policy opposed to that retirement from the Sudan which the Radicals advocate, it is now supposed in London that they will adhere to Mr. Gladstone, and that the resolution of censure will not be carried, although some of the usual supporters of the Ministry may indicate their displeasure by abstention from voting. Meantime, the anxiety regarding the forces in the field has hardly diminished, and the political situation at home may be at any moment changed by news from the front.

Y.

THE BRITISH WAR SPIRIT AND ITS EFFECTS UPON CHARACTER.

DUBLIN, February 14, 1885.

THE ever-extending influence of the British Empire and British prestige are as wonderful as they are undeniable, and are unequalled in the history

of the world. We may not all admire or be able to share in any feelings of pride regarding them, but we cannot shut our eyes to facts. The formation of the Roman Empire by the addition of territory after territory round a small centre was nothing compared with a remote island extending its dominion to all parts of the world—replacing the power of older rivals, more populous and in some respects stronger than herself. Not the least remarkable features of the phenomenon are the completeness and precision with which England accomplishes her annexations and the extensions of her power, no doubt mainly through the appliances which modern science has placed at her disposal. Such an empire could not be attained and sustained without high average brain power and individual reliability, essentially the outcome of Protestantism, which favors the development of individual self-reliance and character. While believing that, upon the whole, war and its attendant horrors are tending to decrease, I doubt whether of late years the war spirit has at all lessened in the minds of the British people. It may be interesting to surmise the causes.

Although Disraeli's proclamation of the Queen as Empress was smiled at by so many of her subjects, the idea of British empire has latterly taken possession of the public mind in Great Britain as it never did before. "The empire" is now spoken of where the term "kingdom," or kingdoms, was formerly used. And with the new conception has come a strengthened, at least more openly expressed, belief, that any means would be justifiable for the maintenance of the power and prestige of that empire. This spirit is patent not only among the "'Arrys" and "Jingoes," but among the highest and most cultivated class of spiritual teachers in literature and the pulpit. This spirit may yet lead to any depths of cruelty and despotism toward other peoples where it is not curbed—as it was in our late dealings with you and other nations by respect, not unmixed perhaps with fear, and in our dealings with the Boers by a common religion and historical sympathies. The teachings of the New Testament are gossamer threads with the British Lion when what he considers his rights or his honor is concerned.

In all these considerations I must except the feeling of three-fourths of the Irish people at home and abroad, who, not from a sense of right and wrong, or because they have a higher political conscience regarding the outside world than the masses of their fellow-subjects, but for reasons which need not be here enumerated, are always upon the side of any nation, tribe, or people with which "England" is at war.

The establishment and maintenance of the volunteers has done much to increase the war spirit. Amateurs naturally learn to appreciate professionals more highly, and to admire in them feats which it would be their own ambition to emulate. The laying open of the immense civil service of the empire to all classes has permeated all classes with a taste for the details of government and a consciousness of the sweets of office, such as never existed when the aristocracy had the good things to themselves. Then, again, the dissenters and radicals have been brought into sympathy with the Government by the entrance into the Cabinet of such men as John Bright, Chamberlain, and Sir Charles Dilke. People are likely to make allowance for, if not to endorse, the measures of their friends. Parnell's portrait is not likely to be found in an Irish cabin after one of the boys has passed an examination for the police. On the whole, we do not hear the same expression of consideration for heathen opponents that was customary even in the days of the Indian mutiny or the bombardment of Kagoshima. There is no whisper now of a desire to surrender Gibraltar to Spain, such as at one period was occasionally heard in certain doctrinal circles. It is to be doubted whether a protectorate over the Ionian Islands would now be abandoned. Formerly, tolerably steady and consistent protests on the side of humanity and peace might be expected at least from the Society of Friends. But now that Friends are swarming into the professions and into the magistracy, that they wear Lord Mayor's robes,and attend levees in the scarlet costumes of Deputy Lieutenants, with a sword by the side, the rank and file of this Society are as little inclined to "embarrass the Government" as other men.

Latterly the expenses of our little wars have been raised entirely by increases of a penny or a few pence in the income tax, which no one pays who has not an income of £150 a year, and upon which a considerable allowance is made to all whose incomes are under £400. The cost, therefore, does not apparently press upon the artisans or poorer classes, who in many districts are directly gainers by the expenditure on war material and preparations. One of the most striking phenomena of the empire is the maintenance of the army by voluntary enlistment. Foreign wars would wear a very different complexion if they had to be fought with men taken by force from the plough or the loom. The same spirit which induces a young man to enlist makes him long for the excitement and chances of war. As to the upper classes, the army is even still looked to as preeminently the field for the display of spirit and gallantry, with which they are so largely endowed, and as a provision for younger sons. "And then we must hope there will be some little war," was remarked to a friend of mine by a widowed mother, belonging to the aristocracy, when, turning over a photographic album, she showed the portraits of her son as a lad, as a public-school boy, and as a collegian, and told how he was about entering the army.

The illustrated papers and the letters of war correspondents must play no inconsiderable part in fostering a warlike spirit and the idea of empire. Formerly war seemed in the main distant and vague. Money and men had to be sent out, and in return after long weeks or months came dry despatches and convoys of wounded. Now it is graphically and freshly brought before us, day by day, and hour by hour, in all its details, by facile pencils and brilliant writing. What is the payment of a few pounds of income tax to the consciousness of fellowship with such glorious doings! The thought of those few we have known who were struck down in a heroic death is soon forgotten as our hearts swell with exultation at vivid portrayal of the embarkation and the voyage, the landing, the march, and camp life in all its phases; the defence against innumerable odds; the hecatombs of savage dead who have rushed upon our bayonets and been sacrificed to the deadly fire of Remingtons and Gatling guns. The cartoons are large enough now to show us the glare in the eye of our townsman or schoolmate (in the inevitable white helmet) as he gives the fatal thrust, and the death horror of the naked savage receiving it, who had not the wisdom to gauge the power and acknowledge the manifest destiny of our empire and our race. These illustrated papers must have a powerful effect, especially upon children. For the very few who shrink more and more of late years from opening them—and there are such—thousands are attracted to them by the manner in which they minister to their pride, and the love of the horrible, not unmixed with that interest which few can avoid taking in the portrayal of the heroic endurance and the indomitable pluck which high education, and breeding, and civilization appear to induce and favor to a remarkable degree.

It is interesting to consider the differences of character that cannot but ultimately be evolved and accentuated between the British and American people in consequence of their different foreign relations. There is no class here that is not brought into sympathy with either the military or the civil services. The Mediterranean is always alive with steamers conveying backward and forward armies of military or civil servants and their families. With whatever feeling they first leave home, they return in a few years saturated with ideas of domination and superiority, not unmixed perhaps with a profound belief in their duties for good to the subject races with whom they are brought in contact. The thought of domination and superiority is, however, uppermost. Men retired from active service, whether by Highland lough or in the fashionable residence-towns in Great Britain (comparatively few select Ireland as their residences), give the tone to whole classes of society. Their ease of life, attained after comparatively a few years' service, is a standing proof of the advantages of foreign empire. And the contemptuous attitude of mind to which most of them attain toward the peoples over whom they have ruled, is easily translated into the same feelings toward all but the dominant class with which they have learned to mix.

In America, now that slavery is dead, you seem to have no influences tending in these directions. The struggle of life with you lies among yourselves, with your equals, or abroad mainly with those whom you must win, not coerce. You have developed as high a culture as ours; you have surpassed us in many of the arts of life; you will soon be our equals in the higher arts. Already it appears to me that Americans, male and female, of ordinary culture and education, are a higher, a more all-round, human type than their British brothers and sisters in a corresponding position. Your equal abilities and greater opportunities (Protestants as you will ever be in the main) cannot but eventually assert themselves in some remarkable manner, as abilities and opportunities have asserted themselves in the case of the British people in the capacity for foreign conquest. What your development may be can scarcely even be surmised until you throw off the shackles of protection, and until the field for the display of your energies, in the agricultural development of your continent, is much more circumscribed than it is at present.

All I have written is with the full consciousness of the many noble protests against a pursuance of the present bloody work in Egypt, by Mr. Morley, Mr. Courtney, and the provincial press here and there. There are as yet no signs that the mind of the British public generally is working toward a higher state of feeling that would prevent a recurrence of such a succession of warlike complications as we have had of late years.

D. B.

RETROSPECTIVE EXHIBITION OF THE ROYAL ACADEMY.

London, February.

The English school is very well represented in this exhibition by a few very choice Gainsboroughs (which ought to have been at the Grosvenor in lieu of much of the rubbish the directors had to be content with). The portrait of Lepell, Lady Mulgrave — a dainty, beautiful lady, with the usual smile which Gainsborough reserved for fair women—is very delicate and subtle in color, painted in the slight and true method of his most individual period. "Squire Hilliard and his Wife," a handsome couple,Gainsborough represents walking arm in arm in a park, the lady leading a white Pomeranian dog, which continues the line of toned white of her carefully (for Gainsborough) painted draperies. "Mrs. Hibbert" is also one of Gainsborough's

very best female portraits, and of a very lovely woman. The arrangement of this seated three-quarter figure is very graceful, the line of floating scarf and crossed arms being carefully studied and the values well balanced. The large black hat, with yellow ribbons and black feathers, is excellently well painted. The last two examples being not far from the Vandyke portraits, our eye wanders from Gainsborough to see how he emulated his great ideal, and we must confess that he seems weak and unsubstantial, very inapt at drawing hands, and generally patchy in execution.

Of Sir Joshua there is the lovely child, "Penelope Boothby," painted in his happiest vein. The fair soft hair, surmounted by the large white mob cap; the surprised gray eyes, so kittenlike and sweet; the mobile mouth and the childlike pose—are all admirably painted, with so much softness and rich cool color; while the dress and arrangement are very happy. Another child's portrait, that of Lord Burghersh, represents a happy momentary action with grace: the grays and whites of the boy's dress harmonize most pleasantly with the subdued brownish-green park-like background. Angelica Kauffman's portrait, by Sir Joshua, is very sweet in color and interesting in expression, but is slighter than the above-named examples. There are many more of his that might be named, but excepting a sketch of himself in the attitude of a deaf person listening, they are for the most part painted to order.

Hogarth has a very good life-size portrait of James Quin, the actor, painted with great facility and warm, true color, and the famous "Southwark Fair," full of incident and variety, well known from the print. The painting is as good as usual with Hogarth; the bits of landscape seen through the openings in the buildings are full of aerial quality; the groups and incidents are well subordinated, so that the detail and individual character, while well defined, are not obtrusive.

The two Turner landscapes in the long gallery are both eminently representative of different epochs of his painting. "Old London Bridge" is in the early, quiet manner. It represents fishing boats arriving at daybreak; some have already landed their burden, others are just coming in; the sky is full of light. But far more interesting in composition and subject is the "Burning of the Houses of Parliament"—a masterpiece of brilliant effect and harmonious color. The foreground to the right is cool and night-like in color, the water and sky dark blue, the bridge seen in moonlight, with black boats beneath crowded with people; in the distance the blazing mass of the Houses of Parliament. The moving mass of flames is so exceedingly fire-like in quality as to illumine also with a lurid light the left water foreground. This is a noble Turner, as is also "Saltash, Devon," in which some picturesque buildings by the riverside are illuminated by a warm evening light, with a luminous silvery sky above.

The Vandyke portrait of Charles I. is a very imposing picture—rather conventional, it would seem, in its arrangement of curtain and archway and coat-of-arms resting beside it, facing the spectator, were it not painted with such dash and ease that the head and figure of the King dominate the immense canvas. Not far from this is a most interesting portrait of the ill-fated Earl of Strafford. The head is fine and gentle, rather sad in expression. The whole picture is rich and sombre, the white dog's head on which Strafford's right hand is resting, and the toned white gaiters, being the only lights in it. There is also a fine Vandyke "Portrait of the Duchess of Buckingham and her three children," rather conventional in treatment. The Duchess is affectedly pressing to her breast the miniature of her dead husband, whose large oval portrait is above her.

A "Portrait of a Genoese Noble," Spanish School, is a very remarkable work. The figure and costume and hands, as also the clever arrangement of lines of the background and the general color, recall Velasquez. The excellent modelling, too, reminds us of some of his best portraits, but the head is less good than the rest of the picture—black in the shadows and unpleasantly red. The man is standing in the angle of a stone staircase, and has just turned to descend another flight, so that the lines of the staircase all point toward him from above. The Duke of Alva, by Antonio More, is splendid, though rather hard throughout. The face is like Holbein; the rest is most elaborate in detail, the inlaid armor being especially fine.

Mabuse's "Adoration of the Magi" is one of the remarkable pictures of the exhibition. The general effect is brilliant, hard, and wanting both in grace of line and beauty of expression, yet the color is clear and the draperies and accessories perfect as detail. Especially noteworthy as painting are the robes of the kneeling King, rich, deep-red velvet, lined with fur, executed in a manner worthy of Memling. Another beautiful piece of color is a woman's figure, to the extreme left, leaning out of a window in the red brick building, the blue of the figure harmonizing with the red in shadow. The whole picture is curiously balanced in respect to color relation between the two sides. The ruins in which the figures are grouped are naïvely rendered, and it is quite evident that they were painted from a new building of red brick and marble in which pieces have been damaged for the express benefit of the painter. In the pavement of the foreground the pieces can easily be detected, as they lie in would-be confusion, that fit into the damaged parts. The distant towers of Bethlehem are pale-blue as usual in distances of the Dutch school; to the extreme right, the green hills, less distant, are very beautiful in color. The only graceful piece of composition is the wreath of angels coming from behind the ruins, out to the right and circling round to the front. Each figure and object is painted quite independently of the rest, and there is nothing of the loss of outline and merging of one object in another, characteristic of the Italian masters. There is none of that devotional feeling given even to the ugliest faces by some of the Dutch painters; in fact, though there is a great deal of character, there is an utter want of expression of any kind, but a wonderful individuality and lifelike portraiture.

There are three large pictures by Rubens, from the Marlborough collection, which were offered to the nation, but refused on account of the exorbitant price asked. "Venus and Adonis," with the usual superabundance of flesh in the woman, is in no way remarkable. The pendant is very uninteresting in composition, and not so fine in flesh color as many of the Rubenses in the Louvre. The portrait which hangs between the foregoing represents a lady of queenly bearing and in regal robes of black, with high lace collar and open square bodice, who sits almost facing us. Her exquisitely beautiful hands are shown to advantage as she spreads them on her knee, one resting on a brown muff. Her skin is as fair as that of a young child. The features are very delicate and youthful, the hair fair, curly, and short, the head beautifully set on the shoulders and wonderfully well painted in relief against the white lace collar. The hands are long and delicate, with tapering fingers slightly curled at the tips.

Van Eyck's "Marriage of the Virgin" is a quaint composition. In the foreground is the Virgin to the right, accompanied by her mother and a group of virgins, one of whom is supported by an amorous youth; to the left, St. Joseph, decidedly Jewish and right well satisfied, in contrast with the group of disappointed lovers who stand behind him in various attitudes suggestive of their feelings. One turns away sadly, two look envious and almost ready to quarrel; another stands jauntily throwing back his head, as who should say, "I am sure *I* don't care!" while the priest in the centre joins the hands of the fortunate pair. This scene is cut off from the others which make up this complex composition by a low wall.

A "Virgin and Child," by Titian, is most exquisite in color, warm and rich in the manner of Palma. The Virgin is dark-haired, with sweet peaceful face, and red dress very fine in color, its folds falling gracefully about the seated figure. The background is the most beautiful piece of landscape painting in the exhibition after Turner's. The distant hills of Pieve di Cadore recall the Louvre Titian of the same size. In Veronese's "Punishment of Actæon" there is a lovely effect of color. Over all is a gray cloudy sky of the most beautiful pearly tints, rather wind-blown and streaky. In the foreground is a pool of still water, in which Artemis and two nymphs are bathing. The figures are heavy and short-limbed, but the color and quality of the flesh are exquisite. One figure stands in the full light with upraised arms, and is so white and luminous in the dark water that she seems to throw a reflection on the back of the other figure, which, grasping a red garment, is crouching in the shadow of the overhanging bank to the left. Here is seated Actæon, a little back amid the tree trunks, putting one hand in consternation to his former face, his metamorphosis having already begun. The third figure is half on a lower ledge of the bank to the extreme left, and is pointing with a bow to Actæon and inciting two dogs, who stand back bewildered, to attack their former master.

Correspondence.

CONGRESSIONAL PARALYSIS.

To the Editor of The Nation:

Sir: May I offer to "S. M. C." congratulation upon his conversion, and thanks for his manly acknowledgment of it? There is still apparent, however, something of the timidity of one who sees before him a choice between two evils. He says that if the Cabinet officers were admitted to Congress, that body "should place the appointment of all Federal officials not named in the Constitution in the courts, or leave it to the President or the heads of departments, with such clear and specific civil-service rules as would strip these appointments of any collusive or corrupting factorship in any possible relation between Congress and the Administration. This need would also be avoided if these offices were filled by election." As to the latter point, I have no hesitation in asserting that if ever the executive offices below the Presidency are made elective by popular vote (and a Constitutional amendment to this effect would yet be much more easily carried than one admitting the Cabinet officers to Congress), it would sound the death-knell of the Republic. It is that very thing which has brought the science of administration in our States and cities to the brink of ruin, and the only hope of recovery is in the example of sound principle in the Federal Government through the appointment of all officials by one head. If, instead of local reform, we are to extend the pernicious principle to the national administration, then there is before us only the broad road to anarchy and ultimate military despotism.

So far from increased danger of collusion be-

tween the Executive and Congress, the public responsibility of the Cabinet is just the thing to prevent that danger. It is precisely this element which has changed the British Parliament from the corruption of the last century to its present purity, and which, by effecting the transfer of election contests to the courts, promises before many years to make the elections equally pure; which carried civil-service reform and has kept it effective for thirty years, whereas it is to be feared that ours stands at the mercy of that lobby intrigue which defeats every other measure of public interest.

"S. M. C." hints at a Constitutional amendment to effect a change in the position of the Cabinet. It cannot be too often repeated, that the attempt would be so utterly hopeless as to be equivalent to relegating the whole subject to the Greek Kalends. The entering wedge must be a simple vote of the House of Representatives, forced upon that body by the demand of the country, for the expression of which there is needed only the call of a leader, the "Suivez-moi" of Arcola.

"S. M. C." ascribes his change of heart to visits to Washington, and this is the method by which I arrived at the same conclusion fifteen years ago. But the state of things now is such that this seems no longer necessary. Not to mention all the sins of omission and commission—bankruptcy law, silver coinage, the tariff, railway land-grant titles, the condition of the Indians, etc.—the last week of the session furnishes reason enough for demanding a change. The spectacle of the Speaker deliberately using his official position to postpone action on the appropriation bills till the last minute, while expressing a quiet confidence that there would be no extra session, and then sending them to the Senate, the only place where there is any discussion, so late as to render discussion impossible, and to force a settlement in secret conference committees—it seems as if this was enough to convince anybody who was not wilfully blind of the necessity of some strong and responsible outside control.

G. B.

Boston, March 6, 1885.

TRANSLATIONS AND MISTRANSLATIONS.

To the Editor of The Nation:

Sir: The discussion by your correspondents of the subject of translations has naturally interested me, and has suggested the making of a small contribution to it, which, however, I do not make for the value of the curious instance given, but in order to add a few words on the general subject.

I had occasion about two years since to look at Bohn's translation of Schiller's 'Thirty Years' War,' made by Rev. Mr. Morrison. On page 67, I found the sentence: "Could a mind so weak as that of Ferdinand," etc. The context made it so clear to me that the passage was meant for the Palsgrave *Frederic* instead of Ferdinand, that I turned to the original German and found that *neither* name was in the sentence, a pronoun only being used instead. The translator had evidently thought that he ought to relieve the reader of all doubt, and so supplied, as he thought, the missing name. We naturally wonder how such a blunder could have been made, and not less how it could have remained for about forty years. So it is.

The incident affected me singularly. Though the translation appears to be a good one, I have not since looked at it until to-day. I am now led, by way of supplementing a suggestion of Mr. Bourne in the *Nation* (1026), to make the following remarks:

1. People generally read either the original or a translation, or, if they read both, seldom compare them, unless with a special purpose. If the translation read well, they deem it well made; the rule is safe enough in ordinary use.

2. The average translator, not to say the best one, comes nearer the sense of his original than does the most careful reader to that of a work in his mother tongue. The loss, therefore, which a book ordinarily sustains in passing into a new language is much less than the depreciatory tone in which translations are generally referred to, would indicate. These references are often the fruit of a desire to be deemed familiar with other languages.

3. There are many persons who could produce a fair original article in their own language, to *one* who could make a good translation from a foreign tongue which he understood. The severest critiques of translations are by those who never made one, and could not if they should attempt it.

Finally, the most common objection to a translation—it is very often just—is, that it transfers too much of the style of the original. But some elements of the style of the original must be retained. The translator can properly do but two things, viz.: choose the best words, and form with them the best sentences, in the language into which he translates. The facts, thoughts, arguments, and the collocation of the whole, are supplied to him. If Washington Irving had translated Schiller's 'Thirty Years' War,' he would perhaps have been criticised for not reproducing the racy humor of the 'Sketch-Book.' The supplied matter is refractory. A book is not worth translating if it must in this process be made what it is not in the original.

A. N.

Brooklyn, February 28, 1885.

[None of our correspondents has touched upon the mischief which mistranslations may work when made the basis of further argument or speculation, and especially of controversy. A recent experience has taught us, for example, that no one ought to cite Von Holst's 'Constitutional History of the United States' in implicit reliance on the American translation.—Ed. Nation.]

To the Editor of The Nation:

Sir: The mistranslations given in the last number of the *Nation* brought to my mind some ingenious mistakes which I noted while correcting the French paper set for the Harvard admission examinations last June. The 500 or more papers which were written contained every variety of mistake, but there were two sentences which were the special stumbling-ground. "La pauvre femme, *sentant la raison de son mari*, ne bougea et se contenta *d'écarter un peu son rideau* pour voir sortir," etc., gave rise to "fearing for the reason of her husband," and "appreciating the reason of his marriage," and the words "écarter un peu son rideau" gave large opportunities to the guessers. Among the many mistranslations of these five words were the following: "She disobeyed his command," "she softened his rigor," "she shunned his bedside," "she opened her blinds," "she raised her head," "she polished her glasses" (common), "she listened to his reasons," "she lifted her eyelids," "she soothed her fears," "she checked her curiosity," "she moved her chair," "she joined in his laugh" (very common), "she broke her usual custom," "she stretched her neck out of the window," "she took up a small candle," "she threw on a light shawl," "she roughened her wrinkles," "she listened to her bird," "she kindled a fire in the brazier."

The second sentence was as follows: "Le pauvre garçon . . . se tournait et retournait sur son coussin, *envoyant de gros soupirs et gémissant sans pouvoir se réveiller*." Naturally, in several instances, the poor boy was "reflecting about his cousin," but the prize for ingenuity goes to this translation of the italicized words: "dreaming of great suppers, and groaning without being able to relieve himself."—Yours very truly,

F. A.

March 3, 1885.

To the Editor of The Nation:

Sir: Your correspondent, Mr. Bourne, mentions several odd mistakes made by translators of books written originally in the French language. They are strange and grotesque enough; but they could be more than matched by examples taken from French translations of English books. The most amusing instance of a late date that I recall is to be found in *Le Livre*, vol. v, p. 619. One John Hollingshead having printed a book in London about theatres, under the title 'Foot Lights,' the editor of *Le Livre* found that title too much for him. He therefore ingeniously transformed it into 'Foot Tights,' which he, with equal ingenuity, translated '*Pantalons à Pieds!*'

This exquisite blunder is the more remarkable from the fact that *Le Livre* professes to have a corps of editors capable of criticising all literary productions in all the languages of Europe.—Respectfully,

R.

Little Rock, Ark., March 1, 1885.

THE DEMOCRATS ON THEIR GOOD BEHAVIOR.

To the Editor of The Nation:

Sir: Your implied prediction, in No. 1026, that if the Democrats do not make hogs of themselves they will enjoy a prolonged hold of power, will strike most Republicans, and many Mugwumps even, as somewhat rash. I do not think it so, and I wish to point out one strong reason why it should not seem so. Any one who has watched the last three Presidential campaigns in the North, knows that there is a large body of Republican voters whose strongest and almost sole argument for keeping that party in power is the necessity of preserving the results of the war. If you present to them any argument on matters of Government policy, or point out to them any dangers threatening our future, or show them ever so strong reasons for a change of the party in control of the Government, they answer: "O yes, that may all be so; but if the Democrats get into power the results of the war will be endangered, and that would be the worst evil that could happen. You cannot show us any danger that we had not rather risk than the danger of having the war undone." The result is, that no argument is possible. The danger which they imagine, overshadows all others, and they cannot be persuaded that it does not exist. It is a real fear with them; and however sorry one may feel for them, one cannot blame them under the circumstances for voting as they do, or doubt their patriotism.

Thousands of votes were cast for Blaine last fall on this ground alone. Any one's observation will show that men of education, men who are open to conviction on most subjects, were influenced by this more than by any other consideration. Now four years of wise and careful Democratic administration will accomplish in removing this prejudice what whole libraries of argument would fail to do. When it is seen that the results of the war are as safe in Democratic as in Republican hands, this fear will vanish, and with its disappearance a wide door will be opened to Democratic proselyting, which has been obstinately closed till now. Remembering, in connection with this, the closeness of the struggle at the last two Republican victories, one may reason-

ably expect a continuance in power of the Democratic party if it behaves itself well during the next four years.

Not the least beneficial result of the defeat of Blaine will be that arguments on questions of national policy can now be used with this class of Republicans with some hope of influencing their action. It may be hoped, also, that a good administration will furnish the party with a consistent and firm policy on important national questions. One main reason why thoughtful men have hesitated to work for Democratic success has been because the party has been so vacillating and untrustworthy on every great issue. Nobody could tell where to find it or what to expect of it. Perhaps this is a natural result of being so long deprived of power and responsibility, but it has been a hindrance to its success which we may hope to see removed.

Altogether, President Cleveland has an opportunity to perform a great service to his party, and through it to the nation, such as falls to the lot of few men; and everything seems to indicate that he is the man for the opportunity.

PRESTON.

HISTORY AND THE SUDAN.

TO THE EDITOR OF THE NATION:

SIR: In Mr. G. Stanley Hall's Introduction to the recently published volume on 'Methods of Teaching History' there is this important sentence: "Others, who have realized the pregnant sense in which 'history is past politics,' forget the other sense in which the history of the world has been at nearly every point very different from the history of the conscious purposes of the leaders in its movements, and that 'while men thought they were doing this thing by these means, it was later seen that they were really doing quite other things by very different means.'" This view finds an interesting confirmation and amplification in a passage quoted by Grimm, the great critic of the eighteenth century, from the famous Cardinal Alberoni, the powerful minister of Philip V. (I quote from a translation): "The spirit of system," the Cardinal says, "is not less dangerous in politics than in philosophy. There is a good deal of temerity in seeking the causes of the grandeur and decline of the Romans in the constitution of their state. Events in which human prudence had the least possible share are epochs rather than consequences; it belongs to history alone to detail the causes of the grandeur and fall of states." Grimm himself adds to this: "We must observe here, after the Cardinal, that M. de Montesquieu has fallen into this error, in his 'Spirit of the Laws,' with respect to the English Constitution. He seeks, and has the secret of always finding, in that Constitution the causes of events. If states were arranged, like a system of philosophy, on paper, this procedure might answer very well; but we see every day that the greatest events . . . are only the work of chance, and of a thousand arbitrary circumstances."

We do, indeed, see every day that the greatest events in the history of England at this moment are the work of a thousand arbitrary circumstances, and that her possible misfortunes, reverses, dangers, embarrassments, the "decline" (in a word) of England—which God forefend!—lies beyond the range of perceptible laws. * *

Notes.

THE CENTURY COMPANY announce, as in course of publication for the coming autumn, 'William Lloyd Garrison: The Story of his Life, told by his Children.' This work will make two volumes octavo, and will bring the narrative down to the close of the year 1840. It has been largely prepared from inedited sources, and will abound in references to authorities. The illustrations will consist chiefly of portraits of Mr. Garrison and his nearest associates. Unavoidably, the work will partake of the nature of a history of the anti-slavery cause in the United States. The same house will simultaneously bring out 'The Life and Times of Samuel Bowles,' also in two volumes, by Mr. George S. Merriam, who, says the Springfield *Republican*, writes "with entire independence, from the standpoint of his personal opinions."

We understand that the sale in England of the great 'Dictionary of National Biography,' edited by Mr. Leslie Stephen, has exceeded the publishers' expectations. We have looked through the only volume which has thus far appeared, to note the number of articles having a special interest for Americans. Among the founders of New England we find the Rev. John Allen, of Dedham, Mass.; in the middle Colonial period, General Amherst, the captor of Louisburg and Governor of Virginia; in the Provincial, Sir Edmund Andros; in the Revolutionary, General Stirling (William Alexander), and Major André. Coming down to our own time, we mention Sarah Flower Adams, whose hymn "Nearer to Thee" perhaps obtained its earliest and widest recognition in this country; Lucy Aikin, the correspondent of Dr. Channing; Edward Strutt Abdy, author, fifty years ago, of a valuable 'Journal of a Residence and Tour in the United States'; and Professor Anderson, the "Wizard of the North." We have been struck anew with the general readableness of the sketches in this dictionary.

Among the latest announcements of Macmillan & Co. are an 'Introduction to the Study of the Law of the Constitution,' by Prof. A. V. Dicey, of All Souls, Oxford; and 'Principles of Economics' (a fragment), by the late W. Stanley Jevons.

J. B. Lippincott & Co. will be the authorized agents for the United States of the Revised Version of the Bible to be published in May. The same firm announce 'Lessons in Hygiene,' by Prof. John C. Cutter; and 'The Nature of the Mind and Human Automatism,' by Dr. Morton Prince.

Scribner & Welford are the American publishers of the new editions of Coleridge's 'Table-Talk,' Buchanan's 'Dictionary of Science,' and Bohn's 'Dictionary of Poetical Quotations,' mentioned in our last issue, as well as of volume vi (appendix) of Vasari's 'Lives,' previously noticed (*Nation*, No. 1025).

D. Appleton & Co. will at once begin to publish by arrangement, in six monthly parts, a new narrative poem, by Owen Meredith (Lord Lytton), entitled 'Glenaverie; or, The Metamorphosis.'

A new edition of Peter Parley's 'The Animal Kingdom Illustrated,' also known as 'Johnson's Natural History,' has been prepared by Prof. Alexander Winchell, of the University of Michigan. A novel feature of this work, which is in two large volumes, royal octavo, will be a "symposium"—Prof. E. L. Youmans expounding and defending, and President Seelye combating, the evolution theory. The publishers are A. J. Johnson & Co.

'The Structure of English Prose, a Manual of Composition and Rhetoric,' by Prof. John G. R. McElroy, of the University of Pennsylvania, is in the press of A. C. Armstrong & Co.

The special correspondent of the *Photographic Times* at New Orleans gives an interesting account, in the issue for February 27, of the experiments made by Surgeon John S. Billings, Curator of the Army Medical Museum, in procuring composite photographs of crania, in the manner first indicated by Mr. Francis Galton. In time the types thus obtained from various groups of primitive races will afford a most interesting comparison.

Science for February 27 has some noticeable articles on the results of the Greely expedition, accompanied by a map in which a curious discovery concerning the width of Grinnell Land is shown by the unexpected direction given to its western coast.

The *English Illustrated Magazine* for March leads off with a long extract from the forthcoming book of Princes Edward and George of Wales on their voyage round the world, which will certainly induce no one who is not in the clouds in the presence of royalty and its progeny, to read the book either for its very commonplace literature or its less than commonplace illustrations.

L'Art comes from the same publishers (Macmillan) to show in its January and February numbers how such things may be done with credit. Besides the etchings (of which one from the Velasquez portrait of Pope Innocent X. is worth the price of the three numbers), there is a surprising copiousness of spirited process illustrations, showing how, in the hands of a good artist, a process block is better than a woodcut with poor art. A review of Perrot's book on ancient art contains, apropos of the section on Cyprus, some grave allegations which ought to interest the authorities of the Metropolitan Museum. The *Courrier de l'Art*, an illustrated weekly chronicle of the studios, etc., of Paris, the hub of the artistic world without denial, accompanies *L'Art* as usual.

We receive from the compiler and publisher, Mr. Thomas G. Thrum, of Honolulu, the *Hawaiian Almanac and Annual* for 1885, which contains a great deal of statistical information concerning the Sandwich Islands. The past year there was not very prosperous commercially, though the weather was exceptionally favorable for the planter. Japanese immigration is about to be attempted, thus deepening the interesting race mixture of which this archipelago is the scene. The Honolulu Library and Reading-Room Association took possession of its commodious new building. The importation of paper is on the increase, and Mr. Thrum thinks it high time that a paper-mill were established, there being an endless variety of materials for making the stock.

S. M. Pettengill & Co. send us the tenth annual issue of Street & Co.'s 'Indian and Colonial Mercantile Directory,' a work steadily growing in bulk, and of universal utility for those engaged in foreign commerce, whether Englishmen or Americans. A directory of the United Kingdom is appended. Numerous maps are interspersed with the text, and, so far as we can judge, nothing seems to be wanting that could subserve the end of this publication. The following titles under Brazil will give an idea of the scheme: general view of geography, natural productions and population; trade returns; a list of principal towns; principal products; books of reference; steam communication; coins, weights, and measures; customs tariff, in full; the chief cities in regular order, with ample statistical details and merchants' directory.

Two recent French announcements are 'L'Expédition du *Rodgers* à la recherche de la *Jeannette*, par William H. Gilder,' translated into French by Capt. J. West; and 'Jack et Jane, adaptation d'après L. M. Alcott, par Stahl et Lermont.' This adaptation of 'Jack and Jill' is illustrated. M. Stahl had already adapted 'Little Women' as 'Les Quatre Filles du Docteur Marsch' (*sic*), now in its second edition.

Mr. Bret Harte's new story, 'A Ship of '49,' which was published in a syndicate of American

papers, is now appearing in the *English Illustrated Magazine*.

The English magazines and reviews continue to give abundant space to theatrical topics. Mr. Henry Irving has contributed to the *Nineteenth Century* a brief note on "The American Audience." In the same review Mr. William Archer, author of an incisive criticism of Mr. Irving, has an admirable essay on "The Duty of Dramatic Critics." In *Longman's* for March there is a rough and broad sketch of Gustavus V. Brooke, not always in the best of taste, by Mr. John Coleman, the writer of two papers on Charles Reade in *Lippincott's*.

Taking time by the forelock, the managers of the Paris Exhibition of 1889 have begun to publish a folio *Moniteur de l'Exposition* (New York: F. W. Christern). Portraits of M. Rouvier, Minister of Commerce, and M. Antonin Proust, head of the Exposition Committee, adorn the first number. Besides official information, the paper contains a certain amount of light miscellaneous reading.

MM. Bréal and Bailly announce that they will presently publish a 'Dictionnaire Étymologique Latin,' in which they have taken especial pains to trace the history of words, and to arrange the series of meanings in their true order. Merely to give the derivation of a word would be like giving in a biographical dictionary only the names of the subjects and of their fathers. MM. Bréal and Bailly try to show, wherever it is possible, to what side of the life of the Roman people, to what part of the ancient culture each word belonged, and proclaim that what has improperly been called the life of the language is in reality the life of the nation imprinted upon the language—a remark that reminds one of the attempts to construct the life of our Aryan ancestors from the language of their descendants.

The discovery of terracotta figurines in the necropolis of Myrina resembling those of Tanagra has led to a little controversy in regard to their character. M. E. Pottier, in a thesis published more than a year ago, maintained that the statuettes were originally made without any definite purpose, and were used either as gifts to friends, or as offerings to domestic or to public divinities, or to the manes of the dead. Their character at once shows that they were not made with any exclusive religious purpose. M. J. Martha now insists that they were manufactured without any religious purpose at all, and are found in tombs simply because they were very convenient mementoes of the dead to put there. Originally it was the custom in Asia Minor, as in other barbarous countries, to bury with the departed chief all that belonged to him—captives, slaves, horse, arms, jewels. In time the custom became at first less cruel, and then less expensive. Still, some memento was to be buried with the head of the family, and these little statues were a convenient substitute for the slaves and animals of the earlier days. The difference between the two theories is not profound, and it is not easy to see how it can be decided.

—Mr. Charles Bray's autobiography, 'Phases of Opinion and Experience during a Long Life' (London: Longmans), comes with exceeding opportuneness so soon after the publication of George Eliot's Life, and affords a most valuable and delightful addition to our knowledge of her. The little book fills out the picture her letters had already more than outlined, of the life at Rosehill and of the master—a man of determined persistence in individual and often unpopular opinions, but always of most bright and loving spirit. The first mention of George Eliot is upon that day of which she herself wrote: "I have seen Emerson—the first *man* I have ever seen." Mr. Bray writes: "We should have liked to have seen more of Emerson, but some Stratford friends came over and impressed on him that he was bound to pay homage at Shakspere's tomb, and accordingly carried us all off, Miss Evans included, to their home near that church on the Avon." Mr. Bray continues:

"I consider my intimate friendship of nine years with her among the bright spots of my life. . . . My sister, who lived next door to her (Coventry, 1841), brought her to call upon us one morning, thinking, among other natural reasons for introducing her, that the influence of this superior young lady of Evangelical principles might be beneficial to our heretical minds. . . . I can well recollect her modest demeanor as she sat down by the window, and I had a sort of surprised feeling, when she first spoke, at the measured, highly cultivated form of expression, so different from the usual tone of young persons from the country. We became friends at once. . . . I consider her the most delightful companion I have ever known; she knew everything. She had little self-assertion; her aim was always to show her friends off to the best advantage—not herself. . . . There were two sides; hers was the temperament of genius which has always its sunny and shady side. She was frequently very depressed—and often very provoking, as much so as she could be agreeable—and we had violent quarrels; but the next day they were quite forgotten. Of course we went over all subjects in heaven and earth. . . . I may claim to have laid down the basis of that philosophy which she afterwards retained. . . . George Combe, on first seeing a cast of her head, took it for a man's."

— Professor J. B. Thayer, of the Harvard Law School, has published an interesting "memorandum" on the "Legal effect of opinions given by judges to the Executive and the Legislature under certain American constitutions." The clause giving authority to call for judicial opinions out of court is found only in a very few constitutions. In Massachusetts it occurs in this form: "Each branch of the Legislature, as well as the Governor and Council, shall have authority to require the opinions of the justices of the Supreme Judicial Court upon important questions of law, and upon solemn occasions." It is the Massachusetts clause which has been copied into the constitutions of the other States. It appears that it originally came from the usage of the English Constitution by which the King, as well as the House of Lords, had the right to demand the opinions of the twelve judges of England. The practice, so far as the Crown is concerned, long since fell into disuse, but it is believed that the House of Lords keeps it alive. In England it is well settled that answers of the judges to the Lords have no binding force, and are merely expression of opinions of high authority, though few people who discuss the well-known answers relating to insanity in McNaghton's case (10 Cl. and Fin., 200) seem to remember this. To quote Professor Thayer:

"Here not only was there no litigated question before the Lords, but not even any pending legislative question. The Lords, in the course of their debates, having fallen into a discussion about a case recently tried at the Central Criminal Court, but not in any way before them—a case developing interesting questions in the law relating to insanity—conceived that they would like to know a little more accurately what the law on these points was. They accordingly put a set of 'abstract' questions to the judges—questions not arising out of any business before them, actual or contemplated. One of the judges (Maule) protested against this proceeding, but, as the others answered, he also answered. . . . It needs no argument to show that opinions so given are not binding upon anybody, and should not be. If reasons were asked for such a view, it would be enough to refer to what Mr. Justice Maule suggested in his protest, when he objected that the questions put 'do not appear to arise out of and are not put with reference to a particular case, or for a particular purpose, which might explain or limit the generality of the terms'; that he had heard no argument; and that he feared 'that, as the questions relate to matters of criminal law of great importance, the answers to them by the judges might embarrass the administration of justice when they are cited in trials.'"

To turn to this country, the English rule has been adopted generally, and the Massachusetts judges, and those of other States, have decided that such opinions are not binding when the point decided comes subsequently before them in the course of litigation. In Maine the early opinions of the judges seem to have been the same, but in the political excitement of 1880 they adopted the opposite view, that their opinions were binding on the Governor and Council in the performance of their ministerial duties. This view was generally acquiesced in by the public at the time, but Professor Thayer considers it as a matter of law "strange doctrine," and there seems to be no authority for it in the precedents. Another fact which this interesting pamphlet recalls is, that Washington in 1793 tried to introduce the English usage with the judges of the Supreme Court, but they saw the danger of their being dragged into politics, and declined to answer.

—Except for a brief after-word, J. ten Doornkaat Koolman's laborious 'Wörterbuch der Ostfriesischen Sprache' has now reached its conclusion in Part 22 (Norden: H. Braams). The first number was issued in 1877, and the publication has since continued without haste but also without rest. The thoroughness of the etymological scheme may be partly judged from the fact that the index to cognate words in German fills 27 columns, in Dutch 34, in English 23, in Swedish 17, in Norwegian 12, in Danish 16, in Italian 6, in French 8. But the derivations are in fact carried back to as ultimate a root as possible in the Aryan chain; so that each member of the Teutonic group is served by this Dictionary of a special dialect, and all by comparison one with another. We have in our notices of the successive issues often remarked upon the close resemblance of the Frisian vocables to English. Such sentences (to borrow a few more examples from the number before us) as "Stille waters hebben de dêpste grunden," or "Dat was 'n wîs wôrd, wat he dâr sprak," or "Brau good beer, bakk good brood," hardly need interpreting, to our *eyes* at least. The work is a thesaurus of proverbs and proverbial expressions, and when the author takes a fancy to one he is not above repeating it. For the third time at least he quotes, under *waren*, the saying, "Môi gan un waren: sat ëten un sparen," and dismisses it with the remark—"a golden rule of life, which has unfortunately fallen far too much into oblivion and neglect." Such an *obiter dictum* throws a flood of light on the spirit which has endured the steady toil of eight years (and how many more?) in the dry pastures of etymology.

— Some of the most important bibliographies are those which record the literary work of the monastic orders of the Roman Church. The Benedictines have at least ten, of which the best known is St. Maur's; the Franciscans almost as many; the Dominicans and Cistercians two or three apiece (a bibliography of the Spanish Dominicans is now in the press), and the Jesuits as many as all the rest put together, as might be expected from their great literary activity. Even the Jesuit bibliography of the Brothers Bakker appears not to have exhausted the field. Father Sommervogel is promising an elucidation of the anonymous and pseudonymous writings of the society. Till now, the Premonstratensians had been neglected, but Father Louis de Gonzaga, prior of Storrington, a religious house founded by members of the order expelled from Frigolet, who has spent twenty years in the compilation of materials, promises shortly a list of the works of the 1,500 writers which his order has produced from 1280 to 1884. A preliminary pamphlet published by Palmé details his plans, gives a bare list of names of the writers, calls for additions,

and speaks of the difficulties in the way of completeness. The archives and libraries of over 3,000 Premonstratensian houses existing in the Middle Ages have nearly all disappeared.

— The eleventh issue of 'Norges Statskalender,' for the year 1885, is published with commendable promptness. This is what we should call the Blue Book of Norway, *i. e.*, a volume containing the *personnel* of the Norwegian Government; but it is by no means merely a barren list of names, like our own 'Official Register.' The volume contains, however, the usual lists of the officers and employees of the different departments of the Government, the members of the Storthing (Parliament) and of the High Court of Justice, the Norwegian and Swedish diplomatic agents and consuls, the members of the Norwegian Order of Saint Olaf, and the names of all persons who have earned medals for meritorious services. All these details are given with careful fulness, and supplemented with accurate statements as to date of birth, time of service, salary, official and honorary titles, etc., of each person. Brief, but concise, notes contain valuable information as to the functions of the different departments and bureaux; generally, also, the dates of organization are stated, in which cases there are careful citations of the laws creating each office. We have, besides, useful knowledge concerning all the public schools and the university, with the rolls of teachers and professors, together with information as to the various religious, philanthropic, scientific, and artistic societies or associations, the various museums, libraries, and hospitals. To a résumé of the contents of the budget for the last finance year is prefixed the usual introduction to European books of this class, viz.: a list of the reigning monarchs and their families. All this store of knowledge is made readily accessible by good indexes of subjects, places, and persons. The painstaking care of the editor, Mr. N. R. Bull, is shown in a hundred particulars, and the whole work reflects credit upon his industry and intelligence. It would be of interest, we think, were he to add a list of the persons who are paid pensions by the Government, at least those who receive their stipends upon the ground of distinguished literary activity. The list of fifty-one officers who have died since the issue of the volume for the previous year contains but one name of literary note, that of the poet Andreas Munch, which is included by virtue of the position he had held since 1866, as emeritus-professor at the University of Norway. He was a cousin of Norway's most famous historian, Peter Andreas Munch, and was born October 19, 1811, and died on June 24, 1884, leaving to posterity a long list of thin volumes of poems and dramas. During the year the University suffered the loss, also, of two active professors, one of zoölogy and one of philosophy. The list of deaths otherwise includes, as worthy of mention here, a member of Parliament, representing one of the southern seaport towns of Norway, an ex-Minister of State, and the Bishop of Christianssand, who was the successor of the late well-known Jörgen Moe.

—'Sveriges Statskalender,' issued under the auspices of the Scientific Society, of Sweden, contains nearly twice the quantity of matter, but in general arrangement does not differ much from the similar volume for Norway. We miss, however, the head-notes, which go far to add not only value, but interest, to the latter book. The salaries paid officials are also omitted; but, as added matter, this volume contains lists of all the post-offices and telegraph stations throughout Sweden. We notice that of the 368 persons employed by the State in its telegraph offices, 159 are women. Of these, 154 are operators, as against 7 men similarly employed, and the other 5 are office officials. On the other hand, no women seem to be employed in the post-offices, the only exception being the case of a telegraph operator who also acts as postmistress. The long lists of members of the various societies and orders of knights occupy 143 pages, and we note among them the names of twenty-four Americans. Number eleven of the eighteen places in the famous Swedish Academy, left vacant by the death, last August, of the archæologist Bror Emil Hildebrand, who was elected in 1866, and was for some time the Secretary of the Academy, is not yet filled. The index of persons contains the astonishing number of nearly 14,000 names, although it includes no foreigner not actually in the service of the Swedish Government. Both volumes are excellently printed, and are furnished in substantial cloth bindings for the reasonable price of five crowns ($1 35) each.

HARRIET MARTINEAU.

Harriet Martineau. By Mrs. F. Fenwick Miller. [Famous Women Series.] Boston: Roberts Brothers.

One feels some instinctive distrust of a biographer who finds it necessary to begin proceedings by a studied attack on the last person who treated the same theme; and this especially where that predecessor was selected by the author who happens to be the subject of both works. Near the very beginning of Mrs. Miller's preface occurs the following passage:

"Mrs. Chapman of Boston, U. S. A., has written a volume in completion of the Autobiography, which should have covered the later period. . . . But it is to be remembered that when Miss Martineau committed to Mrs. Chapman the task of writing a memorial sketch, and when the latter accepted the undertaking, both of them believed that the life and work of the subject were practically over. I have reason to know that if Harriet Martineau had supposed it to be even remotely possible that so much of her life remained to be spent and recorded, she would have chosen some one more skilled in literature, and more closely acquainted with English literary and political affairs, to complete her 'Life.' Having once asked Mrs. Chapman to fulfil the task, however, Harriet Martineau was too loyal and generous a friend to remove it from her charge; and Mrs. Chapman, on her side, while continually begging instructions from her subject as to what she was to say, and while doubtless aware that she would not be adequate to the undertaking which had grown so since she accepted it, *yet would not throw it off her hands*" (pp. vi-vii).

The italics are our own; and a more malignant sting than they designate has seldom, in our judgment, been directed by one woman against another. What are the facts of the case? Mrs. Maria Weston Chapman, a lady who still lives esteemed and respected, was the honored associate of Miss Martineau in the anti-slavery movement, of which Mrs. Chapman, more than any other woman, was the American head. She, being also highly educated and sufficiently "skilled in literature" to wield an uncommonly keen and vigorous pen, was requested by Miss Martineau to edit her autobiography and write a supplement. She accordingly did so, in her own way. Her memoir had some undoubted faults both of omission and commission; and these were frankly pointed out in this journal at the time (see *Nation*, April 12, 19, 1877). We also asserted that Mrs. Chapman's memoir put Miss Martineau in a far more attractive light than did the autobiography itself; and we praised the work as showing, on the whole, "careful and accurate execution." But had it been the poorest book ever written, the tone of the later biographer would have been equally ungenerous. Mrs. Chapman tells us in her opening chapter that she undertook the work with the greatest feeling of "sorrow and inadequacy for the service demanded"; and that she combated her friend's wish with all the arguments she possessed ('Autobiography,' ii, 140). These remonstrances were unavailing. We also have reason to know that Mrs. Chapman, instead of being unwilling, as Mrs. Miller ungenerously intimates, to "throw it off her hands," repeatedly expressed a desire to do so, and was always met by a firm refusal. Mrs. Miller is therefore left to the painful alternative of either assuming to know Miss Martineau's mind better than that very vigorous lady knew it for herself, or of having disclosed an instance of duplicity in Miss Martineau which would add another to the recent instances of unfortunate biographical revelations. Mrs. Chapman, at any rate, did not suspect any such duplicity, but went on to fulfil what she regarded as a sacred trust of friendship. To say that she did it, to all appearance, as well as Mrs. Fenwick Miller would have done it, is not a very strong expression; but she did it faithfully and sincerely, and it may be assumed that she did it truthfully, as the later biographer finds no error to correct except the extremely venial one—which Mrs. Miller calls "absurd"—of supposing that a certain letter from Charlotte Brontë, quoted in Mrs. Gaskell's life of that lady and beginning "My Dear E——," was written to her sister Emily, whereas it was written to some one else. It was, of course, an error, as Emily Brontë had already died; but the phrase is as unreasonable as if we should call it "absurd" in Mrs. Miller to speak of "Errina the Greek poetess" (p. 27) when she means Erinna. In more important points, the views of the two biographers essentially coincide, except that Mrs. Chapman's, as became the work of a first biographer, was a little more eulogistic; while she did not, like Mrs. Miller, make the mistake of so attacking Miss Martineau's mother as to bring on an immediate controversy with the most eminent living member of the Martineau race.

This stumbling-block of offence being once passed, it is a satisfaction to be able to say that the biography by Mrs. Miller is a good, compact, unambitious summary of the career of a remarkable woman. The biographer's original remarks are almost always commonplace; she sometimes strays into political economy, and her mild platitudes are in great contrast to the vigorous summaries of Miss Martineau. When she begins, "Political Economy treats of the production, distribution, and consumption, or use, of all the material objects of human desire, which are called by the general name of wealth," the treatment seems very elementary indeed. In dealing with the difficult question of Miss Martineau's relations with Mr. Atkinson, she gives some additional correspondence between them; but as the correspondence already published was generally found too dull to be fully read, an enlargement of it hardly seems welcome; nor does she attempt the slightest explanation of the lifelong separation of Miss Martineau from her brother, after his review of the book, except to say that the criticism was aimed at Mr. Atkinson, and that the sister was loyal to her friend. On the secret of Miss Martineau's deference to a man by whom other people were not much impressed, Mrs. Miller gives no new light; but she quotes a passage from one of Margaret Fuller's letters (p. 172) giving a favorable impression of this gentleman, which nee is, however, to be read in connection with another passage printed by Madame Ossoli's latest biographer, where she describes Mr. Atkinson more lightly, as "the professed magnetizer, with his *beaux yeux* and extreme sensibility, unable to confer benefit without receiving injury" (Higginson's 'Ossoli,' p. 224). The world has never been able to take Miss Martineau's mesmeric experiences quite seriously,

but Mrs. Miller evidently does, even to stating, without the slightest apparent consciousness of the ludicrous, that "seven mesmerized patients were sometimes asleep at one time in her drawing-room" (p. 196).

The book has no index and no bibliography, though much detailed information is given in the text as to the successive publications of Miss Martineau. The author shows a good deal of moral courage at certain points, especially in dealing with that stone of offending, the 'Autobiography.' The faults of this unfortunate book are frankly conceded by Mrs. Miller; she calls it "interesting but misleading," "hard and censorious"; says that it "displays vanity," that it does no justice to "either the finer or the softer qualities of her nature," and that it is "the least worthy of her true self of all the writings of her life" (pp. 233-4). It requires courage for a friendly biographer to say this, and it is after all a destructive admission. It is a perilous thing to write one's own memoirs. As, after all that we may have heard or read of an unseen person, we instinctively base our final judgment of him on the first glance at his face, so, no matter though a great writer have put forth a hundred books, that by which he or she will inevitably be judged by the world at large is the volume which contains an autobiography. "Beware," said Wendell Phillips, "if your sixpenny neighbor keeps a diary." But the neighbor, be he sixpenny or otherwise, has far more reason to beware of those who may live to publish it.

PREHISTORIC AMERICA.

Prehistoric America. By the Marquis de Nadaillac. Translated by N. D'Anvers. Edited by W. H. Dall. G. P. Putnam's Sons. 1884. 8vo, pp. 566, with 219 illustrations.

TAKE it all in all, this is the best book on this subject that has yet been published—not that it contains anything especially new, or that it is entirely free from carelessness and error, but for the reason that, as a record of facts, it is unusually full, and because it is the first comprehensive work in which, discarding all the old and worn-out notions about the existence on this continent of an extinct civilization, we are brought face to face with conclusions that are based upon a careful comparison of architectural and other prehistoric remains with the arts and industries, the manners and customs, of "the only people, except the whites, who, so far as we know, have ever held the regions in which these remains are found." That this is the only safe method of investigating many of the questions to which a study of American archæology has given rise, we have repeatedly declared; and hence the satisfaction with which we greet the appearance of this volume and the importance we attach to its conclusions.

Summing up the results, as here given, it will be found that the Mound-builders of the Mississippi Valley (chaps. iii and iv) disappear as a separate and distinct people, and in their place we have the "red Indians of historic times," such as they were when the Spanish adventurers first landed on these shores. The buried cities, too, of Mexico and Central America, are made to give up their secrets (chaps. vi and vii), and, instead of the ruined temples and deserted palaces of a mythical people of high civilization and fabulous antiquity, we have the communal houses, often but recently abandoned, of tribes which differed but little in their mode of life and in their social and political organization from the Pueblo Indians of to-day. So, also, may it be said of the ruins which dot the shores and guard the mountain valleys of Peru. Great and wonderful as they are when contrasted with the means at the command of the aboriginal workmen, they are, after all, but the evidences of barbaric magnificence, and, when viewed in the white light of history, do not indicate a higher stage of development than the Spanish conquerors found and partially destroyed.

Exactly who the people were who erected these mounds and built these cities, and what their origin, are problems which, wisely enough, our author-editor, except in a general way, does not attempt to solve. To us they are known as Indians, and if they are of Asiatic descent, as our author intimates, there can be no question that their ancestors must have arrived here at a time when the flora and fauna were very different from what they now are, and when they themselves were living in that stage of progress which we are accustomed to characterize as the age of stone. From this condition, low as it undoubtedly was, it was certainly possible for them to have raised themselves to the level of the most favored tribes of Mexico and Peru; and it is also possible that they might have been aided in this upward movement by "the successive waves of migration," which, it is said, may have rolled in by way of the Polynesian Islands, as well as across Behring Straits. Be this as it may, the subject is one which we do not now propose to discuss. As has been said in a former number of this journal, the Indians, so far as we know anything about the matter, may have started from different centres, travelled by different routes, and arrived at different times and at different places on the same or opposite sides of the continent. At best, it is but a question of probabilities, and our object in referring to it at this time is not for the purpose of discussing the feasibility of any particular route from the Old World to the New, but of calling attention to the wide extent and varied character of the intercourse which prevailed everywhere, in early times, between the tribes of our continent; and of insisting upon the necessity of recognizing this condition of affairs as a probable element in the growth and spread of aboriginal civilization in America.

In the above sketch it will be noticed that we have merely outlined some of the conclusions that have been reached, and have not attempted to give any account of the long and formidable array of facts upon which these conclusions are based. To do this, would require more space than we can command, and hence we content ourselves with saying that some idea of the amount of labor necessary to the preparation of this portion of the volume, may be gained from the fact not only that it embraces the whole field of American archæology, but that it also includes an account of the manners and customs, arts and industries of all the tribes that were found here. Of course, in a work of this character, covering such a wide range of subjects, and involving a familiar acquaintance with several languages, and requiring numerous references to many authors of various degrees of credibility, errors of omission and commission are sure to occur. From the very nature of the case it was almost inevitable; and however thankless may be the office of noting these shortcomings, it is, in the present instance, made unavoidable by the promptness with which we have recognized the merits of this work, and the importance we have attached to its conclusions.

Before, however, beginning this part of our task, it may be well to premise that, in its present shape, this volume differs very materially from that in which it originally appeared. Availing himself of the liberty judiciously allowed him as editor, Mr. Dall has not only rewritten the chapter (x) on the origin of man in America, but he has so "modified and revised" other portions of the work as to lead to conclusions that were but little dreamed of in the original publication. Especially is this true of the chapters on mounds and mound-builders, in which a series of facts, owing to a difference in the light in which it is regarded, is made to produce results essentially at variance with those it had previously yielded. For these changes, or rather improvements, Mr. Dall is entitled to the credit, and were it always possible thus easily to apportion the award of praise or censure, our task would be much simplified. Unfortunately, however, this cannot be done, for the subject-matter of the volume is so mixed that it is impossible to distinguish between what belongs to the author and what to the editor, without an amount of labor that the average reader will not care to undertake. Hence it is, that while giving Mr. Dall credit for bringing this work "into harmony with the results of recent investigations and the conclusions of the best authorities on the archæology of the United States," we can hardly help holding him responsible for the shortcomings of which this portion of the volume is only too full. That many, perhaps a large majority, of these mistakes can be traced to the original French edition, is true, and if we were dealing with that alone we might pass them by, as they do not affect the validity of the conclusions, and are, at times, of such a character that it must have been difficult for the author to guard against them. In the case of Mr. Dall, however, no such forbearance is possible. He is altogether too strong to ask or receive favor.

Turning now to the volume itself, and examining it somewhat in detail, we are struck first of all with the want of accuracy in the quotations and references. One or two mistakes of this kind, in a volume of this size, might be pardoned; but when they are so numerous as to cast suspicion over the whole of one portion of the work, the affair becomes too serious to be passed over lightly. To show that we do not exaggerate the carelessness with which this part of the work is done, it is only necessary to open the volume, we had almost said, at random. Thus, for instance, the figures Nos. 15 and 23 are not only imperfectly copied, but they are assigned to wrong localities; and the shovel, described (p. 171) as being "of stone with a horn handle," is really of horn with a wooden handle, and the account of it was given by Dr. Edward Palmer, who found it, and not by Schumacher. Of a somewhat different character, but none the less erroneous, is the reference (Note I., p. 103) in which Brackenridge, not "Breckenridge," is said to have "located by mistake a Trappist convent" on Cahokia Mound, when he expressly tells us ('Recollections of the West') that "the dwelling of the monks was on a mound a hundred yards west of the great mound." So, too, Dr (Joseph) Jones (p. 48) is mistaken for Colonel (Charles C.) Jones; Putnam (p. 166) and Carr (p. 188) are made to say things which we are very sure never entered their heads, and Morgan (p. 386) is credited with a statement which he could hardly have made, at least not in the shape in which it is given. These are fair samples of the class of errors of which we are now speaking. They are numerous, but fortunately not of much importance, and though they detract from the value of the book as a work of reference, yet they do not materially affect the conclusions. Paradoxical as this may seem, its truth will be apparent to any one who will reflect that it is the existence of these archæological remains that interests us, and not the particular localities in which they were found; and that it is with the truth of a statement, and not the name of its author, that we are chiefly concerned.

Other errors there are of a more serious nature, which may be classed under the head of incorrect or doubtful and ambiguous statements as to facts. Many of them are, no doubt, "slips of the pen," though there are others which we should not hesitate to characterize by

a harsher term if uttered by a writer of less eminence than Mr. Dall. Of this character are the assertions (p. 57) that "the Indians rejected with disdain" the fresh-water mollusks—*Ampullaria* and *Paludina*—of which the shell-heaps of the St. John's River are partly composed, and secondly the one (pp. 180-181) in which we are given to understand that, except the meteoric iron found by Putnam and Metz in the Little Miami mounds, "previous statements with regard to the discovery of iron in the mounds are, without exception, unsatisfactory, ... not a scrap of it having been found in numerous excavations made at many different points and in many different regions." In regard to the first of these statements we prefer to let Wyman speak. The account of those shell-heaps is taken from him, and it is but fair that he should be heard in answer to what seems to be a most unwarrantable inference from anything that he ever said. Referring to his publication on the 'Shell Mounds of the St. John's River,' we find (p. 11) that "there need be no doubt as to the suitableness of these shells for food, as the Indian is nowhere very fastidious as to what he eats, and the 'cracker' of the present day does not hesitate to use them." In regard to the second statement—that relating to iron in the mounds—we are in something of a quandary. The denial is certainly as broad as language can well make it, and in this sense it is clearly an oversight. What Mr. Dall probably intended, was to limit his denial to the mounds of Ohio. Here he is on firmer ground, though even here we take issue with him, and willingly rest our case upon Atwater's statement (omitted in this edition) that "oxydes" of iron of the shape of a sword or knife-blade and of a plate were taken from the Circleville mound. The truth is, that, if the testimony of a competent witness backed by evidence that is believed to be decisive as to the recent occupancy of the earthwork which enclosed this mound, can be held to prove anything, we shall have to admit that the people who built and buried in this mound were acquainted with the use of iron. There is no escape from the conclusion except by showing either that iron will not oxidize, or that Atwater was mistaken in what he says he saw. Until this is done his statement must stand.

There are some other matters that we had marked for comment, but we are admonished to be brief. In fact, we fear that in dwelling as we have done upon the defects of this volume when there is so much that ought to be said of its merits, we have not kept within the limits of just and fair criticism. In defence, we can only plead our interest in the success of the work, and our desire to have the future editions, to which we trust it is happily destined, freed from the blunders which we have indicated. In conclusion, we must be permitted a word of commendation for the translator. Solecisms there are, and occasionally an obscure sentence, but these may be forgiven in consideration of the fidelity with which the text is preserved. Technical terms, too, are not always judiciously rendered. For instance, "*excavations*" and "*rampe*," we think, used as they are here, mean something different from a "trench" and a "flight of steps"; and a singular mistake may be found on page 133, where the omission of a proper name, and the translation of the word "*aïeul*" by "grandson," makes nonsense of a classical allusion. With these exceptions the work is well done, far better than usually falls to the lot of authors who have to pass through a similar ordeal.

A NEW DEPARTURE IN ORIENTAL LITERATURE.

The Repentance of Nussooh. Translated from the Original Hindustani by M. Kempson. London: W. H. Allen & Co. 1884.

Of few languages is the literature, where there is any at all, so strikingly insignificant in value as is that of the Urdû or Hindûstânî. Quantity it certainly does not want, as thousands of volumes, mostly unprinted, and destined to remain so, suffice to testify. Out of the entire mass of it, however only a small fraction, translations apart, is found to rise above the most pitiful mediocrity. And this is not the worst. In point of profligacy, as are the Muhammadans of Persia, so are their Indian co-religionists, whose minds and lives their books reflect but too faithfully. The great aim with them (especially in what is, by a violent stretch of courtesy, called their poetry) being to give expression to what should never be expressed, and never conceived, any novel fashion that is set on foot among them, by a rhymester, in ringing the changes on impurity, is enough to secure for its originator a pedestal of uncleanly fame. Bitter as is the disdain with which the Indian Islamite regards his Hindu neighbors, as being idolaters, it would be well if he were to imitate them in their comparative pudicity of thought and conduct. Account for the fact how we may, it greatly redounds to the credit of the Hindu, that, so far as appears, centuries of evil communication with the followers of Muhammad have not operated to deteriorate him, in the matter of decency, below the level of his old-time ancestors.

To influence and encouragement on the part of the English in India it is well-nigh wholly owing that there is such a thing as methodical Urdû prose. Prior to 1800, at least as a literary vehicle, it scarcely existed. During forty years, or thereabouts, onward from that period, a considerable number of Urdû prose translations, all of them from Persian or Arabic, were prepared, for the special use of its students, under the auspices of the College of Fort William. With few exceptions, each of these evinces an advance in style on those to which it succeeded. And then followed translations from the English, several of which are of superior excellence. Concurrently with the latter, the establishment of a vernacular newspaper press, which, year by year, exhibits rapid expansion and growing importance, has served to stimulate the cultivation of the Urdû, until it has now become a language in comparison with which its crude germ of a few generations back was but a jejune and incondite jargon. Something of its popularity, if not of its development and polish, is, however, undoubtedly attributable to the substitution of it, in the civil and criminal courts, for Persian, which long held its own, in the conservative days of the East India Company, as the sole linguistic medium of judicial proceedings. That it will, at all events for some time to come, undergo much mutation is not obviously probable. For such mutation there is, indeed, no perceptible necessity, so diligent and apparently exhaustive has been the recent prosecution of its culture. Noteworthy, assuredly, is the fact that it has made more progress for the better within the last eighty years than it had previously made from the days when the contact of foreign invaders with the hapless populations of Northern India evoked its rudiments into being.

In these premises we see revealed the curious phenomenon of a language elaborated to a high state of perfection, but hitherto very rarely employed, for literary ends, to any recognizably commendable purpose, except in translations. Are, then, the Indian Muhammadans hopelessly sterile of intellect? By no means are they so. Indications of ability are far from wanting even in the countless pages of their nauseous verse. All that is needed in order to their creating a respectable indigenous literature is, that they should employ their mental abilities in a rational direction. Moved by this conviction, the Government of the Northwestern Provinces of India was induced a few years ago to offer prizes for "meritorious treatises in the vernacular." It would be interesting to know to what extent the prizes were competed for, and what was the nature of the compositions which failed of winning them. All that we are told is, that a prize of £100 was awarded for the 'Repentance of Nussooh.' This tale, in the original Urdû, has been repeatedly printed at Agra and Lucknow—a patent attestation that it has awakened curiosity, if it has not also met with acceptance, in quarters where its salutary lessons have long urgently required to be inculcated. Its author is Maulavî Hâjî Hâfiz Nazîr Ahmad, who, after tried service as a Deputy Collector of Revenue under the English Government, now holds an important office in the administration of Haidarabad, in the Deccan. Its language is of the purest type of that current at Delhi, where Urdû is acknowledged to obtain at its best. Accredited authority has certified that, for an Urdû composition, its vigor of expression, the chaste and simple beauty of its style, and the aptness and richness of its idiom are probably unsurpassed. Mr. Kempson, who was for many years Director of Public Instruction in Northern India, has further, as we have assurance for stating, discharged his function in translating it "faithfully and ably," as was, indeed, to be expected from his admitted accuracy of scholarship.

Rather than a tale, strictly so called, the 'Repentance of Nussooh,' which has no plot to speak of, is a series of chapters of domestic history. Its central character, a well-to-do Islamite gentleman, who has a wife, a married daughter, a son arrived at manhood, and several other children, is stricken down by a severe attack of cholera. He recovers from it, and, on his restoration to health, prompted by a dream which he had in his illness, resolves to amend his ways. The unsatisfactory condition in which he sees his family he lays to the account of his neglect of moral and religious duties, and his connivance at the neglect of them in those about him. As the result of his change of mind, he succeeds, what between precept and example, in reuniting his married daughter to her husband, from whom she had for some time been living apart. His eldest son, who is depicted as a graceless reprobate, and whom he at first treats as if incorrigible, returns home, after divers adventures, with the loss of a leg, and dies contrite. The younger children, under the reformed guidance of their father and mother, give promise of growing up models of propriety.

Nussooh's religious attitude is markedly peculiar for a Muhammadan, who ordinarily, if not like an every-day Christian, much of an indifferentist, is apt to be either a sanguinary fanatic awaiting with more or less impatience an opportunity to wreak his malice on "unbelievers," or else an incomprehensible but all-tolerant mystic. Of distinctive religious dogmatism Nussooh is represented as manifesting but slight traces, if any at all. Christianity he is made to speak of without the least aversion to it, though of course he could with no consistency abide its prevailing Athanasian phase; and his references to his Prophet are as though he held certain of his characteristic doctrines to be nowise essential. In short, he seems to be hardly distinguishable from a deist who believes in a future state of rewards and punishments.

A somewhat remarkable production, accordingly, considering whence it emanates, is the 'Repentance of Nussooh.' Of its linguistic merit

we have already adduced an estimate against which it would be hazardous to appeal. Whoever, therefore, may have occasion to take up the study of the Urdû has now, in it, as a text-book, something very different, alike as to subject-matter and as to tone, from the well-known *Totâ-kahânî*, *Bâgh-o-bahâr*, *Akhlâg-i-hindî*, and kindred repertories of flagrant filthiness or wearisome insipidity.

The Woodcutters of the Netherlands in the 15th Century. By William Martin Conway. Cambridge (Eng.): University Press.

Mr. Conway has made a most exhaustive monograph on the book-illustrations of the Netherlands during the period in which they may be said to have had a distinct existence—*i. e.*, distinct from the block books which preceded and the style of illustration which succeeded them. Of the woodcutters who are the nominal subjects of the essay nothing is known, and nothing can be said—we do not even know if they were the designers also; and without some internal evidence that this or the contrary was the case, there is no possibility of making a demonstration. It is a problem only for the highest expert knowledge to solve, and not for literary investigation, what were the relations of the cutters of these illustrations to the art of their time; and although Mr. Conway has greatly dared, it is impossible to admit that he has made the problem clearer to the reader. Thus, in the section on "the Haarlem wood-cutter," he says:

"Three of the four cuts in the *Four Last Things* of 1484 had already appeared in *der Sonderen troest*; a new one was required for the chapters on Hell. This cut is remarkable because it differs from the usual Dutch type. . . . In those the mouth of Hell is seen open on one side, and devils are casting the condemned into it. . . . The Haarlem artist, however, discards all these adjuncts, and simply draws the gaping mouth of a hideous beast and a few flame-clouds floating about it. The reason for this change is not evident, and I do not know of its having been *followed by any other woodcutter*; but it is interesting as showing that about this date the restraints of precedent were being thrown off, and *woodcutters were trying to stand on their own resources*—with but little credit, however, as the result proved."

Now what evidence is there (certainly Mr. Conway gives none) to authorize the conclusion that the *woodcutter* had anything to do with the change alleged? And in his general analysis he deals with technical qualities for the satisfactory elucidation of which, to his readers, he should have given facsimiles of the cuts, for no verbal description can convey an idea of subtle technical differences. In default of facsimiles it is impossible to say whether the distinctions made by the author can be maintained, except by those who have access to the collection containing the originals. What we should have in such a study is the clearest distinction between the qualities of design and those which become conditional on the technical difficulties involved in cutting out with a knife lines drawn on a board; and if the data given do not contain the material for such a distinction, then nothing beyond guesswork is possible. This classification of the book-illustrations in question is clearly, from all the data we possess thus far, only matter of the most filmy conjecture.

The utter want of consideration given to the woodcutter of those days is indicated not only by the analogies afforded by other handicrafts, but by the absence of any contemporary notice of the workmen: their work was not even worth marking with their own names. It is, indeed, a curious fact in the history of all art that in the epoch when it is soundest and most masterly in general method—when the general quality of the school is at its highest level—the artist should always be regarded merely as a craftsman, not entitled to the personal consideration which by a modern fiction genius receives from authority. The Netherlandish woodcutters, like artists in other walks and places, were personally of no account whatever; and indeed it may be doubted if, even in the few and short periods when the artist won respect apart from his work, the consideration accorded exceptionally was not due to personal and intellectual qualities quite independent of art. We know no more, therefore, of the subjects of Mr. Conway's book than we do of the cave-dwelling artists whose engraved fragments of bone or bone utensils we have, or than another generation will of the men who work the press for the illustrated magazines of to-day.

Mr. Conway has been indefatigable in research, and most careful and comprehensive in the cataloguing of the work attributable to his chosen epoch, the last quarter of the 15th century; and in the bibliography of this period his book fills its place, as an admirable and admirably arranged compendium of what remains and is to be found in the various collections to which the student has or may have access. It gives, besides an elaborate analysis of the entire series of cuts, not only a minute and well-classified descriptive catalogue of the cuts with their printers and localities of printing, but another of the books containing woodcuts—a masterly piece of literary condensation and arrangement.

Among the passages which particularly merit attention as an example of the author's ability as an analyst is his study on the *Chevalier délibéré*, in which he remarks with subtlety the qualities due to the designer and the deficiencies in the achieved result due to the low abilities of the cutter; but even here, in his attempt to trace the personality of the latter, he encounters the same difficulty which stood in his way in the analysis of the earlier workers—that of identifying the unknown workman purely by his treatment of a line in face of the probabilities of the shortcomings being due to impersonal technical difficulties on one side, or deliberate imitation on the other. It seems to us that there is not sufficient internal evidence to justify so rigid conclusions

The make-up of the book is such as is to be expected of the Cambridge press; but its solidity and the excellence of its typography make one regret the more the absence of the facsimiles which are really indispensable to the wide usefulness of the book.

Atheism in Philosophy, and Other Essays. By Frederic Henry Hedge. Boston: Roberts Bros. Pp. 390.

Dr. Hedge explains, in the introduction to this volume, that by philosophic atheism he means "speculative denial of a supermundane, conscious intelligence"—"not to be confounded with the scientific atheism of the Positivists," he adds in a foot-note, although the Positivists reject atheism on the ground of its being, no less than theism, a dogmatic theological doctrine. As representatives of ancient and modern atheism Dr. Hedge chooses Epicurus and Schopenhauer, in order "to show the range of the atheistic mind":

"The contrast is striking. Epicurus was a flat materialist; Schopenhauer an out-and-out idealist. Epicurus was an optimist; Schopenhauer a pessimist. Epicurus was sunny-tempered, bland, humane; Schopenhauer was a cynic and malcontent. Epicurus gathered his followers around him in a garden, and invited the world to partake of his cheer; Schopenhauer shut himself up in a German *Studirzimmer*, and wreaked, with curses on the world, his spite at the world's neglect of his wisdom. Epicurus despised and decried all learning; Schopenhauer was richly, widely, profoundly learned. Epicurus exhorts us to make the most of life; Schopenhauer teaches that renunciation of the will to live is the true wisdom. Epicurus lived abstemiously, and taught that pleasure is man's chief end; Schopenhauer lived daintily, and taught that the end of man is suffering."

We quote this batch of antitheses because it is the best thing in the book, which as a whole is not entertaining, the function of the essayist being too often overshadowed by that of the homilist. Dr. Hedge fails to grasp the significance of the ethical doctrines of Epicurus, and he goes so far as to approve of the popular judgment which, when it uses the word epicurean, means "something soft, luxurious, effeminate, timid, otiose." But this is a complete misconception of epicureanism, distorted by the Puritan mind. There is no scientific fact better established than this, that pleasure promotes vitality and pain lowers it. The Hedonists set up pleasure as the chief end of life, but it remained for Epicurus to point out that not all pleasures are to be aimed at, but only those which have no injurious consequences, thus implying moderation in everything. But his greatest achievement was the *aperçu*—a true flash of genius—that psychic pleasure is superior to physical pleasure; a doctrine which is neatly proved in Stendhal's aphorism, that duration diminishes the pleasures of the body and augments the pains, whereas the pleasures of the mind are intensified by time, and the sorrows weakened. Dr. Hedge is annoyed by such evidences of epicureanism in modern life as the "universal relaxation of discipline, abolition of all pain, retribution ignored, all strengths and austerities ruled out of life, softness in legislation and education," etc. But we are far from the good old times when mortification of the flesh and the scientific pursuit of unhappiness were regarded as the chief aim of life.

The essay on Schopenhauer gives a clear view of some of his leading doctrines, but makes no mention of his æsthetic speculations, which constitute an essential part of his philosophy; nor is anything said of the important rôle which Schopenhauer played in calling attention to the treasures of old Indian thought. Dr. Hedge ridicules with an exclamation point the belief of Schopenhauer "that the university professors were afraid of him—were afraid that if he came to be known they would fall at once into hopeless neglect, and therefore had combined to suppress him!" Perhaps there was no such conspiracy, but it is a fact that the doctrines taught by these professors did fall into "hopeless neglect" as soon as Schopenhauer became known, and the neo-Kantian movement, which he initiated began to spread. Dr. Hedge does not fail to acknowledge the superiority of Schopenhauer's literary art over that of other German philosophers, but it is difficult to understand what he means by saying that he has "a crystalline, *colorless*, and yet singularly vivid and commanding style." To characterize as "colorless" writings which abound in wit, grim humor, sarcasm, exquisite imagery, and every other form of literary spice, is surely to use a word contrary to its sense.

The "other essays" referred to in the title to this work are concerned with St. Augustine, Leibnitz, Kant, Irony, Fetishism, Genius, "The Lords of Life." Of these the best is that on St. Augustine, a spiritual contemporary of our author.

On page 334 a statement is made, regarding the relations between pain and pleasure, which calls for correction. After pointing out that pleasure, if it reaches a high pitch, is apt to turn to pain, Dr. Hedge asserts that "Bodily pain, on the contrary, never breaks into any falsetto of pleasure, but keeps 'due on' its dolorous road, till anguish deepens into death." The old school of psychology pays no attention to the

study of morbid cerebral states, and therefore abounds in errors and misrepresentations. We will quote a single sentence from Dr. Emminghaus's 'Psychopathologie': "Convalescents from mania often assure us that they never felt so indescribably happy as during the maniacal attack."

A History of the United States of America. For the Use of Schools and Academies. By Horace E. Scudder. With Maps and Illustrations. Philadelphia: J. H. Butler.

We have delayed our notice of Mr. Scudder's history unpardonably long; but our readers will thank us, even at this late hour, for calling their attention to one of the freshest and most thoughtful books on the perennial subject that have ever been offered to them; for it is one whose vitality many times six months will not drain. Mr. Scudder has equipped his book with all proper appliances for its use as a text-book—sections large and small, a very full index, chronological tables, questions, maps, small pronouncing vocabularies, and the inevitable illustrations. We must pronounce these last the least valuable part of the book. The pictures of the Presidents are enough to rejoice the hearts of all who voted against them; and some of the better pictures—the monk in the Scriptorium, the ship of the Vikings, the Indian and pioneer, etc., are either absolutely out of place, or at best thoroughly unreal. They are a sacrifice to a taste cherished much more by those who negotiate the purchase of the book than by those who use it. The appendix contains Mr. Lincoln's farewell address, the "Declaration," and the Constitution. In the last Mr. Scudder takes the astounding liberty of removing five important clauses out of Article II. and inserting them in Amendment XII., suppressing wholly the original clause on the choice of electors. We can see no advantage in this over the original order, with a reference to Amendment XII. in a note. In the pages of examination questions at the end are named a variety of books for parallel reading likely to interest young people. The maps, whether on a large or a small scale, are very attractive, and not at all too many. Of the pronouncing vocabularies we cannot speak so highly.

The history is obviously the work of a man who, with strong opinions of his own, is yet no unfair or unkindly partisan. It is very plainly a labor of love, as well as work done for honorable compensation. Moreover, it has in it what many writers are wholly wanting in—an intellectual and literary conscience. Mr. Scudder seems carefully to have kept the laws of proportion, not only in the amount of time he gives to each period, but in the stress he lays on the conscious and the unconscious in our development, one or other of which is generally neglected. We would commend chapters iii. and vi. in Part 3 as admirable instances of accurate *perspective* in writing. We think the book would have been improved by clearing away a certain unreal tone, which has clung to all the author's writing ever since his original delicate fictions. There is, not perhaps throughout the book, but often recurring, an air as if it had all been told, as Hawthorne's 'Grandfather's Chair' was supposed to be, to children round the fire at twilight, and as if these had been some of Mr. Scudder's own "dream children." There are signs of a tendency to become that most unnatural and weakening of literary productions, a "prose poem"; and of what for a school history is perhaps worse, talking down. Mr. Scudder is very properly not afraid of introducing hard subjects like Jay's treaty and the early tariff; he is right in thinking that school children can understand them. They can—and they can understand them in the natural language, without turning them into words of one syllable. We do not feel quite sure that Mr. Scudder would not like to draw a protective tariff on the board, and explain the removal of the deposits by colored balls in the true spirit of Froebelism. The history of the United States is preëminently the history of men and women. We sprang full-armed into life, and nothing that savors of the nursery or the infant school has any place in the way our history is told. It is brimful of sentiment; but any sentimentality it may have has been put into it by writers who looked back on events through the spectacles of drawing-room philosophy. We trust that this criticism, even if Mr. Scudder does not see the justice of it, will not cause him to doubt our warm and friendly appreciation of his good work.

John Howard Payne, Dramatist, Poet, Actor, and Author of "Home, Sweet Home!" His Life and Writings. By Gabriel Harrison. With Illustrations. Revised Edition. Philadelphia: J. B. Lippincott & Co. 1885. 8vo, pp. 404.

Nearly ten years ago, just after the Faust Club, of Brooklyn, had put up a bust of Payne in Prospect Park, Mr. Harrison issued a bulky work devoted to the 'Life and Writings of John Howard Payne.' It was padded with much irrelevant matter, most of which is omitted in the new and revised edition before us. It was privately published—if one may use this phrase—by the late Joel Munsell, of Albany, in an edition limited to 265 copies. In the years which have elapsed since the book first appeared Mr. Harrison has collected much new material, but neither has his style improved nor has his appreciation of the duty of a biographer. A quotation of the second sentence of the first chapter will suffice to show the quality of his style: "His varied talents, and his constantly changing disposition to follow this object and the other, causes (*sic*) the writer some difficulty in finding a climax to any of the many vocations which Mr. Payne attempted throughout his life." But no quotation can show the slip-shod carelessness and complete lack of proportion which characterize Mr. Harrison's biographic work. Nowhere is there any succinct sketch of Payne's career or any distinct outline of his character; all sorts of letters from all sorts of persons are reprinted for little or no reason; matter which ought to be in the text appears in the notes, and matter which had better be relegated to notes encumbers the text. As typical as anything of the author's negligence is the fact that no mention is made of the highly interesting letters of Charles Lamb to Payne, recently printed in the *Century*. These letters showed that Lamb was intimate with Payne, and acted as his agent in dealings with the London managers; but Mr. Harrison makes no reference anywhere to Lamb—except a chance comparison (wholly absurd) to the likeness of Payne's style as a critic to Lamb's. In fact, one does not get as clear an idea of Payne's life and works from Mr. Harrison's 400 pages as from the brief sketch contributed a year or so ago to the *Magazine of American History* by Mr. Laurence Hatton. We have here an ample account of the ceremonies at the dedication of the Prospect Park bust, and at the reinterment of the remains of the poet at Mr. Corcoran's expense somewhat more than a year ago. Nearly fifty pages of Payne's verse are reprinted, though it is now of no great value. So is Payne's paper in the *Democratic Review* on "Our Neglected Poets." The list of Payne's plays is wholly destitute of bibliographical exactness, as it is a mere list, without any date or place of first performance, or indication whether the play is published or not. There is no list of the parts performed by Payne as an actor—an absolutely indispensable adjunct of every histrionic biography, and one which the books of playbills consulted by Mr. Harrison would have made easy to compile. There is an index, which, so far as we have been able to verify it, seems very good. Of the illustrations, the most interesting is a facsimile of a letter of Edmund Kean's, recommending Payne to the manager of the Theatre Royal, Birmingham. The frontispiece is a portrait of Payne, engraved by Mr. G. R. Hall, after a photograph.

The Author of Beltraffio, Pandora, Georgina's Reasons, The Path of Duty, Four Meetings. By Henry James. Boston: J. R. Osgood & Co. 1885.

In this collection of short stories Mr. James shows his usual fertility of invention and his remarkable powers of description to great advantage. With one or two, perhaps more of them, the American reading public were already familiar. "Four Meetings" is, to our taste, the most pleasing of them; "The Author of Beltraffio" has most of what the young ladies call "weirdness." The weirdness consists—we may say as much as this without revealing the plot—in the situation, being that of a man who writes books to the last degree artistic, but which are so repulsive to his wife, for what she is pleased to consider moral reasons, as to cause a tragic breach between them. The author of 'Beltraffio,' we are asked to believe, is the greatest English novelist of his time. His style is the purest, his imagination the loftiest, his fancy and humor the most delicate, his books the most profoundly interesting; but he is a devotee of Art for Art—that is, he writes in the way that Art calls upon him to write about what Life shows him, no matter whether the sights are such as Morality thinks ought to be revealed or not—for Morality, according to this theory, cannot impose limits upon Art. It is difficult to imagine a more unpleasant relation than that between a man who writes books like 'Beltraffio' and his wife, who thinks they offend against the laws of God and man, and who dreads them most on account of their probable pernicious effect on her child. Does not the situation throw some light upon the problem itself? In the English race the individual conscience plays a prominent part, and one marked effect of this is seen in the purity of its literature. It has developed pure fiction, as distinguished from the impure sort which furnished people with amusement in the middle ages, and even much later, and which has lingered on in France down to our own time. What the devotees of Art for Art want, of course, is not necessarily impurity, but fiction untrammelled by any moral law debarring it, as in England, from dealing with or treating certain departments of human life. But for English-speaking people, would not the adoption of any such theory imply a reversal of their whole historical development, the effacement of the strong Puritanism which for three centuries has helped to make them what they are, and, in fact, a change of race-characteristics? Rightly or wrongly, fiction with us must be *virginibus puerisque*, and we fear that we are still so profoundly moral, at any rate in this respect, that ninety-nine out of a hundred English or American readers will have less sympathy for the author of 'Beltraffio' than for his wife.

Dickens's Dictionary of Oxford and Cambridge. Macmillan & Co.

This dictionary, on the plan of the same editor's 'Dictionary of London,' is certainly the best guide-book extant to those famous and self-contained seats of learning. The use of the singular form in the title of the book is only justified by the circumstance of the two dictionaries being bound within one cover, for they are in all other ré-

spects two separate books. Considered as one book, the two are mutually helpful to some extent, the one sometimes giving information which applies equally to the other. But on the other hand, whole pages of matter are printed word for word alike in both—an extravagance in the use of space which is by no means justified, since the common matter is just what could and should have been spared from both books, namely, full details of the inter-university sports of various kinds in 1884.

The dictionary is by no means perfect, although the compilation has evidently been intrusted to persons familiar as well with the inner life of the universities as with that part of their organization which is accessible to any diligent inquirer on the spot. The long articles on expenses, reading, and undergraduate life clearly show the hand of one who is, or lately was, at home within college walls. How far the editor is responsible for omissions and trivialities and inconsistencies, it is difficult to judge, but, whosever the fault, it may fairly be asked why a reference-heading should be given to cabs and not to hotels; why to "the tavern" (a nickname of New Inn Hall) and not to "Teddy" Hall (St. Edmund Hall); and why, indeed, to either? Why should we be told the stipends of nearly all the professors and readers, and yet be suffered to remain in ignorance of how much a regius professorship with a canonry of Christ Church attached is worth? The emolument of one of these comfortable chairs is from twelve hundred to fifteen hundred pounds a year, with a handsome and spacious residence. In the Cambridge book a definition is given of that unique organization a university, as the term is understood in England; but the stranger who may visit or feel curious about Oxford alone is left in ignorance as to the constitution and powers of a body the functions of which many an Oxford graduate imperfectly apprehends. Lastly, why are the famous Clarendon Press at Oxford, and the corresponding establishment at Cambridge, totally ignored as if they were mere independent printing offices, where academical authors might have their books printed "on the usual terms," whereas they are as distinctly university institutions as are the Bodleian Library and the Fitzwilliam Museum, and in their way as important as either of these, and certainly more widely known than one of them?

These are the most conspicuous omissions from a book that is in the main full, judicious, and accurate, and they are in some degree made up to the fortunate reader who shall come upon the comical anachronism contained in the statement (under "New Inn Hall") that Keble College sent its plate to the melting-pot for the benefit of King Charles I. Keble College was founded in 1868, and Exeter is probably the society whose loyalty the writer intended to refer to.

Wensley, and Other Stories. By Edmund Quincy. Edited by his son, Edmund Quincy. Boston: J. R. Osgood & Co. 1885.

MR. QUINCY'S name is well known to most readers of the *Nation*, and has been immortalized for them by some beautiful lines of Mr. Lowell's, which originally appeared in its columns, and are reproduced in this collection of his stories. His life was devoted to the anti-slavery cause; for, though his original bent was rather to literature, he found, as so many Americans do, that in our practical life a purely literary career falls short of satisfying that longing to take an active part in the great struggle of humanity which is part of the inheritance of every educated American. No one can read such a novel as 'Wensley,' however, without perceiving that had he devoted himself to fiction, Mr. Quincy would have easily obtained a high rank as a novelist. The style is not that of our day, and the humor has an antique but perfectly genuine flavor, which will recall to those who knew him something of the nameless charm and attractiveness of Mr. Quincy's conversation—a humor not as shy or subtle as Hawthorne's, but colored by the same conciliatory modesty which characterizes what used to be known as the manners of the old school. 'Wensley' is a novel of the old school. The scene is laid in post-Revolutionary New England. The hero is a "rusticated" Harvard student, the heroine the daughter of a Massachusetts Tory, and one of the principal figures a New England clergyman of the period when New England was still a theocracy, and Sunday began at sundown on Saturday. The figures of Mr. Bulkley and his old negro servant are well drawn; and if the villain is a little conventional, his connection with the plot is well worked out, and the termination is thoroughly satisfactory. The effect in heightening the interest of a story of "suspense," which all the old novelists so sedulously cultivated, and which so many of those of our day seem to know nothing about, was evidently appreciated by Mr. Quincy. 'Wensley' is certainly not in the taste of our day; yet no one who is at all familiar with New England could read it without a great deal of pleasure—a pleasure partly derived from the interest of the story, and partly from the insight it gives us into bygone times and feelings.

"Who Paid for the Prima Donna?" is a short story of the days of the "Old Park" Theatre (Mr. Quincy was an inveterate theatre-goer) when Malibran was in her prime—so much in her prime as to lead a couple of ingenious rascals to make her the medium, and victim, of an elaborate swindle, by which the singer, the daughter of one of them, was transferred in marriage to the other, the price paid for his wife being a cargo of linen out of which he swindled a third person. The subsequent history of the adventures of the father (Garcia), as given by Mr. Quincy, is very amusing, and the tale contains an original apothegm with regard to foreign travel that will do for any system of philosophy, Stoic, Cynic, or Epicurean, viz., that its chief advantage is that it teaches you that one place is as good to live in as another. The author himself, we believe, lived up to this by never going abroad. Mr. Quincy's minor writings, including his anti-slavery publications, would, his son says, fill many volumes, and we trust that the time may soon come for a selection from these also, under his name. He was a most careful writer, and what he wrote, even controversially, was done with the same conscientiousness that marks his essays in fiction. Every one who knew Mr. Quincy will be glad, at any rate, to possess this selection. The regard for his memory and character which we have, most inadequately, expressed in this brief notice, the reader will, as we have said, find beautifully preserved for generations to come in "Bankside," a poem that is a perfect portrait, such as only the sympathetic insight of friendship could have produced.

BOOKS OF THE WEEK.

Arnold, E. The Secret of Death. From the Sanskrit. With some selected poems. Boston: Roberts Brothers.
Bliss, P. Of Sovereignty. Boston: Little, Brown & Co.
Battershall, J. P. Legal Chemistry. Translated from the French of A. Naquet. 2d ed. D. Van Nostrand.

The Works of Virgil.

Translated into English Prose, with an Essay on the English translators of Virgil, by John Conington. Edited by John Addington Symonds. Price $2.00.

*** This prose translation of the works of Virgil was the last of Prof. Conington's classical labors. It was made several years after the publication of his metrical version of the 'Æneid.'

This volume has won the highest commendation from scholars, and is accounted the best English prose version of the works of the Latin poet.

Sold by all booksellers, or sent postpaid on receipt of price.

New Law Books.

Telegraph Communication.

A Treatise on Communication by Telegraph. By Morris Gray, of the Boston Bar. Crown 8vo, sheep, $3 *net.*

Bliss on Sovereignty.

By Philemon Bliss, LL.D. Part I. Limitations upon Sovereignty in respect to Public and Private Law. Part II. Sovereignty in the Federal State. Crown 8vo, cloth, $2.

Drake on Attachment.

Sixth Edition. Revised, Corrected, and Enlarged. 8vo, sheep, $6.

This final edition has been subjected to a very thorough revision. Several passages have been rewritten; new topics have been introduced and treated, and more than 500 new cases have been gathered.

Seton's Decrees.

From the Fourth English Edition. By Franklin Fiske Heard. 8vo, $6 *net.*

The Forms are adapted to either the old or new method of Procedure.

Transfer of Stock in Private Corporations.

By Abbott Lawrence Lowell and Francis C. Lowell. 8vo, law sheep, $3 *net.*

CONTENTS:

1. Of the Nature and Ownership of Stock. 2. Of the Passing of Title. 3. Of Transfer in Equity. 4. Of Transfer on the Books. 5. Of the Effect of Certificates. 6. Of the Liability of the Corporation. 7. The Lien of the Corporation. 8. Individual Liability as affected by Transfer. 9. Remedies and the Measures of Damages.

The work also contains a full Index and the following Appendices: A. Of the Individual Liability of Infants. B. Of the Possession of Stock. C. Mass. St. 1884, chap. 229 (the Statute passed by the last Massachusetts Legislature relating to the transfer of stock).

"It is a pleasure to come upon a piece of work so well thought out, and executed in so clean and neat a fashion as 'The Transfer of Stock in Private Corporations,' by Abbott Lawrence Lowell and Francis C. Lowell. The compact and intelligent exposition which it presents of the nature of stock, the passing of title, the effect of transfer on the books, and the effect of certificates, will help to clarify professional ideas upon these topics."—*The Nation, December* 18, 1884.

"This is a recent law book which will prove of great value to the legal practitioner, and it will repay any one who has business dealings in the stocks of Corporations for the time spent in its perusal. The method of the book is less wearisome than that of most of the modern text-books of the law, which are generally merely a digest of ill-arranged cases. The authors have evidently given careful thought to their subject, and have discarded the artificial reasoning of feudal times, when personal property consisted of a few kinds of movable chattels, and have applied the rules of sound sense. . . . Nowadays, when 'of making of books there is no end,' it is comforting to peruse a volume which is practical, sensible, and one which deals with matters which are of great importance to-day, and not merely possessing an antiquarian or historical interest."—*Philadelphia North American, Nov.* 21, 1884.

NEW PUBLICATIONS
READY.

WHO WROTE THEM?

A Man of Destiny.

Letters to a President. By Siva. 12mo, cloth, $1.00; paper covers, 50 cents.

Since the days of the famous 'Letters of Junius,' few writings have commanded so much attention as these Letters of Siva to a President-elect. They have been frequently and deservedly compared with the 'Letters of Junius,' while in the judgment of some of the ablest critics they are regarded as being far in advance of those remarkable epistles. The fact that they have been published anonymously adds greatly to their value. They challenge attention on their own merits, and not on the reputation of their author. Much curiosity has been manifested concerning their authorship, and the common question of to-day is, "Who is Siva?" The most thoughtful readers are at a loss for an answer. These letters have been ascribed in turn to the Hon. J. G. Blaine, Hon. W. M. Evarts, Hon. Roscoe Conkling, Col. R. G. Ingersoll, Judge Tourgée, Hon. E. B. Washburne, Charles A. Dana, Hon. Emery A. Storrs, "Gail Hamilton," D. R. Locke, General Grant, Gen. B. M. Prentiss, Margaret Sullivan, James Redpath, and other distinguished persons. This fact alone is evidence of their remarkable character.

'Germinal.'

By Emile Zola, author of 'Nana,' 'L'Assomoir,' etc. Printed from advance sheets, by arrangement with the author. Illustrated Frontispiece by True Williams. 12mo, cloth, black and gold, $1.00; paper cover, 50 cents.

'Germinal,' the latest work of the distinguished Zola, is without doubt the most masterly effort of his genius. Its descriptions of character are startlingly life-like and vivid. It deals with the dreadful condition of the miners in the coal mines of France. The struggle for a miserable existence on the part of the Maheu family is wrought out in horrible detail. The hero of the story, Etienne, captivates the reader's attention from the outset; his speeches in the moonlit forest near Montson are thrilling in the extreme, while the whole story of the revolt of the workmen is a study especially appropriate to these unsettled times.

Shadowed to Europe:

A Chicago Detective on Two Continents. Mooney & Boland's Detective Stories. 16 full-page illustrations by True Williams. 12mo, cloth, $1.00; paper cover, 50 cents.

This record of the chase from Chicago to Spain after one of the most accomplished swindlers of modern times, is full of exciting interest from first to last. The story, being founded on fact, is much more wonderful than any creation of the imagination. The descriptions of character are as graphic as they are true. The theory of Mr. Mooney, that a swindler invariably leaves some trace of his misdoings, and is sure sooner or later to be run down, is carried out in the remarkable plots and counterplots of this story. 'Shadowed to Europe' shows, more than any detective story ever written, how the ceaseless vigilance of a cool and level-headed detective is more than a match for the most cunning swindler. This work is founded on the records of the Mooney & Boland Detective Agency, whose effective operations are known all over the country.

NINTH EDITION NOW READY.

Poems of Passion.

By Ella Wheeler. The most salable Book of Poems issued this century. Square 16mo, cloth, price $1.00.

"Miss Wheeler evidently has 'the courage of her opinions.' Her verse is always thoughtful, often animated with a true poetic instinct, and made beautiful by felicitous fancy. It is always melodious."—*Chicago Times.*

BELFORD, CLARKE & CO.,
PUBLISHERS,
315-321 Wabash Ave., CHICAGO. 384-386 Broadway, NEW YORK.

Recently Published:

Arthur Penrhyn Stanley,

Dean of Westminster. His Life, Work, and Teachings. With fine etched portrait. By Grace A. Oliver, author of 'Maria Edgeworth.' 1 vol., 12mo, pp. 408, $1.50.

The first attempt to give to the world a narrative of the life-work of the celebrated Dean Stanley. The growing popularity of the author as one of the best of our modern biographical writers, the splendor and greatness of the subject treated, will insure for the book an immediate and hearty welcome in the reading world. The careful critic of the Boston *Daily Advertiser*, reviewing it from advance sheets, says: "Mrs. Oliver has made a biography of great interest, and one that appeals to all that is good and aspiring in every human soul."

An Actor's Tour;

Or, Seventy Thousand Miles with Shakespeare. By Daniel E. Bandmann. Edited by Barnard Gisby. With Portrait after the celebrated painting by the late W. M. Huut. 1 vol., 12mo, cloth, pp. 303, $2.

"As a book of travel it has unique interest, being the first account ever published from the pen of an actor who writes from personal knowledge of the Hindu and Chinese stage, and of a hitherto untreated vast theatrical world. It is the record of a tour more extended than any other actor has made, replete with amusing anecdotes, stories of distinguished persons, graphic descriptions of places, and full details of an actor's life—its successes and rewards—making it a volume of rare attractiveness. . . . His career in America was a triumphant one. Accordingly, in February, he appeared at the Lyceum Theatre (London), in 'Narcisse,' his success being so great that the late Lord Lytton said he was the only actor since the days of Macready he had seen who inspired him to work again for the stage. Lytton re-wrote for Bandmann his drama of 'The Rightful Heir.'"—*Men of the Time, London,* 1884.

Heidi:

Her Years of Wandering and Learning. How She Used what She Learned. A story for children and those who love children. From the German of Johanna Spyri, by Mrs. Francis Brooks. 2 vols. in one. 12mo, cloth, pp. 668, elegant, $1.50.

This work was the most successful book for the young issued during the season. The whole edition was exhausted before Christmas. To meet the daily increasing demand the publishers now offer a popular edition at a popular price, namely, $1.50, instead of $2.

The *Atlantic Monthly* pronounces 'Heidi' "a delightful book, . . . charmingly told. The book is, as it should be, printed in clear type, well leaded, and is bound in excellent taste. Altogether it is one which we suspect will be looked back upon a generation hence by people who now read it in their childhood, and they will hunt for the old copy to read in it to their children."

A leading Sunday-school paper further says: "No better book for a Sunday-school library has been published for a long time. Scholars of all ages will read it with delight. Teachers and parents will share the children's enjoyment."

AN ATTRACTIVE EASTER SOUVENIR.

Easter Gleams.

By E. W. Shurtleff. A new ribbon book on parchment paper. 24 pages. Price, 35 cents.

The Widow Wyse:

A Novel. 1 vol., 12mo, cloth, $1.

The most strikingly original and brilliantly attractive society novel since the 'Confessions of a Frivolous Girl.' Third edition now selling.

The History of the Independents.

Pamphlet. 1 vol., square 8vo, pp. 65. Price, 25 cents.

It will be found to contain a large amount of information concerning the birth and growth of the Independent movement in Massachusetts, the cause of its establishment, and its possible influence in the future. A work of the greatest personal interest to every politician, and of the greatest general interest to every thinking man.

The above mailed, postage paid, to any address on receipt of price.

CUPPLES, UPHAM & CO.,
Publishers, Boston.

The Nation.

NEW YORK, THURSDAY, MARCH 19, 1885.

The Week.

We extend our deepest sympathies to those Republican journals which started out a few weeks ago with the assurance to their readers that President Cleveland's civil-service-reform professions were all humbug. They are having a very hard time in explaining what is happening, or rather failing to happen, at Washington. When the office-holders turned up in great numbers after the inauguration, they were sure that after a few days of resistance the President would surrender. Now they have to admit that he has not done this, and that "the boys" are one by one going home in despair. Some explanation must be found, and it has been put forth on the theory that the President is going to wait till the Senate adjourns, when he will be able to make appointments without the rigid scrutiny to which they are now subjected. Another point which needed explanation was the charge that "Hubert O. Thompson had the inside track for the Collectorship of New York." This has been made nearly every day since the election in November, but it is abandoned now, and the reason given is that the President fears that the Senate would refuse confirmation. In this way any sort of disgraceful design may be attributed to the President, and when he fails to fulfil the prediction, the failure can be charged to his fear of the Senate.

There are three kinds of people who are very anxious for the President to make the mistake of not reappointing Mr. Pearson as Postmaster of this city, and they are combining their energies in a final effort to accomplish their purpose. The office-seekers do not want him reappointed because the precedent would be an ominous one for them, and because they want the patronage of the place. The Blaine extremists, who are hoping and praying for a failure of Cleveland's Administration, do not want him reappointed for obvious reasons. The late Butler organ, the *Sun*, does not want him reappointed for precisely similar reasons. In fact, the "enemies he has made" are unanimous in desiring to see the President make a slip in this very important matter. So eager are they that they are supplying him with reasons for making it. The Blaine organ tells him it is really not worth his while to keep Mr. Pearson in office, because to do so will be taken by the public as a "blind." The Butler organ tells him that the reappointment may please a few Independents, but "may fail to please a good many Democrats," and that while Mr. Pearson has been a good Postmaster there are not wanting Democrats who could run the office just as well. The spoilsmen do their part by reproducing an old and exploded charge that Mr. Pearson was at one time interested in some express contracts for carrying letters, and ought to be removed as an unfit person.

The objection has been raised against the reappointment of Postmaster Pearson that since it is to be made (if at all) at the instance of the Independents, it will be in the nature of a political *quid pro quo*, and, therefore, not in the interest of civil-service reform. It is rather freely assumed that President Cleveland would not make such an appointment of his own motion, but only in obedience to pressure from a certain number of his supporters in the late campaign, and that therefore it would be as much in harmony with the spoils system as though the office were given to Tammany Hall, as an offset to some other office given to the County Democracy. The fact that Mr. Pearson is himself not an Independent makes this reasoning a trifle obscure to the common understanding, which has somehow coupled the spoils system with the instinct of human selfishness. A spoils system grounded upon principles of self-denial is something of a puzzle. It is so much at variance with prevailing ideas that it requires elucidation. Yet there is a substratum of truth in the particular objection made to Mr. Pearson's reappointment. If the Independents had asked for it as a return for their votes, and as a recognition of themselves as a distinct body of Mr. Cleveland's supporters, an appointment thus made would not be in the line of what we understand by civil-service reform. What really detracts from the force of this objection is, that the Independents have made no such request. They have never thought of hiring Mr. Cleveland to do anything. They did not support him in order to secure the appointment or the reappointment of anybody to any place, but to establish the principle that "public office is a public trust." They conceive that Mr. Pearson has illustrated this principle in a conspicuous manner, against heavy odds of party pressure, and that his reappointment would signalize the President's adherence to the same principle as perhaps no other act could do. They are not unmindful of the fact that in reappointing Mr. Pearson the President would go a step further than he has ever gone, or promised to go, in this direction. Nevertheless, they indulge the hope that so favorable an opportunity of stamping purely business methods upon purely business administration will not be neglected.

Secretary Whitney has performed a simple act of justice in restoring Commander Evans, of the navy, to his former position of Inspector of the Fifth Light-house District. He was removed last July by Secretary Chandler and put on waiting orders at half-pay, simply because he would not allow political interference by Mahone in the affairs of his department. There was no other complaint made of his conduct. He had been in the naval service twenty-three years, twelve of which he had passed at sea. He was a faithful and efficient officer, but he would not consent to Mahone's wishes in regard to the selection of subordinates. His chief offence was in refusing to retain an incompetent colored man as a lighthouse-keeper. Pressure of all kinds was brought to bear upon him both in Virginia and at Washington, but he resisted it all, and at Mahone's instigation Secretary Chandler removed him. A Democrat was put in the place, and he now retires in the interest of justice and civil-service reform.

The evidence that Mr. Manning was grossly imposed upon in the matter of Higgins, the Appointment Clerk, by Senator Gorman, is very strong, and we are quite ready to believe it. But the plea which comes from Washington, that "it will not happen again," hardly meets the occasion. There is only one way for Mr. Manning to set himself and the Administration right with the public, and that is to get rid of Higgins. We are not consoled for having one Higgins by the assurance that we shall not have two, because one is too many. The appointment has nowhere excited more surprise and regret than in Baltimore, where Higgins is well known as a bad specimen of the ward politician, and we believe steps are being taken to put his personal and political record before the world, in a way which will make his retention not only a mistake but a great scandal. We trust that Mr. Manning will anticipate all this by removing him. It would be absurd, it seems to us, to shake the daily and rapidly-growing confidence of men of *all* parties in the Administration, in order to oblige Senator Gorman or give a man like Higgins $2,500 a year. Besides, if there was one thing more than another in which Mr. Manning was supposed to be strong, it was his shrewdness as a politician—that is, his capacity for detecting attempts to humbug him. He ought not to sacrifice this for the sake of one small place.

Notwithstanding reports which have come from Washington implying that the contest between Mr. "Phil" Thompson, of Kentucky, and Mr. Miller, of West Virginia, for the appointment of Commissioner of Internal Revenue was a trial of strength between Mr. Carlisle and Mr. Randall, or more broadly between the friends and opponents of revenue reform, we can perceive no reason why it should bear any strange complexion, or rise to the dignity of a national episode. Mr. Phil Thompson made himself notorious a few years ago by murdering an unarmed man in cold blood on a railway train, for alleged corruption of his wife through her unfortunate propensity for drink. He had previously shot two other men in a court-room. It was said, and we believe truly, that in this affair he was defending his father against a personal assault. He was acquitted in both cases, and afterward elected to Congress. The view taken by President Cleveland of his fitness for a bureau appointment would naturally be different from that taken by a Kentucky jury, or a constituency among whom the carrying of deadly weapons in court-rooms and on railway trains is considered consistent with high civilization. It is altogether fitting that Mr. Thompson's civic honors should be left wholly to the determination of his friends and neighbors, and it is not necessary to import into President Cleveland's decision of

the contest between him and his competitor any deep-laid scheme to decide weighty questions affecting the public revenue or the next Speakership contest. There are plenty of Democrats to hold all the offices who have never shot anybody on sight, and probably Kentucky can furnish her quota without encroaching upon the ranks of those who have been tried at one time or another for homicide.

The sentence of two years' imprisonment in the penitentiary and a fine of $5,000 each, passed upon the professors of "fine work" in the Chicago election cases, will be a wholesome lesson to ballot-box stuffers in all parts of the country, since the law under which the conviction took place is a statute of the United States, applicable to every precinct where a member of Congress is voted for. It may be said that this proceeding in Judge Blodgett's court is a new encroachment of the Federal judiciary upon State jurisdiction. The fraud actually committed was a fraud in the election of members of the State Legislature. In order to commit it the ballots cast for Congressman in the district were unlawfully tampered with, although the result was not changed. The transaction brought it within the purview of the United States statute governing the election of members of the House of Representatives. It is contended by the counsel for the prisoners that a jurisdiction acquired by mere technicality should not operate to deprive citizens of their liberty. But it is difficult to see how a court is to draw a line between excusable and non-excusable ballot-stuffing. It is true that Mackin and his pals did not intend to cheat the voters out of the Congressman of their choice, but the law does not confine itself to frauds which change the result of an election. It prohibits and punishes any meddling with the ballots at all. If the jurisdiction is technical, the crime was real enough to warrant the heaviest punishment that the law allows.

Senator Sherman's refusal to serve on the Committee on Finance has drawn attention to the composition of that committee as regards the silver question. It appears to have been made up, as the previous one was, with a bare majority in favor of a suspension, sooner or later, of the compulsory coinage of silver. Senators Morrill, Sherman, Allison, Aldrich, Miller (of N. Y.), and McPherson, are counted as favorable to the bill reported by the Committee at the recent session, while Senators Jones (of Nevada), Voorhees, Beck, Harris, and Vance are supposed to be on the other side. The retirement of Mr. Sherman will not change the complexion of the Committee in this regard, as the vacancy will be filled by an anti-silver man. Mr. Sherman's action is said to have been prompted by personal pique, because he was not given the chairmanship of the Committee, which he held before he became Secretary of the Treasury under the Hayes Administration. It is not presumable that this was the real cause, since Mr. Sherman has found no difficulty in serving on that Committee under Mr. Morrill's chairmanship for the past four years. Looking over the list of committees, we observe that the only chairmanship accorded to Mr. Sherman is that of the Committee on the Library, which is rather an ornamental than a distinguished position. In contrast with this assignment, Senator Plumb is made Chairman of Public Lands, Senator Cameron of Naval Affairs, Senator Miller (of California) of Foreign Relations, Senator Pike of Claims, and Senator McMillan of Commerce. All of these Senators are by a long distance the juniors of Mr. Sherman in terms of service, and still more so in experience and reputation. While Mr. Sherman would not be justified in making an issue with his fellow-Senators on the chairmanship of the Finance Committee, he is clearly entitled to a leading position in the organization of the Senate, and this has not been accorded to him. Both Mahone and Riddleberger have received more consideration from the Republican caucus, the former being Chairman of Public Buildings and the latter of Manufactures.

The drift of public sentiment in the countries of the Latin Monetary Union appears to be in favor of the coinage of silver on the basis of its actual value in gold. The Union expires at the end of the present year unless renewed, and the terms of its renewal are now under consideration. If a new arrangement is not made, each country will be bound to take care of its own silver, and the circulation of Italian pieces in France, and vice versa, will come to an end. Events have long outgrown the Union. It ceased to have any real vitality when France, Belgium, and Switzerland closed their mints to free coinage. Its operation since that time has been conservative and useful, but the original purpose has been superseded by the introduction of the single gold standard. Speculation is rife on the other side of the water on the question whether the United States will join in a movement to establish the double standard on an entirely new ratio—that is, the ratio of the market value of the two metals. This is a question not easy to answer, since the political supporters of silver are committed to the "dollar of the fathers," the ratio of 16 to 1, and have as large a contempt for "abroad" as they had when the Silver Bill was passed, while the commercial classes do not believe that any ratio can be maintained by law or treaty which will hold good against changes in market value caused by the variations of supply and demand. Inasmuch, however, as President Cleveland has expressed the hope that measures may be taken to prevent the two metals from "parting company," we presume there would be a general acquiescence in the adoption of the market-value ratio as an experiment, unless the Bland faction should oppose it. One of the consequences of the adoption of this ratio would be the retirement and recoinage of our existing stock of silver dollars, and the wiping out of the imaginary profit which the Government has made by the coinage of the eighty-five-cent dollars, and the acknowledgment of the actual loss incurred in the operation.

In the proceedings before the Hazen court-martial on Monday, the defendant tried to show that the Secretary of War had no jurisdiction in the matter of the Arctic expeditions, but this the Court ruled out. His counsel then made a vigorous attack on the Secretary's motives, maintaining that he was actuated by such deep-seated hatred of the Chief Signal Officer, that he procured the theft of certain letters from General Hazen's desk, and rewarded the thief with a special appointment. Indeed, this hatred reached such a point that the Secretary's "body exhaled malice whenever the Chief Signal Officer was named." This was certainly a most extraordinary phenomenon, because physical exhalations can only be detected by the smell, and the precise odor of malice is, we think, generally unknown even to medical men. This reliance on physical indications of a man's state of mind, by counsel before courts-martial, is, however, not new. One of the witnesses before the Fitz-John Porter court-martial, Col. T. C. H. Smith, swore that he was so satisfied by the expression of Porter's countenance, although he had never seen him before, that he was going to betray the army the day before the celebrated march from Bristow Station, that he would have felt justified "before God" in shooting him on the spot. Judge-Advocate Holt, in summing up, dwelt strongly on this testimony, alleging that "the tone of the voice, the expression of the eye, and the play of the features" of the accused, as remembered by a witness, though he could not reproduce them, "afforded a language more to be relied on than that of the lips." In fact, he came very near enunciating the great doctrine that mental conditions may be inferred, for judicial purposes, from bodily odors, by declaring that "great crimes, like great virtues, often reveal themselves to close observers of character and conduct as unmistakably as a flower-garden announces its presence by the odors it breathes in the air."

Three important changes in postal rates will go into effect on the first of July next. The postage on letters after that date will be two cents an ounce instead of two cents a half-ounce as at present. The postage on newspapers sent to regular subscribers, and on sample copies sent out by publishers, will be reduced one-half. All cities having more than 4,000 inhabitants will be authorized to establish a special ten-cent. stamp delivery service, by which letters can be hastened to their destination. All these changes were recommended in the last annual report of the Postmaster-General. About the wisdom of the first two there is very little doubt. The ten-cent-stamp project is an experiment, and its wisdom is still to be tested. Provision is made for establishing this service on a separate basis from the regular delivery, and specification is made that it shall not be permitted to interfere in any way with the latter. There is no apparent reason why it should interfere. The argument that if more prompt delivery can be secured for ten cents than for two, it follows that the present system is very defective, does not bear examination. A special messenger with ten or a dozen letters can, of course, make better time than a regular delivery agent with a bagful of letters and papers.

An investigation of wage reductions is furnished by *Bradstreet's* as an appendix to its re-

cent compilation of the statistics of unemployed labor in the United States. The conclusion reached upon the latter point was, that there were at that time (December, 1884) 350,000 fewer operatives at work than were employed in 1882, a loss of 14 per cent. The tables of wage reductions embrace thirty-eight leading industries, which are included under six principal heads, viz.: food products, textiles, metals, lumber, building, and leather and minor manufactures. The rates of wages are compared with those of July, 1882. The singular result is reached that the industries protected by tariff duties are those in which the heaviest reductions in wages have been made, and that these reductions are generally in proportion to the amount of protection accorded to them. In woollen and cotton mills the reduction has been 25 to 30 per cent., while there has been no reduction in the wages of the unprotected house-builders, carpenters, stone-cutters, and brickmakers. The reduction in wages of iron-mill workers has been 15 to 22 per cent., while the pay of butchers, millers, bakers, tanners, and printers has not declined at all. Wages in the silk trade have fallen 15 to 25 per cent. Those of agricultural-implement makers remain substantially unchanged. The reductions in wages, however, are not in any case equal to the fall in prices of the articles produced, and this signifies that the loss has been mainly borne by capital in the shape of diminished profits.

The action of the Union League Club last week, reversing the policy of the Committee on Admissions, who had adopted a political test for new membership not prescribed in the charter or by-laws, carries two plain implications. One of these is, that President Cleveland's Administration has gained ground in the estimation of Republicans since it came into power. The other is, that an increasing number of Republicans are now willing to admit that the nomination of Blaine gave an exceptional character to the recent Presidential campaign, and did really, in some sort, justify Republicans in voting for Cleveland. Mr. Theodore Roosevelt, who has lost none of his habit of telling unpleasant truths, declared very distinctly his opinion that the last election was "peculiar." It was not necessary to state what the peculiarities were — everybody understood them. The only peculiarity appropriate to the discussion was, that something had occurred which made it excusable for Republicans to vote the Democratic ticket. Directly upon this hint the Club voted, by a majority of two in a total vote of 324, to overrule a decision of the chair which was adverse to the Griswold-Roosevelt resolution. The Mugwumps thereafter had it all their own way and passed the resolution, in a form modified so as to spare the feelings of the Committee on Admissions, but still sufficiently precise to abolish the test.

The movement in Harvard College against compulsory attendance at morning prayers has again failed, the petition of the remonstrants having been rejected by the Corporation. The petition asked simply that undergraduates over twenty-one years of age should be allowed to exercise their option in the matter, and that those under that age should be governed by the option of their parents. The decision is very curious when taken in connection with the yearly extension which is given to the elective system in the choice of studies. One would think that there was nothing in a young man's life on which he himself or his parents should be so competent to form an opinion as the time and place at which he should pray to Almighty God, and that there was no duty to which it was more absurd to drive him by law under defined penalties. And yet this is what the college authorities, who are steadily converting Harvard into a university in the large sense, insist on doing. The President and Fellows unluckily do not give their reasons, but the only creditable reasons must be either the belief that God is pleased with the presence in a chapel or church of unwilling, irritated, and irreverent worshippers, brought thither by the fear of temporal punishment, and does not mind the set against all religion which such a process is very apt to give young men; or the belief that a man is benefited by being present in any place in which prayers are being offered, no matter in what state of mind he may be, and no matter what agency has brought him there. But neither of these reasons is modern, or, if we may make a bull, rational.

The Crown Solicitors, who have discovered treason in Parnell's advice to treat the Prince of Wales with cold neutrality, and his visit inopportune, may be good judges of the law, but it is to be hoped that "the Castle" will not commit the egregious folly of prosecuting him. No conviction could, of course, be obtained without packing a jury, and the excitement and fury the affair would create throughout Ireland would be a very undesirable accompaniment to the Prince's tour. Mr. Gladstone's proposal that Earl Spencer should receive some signal mark of royal favor for the conspicuous ability he has displayed in the management of Irish affairs, is another illustration of the muddled condition of the mind of even the ablest Englishmen about Ireland. The theory which is preached to the Irish by English statesmen is, that Ireland is a portion of the Empire in all respects enjoying full equality of rights with England. If this were true, of course the Minister would not venture to recommend the Crown to reward an officer whose conduct in office was condemned, whether justly or unjustly, by the vast majority of the people within his jurisdiction. That it is not true, is shown by the fact that the Prime Minister does not care one cent what the bulk of the Irish people think about Earl Spencer, and, in fact, probably considers the hostility he has excited as one of his strong claims to reward. Earl Spencer is honored in virtue of what Englishmen think about him, and in spite of what Irishmen think about him, and largely, too, in virtue of that English superstition which Matthew Arnold so pleasantly ridiculed in his late article in the *Nineteenth Century*—the belief that an "English gentleman" is a governor under whom any race or tribe on earth ought to be glad to live. Even so open-minded a journal as the *Spectator* has often marvelled over the perversity of the Irish in not enjoying the rule of such a thoroughly good specimen of the English gentleman as Earl Spencer undoubtedly is.

There is really no essential change, as far as we can make out from the telegrams, in the Afghan trouble. There appears to be, as usual, a strong desire at St. Petersburg to avoid hostilities, combined with a strong belief in Central Asia that there is going to be war. Certainly both parties on the ground seem to be getting ready for it. The British are hurrying troops up to Quetta, and the Russians are reinforcing General Komaroff, and the Afghans are fortifying, probably under the advice of Sir Peter Lumsden, who is on the ground as the British member of the Boundary Commission. The talk of the Russian agents both in London and St. Petersburg appears to be very moderate. Unfortunately the dispute is one in which it is as easy as possible for both parties to be in the right, and this is always the hardest kind of dispute to settle. The Afghans have undoubtedly often exercised jurisdiction over the territory claimed by Russia, but no boundary line was ever traced because outside was the desert and the wandering Turkomans. Russia now claims all that the Turkomans wandered over, which would—not to go into particulars—carry their line not along the base, but along the crest of the mountains.

The arrest of Zebehr Pasha on suspicion of treasonable relations with the Mahdi is one of the most curious incidents of the ever-changing Egyptian drama. Zebehr Pasha was once Governor of the Sudan, and while there an active and hardened slave-trader. Gordon, who came after him, held one of his sons as a hostage, and hanged him for some breach of faith on the father's part. Subsequently Zebehr seems to have overlooked this little slight, and become good friends with Gordon, who, when he found his own pacificatory mission was a failure, advocated Zebehr's restoration to his old place —a measure which, however, the Government at home would not sanction. Zebehr is now in jail on the charge of secretly corresponding with and aiding the Mahdi, of which he is doubtless quite capable.

An article in the March *Macmillan's Magazine* on "Irresponsible Opinion" has some excellent remarks addressed to newspaper strategists in particular, and people generally who keep talking with positiveness about things which they cannot by any possibility understand even one-fiftieth part as well as those whom they criticise. The writer says:

"There is a familiar provincialism used in deprecation of such self-praise as is felt to be inevitable, 'Though I say it as shouldn't.' Might not this formula be extended to all such enforced judgments as I am contemplating? As thus, 'I am decidedly of the opinion that the attack at Tel-el-Kebir should have begun an hour earlier than it did, but seeing that I have been engaged all my life in the manufacture of small-clothes, and that although a volunteer I have never seen active service, 'I say it as shouldn't'—Sir Garnet being so much more likely to be right than I.'"

And also:

"We cannot all be expected to emulate the sobriety of that Parisian bootmaker, a hero of fable—I am afraid—who, on being asked his opinion of the respective merits of Turenne and the Grand Condé on the same stricken field, replied: 'I made the boots of both gentlemen; as far as boots go there is not a pin to choose between them; beyond that I cannot go, for it lies outside my profession.'"

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, March 11, to TUESDAY, March 17, 1885, inclusive.]

DOMESTIC.

THROUGHOUT the week the office-seekers at Washington have been given little encouragement. President Cleveland's policy of going slowly in all changes is, it appears, to be rigidly enforced. Only a few nominations were sent to the Senate on Monday; among them Edward D. Clark, of Mississippi, to be Assistant Secretary of the Interior. He is a young and active lawyer and is well spoken of.

President Cleveland on Monday nominated Joseph S. Miller, of West Virginia, to be Commissioner of Internal Revenue. Senators Beck and Blackburn, of Kentucky, and Speaker Carlisle, who were urging Congressman Phil Thompson, were very much disappointed. Mr. Randall favored Miller, who is State Auditor of West Virginia.

It is believed that the President has requested Mr. Foster, Minister of Spain, to remain in office. The Administration is understood to be of opinion that modifications of the Spanish treaty can be secured which will be advantageous to the United States, and that Minister Foster, in view of his experience, can be of more service than a new Minister. Mr. Foster is making arrangements to return to Madrid within a short time.

Senator Bayard has informed the State Department clerks that they will not be removed except for inefficiency.

Eugene Higgins, of Baltimore, was on Wednesday made Appointment Clerk in the Treasury Department by Secretary Manning, in place of Constant S. Trevitt, of New York, who was recently promoted to fill the vacancy created by the resignation of Mr. Butler, and who had been in the service more than twenty years. The appointment has elicited severe criticism. Mr. Higgins is a Maryland politician, appointed on the recommendation of Senator Gorman.

Civil-service reformers from New York and Maryland, now in Washington, say they have received assurances from the President and from Assistant-Secretary Fairchild that the selection of Mr. Higgins as Appointment Clerk of the Treasury Department was a surprise to them, and that the mistake made in that appointment is not likely to be repeated.

On Friday morning Secretary Manning made a material reduction in the force of the Special Agents' Division of the Treasury Department, by which it is expected that $40,000 will annually be saved. The services of forty persons in all have been dispensed with. The list includes six special agents, twenty-six special inspectors of customs, and ten employees whose names are borne on the so-called "Fraud Roll." This action reduces the number of agents to twenty-two, the number of inspectors to twenty-five, and the fraud-roll employees to fifteen. It is stated at the Department that these changes are made solely in the interest of economy, and that no new appointments will be made to fill the vacancies created.

Commander R. D. Evans, who was removed from the Inspectorship of the Fifth Lighthouse District by ex-Secretary Chandler, has been reinstated by Secretary Whitney. Commander Silas Casey, who was appointed to succeed Evans, has been ordered to settle his accounts. The removal of Commander Evans, it is alleged by his friends, was for political reasons.

A written message from President Cleveland was sent to the Senate on Thursday for the purpose of withdrawing the Nicaragua Canal treaty and the Spanish reciprocity treaty, in order that they may be considered by the new Administration. They were returned to him on Friday.

President Cleveland on Friday issued a proclamation, warning the Oklohoma invaders that the military power will be used against them if they persist in unlawfully entering the Territory.

Some of the bad results of hasty legislation in the closing days of Congress have already been discovered. In the Naval Appropriation Bill the section which appropriated $500,000 for the armament of the new cruisers is omitted, and in the Sundry Civil Bill the item appropriating $5,500 for telegraph poles and material to aid in extending the life-saving service is omitted.

The Post-office Appropriation Bill, as passed by the recent Congress, provides for the following important changes, which will take effect on July 1: The weight of all single-rate letters is increased from one-half an ounce each or fraction thereof to one ounce each or fraction thereof. The same increase of weight is allowed for drop letters, whether mailed at stations where there is a free delivery or where carrier service is not established. All newspapers sent from the office of publication, including sample copies, or when sent from a news agency to actual subscribers thereto, or to other news agents, shall be entitled to transmission at the rate of 1 cent per pound or fraction thereof, the postage to be prepaid. This is a reduction of one-half from existing rates. A special stamp of the value of 10 cents may be issued, which, when attached to a letter, in addition to the lawful postage, shall entitle the letter to immediate delivery at any place containing 4,000 population or over, within the carrier limit of any free-delivery office, or within one mile of the post-office; and such specially stamped letters shall be delivered between 7 o'clock A. M. and midnight.

The Republicans in the Senate have seated Senator Blair, appointed by the Governor of New Hampshire, thus establishing the precedent that a Governor may appoint at the beginning of a new Senatorial term, if the State Legislature adjourns without an election. The opposition held that such a case was not a "vacancy" in the meaning of the Federal law, which was held to apply only to unexpired terms.

The Delaware Legislature on Tuesday elected Attorney-General George Gray (Dem.) to succeed Mr. Bayard in the United States Senate.

At the regular monthly meeting of the Union League Club of this city on Thursday the following resolution, offered by Mr. Theodore Roosevelt, was adopted: "That it is unadvisable for the Committee on Admissions to question the proposers of candidates for admission to the club as to how they (the candidates) voted at the last Presidential election, and said committee is hereby requested to omit any such questions in the future." This action grew out of the fact that the Committee on Admissions had recently made such requests.

General Husted reported his Supply Bill to the Assembly at Albany on Wednesday. Its total amount is $809,885 97. The amount of last year's bill was $606,421 15. The increase is due to the necessities of the prisons and penitentiaries, and to precautions to be taken to prevent a cholera epidemic. At least $100,000 of this increase Mr. Husted attributes directly to the abolition of contract labor in the prisons.

In the State Senate at Albany, on Monday, the Gibbs bill for freedom of worship in State institutions was debated in Committee of the Whole. Mr. Gibbs proposed the following amendments: First, that the religious services allowed should be only on Sundays; second, that religious ministrations be permitted only on two week days; and third, that the managers may pay for the religious services if they see fit. The debate was adjourned without any vote being reached.

The New York Assembly on Wednesday afternoon passed a resolution for final adjournment on April 23.

The Connecticut House on Friday, by a vote of 94 to 63, passed a bill allowing women to vote at school elections.

Joseph Chesterfield Mackin and William J. Gallagher, the two Democratic ballot-box stuffers at Chicago, were on Thursday sentenced to the penitentiary for two years.

The railroad strike on the Gould Southwestern system ended on Sunday through the intervention of Governor Martin and the Kansas State Railroad Commissioners. As a result of a conference it was resolved to restore the rate of wages which prevailed prior to last September, and to give the men one and a half time for all extra work. This was more than they asked for, their request being that the railroad companies restore the rates which prevailed prior to the January cut.

A partial and annular eclipse of the sun was successfully observed in many parts of the United States on Monday.

General Grant is slowly but surely failing in strength, and his physicians say that life cannot be prolonged for many weeks.

Charles W. McCune, President of the Buffalo *Courier* Company, died on Saturday, at the age of 53. He was prominent in the Democratic politics of the State, and was a friend of President Cleveland.

Mr. Charles Tracy, a prominent lawyer of this city, died on Saturday at the age of 76.

FOREIGN.

The London *Times* on Wednesday announced that the Russians had advanced further into Afghan territory, and that a collision was imminent. It also announced that the British Government had ordered Gen. Sir Peter Lumsden to organize a system of defence. London financial circles were somewhat excited over these reports. British consols fell 11-16 of 1 per cent., and Russian securities 2 per cent. in consequence of the news.

The Afghan war alarm was somewhat abated in London on Wednesday night by the statement of the Chancellor of the Exchequer in the House of Commons that the Government was uninformed of any further advance having been made by the Russians in Afghanistan, and that he believed there was no foundation for the report. The officials of the Russian Embassy at London denied that preparations for war were making by Russia on the Afghan frontier.

On Thursday the alarm was again renewed by a British Cabinet meeting at an unusual hour. It was reported that the Cabinet decided to address a serious representation to the Russian Government, that if through any Russian advance in Afghanistan a conflict results with the Amir's troops, Russia must accept the consequences, as England is bound to guard Afghan territory. In the House of Commons on Thursday afternoon, Mr. Gladstone said that England's relation with Russia had not been improved during the past few days.

The war feeling was greatly allayed when, in the House of Commons on Friday afternoon, Mr. Gladstone announced that an agreement had been arrived at between Russia and England, by the terms of which neither the Russian nor Afghan forces would advance any further on either side of the frontier. A Conservative member asked whether the Amir of Afghanistan had accepted this agreement. To this question Mr. Gladstone made no reply. Sir Stafford Northcote asked whether the agreement was a permanent or temporary arrangement. Mr. Gladstone replied that the agreement was without any specific time limit. The best description he could give, he said, was that the agreement should last as long as there was occasion for it. It provides against a rupture of friendly relations between the two Governments in the event of a collision between the Afghan and Russian outposts, which might possibly occur while instructions are being conveyed to the opposing commanders. This announcement was heard with an almost general sense of relief by the House, as it afforded a reasonable hope of peace.

The British Cabinet do not insist upon the withdrawal of the Russian troops from the

outposts during the deliberations of the Joint Commission. Sir Peter Lumsden has received certain discretionary powers touching his course in the event of a dangerous Russian advance. The Marquis of Hartington, Secretary of State for War, stated on Friday evening, in the House of Commons, that it was impossible to deny that there was still cause for great anxiety regarding the relations between Great Britain and Russia.

M. Lessar, the Russian member of the Afghan Boundary Commission, in an interview in London on Sunday, stated that Russia desired a frontier boundary line starting at the Herirud, a little south of Zulfikar, thence running east to Tchemeni-baid, on the Kushk River, thence northeast, leaving Murghabi-bala to the Afghans, to a point a few miles south of Panjdeh, and thence in a direct line northeast to Khodja-salih. Russia, he said, had never admitted that the frontier line due east from Serakhs to Khodja-salih was the correct one. He declared that Russia had no designs on Herat.

It is reported that Sir Peter Lumsden has arrived at Herat, and that the Afghans are actively fortifying the city. The Russian forces occupying Merv consist of a battalion of infantry, a regiment of dragoons, and some Cossacks. At Askabad there are about 8,000 troops of all arms. It is reported that Russia has been sounding Turkey with reference to a Russia-Turkish alliance, and that the Porte has replied that Turkey will remain neutral.

Reports were current in Calcutta on Sunday of an actual collision between the Russians and Afghans. The Russian General, Komaroff, who is in the disputed territory, has been given peremptory orders to avoid provoking the Afghans.

Mr. Gladstone explained in the House of Commons on Monday that Earl Granville had telegraphed his (Mr. Gladstone's) exact words to St. Petersburg, asking whether M. de Giers, Russian Prime Minister, endorsed as correct the statement of the agreement reached with Russia on the Afghan question. Mr. Gladstone added that it was rather an arrangement than an agreement. In the evening the Government announced that a telegram had been received from St. Petersburg fully endorsing Mr. Gladstone's statement. The Marquis of Hartington explained that the Russians occupied Khatun and Akrabat, and that the Afghans still occupy Panjdeh. The London newspapers on Tuesday commented on the arrangement with Russia as very unsatisfactory. On Tuesday afternoon Mr. Gladstone read a despatch from St. Petersburg giving M. de Giers's assurance that the Russian troops will not advance from the positions now occupied by them, provided the Afghans do not advance, or unless some extraordinary reason be given, such as disturbances in Panjdeh.

It is announced that the total number of Russian troops at present in Asiatic Russia is but 30,000, and that these are not concentrated, but scattered over a very wide area.

In the course of a dispute in the House of Commons on Thursday night, Mr. Gladstone said he wished it distinctly understood that Prince Bismarck's despatch of May 5 had never been delivered to the English Government. Mr. Gladstone declared that he would stand behind no man in the value he attached to the friendship of Germany. He must say, however, that he was not prepared to admit that the friendship of any country in the world was now or ever had been necessary to enable England to maintain her position. He thought that where Germany's colonizing operations were bona fide and consistent with the rights of all parties, England, with due regard to the claims of her own colonists, ought to meet Germany in no grudging spirit, and should refrain from discussing the occupation of this or that spot after the manner of hucksters, showing a disposition to grudge what she is unable to hold. If Germany became a colonizing Power he would only say God-speed to her. He hoped that she would become England's partner and ally in the work of civilizing the world. This was the spirit in which he viewed the matter, and, regardless of this or that despatch, Germany would have the best and heartiest wishes of the English Government, and every encouragement that it was in their power to give.

The Berlin *North German Gazette* (Bismarck's organ) says there will be no further polemic between Germany and England. Earl Granville's statement in Parliament was perfectly correct. The result of Count Herbert Bismarck's special mission to England relative to German interests in West Africa is reported to be as follows: England concedes to Germany the whole of the Cameroons country, with the exception of the mission town Victoria, where the Germans are alleged to have hauled down the British flag. England further agrees not to interfere with any action Germany may take in the entire country from the south bank of the Rio del Rey, a small river emptying into the Bight of Biafra, some distance north of the Cameroons, to the Gaboon, which enters the sea very near the equator. Germany, on the other hand, recognizes the supremacy of England over the country lying between the north bank of the Rio del Rey and Lagos. This covers the basin of the Lower Niger.

The London Press Association denies that Earl Granville has conceded the Cameroons territory to Germany or abandoned any of the British claims in that country.

In the German Reichstag on Friday Prince Bismarck declared that there was a good prospect of building up a thriving mining industry at Angra Pequena, and of obtaining a supply of cotton from German producers in the Cameroons and New Guinea colonies. He stated that the negotiations with England regarding the Cameroons territory were making gratifying progress. In concluding his speech Prince Bismarck said that since God's blessing had crowned the policy of Germany for twenty years, and as the Germans had withstood the foe in 1870 as a nation of brothers, a spirit of party strife and confused dissension must not now be allowed to ruin the newly founded empire. This was received with great cheering.

In the election for Member of Parliament at West Gloucestershire, England, on Wednesday, the Tories scored a victory, Mr. Ackers, their candidate, being elected by 411 majority to fill the vacancy caused by the resignation of Mr. Robert N. F. Kingscote, a Liberal. The Liberal majority five years ago was 876.

Mr. Parnell, in the House of Commons on Monday evening, when the Government called for the vote on the civil-service supply, arrested the vote by demanding that the Government keep their promise to introduce a bill for a triennial redistribution of the Irish constabulary, according to the pledge given the Irish members last August. The Irish leader's guarded announcement took the House by surprise. It was the first authoritative announcement that a bargain had been made by the Government with the Nationalists during the franchise and redistribution contests last summer. The Chief Secretary for Ireland, while denying such an explicit agreement, deferred to Mr. Parnell's wishes, and promised such a bill. Mr. Parnell accepted the explanation as satisfactory.

A motion to grant the family of General Gordon the income of $100,000 was adopted by the House of Commons on Thursday.

The Gordon Memorial Committee, at a meeting in London on Saturday, the Prince of Wales presiding, decided that the memorial should be a great hospital and sanitarium, to be erected at Port Saïd and be open to the people of all the nations of the earth. The Khedive has already granted a site for the proposed memorial.

Zebehr Pasha, whom General Gordon trusted and wished to make Governor of the Sudan, has been arrested at Alexandria under charge of combining against the Khedive. Many documents were found at his residence proving that he is in secret league with El Mahdi. Zebehr's two sons and three other persons were arrested on Sunday at Cairo, and numerous papers were seized at their residences. Nubar Pasha, the Egyptian Prime Minister, refuses to believe in the guilt of either Zebehr or his sons. Zebehr and his two sons were taken to Malta on Monday, on a British despatch boat.

Osman Digna is concentrating a large force at Tamanieb to oppose the advance of General Graham toward Berber. Thousands of well-armed Arabs are gathering to assist Osman Digna. His forces repeatedly attack the British outposts.

It is said that Ollivier Pain, the French Communist and journalist with El Mahdi, has become frightened at the threats of British vengeance for the part he played in the betrayal of Gordon, has escaped from Khartum, and is drifting down the Nile. General Wolseley has offered $250 for Pain's body, dead or alive.

A sensation was caused in Paris on Thursday, in dynamite circles, by the arrest of the Fenians James Stephens, Eugene Davis, John Morrissey, and Mortimer Leroy. Other arrests were made on Friday, and on that day Stephens, Leroy, Davis, and two Anarchists were expelled from France into Belgium.

Admiral Lespès telegraphed on Thursday from Kelung, under date of March 8, that Colonel Duchesne, at the head of 1,300 French troops, began on March 4 an attack on the Chinese who were stationed along the hilly country bordering on the road to Tamsui. He succeeded in driving the Chinese from all these positions and cleared them from the line of the road, inflicting upon them heavy losses, and capturing from them many rifles and flags. The conduct of the French soldiers during this series of difficult engagements is described as admirable.

The Chinese Embassy in London deny that the French troops have occupied the heights of Kelung, as claimed in Paris. The members of the Embassy say that the French, after fighting several days and losing 500 men, succeeded in occupying two positions commanding the road across the island between Kelung and Tamsui, but that the Chinese still hold all the other forts.

War was formally declared on Wednesday by President Barrios, of Guatemala, who desires to unite the five Central American States into a confederacy. On the 5th of March President Barrios declared in the Assembly of that country that Central America should constitute one republic, and at the same time he made public announcement that he would assume the command of all the military forces of the various States. The declaration was accepted by Honduras, but was rejected by San Salvador, Nicaragua, and Costa Rica. The forces of Guatemala began immediately to March against San Salvador. The people of the latter republic rose as one man to resist the invasion, and on Thursday Guatemala ceased hostilities. President Zaldivar, of San Salvador, appealed to President Diaz, of Mexico, and the latter telegraphed to Barrios as follows: "Your telegram of the 7th instant announcing your determination to declare Central America one republic, and to assume yourself the command of all the forces thereof, has been received. This declaration has been made by your Assembly only, and has been rejected energetically by your sister republics. These circumstances have created such antipathy to your course among Mexican citizens that my Government will be obliged to take immediate action to prevent the execution of your threat against the sister nationalities of this continent." Nicaragua and Costa Rica are preparing to resist Barrios, but it is believed the action of Mexico has prevented any further aggressions by him.

General Fernandez, President of Costa Rica, died suddenly on Friday.

MEMORANDA.

THE *Sun*, in its new rôle of adviser to President Cleveland, points out to him the danger that if he does such things as retain Mr. Pearson in the Post-office, he will please the Independents, while if he does such things as remove him, or rather not reappoint him in order to make way for a good Democrat, he will please the Democrats. In the former case, it is clear, says the *Sun*, "that he can hardly avoid a breach with the Democrats"; and "it is possible that such a breach would be fatal to him and his Administration," inasmuch as he would probably lose his influence with the House of Representatives, and would cause the loss of this State next fall.

To all this we have a ready answer. If it had not been expected by a considerable body of both Democrats and Independents that Mr. Cleveland would do just such things as keep Mr. Pearson in office, he could not have been elected President of the United States last fall. If he fails to do such things now, not only will it be fatal to his Administration, but this will be the last Democratic Administration this country will see for twenty years more. One great reason, we might almost say the greatest, why the Democrats have been excluded from power during the last twenty years, has been the fear of those who hold the balance of power between the two parties, that a Democratic President would do just what the rag-tag and bobtail of the party are now urging President Cleveland to do—that is, deliver over the public service to be the prey of needy adventurers from all parts of the country, who have not succeeded in getting a livelihood out of any calling in which a man has to be fit for his work. It is because the Democrats were able to nominate a man whose conduct in office gave promise of better things, that they have succeeded in getting hold of the Administration. It is for them to say now whether they will have a grand four years' debauch with the offices, and then go out once more into the cold for a whole generation, or carry out the reform which the best men of both parties demand, and to which the Republicans were found unequal, and stay in power indefinitely. If "pleasing the Democrats" means dividing the spoils in the old fashion, it means also the speedy loss of everything to divide. There must be no mistake about this. Any sign of returning to the old ways will bring defeat both in this State next fall and in the Union four years hence. The Republicans will never again nominate a charlatan and jobber, and if they put up an honest and able man, on a civil-service platform, against the candidate of a party fresh from a practical and striking exhibition of its faithlessness and imbecility, we know, and everybody knows, what the result will be. We know where the Independent vote will go; and happily, where this vote goes, as parties are now divided, victory goes also.

At the same time, we have no objection to offer to President Cleveland's plan of filling vacancies, properly made, preferably with Democrats until the public service is divided between the two parties with some degree of fairness. Some such process as this is necessary to redress the monstrous injustice worked by the spoils system during the past twenty-five years, in regularly excluding from office all who did not belong to the party in power. Nothing like it has ever been seen under a free government, and as long as it exists it is a flagrant abuse, but not one to be remedied at the cost of damage or interruption to the public business.

But we have no fear that the Administration will make any such mistake as "to please the Democrats," in the manner described by the *Sun*. President Cleveland knows very well the situation in which the election placed both him and his party. We do not expect a perfect Administration from him by any means, or an entire absence of mistakes or aberrations; but we do expect that his mistakes and aberrations shall not be conspicuous and deliberate, like President Arthur's dismissal of Colonel Burt, and that his sympathy with the reform of the civil service shall not find expression only in declarations on paper. Moreover, we do not believe that it would "please the Democrats," meaning by this phrase the better and more influential portion of the party, to go back to the old spoils system. We believe that the more thoughtful and intelligent members of the Democratic party, and above all its young men, are, like the same class in the Republican party, thoroughly convinced that this Government has reached a stage in which the conduct of public business by officers appointed after each election as rewards for electioneering activity is as antiquated and absurd as the extinction of fires in great cities by hand-engines and volunteer fire companies would be. There is something preposterous in trying to handle the revenues and execute the laws of a nation of 50,000,000 by such machinery. It is doomed, if not dead, and woe be to the party which deliberately refuses to be the instrument of the change. The Democratic party, which really had from the beginning a firmer grasp of American polity than any other that has arisen in the country, lost its footing in 1860, through failure to see that the country had outgrown the institution of slavery. It has now another chance of heading a forward movement by discarding the spoils system. It may use it or it may not. It may try to rule through office-jobbing or rule through ideas, but nothing is more certain than that the office-jobbing will only last four years. The displeasure of the Democrats at getting nothing now for their votes but the good of their country may be great, but it will be nothing to their displeasure should they be kicked out of everything in 1888.

COLONEL JACQUES AND THE TOWNELEY ESTATE.

ON Friday an amusing despatch to the New York *Times* gave an account of a vast English inheritance, called "the Towneley estate," awarded to American heirs by the Court of Queen's Bench, but showed that the judgment of this tribunal did not transfer the property, for it appeared that the American agent, "Colonel Jacques," who was engaged in prosecuting the claim, had subsequently to bribe "two members of the House of Lords," to procure the passage of an act of Parliament directing the payment of the amounts due into the United States Treasury. The same story, we now observe, has been sent to various other newspapers, and it would seem as if "Colonel Jacques," if there be such a person, is engaged in a scheme of some kind which merits the attention of the police, and against which all credulous American heirs ought to be put on their guard. The tale appears, as a special despatch, in the following shape in the Boston *Advertiser* of the 11th and 13th inst.:

BUFFALO, N. Y., March 10.—The wife of Deacon Sidney S. Brown, of Gowanda, has brought him good fortune, as she has been acknowledged by the court of Queen's Bench as the heiress to the Lawrence-Towneley estate in England, valued at $100,000,000, her part being $40,000,000. Lord Towneley, before the opening of the present century, was the parent of a wilful daughter Mary, who was disowned for engaging herself to John Lawrence, a man of good family, but poor. They came to America, and were married by a Springfield (Mass.) clergyman. Lord Towneley died, and his family was extinct, save the daughter, and for half a century the property was held by law. Colonel James Jacques, at the close of the war, went to Springfield, and there discovered the record of the Towneley-Lawrence marriage. Knowing of the estate in England, he traced the heirs to Gowanda, and there found Mrs. Brown, who was a daughter of Judge Wilder. Colonel Jacques was sent to England, where he obtained a decision that his claim was valid; and last week, by giving two members of the House of Lords an interest, they procured a transfer of the proceeds of the estate to the United States Treasury. Colonel Jacques claims that the money will be transferred within a month or two. He gets one-third for his trouble.

SYRACUSE, N. Y., March 12.—Mrs. Augusta J. Pratt, of this city, widow of the late ex-Attorney-General and Judge Daniel Pratt, has been found to be an undoubted heiress to the Towneley English estate, valued at $100,000,000, which is also claimed by Mrs. S. S. Brown, of Bagdad, N. Y. Mary Towneley, to whom the estate was left, was Mrs. Pratt's great-grandmother. Mrs. Pratt has heirlooms in silver and pictures, together with documents proving her claim. The other heirs are Mrs. E. Baxter of Oswego, Mrs. Douglass Benson of Erie, Penn., Mrs. Charles Metcalf of Cleveland, Philip and Lawrence Malcolm of Australia, Henry, Evaline, and Mary Dezang of Geneva, Mrs. Clarence Seward of New York, Alice and Eliza Morton of Carthage, Lawrence Dezang's heirs, Mrs. Emma Colton of Brooklyn, and Anna and Charles McCully of Brunswick, Me. Clarence Seward, son of the late Hon. William H. Seward of Auburn, but now of New York, has all the proofs of heirship, and is prosecuting the claim.

Before dealing with this special case, a word or two on the general topic may be seasonable. In the fourth volume of the *Galaxy*, for 1868, an article on "Fortune Hunting" was published, giving some particulars of numerous ridiculous schemes to obtain fortunes left in England by emigrants hither. The examples cited were those in which the dupes had been formed into associations, had collected money and employed agents to go to England, and had issued printed reports. These were the claims of the Houghtons, Gladdings, Willoughbys, Gibsons, Holts, Browns, Churches, etc., in most of which one or two Vermonters appeared as the moving spirits. The great Lawrence-Towneley claim escaped notice, as it was set forth in a formal genealogy, and had probably kept aloof from any greater notoriety. That it is the same old humbug now resurrected can be easily demonstrated.

In July, 1872, the Buffalo *Express* printed a long article, setting forth that one Jasiel Lawrence was a claimant of this Towneley estate of $500,000,000, and that he had been selling bonds thereon at a very low rate to obtain funds to prosecute the claim. One Corydon Karr had joined forces with him, but a quarrel had arisen as to the accounts, and the fight was transferred to the columns of the

Express. How the quarrel was settled is not recorded, but Mr. Karr did one good thing, in publishing a letter dated in London, June 16, 1872, from the well-known genealogist, H. G. Somerby, stating the plain fact that the Towneley estate in England was in the possession of the legitimate and lawful heirs.

The claim set forth in most absurd language in the genealogy of the Lawrence family (New York, 1858), pp. 120, 124, was (1) that William Towneley, of Towneley, married a Standish, granddaughter of the sixth Duke of Norfolk; (2) that his daughter Mary Towneley married Joseph Lawrence, of New York, son of the emigrant, Thomas Lawrence; (3) that she was the heiress of her father's estate.

A reference to the Lawrence pedigree, in the New York *Genealogical Record*, for July, 1871, brought out a statement in the volume for January, 1872, that the first point above was partly correct, and the third entirely wrong. That is, the marriage of William Towneley, of Towneley, Lancashire, with Cecilia Standish was a fact, but this William was born in 1714 and died in 1741, when his sons Charles and Edward successively enjoyed the estates. At the death of Edward, Towneley reverted to his uncle John, whose grandson is now the owner. All of these facts are accessible in Burke, the family being a distinguished one, and flourishing in the male line.

But the second point was worse, for at that time, 1872, no one had seen any record of the marriage of Joseph Lawrence. His wife was named Mary, but her family name was assumed to be Towneley only in family tradition.

The Lawrence pedigree in general received rather hard usage, and this led to a rejoinder by a gentleman, Mr. W. E. Lawrence, in support of the claims both to a lofty paternal pedigree and to a Towneley descent. The matter was noticed by English students, and in the eighth volume of the *Herald and Genealogist* (London, 1874), Mr. John Gough Nichols published many notes on the Lawrences in general, and (on pp. 177–182) on this Towneley claim in particular. Mr. Nichols pointed out the errors made by Mr. W. E. Lawrence, speaking with authority on English pedigrees. The main prop and support of the alleged Towneley marriage was the fact that Joseph's son Richard had a son born in 1734, named Effingham, and a grandson Effingham, the latter being the father of the W. E. L., who wrote on that side. It was strongly claimed that Lord Francis Howard, Baron Effingham, Governor of Virginia, married Dorothea Towneley, who was sister of the Mary Towneley who married Joseph Lawrence, and *hence* the family name of Effingham Lawrence. But Mr. Nichols pointed out that no Earl of Effingham married a Towneley, but that the lady married a namesake only; "the bridegroom being not a Howard of Effingham, but a Howard of Corby—branches of the great family, we need scarcely tell even our American friends, far separated from each other."

It is beyond dispute that there is no support given to the Lawrence-Towneley marriage by any Effingham marriage. But there is a very good reason for the family name of Effingham, shown in a very different manner. Elizabeth, widow of William Lawrence, the emigrant, married secondly Sir Philip Carterett, Governor of New Jersey, and on his death in 1682, thirdly, Colonel Richard Towneley, of that colony. This last-named gentleman was from another branch of the Towneleys, came over to Virginia in the suite of the Earl of Effingham, and named a son Effingham Towneley, in honor, no doubt, of his patron. As Joseph Lawrence had a step-brother, or possibly a half-brother, Effingham Towneley, it is quite natural that some of the next generation adopted the name for a Lawrence child—in honor of a grand-uncle or cousin. But these Towneleys are not of very near kin to the Towneleys of Towneley, and the ridiculous schemers who are after a fortune, are misled entirely by the similarity of names.

Thus far we have written in order to show the true history of the Lawrence and Towneley families, and to suggest the genealogical problem only, which is entitled to fair examination, and which may rightly interest all of the descendants. It has always seemed possible that Colonel Richard Towneley, of New Jersey, may have been married twice, and if so it would be very possible for Joseph Lawrence to have had a step-sister, Mary Towneley, and to have married her. Such marriages were of frequent occurrence in our early history, where a widow rarely remained unwed, and when second and even third marriages brought together broods of young people unallied in blood, under one roof. But this is pure speculation, and if verified, it would lead to no fortune.

In the ridiculous matter now again thrust before the public, it must be remembered that every claim heretofore made for the Lawrence fortune is absurdly wrong. The Towneleys in England are the male representatives of the family, possessing estates handed down for centuries. Every attempt to connect any Lawrence with them has proved to be the result of crass ignorance, exposed at the first reference to any "Peerage" or "Gentry." It will be noticed that the new story now takes a John Lawrence as the happy founder of the greatly to be enriched family. Why this change is madeis a mystery, and must lead to unpleasant disputes with Joseph's descendants who have so earnestly beaten the bush. It suggests, indeed, a perpetual hankering of male Lawrences for female Towneleys, coincidences but not identities, and, if substantiated, will lead to a new comedy of errors. The services of Colonel Jacques should be secured by the *Century*, or such of its rivals as desire an enormous circulation. A man who, "at the close of the war," can casually stroll into a minor city in New England, and pick up the record which generations of Lawrences have vainly sought, is a man beyond price. The unrivalled sagacity with which he located the right great-granddaughter in the secluded site of Gowanda, is only to be surpassed by his audacity and decision in giving *two* members of the House of Lords an interest in the estate. One Lord might have been a fraud, but *two*, say one to move and the other to second the motion, give the necessary regularity to the "transfer of the estate to the United States Treasury." More than two would be a wrong on the estate; for Colonel Jacques taking one-third and the Lords say a twelfth each, only one-half remains for the heirs. However, as the French spoliation claims are a proof of the Treasury's methods, it does not matter so much what sum was transferred to the Treasury as how to get it out. We greatly fear that by some error Mrs. Brown's claim as sole heiress, though "acknowledged by the Court of Queen's Bench," will be litigated here. The postscript shows fifteen other heirs, and it may be feared that "Daniel Pratt, the great American traveller," is yet unrecognized in the list.

THE RUMORS OF WAR.

THE news from England continues to be warlike, in spite of the denials of the Government of knowledge of any forward movements on the part of the Russians on the Afghan frontier. The ground taken by the Russian press that the affair is one between the Czar and the Amir, with which England has really nothing to do, and that it is her own and the Afghan frontier, and not that of British India, which Russia is seeking to define, is so evasive that it probably means mischief. The state of the London market as regards both British and Russian funds indicates clearly enough the opinion of the British public that war is imminent. We may indeed expect at any moment to hear of a collision between the Afghan and Russian outposts, for the Afghans are both excitable and ill disciplined, and will probably not bear very long the close pressing to which General Komaroff is subjecting them.

Moreover, the Anglo-Indian Government has long been prepared for this crisis. There has been no difference of opinion for twenty years among men of all parties in England as to the consequences of a Russian occupation of Merv, or as to the necessity of being prepared for them. What has divided the Liberals and Conservatives is the proper mode under these circumstances of treating Afghanistan. It may be said in general terms that, from the disasters of 1841 down to 1874, it had been the settled policy of the Anglo-Indian Government not to meddle in Afghanistan, and to keep on friendly terms with the Amir, whoever he might be, by subsidies and other good offices, and flattery. When Lord Beaconsfield came into power in the latter year, he determined on a bolder and more aggressive line, and Lord Lytton was directed to insist on the presence of an English resident at Kabul, to supervise the Afghan Government, and especially to guard against the growth of Russian influence at the Afghan Court. This was promptly resented as an attempt to reduce Afghanistan to the level of the dependent native princes of India, and we know with what results. Cavagnari, the resident thus forced on the Afghans, was murdered, and there was another bloody war, filling the Afghan population with hatred of the English name, and ending in the downfall of the Beaconsfield Ministry and a complete reversal of their policy.

As soon as Lord Ripon reached India, all attempts to meddle in Afghan affairs were relinquished, and the Amir was subsidized and assured of British friendship. The result has been a considerable restoration of British influence, and the work of concilia-

tion has, of course, been much aided by the presence of Russian troops on the northern frontier. The Afghans in their own country are by no means a contemptible enemy. Backed by a large disciplined force from India, it may safely be said that it will be impossible for Russia to make any impression upon them with any force she can muster on the frontier. The Afghans have probably no affection for the English any more than for the Russians; but a foreign master they will not endure. The English, too, are fortunate in having in India a tried and experienced commander in the person of Sir Frederick Roberts, who conducted the operations in Afghanistan in 1878-9.

The question which probably most influences business men in Europe, however, is, after all, not so much how the fighting will go in India, but how far the war will extend. It is not likely that either Power will make any attempt to confine it to the East. In Europe the belligerents will not come in contact by land. England will probably promptly blockade the Russian ports in the Baltic, and prevent the Russian warships making their way out of the Black Sea in spite of the Turks. There are, indeed, only two ways in which Russia could assail England in the west. One, the despatch of swift cruisers to prey on English commerce, would probably be short-lived, owing to the want of harbors or coaling stations in which the cruisers could refit or take refuge; the other is a fresh attack on Turkish territory in Asia Minor, which the Turks could hardly meet, and against which England has solemnly guaranteed them by treaty in return for Cyprus.

In fact, it is on this side that the prospect of war looks most serious. Should Russia attempt further aggressions on Turkey in Asia, it would almost certainly indicate an understanding of some sort with Germany, and would probably end in the long-threatened advance of Austria to Salonica, the lopping off of Macedonia from the Turkish dominions, and the shutting up of the Sultan in Constantinople, much as Palæologus was shut up by the Sultan's ancestors before the fatal blow was delivered which extinguished the Empire of the East. In any event, the Russians are playing for very high stakes. The Government at home is ill able to bear any reverse in the field, and a humiliating peace under the present Czar might lead to internal commotions which would shake the state to its centre.

TAXING SPECULATION IN GERMANY.

The evils of speculation in goods and stocks, for the suppression of which the statesmen of this country have deigned from time to time to make proposals of a more or less drastic character, are now being discussed in the German Reichstag, where a bill is pending for the taxation of the objectionable transactions. Speculation, and particularly speculation in stocks, and still more particularly speculation in stocks by Jews, has been one of the bugbears in Germany for some time. The reigning school of economists have pointed to it as the great instance of the bad effects of letting trade and industry alone. The Government, in openly adopting the principle of State interference as the cure of economic evils, or, to use the current phrase, in adopting the "socio-political" policy, promised to do something to check the evils of speculation. Accordingly they have introduced this bill, which provides for the taxation of what are supposed to be speculative transactions. The tax is to be levied on all sales of stocks or of goods, with certain exceptions, the exceptions including what are supposed to be non-speculative sales. Thus, wherever the articles are not to be resold by the buyer, or are to be used by him as raw material, or have been actually produced by the seller, or are to be actually delivered by the seller to the buyer—in all such cases the law does not apply. Sales outside these exceptions are considered speculative, and are to be taxed at the rate of one mark for every 5,000 marks worth of goods or stocks sold, or 1-50 of 1 per cent. The machinery for collection is to be provided by requiring every merchant and every broker to keep a memorandum-book, in which he shall enter every sale subject to the tax. At the end of each month this book is to be handed in to the authorities, and the amount indicated by it to be due to the Government is to be paid. Where persons who are not dealers or brokers, and do not habitually buy and sell, enter into a taxable transaction, they are to give the authorities special notice of the transaction within a fortnight, and pay their tax accordingly.

It is obvious at first sight that it is useless to expect the honest payment or effective collection of a tax by any process of this kind. Every tax of which the amount is determined by the uncontrolled declaration of the taxable party is objectionable because it puts a premium on fraud and perjury. It taxes the honest and enables the dishonest to escape in whole or in part. Where the taxable object cannot be concealed, as in the case of real property, such a system can be made to work; but it leads to glaring abuses in the degree in which concealment is possible. We have had abundant evidence of this in our experience in taxing personal property. England has had a similar experience in her income tax, and the Prussian income tax stumbles against the same difficulties. That a tax scheme like the proposed German law would give rise to a mass of deceit and false swearing is too clear to need proof. No check or supervision of the tax-books of the parties is possible, and each one would pay as much or as little of the tax as his honesty, public spirit, or fear of punishment directed. The fines for omission to enter sale or for false entries are, as experience shows, quite ineffective to enforce self-taxation. In comparison with these difficulties, the detailed inquisition into every man's business affairs which such a scheme would bring about becomes unimportant; although this in itself is a grave, if not a conclusive, objection. Nevertheless, the indications are that the Government bill will eventually become a law, though very likely with amendments that may remove the more obvious difficulties of the original draft. Prince Bismarck has taken hold of the "socio-political" ideas, and is carrying them through with characteristic energy and pertinacity; and we may expect soon to see some form of tax on speculation added to the protective tariff, the laborers' insurance law, and the other restrictive measures now in vogue among the Germans.

The idea underlying this scheme of taxation is confessedly that in speculative transactions you have an objectionable thing, which you cannot entirely suppress, or do not want to suppress, but which, being objectionable, you may as well subject to tribute. The same idea underlies Government lotteries, which still exist in some countries of Europe, and are used to enable the Government to get revenue from the gaming propensities of its subjects. Essentially the same principle is at the bottom of the taxation of intoxicating liquors, which is universal in civilized countries. But in regard to speculation, it is by no means clear that you have in fact such an objectionable object for your tax. The precise economic effect of what are called speculative transactions is anything but clear. The line between legitimate mercantile business, which is admitted to perform as useful an economic function as digging potatoes or carrying freight, and speculative dealings, which are to be looked on as pure gambling, and as an unproductive employment of brains and labor, is exceedingly difficult to draw. Every branch of trade includes elements of risk and uncertainty, and in so far partakes of the nature of speculation. On the other hand, a multitude of transactions, such as those in grain and provisions, which are commonly considered purely speculative, effect something beneficial to the community at large. They help to accommodate supply to demand, and to prevent excessive fluctuations and inequalities of prices.

Mr. J. S. Mill, in his 'Political Economy,' went so far as to say that speculation could not possibly be harmful to the community; for, in so far as it failed to effect a correct adjustment of demand and supply, it inevitably resulted in a loss merely to the speculators themselves, but not to any one else. Whether this proposition is or is not true without qualification, it undoubtedly points to an important truth — that there is a normal and useful function performed by a multitude of so-called speculative dealings, and that these are no more objectionable, and no more deserving of being specially singled out for punishment by tax, than a hundred other kinds of industrial activity. Doubtless there is, on the other hand, much speculation which is exactly like playing at cards or at dice, and which the Government need not hesitate to suppress or tax, if it can. But the question remains whether it can; whether there is any way of distinguishing that which serves to effect a useful object from that which is entirely useless; and whether we are not reduced, as in the case of so many industrial phenomena of our time, to taking the evil as the inevitable accompaniment of the good. As a matter of principle, it is almost impossible to distinguish between "legitimate" trading and pure gambling in the guise of corners and futures. To get some external indication of the distinction, such as is necessary for fastening a tax on the gambling transaction, is quite impossible. The present German plan certainly fails to find any such external indication, and would tax much that was economically good, as well as, perhaps, something that was useless and bad.

THE VOTE OF CENSURE AND ITS RESULTS.

LONDON, March 3, 1885.

THE fortunes of Mr. Gladstone's Government during the last three years may be compared to those of a steamer making a December passage across the Atlantic. A succession of gales have caught the ship, now from one quarter, now from another—gales which it needed fine seamanship to ride out—and one has scarcely passed off before another more violent has risen. The latest has been the most severe. It has so knocked the ship about that many observers doubt whether the next squall will not send her to the bottom; and of more squalls there is every prospect. Our position is, indeed, as your readers must have already observed, an anxious one, replete with difficulties at home as well as abroad.

The debate which closed on February 27th, after having occupied four nights, was not marked by any brilliant rhetorical displays in either house, if we except Lord Salisbury's unusually telling speech in the Lords. Mr. Gladstone, who spoke first for the Government, was, or seemed, wearied and depressed, unable to breathe much heartiness into his followers. Lord Hartington, who wound up the Ministerial defence, had the air of a man only half believing in his cause, and spoke with a constraint which told upon his audience. The chief interest of the discussion consisted in the efforts which the Government made to conciliate the two mutually hostile sections of their own party. About one-third of the Liberals, consisting of what may be called the Radical wing, disapproves of any further prosecution of the war in Sudan, condemns the projected movement on Khartum, condemns the making of a railway from Suakim to Berber, and wishes the British troops to be forthwith withdrawn to the sea or the frontiers of Egypt proper. Another third, the so-called Whig section, desires not only the overthrow of the Mahdi, but the establishment of some stable government at Khartum. The other third, standing between these two extremes, is willing to be guided by events, and to let the Government carry out its scheme for an advance to be followed by a retreat. But as this section contented itself by giving a silent vote, and saying little or nothing in support of the Cabinet, the strange spectacle was witnessed of a Ministry left alone to defend its policy, the bulk of its own supporters distrusting it, and the final vote going in its favor only because the two extreme sections balanced one another, while all hated or feared the Tory Opposition more than they condemned their own leaders.

Two conspicuous members of the Liberal party were, however, found to overcome this sentiment. Mr. Goschen and Mr. Forster voted with Sir S. Northcote against the Government—not, of course, with any intention of allying themselves with the Tories, but by way of condemning the past mismanagement of the Cabinet, and of protesting against the meagre and unsatisfactory declarations of its policy which, as they thought, the Cabinet now made. Such a defection would generally bring much censure on those who committed it; but the circumstances are so exceptional that the Liberals in Parliament have not experienced much displeasure, although many of the provincial newspapers are indignant, and Mr. Forster's constituents at Bradford threaten to withdraw their support from him.

Even more significant than that revolt, or the indulgence extended to it, has been the apathy of the Ministerial party generally. One can hardly believe that it is the same party which, less than five years ago, came to Westminster full of triumph and hopefulness, burning with enthusiasm for Mr. Gladstone, and prepared to carry that long string of Liberal measures which he had put up before the country—the party which used to give him majorities exceeding 100, and so late as last November supported his Franchise Bill against the House of Lords by a majority of 140. The causes of the change are not wholly to be sought in the recent blunders of the Government in its foreign and colonial policy, in the regret at Gordon's death, in the anxiety now felt with regard to the Sudan campaign. They are also due to the condition of domestic politics. A Liberal government must in England maintain itself by a positive programme, by holding before the people measures of reform which excite their interest and dispose them to make efforts on its behalf. Without such prizes glittering before them, popular enthusiasm languishes. At present the Ministry have none such to offer. They are pledged to large measures, such as the creation of a new system of local government in the counties and in London; but these measures, profoundly important as they are, do not fascinate the popular mind. It was fixed on the extension of the franchise, and, having secured that bill, feels as if the chief work of the Ministry was done. The abolition of the House of Lords would stimulate it afresh, but the Ministry decline to commit themselves upon that subject, while the hopes held out by Mr. Chamberlain of legislation in favor of the poor by throwing more of the weight of taxation on the rich, and by establishing peasant proprietors over England, are merely his individual proposals, and, in attracting the more extreme Radicals, have alarmed the less advanced sections of the party. It may be thought that personal loyalty and gratitude to Mr. Gladstone ought to come in to fill up the void left by striking out of the Liberal platform the now accomplished extension of the suffrage, and all but accomplished redistribution of seats. This loyalty is still strong, and would display itself fervently in a general election, or if Mr. Gladstone's retirement into private life were to be announced, as any day it may be. But it is no longer an aggressive feeling. Mr. Gladstone's sun is just touching the western horizon, and everybody feels that he will take up no fresh question, that no more Parliamentary battles can be won under his standard. It is with regretful sympathy that he is now thought of; and the change of sentiment is perhaps best evidenced by the language of the Tories, who have mostly desisted from their old virulence.

Something must also be set down to the near approach of a general election. Possibly in July or October, certainly not later than January next, a new Parliament will be chosen by new electors in new constituencies. No one can guess what this Parliament will be like, and it seems idle for the present expiring body to busy itself with measures which its successor may repeal, or may, perhaps, go far beyond. The centre of interest has been transferred from the House of Commons to the constituencies. Those members who hope to be returned at the next election are occupied in cultivating their constituencies, whose limits are in most cases altered by the redistribution scheme. Those who mean to retire from Parliament have ceased to care for its proceedings. Thus the House of Commons has become flaccid and lifeless; it now seeks only to dispose of necessary business and make way for its successor.

Among the Ministerial majority of fourteen in the recent division, and, indeed, among Ministers themselves, there were some who wished for defeat, holding that the best thing for the Liberal party would be to go out of office, leaving the difficulties of the situation to be faced by the Tories, and letting the latter have some months of power before the general election in which to efface, by blunders of their own, the recollection of Ministerial faults. So patent were the advantages of this course that the Tories themselves seemed to shrink from victory, and were apparently relieved when they found that they had seriously damaged the Government, yet remained free from the responsibilities of taking their places. They have now abundant materials for denouncing the Government at every election platform, whereas, had they turned Mr. Gladstone's Cabinet out, it would seem to have been already punished, while their policy would, in its turn, have become the target for invective. If they are well advised, they will adhere to this prudent course till the end of the session. But they may not be able to do so. A Government which has once lost its hold on opinion is in hourly danger. Votes have to be taken for the expenses of the new expedition to Suakim and the construction of the railway—votes which the Radicals may find it hard to support. Their sudden defection might leave the Ministers in a minority, were the Tories to deliver an attack upon such an issue.

The moment is an inopportune one for changing the Executive, for our affairs are in a critical, if not a dangerous, condition in more places than the Sudan. The proximity of the Russian and Afghan troops north of Herat, where our Commissioner has gone to settle the disputed boundaries in conjunction with a Russian officer, who has not yet appeared, might bring on at any moment a conflict in which we, as protectors of the Afghans, might become involved. At the other end of our Asiatic domains France is suspected of intriguing with the King of Burmah against us, and the disorders of Independent Burmah have reached a point at which British intervention would be sure to occur, were not our hands already full elsewhere. How unsatisfactory our relations with Germany are, all the world knows, for Bismarck's speeches, as well as our and his Blue Books, are disclosing a series of controversies between the Governments which may further embitter the feelings of both peoples. There is, of course, nothing approaching a *casus belli*, nor any reason to think that Germany any more than England desires a breach; but in view of the difficulties which Egypt presents, the alienation of Germany is a material feature of the situation. The moment is eminently one in which a strong Government, able to inspire the country with confidence in its strength, is called for, but, unluckily, that is the last thing we are likely to get, for a Tory Ministry, if it came in, could not command, and would not on a general election obtain, a majority, but would probably be even weaker than Mr. Gladstone's Cabinet has now become.

Y.

A PIEDMONTESE FAMILY.

PARIS, February 26, 1885.

THE Marquis d'Azeglio, who was for many years Italian Minister in London, published not long ago the letters which he received from his mother between 1835 and 1861, with some from his father. These letters are, so to speak, the journal of the memorable years during which Italian unity was prepared and nearly achieved. The mother of the present Marquis was Constance Alfieri. She was the eldest daughter of Emmanuele Alfieri di Sostegno, and the sister of Cesare Alfieri. She was born in 1793, and married in 1815 Azeglio, who was then a cavalry officer, and who was aide-de-camp to Prince Carignano in 1821. When the movement of 1821, which was the first explosion of the Italian opposition to Austria, began, Prince Carignano, who afterward became Charles Albert, was obliged to leave Piedmont, as were some of his friends, La Cisterna, Collegno, Lisio. Azeglio was

summoned to leave Turin, and remained a little while in France, where his father was Ambassador. "My parents," says Azeglio, "could not have been better situated for information. They lived habitually, after their return to Piedmont, with the most influential persons, such as Massimo d'Azeglio, Cesare Alfieri, Lisio, Cesare Balbo; afterward with Alfonso di Lamarmora, Camillo Cavour, Villamarina, Giacinto Collegno, all more or less related to us; and finally, with such men as Sclopis, Santa Rosa, Provana, Menabrea, Cibrario, Franzini, who took such an active part in the political life of Piedmont."

Piedmont was the cradle of liberty of Italy. It had a national dynasty; an old nobility, accustomed to arms; a strong and brave people. "Il forte Piemonte" is the epithet still used for this little province, which kept the keys of the Alps. The Piedmontese mothers played a great part in the Liberal movement; they prepared their children by a manly education for a life of devotion and of sacrifice. Massimo d'Azeglio has told in his 'Ricordi' the story of the captivity of Cesare d'Azeglio in France. The Marquis Alfieri, maternal great-uncle of Emmanuel d'Azeglio, was taken as hostage to Dijon by the French armies, during the Revolution. His beautiful wife, Charlotte Duchi, lost her brother and her brother-in-law, Joseph Alfieri, in a battle fought against the French near Nice. Every family in Turin could tell the same story. The military traditions of the Piedmontese nobility were the seed of Italian liberty and unity. While all the courts of Parma, Modena, Florence, Naples were ever mere centres of pleasure, of dissipation, of artistic refinement, the little court of Turin, under the veil of a stern etiquette, the most severe perhaps that could be found in all Europe, preserved the ambitions and the aspirations of Italian patriotism.

In 1842 Azeglio was at the Hague. His mother kept him informed of all the little news of Turin: "The King has signed an *indulto* for the last of the men of '21 [the persons who had taken part in the movement of 1821], so that all is now ended on this point. Everybody was asking for this measure. . . . The King seemed very well satisfied and appeared younger." Among the persons who were amnestied was Count Lisio, and she writes: "Lisio was received on Thursday last by His Majesty most graciously, and four times kissed." When the news of the death of the Duc d'Orléans reached Turin, "Our Queen Maria Christina was so affected by it that she fainted. She said that of all the children of her sister those whom she loved most was this Duke, whose birth she had witnessed, and Princess Mary [who was afterward married to a Bavarian prince]. You see that there are still chords which vibrate in the heart of our poor Queen, though she is morally and physically a wreck."

In a visit made to Milan, whither she had gone to see her brother-in-law Massimo (who was living with his second wife on the Lake of Como), Constance d'Azeglio met Confalonieri: "I have had the pleasure of making the acquaintance of Confalonieri, who often comes to see Massimo. It is the salient feature of my journey. I have found in him, as in Silvio Pellico, a mildness and affectionateness of manner which are very attractive. He is a fine character. To bear with firmness such a prolonged misfortune, with no prospect of escaping from it except by death, to bear the misfortunes of their own families, without ever changing, when, by a capitulation of conscience, they could make themselves free—surely, such men do honor to our time, whether they have understood it or not; and I feel in their presence a veneration for their character. . . . It is an offset to so much smallness, baseness, and misery which come under our eyes." Was not this strong and healthy language from a mother to a young man living in courts and surrounded with conventionalities?

In 1846 Massimo d'Azeglio published in Tuscany a pamphlet, 'Degli ultimi casi di Romagna,' in which he criticised the Papal Government. The author was ordered to leave Tuscany, but 2,000 copies had already been sold in Florence. The father of Azeglio sent a copy to his son, who was at the time in Brussels, and wrote: "It is impossible not to be struck with the injustice and the cruelty of the Government in the Romagna; it is the worst and least enlightened of governments. . . . Italy is in a state of uneasiness which announces great events. One waits for an opportunity, so as not to act partially and therefore uselessly. From time to time, however, there are small explosions, caused by an impatience which cannot contain itself."

Charles Albert, surrounded by Austrian influences, felt like his people; he was waiting for his opportunity. The smallest word which fell from his lips having a liberal and national tinge, had an immense echo. The Papal States were greatly agitated during the election of a new Pope. There is a good anecdote of Madam d'Azeglio's: "Before," she says, "the Cardinals were in conclave, Lambruschini went to see Miccara, who was ill, to sound him and find out to whom he would give his vote. After a few vague phrases on the issue of the event, Miccara answered: 'Se lo Spirito Santo c'entrà sarà Mastai [who became Pio Nono]; ma se il diavolo ci mette la coda sarete voi od io'" (If the Holy Ghost enters in, it will be Mastai; if the devil gets his tail in, it will be you or I.)

The new Pope was for a moment looked upon as the liberator of Italy. Massimo d'Azeglio believed in him and took office under him. In all the Italian cities there was a great fermentation, and Pio Nono was hailed as a saviour. Charles Albert, encouraged by these movements, made some reforms in his Government, and he received great ovations in Turin and in Genoa. The letters of 1848-1849 are of the highest interest; they are the echo of Piedmontese opinion during the eventful years which saw the popular movements in all parts of Italy—the concession of the *Statuto* by Charles Albert, the war against Italy after the five terrible days of the revolution in Milan, the fatal battle of Novara, and the defeat of Charles Albert.

It is easy to imagine what were during this time the feelings of a noble and patriotic woman. Madam d'Azeglio, though she belonged to the highest nobility, always shared the feelings of the Italian people: she never became the slave of the Austrian party. She tells her son, one day, at the beginning of the popular agitation, how a procession passed before their house, shouting: "'Viva la casa Zei! [Zei is the popular abbreviation of Azeglio], viva Roberto d'Azeglio! viva il padre del popolo!' . . . Surprise is felt among a certain class that your father should espouse the feelings of the people. It is because they don't know the people, and are ignorant what strong devotion it feels for the country. One is surprised to hear these patriots speak, not academically, but with warmth and good sense, and, when your father speaks, one often sees their beards and moustaches wet with tears, and he likes this emotion more than what he finds elsewhere. Our folks who keep themselves as much as they can out of what is going on, can have no clear ideas of what is outside of the little circle in which they live."

It is quite true that there were many *Codini* in all the great Italian centres, but, fortunately for Italy, the cause of independence was espoused from the beginning by the best families in Turin, in Milan, and in Venice. A party which had in its ranks the Azeglios and the Cavours could not be looked upon as a revolutionary party; it was constructive as well as destructive. It was directed against a foreign tyranny; it was not directed against the fundamental laws of society. It enlisted rank, beauty, virtue, literary genius, parliamentary eloquence. In its first trial, however, it was vanquished. Charles Albert was old; he was older than his years, very ill, incapable of conducting a campaign against Radetzky. The Piedmontese army was ill-led and sacrificed. Novara seemed for a moment to be the end of all hope; but the Italian blood had not been shed in vain. Italy had proved that she could rise and fight. She meant to become free by her own efforts: "L'Italia farà da se." Her statesmen understood that, in her misery, she must find allies, and they did in the end find France.

During this eventful period Azeglio had been transferred from St. Petersburg to London, where he became full Minister, and in the most difficult times. The letters of his mother must have been to him even more interesting than the official despatches: she gave him not only the events, the color of the events—not only what could be said, but what could not be said—she gave him, what was better still, an indomitable hope, a lofty view of his mission and of his duty. Every detail in her letters shows her to have been mild, rather retiring, domestic; she was a real "Roman mother."

The correspondence goes as far as the year 1861, to the death of Count Cavour, the catastrophe which ended the first period of the constitution of Italian independence. The Azeglios were true Piedmontese, Italians of the North; they dreaded somewhat the result of the fusion of the kingdom of the two Sicilies with the kingdom which had transported its capital to Florence. They were afraid of the republican element. But they had the utmost confidence in the genius of Cavour, and they followed him through thick and thin, even when they did not always know how far they might be led. The Marquis d'Azeglio lived in London in the intimacy of Lord Palmerston and his family; and there are some very important letters which show how Lord Palmerston espoused the cause of Italy, and to what extent he was determined to support the Piedmontese Government, after the peace of Villafranca, during the movement for annexation which gave so much trouble to the French diplomacy of the time. Madam d'Azeglio, the mother of the present Marquis, died in April, 1862, and her husband only outlived her by a few months.

Correspondence.

A CASE IN POINT.

To the Editor of The Nation:

Sir: The stars in their courses fight for executive responsibility. The incident of March 9 in the Senate throws a light upon it which might not be obtained in years of outside discussion. Mr. Teller, who had a week before been Secretary of the Interior, had taken his place as a Senator, and Mr. Van Wyck undertook to call him to account for his conduct as Secretary. His reply is of double interest, first as to principle and second as to details. He is reported to have said:

"The head of a department had, however, no seat upon the floor, and was compelled to submit to whatever might be said, without any opportunity to reply. When unfair criticisms were made upon his conduct, he must submit in silence. When falsehoods were uttered in this body or the other with reference to his course, it was undignified for the head of a department to question them. If he should go to the public prints and deny the charges that were made, it

would be said that he forgot his relations to the legislative branch of the Government. He must submit in silence to the most atrocious slanders, uttered in the shape of resolutions or uttered by Senators or members, without reply. He did not believe the Senate was aware of the insults that had been offered, from time to time, to the executive branch by way of resolutions. Such resolutions were not introduced for information, but for the express purpose of making an attack in the cowardly way of skulking behind charges; and they were seized upon by enemies of the Administration, and the newspapers were in the habit of making a great deal of them. He described instances in which a vast amount of labor had been put upon the departments by resolutions, when the information could all have been had in an hour had the seeker called personally or sent a letter of inquiry."

I believe there has not been a Cabinet officer in the last ten years who could not endorse this statement, and testify how he has writhed under charges which he had no opportunity to answer, and that the liability to them was fatal to efficiency and independence. But Mr. Teller's remarks on the particular matter in hand were even more instructive. Mr. Van Wyck uttered a violent tirade against the Administration for issuing patents of land to a railroad just before it went out of office; and if the matter had rested there, the impression left on the country would have been just that described by Mr. Teller as above. This time, however, the assailant did not have the whole field to himself. Mr. Teller showed pretty clearly that the fault was with Congress and not the Executive; that, as the law stood, he was bound to issue the patents unless Congress forbade it; that while he was waiting and waiting, the House, by a majority of 42, declared that the lands should not be forfeited; that he still waited and waited for action by the Senate, but none was taken, and that he finally, just before leaving office, issued the patents, as he was bound to do.

Now, this discussion took place when the Secretary was no longer Secretary. It referred to things already past and matters of history, and therefore of little practical interest. Suppose the same kind of discussion took place between Senators or members and the actual Secretaries as to policies or questions open for settlement, and that charges and inquiries could be made and met *viva voce*, and before the whole country. Could anything do more to excite national interest, to enforce responsibility on one side or the other, to force action on important matters, and, perhaps most important of all, to bring out individual character and ability in strong light? And why should not this take place? Why should not the process begin within a week after the assembling of Congress at the next session? For the same reason that we cannot stop the coinage of silver—because it does not suit the purposes of the lobby. The theory is, that this country is governed by the people through their representatives in Congress. The fact is, that it is governed by the lobby through Congress, largely in defiance of the people. The struggle can be settled in the only way in which factions have always been put down—by popular support of the Executive in its efforts to exercise control.

If Secretary Teller will persevere in the path which he has thus struck out, he will have done more for his country than it would have been possible for him to do in office, and this with certainly no detriment to his own reputation.

G. B.

Boston, March 11, 1885.

BOHN'S TRANSLATIONS.

To the Editor of The Nation:

Sir: As you have lately published several letters criticising unfavorably the translations in Bohn's Libraries, we trust that you will allow us to say a few words in reply. If, as your correspondent, "A Lover of Trustworthy Work" (a designation to which, by the way, we lay claim equally with himself) allows, some of the translations are "excellent," we fail to see that it is desirable that "proof after proof should be given" that they are, in general, not faithful. This course would be eminently unjust to the meritorious translators; and if any judgment is to be pronounced in this public fashion, nothing less than an accurate discrimination between the good and the bad will satisfy the claims of justice. As it is, his "proofs" are not so very conclusive, for one of them, at least, is an obvious, though a misleading printer's blunder. But we are not concerned to deny that there are errors in the particular book referred to, as we have heard of several before, and have corrected them. We grant that, as a matter of fact, there is great variety in the quality of all the translations; but we must protest against a whole series being condemned *en bloc* because, while some are admittedly excellent, others may be found to have an undue amount of errors. Between the two extremes are a number of books which embody a vast amount of painstaking work, and approximate in a very laudable degree to the absolute fidelity which we are perfectly certain that no translation ever yet attained. Both Carlyle and Emerson have expressly testified to the utility of these translations, and of one volume, at least, Matthew Arnold, on whose opinion your correspondent appears to rely, has spoken in the highest terms.

The translations in Bohn's Classical Library are probably more widely known than any others. American publishers have shown *their* appreciation by reprinting most of them. Of these, Kennedy's Demosthenes has among scholars the highest reputation. The translations of Epictetus and Marcus Aurelius by the late Professor Long, of Æschylus by Miss Swanwick, and of Plutarch's 'Essays' by Mr. King, were all executed as "labors of love," and in England, at any rate, are highly esteemed. Of the rank and file, so to speak, the chief fault is not so much looseness of rendering as an excess of literalness, inasmuch as they adhere somewhat baldly to the forms of expression of the original, and err, in fact, by want of freedom. Whether readers who use them in place of, and not in connection with, the Latin and Greek texts, are aggrieved at this, we cannot say; but at least it seems to be a fault on the right side.

In the translations from modern languages there is a similar variety: Goethe's Autobiography and the first part of the 'Tour in Italy' had more faults of the careless sort than the others. The former was partly printed by Mr. Bohn from an American edition, revised; but the number of errors found in it was so great that the editor, Mr. John Oxenford, had to relinquish the proposed substructure and complete the work independently. These books have recently been reprinted in America, but the reprints do not contain the great improvements which have been and are continually being made in our editions.

Your later correspondent, "E. H. H.," is not happy in his selection of Miss Swanwick's *metrical* translation of Schiller's 'Die Jungfrau von Orleans' for his rather trivial criticism. As the author of the Bohn translation of 'Faust,' which is frequently ranked with Bayard Taylor's, and as a well-known Greek scholar, Miss Swanwick, if not "super grammaticam," can at least let her reputation take care of itself. In our view, the defects referred to only prove our position, that no translation is perfect; and if Miss Swanwick's work is a test of the demerits of Bohn, we can very well afford to say no more about the matter. This only we will add, that if your correspondents, instead of communicating their general disapproval to you, will send a definite note of any errors to us, they will do us a kindness instead of an injury, and at the same time help more effectually to remedy the occasional faults which we, no less than they, deplore.—We are, sir, your obedient servants,

The Publishers of Bohn's Libraries.

York Street, Covent Garden, London,
March 7, 1885.

A DECEPTIVE VOLUME.

To the Editor of The Nation:

Sir: In the *Nation* for July 13, 1882, and July 12 and 19, 1883, your Paris correspondent noticed two volumes entitled 'La Jeunesse de Madame d'Épinay' and 'Les Dernières Années de Madame d'Épinay.' It is somewhat surprising that both he and other critics of these works seem not to have been fully aware of their real character; at least their quality has not, I think, been distinctly expressed and duly emphasized. In view of this oversight on the part of the reviewers, I venture to ask for one of your valuable pages to present evidence that these works are not what they appear to be. To do this clearly I must first state a few well-known facts.

In the notice given of Mme. d'Épinay at the time of her death by Grimm (her intimate friend) in his 'Correspondance Littéraire,' he says: "She has left no other work save a continuation of the 'Conversations d'Émilie,' a number of letters, and the rough-draft of a long romance." This romance was the story of her own life, little disguised except by the alteration of names and of a few facts. It was left in the hands of Grimm, but was not published by him. On quitting France he intrusted it to M. Lecourt de Villière, and it remained unknown till 1818, when it passed from the heirs of this gentleman into the possession of an able publisher, M. Brunet, who perceived its value—value so exceptional that Sainte-Beuve declared, "The Memoirs of Mme. d'Épinay are not a work, they are an epoch." M. Brunet, aided by M. Parison, discovered with certainty most of the real names of the characters, suppressed (avowedly) unimportant passages, and gave the world, under the title 'Mémoires et Correspondance de Madame d'Epinay,' three most interesting volumes, whose authenticity is as unquestionable as that of the 'Confessions' of Rousseau.

The persons with whom we have now to deal are known as M. Lucien Perey and M. Gaston Maugras. But "M. Perey" is *Mlle. Herpin;* and I think that in that fact may perhaps be found an explanation of some of the qualities of the work before us. If I add that I refer to qualities of inaccuracy approaching untruthfulness, let it not be thought an imputation on all women. These editors offer us their volumes as containing "une foule de renseignements" discovered by themselves among family papers intrusted to them by the descendants of Mme. d'Épinay, but more especially as being unedited matter belonging to the 'Mémoires'; they having found in the Public Archives thirty *cahiers* of the manuscript of the 'Mémoires,' suppressed by the former editors—being precisely the first quarter—and afterward thirty more unedited *cahiers* in the Library of the Arsenal, being precisely the last quarter of the 'Mémoires.' I will leave this statement of theirs without comment, only reminding the reader of the titles of the two volumes we are examining, and mention a few facts which still less need comment.

The first 150 pages of 'La Jeunesse' are occupied with "new" matter: when it catches up with the opening of the 1818 volumes (which begin with the marriage of the heroine) we find a letter to which this note is attached: "This letter is partly given in Brunet and Parison's edition of the 'Mémoires.' *We publish only the unedited*

passages." The letter is two pages and a half long; one page and a half (in broken portions) is *precisely the same* in one edition as the other, one page is added, half a page is omitted.

On page 376 there is a letter with a note referring as before to the Brunet edition, adding: "We have restored [*rétabli*] the suppressed passages." The letter as here given does not contain *one word* which is not in the Brunet edition; and of the portion from which the Perey and Maugras passages are taken (a portion only one-quarter of the whole letter as given by Brunet and Parison) only two pages are given out of five. If this incongruity of statement and fact be nothing more than carelessness, it is to me inexplicable carelessness.

On page 314 thirty-two lines of a letter of fourteen pages in Brunet and Parison are spoken of here as if they were the whole letter; of these thirty-two lines, "rectifiées d'après le texte original," three, and three only, are not in the earlier edition: the rest is a verbatim copy.

On page 355, a passage two and a half pages long is said by Perey and Maugras to have been previously given "only incompletely"; the incompleteness consists in the omission of five absolutely unimportant lines.

MM. Perey and Maugras nowhere accuse MM. Brunet and Parison of having changed the text (except by suppressions) save that they make use once in the Introduction to their first volume, incidentally, of the phrase "passages importants . . . tronqués ou altérés"; they nowhere confess to having done so themselves, and they nowhere refer to discrepancies between the two texts. But discrepancies abound. The most important exist in passages too long for quotation here; but a tolerably typical illustration may be given with these few lines (curiously enough, it falls on precisely the same page of the same volume in both works, I, 355): "Quoique la vie que je mène soit assez uniforme, j'espère n'être pas obligée d'en changer" (Brunet and Parison). "Je n'ai pas grand'chose à vous dire de la vie que je mène, elle est trop uniforme et vous la connaissez; j'espère n'être pas obligée d'en changer" (Perey and Maugras). One or the other has been rewritten.

Again, we find (in Perey and Maugras), in the Journal, these sentences: "J'ai dîné deux fois chez Mlle. Quinault. J'y ai vu beaucoup Duclos" — which have a singular air of unreality to the reader who remembers (in Brunet and Parison) two passages in the Journal at a considerable distance from one another (unfortunately there are no dates in either edition), one seventeen and the other fourteen pages of brilliant description of these two dinners, with the details of, as Sainte-Beuve says, "les mimaginables orgies de conversation qui s'y passent entre beaux esprits," of whom Duclos is one of the most conspicuous.

On page 265 a passage which in the earlier editions is given as from the Journal, in the later becomes a letter to Francueil: "Nous avons fait aujourd'hui une promenade délicieuse à laquelle il ne manquait que la présence de mon tendre ami pour," etc. "Nous avons fait aujourd'hui une promenade déliceuse, mon tendre ami, à laquelle il ne manquait que ta présence pour," etc. A sentence or two afterward, speaking of Rousseau, "J'ai encore l'âme attendrie de la manière simple et originale en même temps dont il raconte ses malheurs" (Brunet and Parison). "Et la simplicité avec laquelle Rousseau conte ses malheurs! J'en ai encore l'âme attendrie" (Perey and Maugras).

On page 430 a passage is given as being a letter from Grimm to Mme. d'Épinay which is really (if the earlier edition is trusted) a conversation reported by her in her Journal.

On page 484 a note from Grimm to Mme. d'Épinay is in the "vous" form in the earlier, in the "tu" in the later.

On page 270 there is a letter, with the usual form of note, to the effect that it is incomplete in former editions, and "*we give only the omitted portions.*" Out of its five pages only about two pages are *new*; the rest is *verbatim* from the Brunet and Parison edition, with the change of a word here and there, but absolutely *rewritten*, so as to allow the introduction of two long passages concerning a personage entirely absent from the letter in its earlier form, and to whom is here addressed a conversation in place of one formerly addressed to Mme. d'Épinay. For a similar complete "incompatibility" compare the letter on page 277 with what I must call "the original," and let it be remembered that this incompatibility MM. Perey and Maugras never, in any way, indicate or comment on.

We come now to a correspondence between Mme. d'Épinay and Rousseau, to which this note is prefixed: "These letters have been published in part in the 'Mémoires.' We restore the text entirely, and give them in their chronological order, which was completely changed in the printed 'Mémoires'; this mistake [*défaut*] made them almost unintelligible." We will examine these five letters as they are here given.

1st Letter. Half a page omitted. Half a page which is, in Brunet and Parison, separated by another letter, is added. *Nothing new.*

2d. Unchanged in position. Nine lines omitted. *Nothing new.*

3d. Unchanged in position. *Nothing new.*

4th. The omitted half page of No. 1. Twelve new lines. In conclusion, eight lines which have no connection with the rest, which are given as a little note by itself in the 'Mémoires' just before these present letters, and which is referred to in the 'Confessions' not at all as if it were part of a long letter.

5th. The 2d in the 'Mémoires.' One page and a half omitted. *Nothing new.*

It therefore results that in eight pages there are precisely twelve new lines in place of forty-four omitted (from those said to be printed "in part"!); and I am ready to assert that the "intelligibility" of the earlier arrangement is quite as great as the later.

The chapter concerning the rupture between Rousseau and Mme. d'Épinay is acknowledged to be of already published material, but the letters are said to be "rectifiées." They are *rectified* in the same manner as the others.

It is needless to give more of the countless instances similar to these to be found *passim.*

The contents of the first volume, on being somewhat carefully "analyzed" by me, gives these results: 150 pages relating to an earlier period than the previously published 'Mémoires,' and which therefore cannot be tested by them; 40 pages in the Rousseau chapter, avowedly old material; 40 pages (about) of more or less accurate, entertaining broken résumé of the 'Mémoires,' *with no references;* 28 pages in different places, identical with Brunet and Parison, of which (in spite of the statement in the Introduction, "Every time we reproduce a letter or a passage already published we indicate it in a note") just about one-half, that is, 14 pages, broken up in a large number of passages, are *entirely unacknowledged*, and the other half very inadequately acknowledged; 2 pages openly acknowledged as to be found in Brunet and Parison; 270 pages of *padding* of, for the most part, uninteresting material.

These remarks are all on 'La Jeunesse,' etc., but I am convinced (though from a less thorough examination) that 'Les Dernières Années,' etc., are——by the same authors; and I am sure that both volumes are of very little value to

A Lover of Trustworthy Work.

THE NEGRO PROBLEM.

To the Editor of The Nation:

Sir: Touching the negro's future there is little to be said, because we are none of us prophets, and the question relates to the future. The education of the negro is bound to be a slow process, because his mind is essentially sluggish. In saying this I would not be understood to mean any disrespect to him. It is precisely what one must say of any race which a few generations back were savages and barbarians. A couple of thousand years of breeding, more or less good, and several hundred years of intellectual stimulation, have made of the white man what he is. It accounts for all the difference between the white savage and the present leader of the world's thought and progress. It is manifestly unfair to the negro to require or expect of him that he align himself with intellectual forces which have been gathering strength for more than a thousand years. The law of heredity is too real and obstinate to be set aside in favor of any race of creatures, be they men or beasts. Even these last require many generations, under careful selection, either natural or otherwise, to show any marked improvement.

On the fingers of one hand may be counted the generations since the negro was a savage. The legal slave trade ceased in 1808, though an unlawful traffic continued for many years thereafter. Now one measures to him hard lines who requires of him a force whose evolution demands a hundred generations, and that under a stimulation which the negro has not had for even his five or six. We are not to expect too much of "our brother in black," but we ought not to be satisfied with too little. In any study of the negro problem we are likely, in my judgment, to go wrong if we be forgetful of the history of other races who have travelled the road to civilization ahead of him. A savage may learn the use of a gun and be a savage still, but the moment he takes up a hoe he begins his march. All civilized peoples began their civilization with the simplest agricultural implements, and there also the American negro began. After a hundred years (which is more than the average of subjection to what is universally admitted to have been a hard rule of life, under any aspect of it), he was ready to be advanced to his next lesson. What that next lesson ought to be for the freedman is best answered by ascertaining what it was in the case of other races, since we ought not to expect any difference. There is no "royal road" for him, more than for others, and the beaten track must be followed.

In agricultural pursuits other races learned what the negro has learned, but also they gained what was quite unattainable by the slave—the spirit, that is, of independence and self-reliance, the real basis of all civilization worthy the name, the fruit of the union of liberty and energy. Now, since the negro could not cultivate this spirit along with his cotton and corn, as a slave, it is necessary that he now make it a special lesson. He is said to be free, but is he? Of course in a sense he is—free to go and come, free to work or starve, free to loaf around the country store and do the bidding of the keeper for a drink. Is all this freedom? After its sort, yes; but the sort is not satisfactory. The negro has no self-reliance and no feeling of independence, but it is coming to him more and more, yet little by little. His trust in his race has been strong enough all along since the war, and this has been sometimes mistaken for personal self-reliance; but whoever undertakes to do business with or for any large number of these people will bear testimony to the growing strength of individuality among them. It is all-important that this take a right direction. If it do not lead

to the development first of energy, and second of intellectual force, it were better it never began at all. There is a real danger in any large trust in mere numbers, as of a race, but there can come only good from a self-respecting, self-disciplined, and intelligent energy.

I have no idea that the schools will be of any great advantage to the present generation of negroes. The very young will profit most by them, while some even of such as are well advanced in life know how to read and write, and so have gained something. One of the mistakes of our day is the fancy that to read and write is to be educated. The great mass of these people are unable at present to go beyond this, and lack capacity for larger attainment; but the next generation will be freer and more capable, and the next more so still. If the negro shall have a little patience, and not undertake to leap chasms too broad for him, and if the white people of the North shall be content to let him develop according to the universal law, a very few generations will put the negro well forward of his present position. This may be safely predicted, since he will not need to work out his civilization, as most others have done, little by little, and often making hurtful blunders; but, in the midst of another race already enlightened, he must profit by their experience and their instruction.

I have already intimated my conviction that the negro cannot now be educated. He can be taught elementary learning, as how to read, write, and cipher, and to this effort I should rejoice to see given a larger and better-directed impulse than has shown itself up to this time. I have not examined the matter of taxation for schools in other negro States, but I know that in the State of Mississippi the school tax is a large proportion of the whole tax—so large that it does not seem possible to increase it without hardship; and yet our public schools are anything but satisfactory. Touching the proposition of Judge Tourgée to have the general Government undertake the burden of expense in maintaining schools for negroes in the Southern States, I for one should say that, being a free-trader, I am opposed on general principles to taking money belonging to *all* the people and expending it for the advantage of *some* of the people. Professor Sumner is right in his suggestion that the "forgotten man" be thought of once in a while. But if there can be any case in which it would be right for the general Government to bear the expense of education for any class, other than its own servants (as military officers), this is that case. The detail of the Tourgée plan is objectionable, but if the people find it possible to agree upon the outline of any plan at all, the detail can be arranged.

GEO. C. HARRIS.

MADISON STATION, MISS., March 4, 1885.

NUMBER OF POUNDS IN THE METRIC TON.

TO THE EDITOR OF THE NATION:

SIR: Mr. W. Howard White, in his communication on the metric system published in your issue of March 5th, speaks of the ton of 1,000 kilograms as being equivalent to 2,250 pounds.

The legal equivalent of the kilogram in the United States, as fixed by the act of Congress approved July 28th, 1866, is 2.2046 pounds, that of the quintal of 100 kilograms is 220.46 pounds, and that of the ton of 1,000 kilograms is 2,204.6 pounds. A somewhat closer approximation to the precise mathematical equivalent is given by Professor E. B. Elliott, Government Actuary, in the extensive and admirable series of tables prepared by him years ago for Webster's Counting House Dictionary. Mr. Elliott's equivalent, based on the determination arrived at by the British Committee on the New Exchequer standards as reported to Parliament in 1854, is 2,204.621 pounds.

It seems probable that Mr. White had in view 2,205 pounds, as the nearest integral approximation to the equivalent of the metric ton, and inadvertently transposed the 0 and the 5; since so well-informed a writer may fairly be presumed to be acquainted with the relation between the pound and the kilogram, as established by the best authorities.—Respectfully,

EDWARD T. PETERS.

WASHINGTON, D. C., March 9, 1885.

MUSEUMS OF PHOTOGRAPHS.

TO THE EDITOR OF THE NATION:

SIR: Pertinent to M. Reinach's suggestion (*Nation*, February 26) as to the establishment in America of public museums of casts and photographs, it may be well to note that a beginning in this direction has been made in California.

In charge of the University of California Mr. John S. Hittell has placed a collection of nearly 1,000 photographs (normal size, 8 x 10 inches) of the masterpieces of ancient and modern sculpture, for the use and pleasure of the public. To this gift no conditions are attached but one, namely, that the collection be made most conveniently accessible to the people. It is confidently expected by Mr. Hittell that other Californians will generously contribute and make the collection more comprehensive, including photographs of the most notable pictures, public buildings, and monuments of the world.

The fact that sculpture yields itself to the photographer's art readily and with fine results, and, further, that excellent photographs may be gathered at slight expense compared with the cost of casts, should lead to the formation of similar collections throughout the country.

A catalogue of the photographs at the University is in preparation, and will be sent *gratis*, when published in May, to any address. It will contain the names and addresses of Continental publishers of photographs, and may be made the basis for the foundation of collections elsewhere.—Yours truly,

J. C. ROWELL.

LIBRARY OF THE UNIVERSITY OF CALIFORNIA, BERKELEY, March 4, 1885.

Notes.

A SECOND and revised edition of the valuable work on 'United States Notes,' by ex-Comptroller Knox, with the figures brought down to 1885, has just been published by Charles Scribner's Sons. An edition has also been brought out in London.

Dr. Baird's 'History of the Huguenot Emigration to America,' which was announced for publication last autumn, but was postponed, is to be issued by Dodd, Mead & Co. in March. It is the fruit of investigations that have been carried on in this country, and in France and England, during the last ten or twelve years. The materials used have been found largely in unpublished documents.

Houghton, Mifflin & Co. are about issuing another edition of Harriet Martineau's Autobiography, as edited and supplemented by Mrs. Maria W. Chapman, in two volumes, crown octavo, at a reduced price.

Mr. Hamerton's work on 'Landscape' (Macmillan) will be found in the bookstores this week, along with Pater's 'Marius the Epicurean.'

Roberts Bros. have brought out a new edition of Mrs. Stowe's 'Pink and White Tyranny,' in paper covers, appropriately colored.

Charles Scribner's Sons publish by authority Captain Blunt's 'Instructions in Rifle and Carbine Firing for the U. S. Army,' a handy little pocket volume, with clasps.

The bound volume of Stormonth's 'Dictionary of the English Language' is now before us. In addition to what we have already said about this work, it is noticeable as an "old-fashioned" dictionary, in competition with those cyclopædias which are loth to give up the less pretentious name. It is, too, being of English origin, one more agency working against the Websterian orthography, which has apparently seen its best days. Finally, we remark the grouping of derivatives, as *naval* under *navy*, though this is not consistently carried out. In the new 'Webster's Condensed Dictionary,' a like grouping is based upon primitive roots, so that one must look for *navy* under *nauseau!*

Of Mr. Spofford's *American Almanac* (American News Company), and Mr. Keltie's *Statesman's Year Book* (Macmillan & Co.), for 1885, it is sufficient to say that they have made their customary appearance, and will be welcomed by all who know their value as statistical repertories. Mr. Spofford sets down Cleveland's plurality as 62,683, remarking on the discrepancies in the footings which are inevitable under our method of voting indirectly for President. The most popular, the least popular, and the average elector may be selected as representing the vote of any given State.

The book-buying public deserves to be warned of a very gross abuse of its own right as well as of copyright. It is well known that Messrs. Henry Holt & Co. publish, by arrangement with the author, Hugh Conway's collection of short stories called 'Thrown Together.' All but five of these have been taken by J. S. Ogilvie & Co. and issued under the title, 'Circumstantial Evidence, and Other Stories.' The title story is, in the Holt edition, called "The Bandsman's Story," and of the seven, in all, which are pirated, not one has been left with the title bestowed upon it by its author. "My First Client," to take another instance, becomes "The Doctor's Patient."

The burning question for our colleges raised by Harvard's scheme of elective studies is discussed in two pamphlets before us, 'The New Departure in College Education,' being President McCosh's reply to President Eliot last month (Scribners), and 'Some Important Questions in Higher Education,' by President A. D. White (Ithaca, N. Y.: Andrus & Church.)

The latest issue of Proceedings of the American Antiquarian Society (vol. iii, part 3) is largely devoted to memorial notices of the late Stephen Salisbury, the Society's President for many years and most liberal benefactor. His life was a fine example of New England cultivation, public spirit, and ever-present sense of responsibility for the right employment of wealth. A steel portrait of Mr. Salisbury accompanies the text. The report of the Council is made the medium of a valuable contribution to the history of banking in New England, based on the discovery of a rare tract printed in 1682. This essay bears the authoritative signatures of J. Hammond Trumbull and Samuel S. Green.

In like manner, the number for December, 1884, (just out) of the *Pennsylvania Magazine of History and Biography* opens with tributes to the worth of the late president of the society whose organ it is—Mr. John William Wallace, an eminent law reporter, like his father, and a descendant of William Bradford, the first printer of our middle colonies. For the rest, this number is peculiarly rich in inedited and curious matter. Mr. W. M. Conway furnishes a minute account of sundry portraits of descendants of William Penn, and there is a charming phototype of Juliana Penn from the original canvas. We must mention also a transcript from a lost regimental memorandum book (1775) of Benedict Arnold; General Joseph Reed's narrative of army movements near Trenton in the winter of 1776-

77; a letter of Franklin's concerning his mother's relatives in England, only known in part hitherto (1758); Samuel Foulke's memorandum of the proceedings of the Pennsylvania Assembly in 1761-62, etc.

Outing for April becomes a full-blown illustrated magazine, with a cover which is a great improvement on the former design. As already announced, Mr. Julian Hawthorne begins in it his new story, "Love—or a Name."

The *United Service* for March contains some strictures on the British military operations in the Sudan, by General C. P. Stone, and a review of General Grant's recent account, in the *Century*, of the campaign and battle of Shiloh, by General Jordan. The second article we have found more profitable reading than the first.

The March number of *Babyhood* marks steady progress in the conduct of this periodical. It has evidently taken hold of the mothers, and both their questions and their experiences enhance the value of each successive number.

We have received Dr. Charles Denison's roller map of the climate of the United States (Chicago: Rand, McNally & Co.). On one side is graphically depicted, from the data for the year 1883, the annual cloudiness, temperature, rainfall, winds, range of temperature, dew point, etc., together with the elevations. On the other are four smaller seasonal charts to the same effect, while the side-spaces are availed of for tabulated statistics. The interest which these data possess for invalids (to mention but a single class), is heightened by lists of the mineral springs and health stations in the United States.

How many nations of Europe are now interested on their own account in making and studying war-maps, all relating, too, to foreign lands. Italy's Red Sea expedition is the cause of one just issued by A. Villardi, at Milan. It embraces Africa east of the meridian of Tunis and Fernando Po and north of Zanzibar, but is especially valuable for its side-maps—of Assab and its environs, of Massowah, of Danakil, etc.

By good right Berlin, the seat of the late Congo Conference, should have the mapping of the result of that famous gathering. Dr. Richard Kiepert's "Map of the Congo Basin" (Berlin: Dietrich Reimer) has already reached a second edition. It is on a scale of about seventy miles to the inch, and it is wonderful to behold the native "empires" marked out on it with colored boundaries. France and Portugal come next after the International Association in the size and importance of their respective adjacent possessions. America, fortunately, is represented only by the track of her explorer, Stanley. The "free-trade zone" here outlined is vast and vague enough.

For the present, the needful maps of Africa are completed by "Stanford's Popular Map of the Seat of Military Operations in the Sudan" (G. P. Putnam's Sons), on the scale of twenty miles to the inch. It embraces the tract from Korti to Khartum on the south, and Suakim on the Red Sea. Side-maps show the whole of the Egyptian territory, and also, on a larger scale, Khartum and its environs. This map is very full of names, and is in every way useful for the student of current events.

A Dante trade catalogue in the United States is sufficiently rare to deserve mention. Such a one has been sent us by Anton Bicker, No. 78 Johnston Building, Cincinnati. It contains 172 numbers. If not disposed of *en bloc* before May 1, the collection will be sold on individual offers.

Francesco d'Ovidio, writing in the *Domenica del Fracassa*, comes to the support of Professor Bartoli's indication that Bosone da Gubbio was the person to whom Petrarch addressed his famous canzone, "Spirto gentil." He had jumped to the same conclusion himself, after having ruled out all the other claimants. His argument is forcible and unstrained at all points. Especially good is his denial of our present competency to judge of the importance of Petrarch's contemporaries, and his contention that a poet bursting with desire to deliver his message will make a pretext of a less than capital personage. He notes also the conditional tenses and phrases used in stimulating Bosone, and contrasts them with what must have been employed towards Rienzi, the putative "spirto gentil," after he obtained the tribuneship. How absurd, he suggests, it would have been to address Garibaldi, after Calatafimi, "Since you have now *reached* (*giunto*) the honorable grade of General of the Thousand, I should advise you to take courage and essay the liberation of Southern Italy; *if I do not mistake*, the present is a good time, and you *might* achieve a great distinction for yourself."

Polybiblion for February states that the *Revue Catholique*, of Bordeaux, is about to publish the souvenirs of Mme. de Chateaubriand, which have just been placed in the editor's hands, together with many valuable autograph manuscripts, by a grand-niece of the author of the 'Mémoires d'Outre-Tombe.' The same number of *Polybiblion* contains this singular notification: "One of our collaborateurs has just *finished* a study on Mgr. de Condorcet, and urgently desires our readers to indicate to him the sources and documents pertaining to this prelate."

In the *Revue Scientifique*, February 21, is a curious table, prepared by Mr. James Jackson, of different rates of motion expressed in metres to the second. Out of 132 phenomena cited, the slowest is the Mer de Glace, which moves at the rate of 99 ten-millionths of a metre, while next following it is the bamboo, which grows more than seven times as fast, and the third is a glacier in Greenland, whose maximum velocity is twenty-five times as great as that of the Swiss glacier. The swiftest motion recorded is that of the current from a Leyden jar, 463,500,000 metres a second; and next to it, though at a distance of 150,000,000 of metres, is the speed of the electric light. The fastest of animals is the *martinet* or swift. The tornado at Wallingford, Conn., in 1882, and a train on the Bound Brook Road, New Jersey, are cited as the greatest velocities recorded of wind and steam.

'Le Livre de Demain' is the title of a novel book recently published by M. de Rochas, at Blois. It is printed on various kinds of paper with different colored inks, and consists of selections in prose and verse, as well as an account of inks, paper, and the art of typography. The peculiarity of the book is the endeavor to suit the paper, ink, and type even, to the subject of the selection. M. de Rochas contends that a love poem, for instance, printed with light ink on rose-tinted paper, will make a far deeper impression than if printed with black ink on white paper. In order to test his theory, he prints several poems and short stories in accordance with it, and he certainly secures some very picturesque effects, and produces a unique specimen of typography.

The *Portfolio* for March falls below its average in both illustrative and literary attraction. The Hagborg etching is poor and trite as subject, and diffuse and ineffective as etching, and the Canterbury etching is weak. A facsimile of Dürer's "Christmas Day" is interesting, and especially so is a study by W. Watkiss Lloyd on "The Drama of the Greeks in relation to the Arts."

The report of the Apprentices' Library, which, by the way, boasts of being the largest free library in this city, though its 68,000 volumes are not known to *Polybiblion*, is very satisfactory in one respect. The reading of light fiction shows a falling off of 7,148 volumes, and the reading of history, biography, and travels, an increase of 800, which is in the right proportion, for it takes nine times as long to read profitably an historical work as to rush through a volume of the Seaside or Franklin Square Library. Similarly, though there were eight more readers than the year before, the number of books borrowed was less by 6,348, which is merely another way of stating the improvement in the quality of the reading. Evidently, mere comparison of totals of circulation is no test of the comparative usefulness of libraries. The improvement in the Apprentices' Library may be traced directly, we believe, to the publication during the last year of the classified lists of selected books which we have already noticed. The same result was seen in the Boston Public Library on the publication of its annotated class catalogues, and has been noticed wherever similar helps to choice in reading have been given to the public.

From the annual report of the Director of the Dearborn Observatory at Chicago, Prof. G. W. Hough, it appears that the chief instruments have been kept in constant use. A gas engine is now employed to turn the dome covering the great telescope. The Repsold meridian circle is used only for observations connected with the time-service. The great telescope, of eighteen inches aperture, has been exclusively employed in the observation of a few objects, (1) the Pons-Brooks comet, the changes in the structure of which were not remarkable; (2) difficult double stars, thirty-two new objects of this class having been discovered by Professor Hough; (3) the planet Jupiter, the principal objects of interest being the great red spot first noticed in 1878, and which has maintained its size, shape, and outline with very slight change, the great equatorial belt, which has been subject to gradual drift in latitude from year to year, and the equatorial white spots, which, with the envelope they are situate in, move with a velocity of 260 miles per hour, thus revolving about the planet in a month and a half; (4) the planet Saturn, with negative results so far as markings on or subdivisions of the rings were concerned; and (5) the satellites of Uranus, which were such difficult objects as not to have been frequently seen. Six drawings of Jupiter's disk were made, four of which are printed in the report. As heretofore, Mr. S. W. Burnham has continued his observations of double stars with the great telescope.

We learn from *Nature* that M. Charles Feil has, after some years' absence, returned to the active management of his celebrated manufactory of optical glass in Paris, the new firm being "Feil père et Mautois." M. Feil is grandson to M. Guinaud, who, some sixty years since, by a mode of working almost identical with that adopted by the celebrated potter, Palissy, overcame the serious obstacles which occur in securing the perfect homogeneity of both crown and flint glass, and whose secrets have descended to his grandson.

—We have received from the publishers, Messrs. G. P. Putnam's Sons, the first volume of the uniform edition of the works of Alexander Hamilton, edited by Henry Cabot Lodge. It is in most respects a beautiful specimen of book-making, the tone of the paper, the clearness of the type, and the good taste of the binding being highly creditable to the publishers from whose press it comes, and a remarkable proof of the steady advance the typographical art is making on this side of the Atlantic. Vol. i contains a preface by the editor, a "Hamilton Chronology" which is very valuable for purposes of reference, and an instalment of the works (579 pages in all), comprising the "Publius" letters, Hamilton's speeches in the Federal and in the New York Conventions, and many minor publications. The editor, in his preface, says with regard to the ar-

rangement of the edition that the primary object in view is to bring into one book all Hamilton's writings—this never having been done heretofore, even in the John C. Hamilton edition of 1851. It will include, he says, the 'Federalist'—presumably only Hamilton's contributions to it. It will also include the famous Reynolds pamphlet, which, as Hamilton published the story to vindicate his honor as a public man, his admirers will be glad to see preserved. Mr. Lodge very justly says that it is almost impossible to overestimate the importance of Hamilton's influence upon the development of American institutions; and it seems at first singular that, with the mass of Americans, the name of his rival Jefferson, whose public services and intellect were certainly inferior to those of Hamilton, should be still a conjuring-word for a great political party, while Hamilton's solid legacy to his country is simply enjoyed without gratitude and without thought. The explanation lies partly in the fact that Hamilton addressed the reason of a rising Democracy, while Jefferson appealed to its sentiments. For the time Jefferson triumphed, but Hamilton's fame was to be vindicated later. Jeffersonian Democracy a generation afterward was taken advantage of, as only a sentimental creed could have been, by slavery, first to extend its own influence, then to break up the Union. The early Federalist idea that the Union was a nation triumphed, and the doctrine of States-rights perished. It can hardly be revived again, and, in the future, parties can hardly divide on issues which will make Jeffersonian Democracy intelligible as a political creed. Accordingly, since the war the younger generation of Americans have turned more and more to the writings of Hamilton, the genius of the Revolution, to study the principles which he and his friends formulated as the guiding principles of republican government. He was one of the great men of the last century who perceived, as if by inspiration, the truths about modern government for which Europe had been groping blindly for generations. It was one of those cases of inspiration which carried conviction with it, for the strangest feature of Hamilton's life is, that from the time when as a mere boy he began his work, he succeeded in convincing his opponents against their will. He was possessed by the spirit of truth, and if later in life his partisanship clouded his vision, his message had already been delivered, and become part of the solid fabric of American government itself.

—The burden of President Eliot's latest annual report to the Board of Overseers of Harvard College consists in a minute history of the development of elective studies at that institution. It is well calculated to allay alarm concerning the changes made in the past twenty years to find that, at the instance of Judge Story, a beginning was made in the same direction sixty years ago. Nor is the freedom now attained anything like, in practice, what might be supposed. For example, the present Freshman class was at liberty to choose between "twenty-five full courses and six half-courses"; but the range of *studies* involved in this scheme embraced only Latin, Greek, French, German, history, mathematics, and science, and four out of these seven were obligatory. As French was prescribed if the candidate had passed in German, and *vice versa*, it appears that, at the end of the Freshman year, the differentiation in *kind* of scholarship among the members of the same class will be confined to two studies. The difference in *degree* will be measured by the courses above mentioned, and by individual ability.

—"In regard to studies, *discipline*, and the selection of teachers," says President Eliot, "the Governing Boards and the Faculties have for eighteen years unitedly and steadily pursued a distinctively University policy, national, unsectarian, and comprehensive in scope, and intended to assure freedom to both teachers and students." The recent decision of the President and Fellows in regard to voluntary attendance at prayers shows that this policy still lacks something of completeness; and we hope that the next annual report will be devoted to an historical review of the progress in religious discipline for sixty years—say, from 1826, when the study of Hebrew, from being prescribed, became optional. This seems already necessary in order to justify an alarming innovation in the Divinity School, where also the pæan of freedom is sounded by President Eliot. The Dean of the school calls special attention to the fact that "marks for absence were first given up at lectures, *then at chapel*, and finally the student was left free to select the studies which he would pursue and the order in which he would pursue them." This is the more extraordinary because we cannot imagine theological students to be capable of a perfunctory performance at prayers, as is the case with ninety-nine-hundredths of the undergraduates to whom the liberty of non-attendance is denied. There is, therefore, nothing shocking in the idea of compulsion as applied to the former. We observe that among the lectures at the Divinity School last year was one on Vivisection, by the Dean of the Medical Faculty. This suggests the utility of a lecture to the undergraduates by the Dean of the Divinity School, setting forth the grounds of his liberality in respect to prayers in his own domain.

—The English Blue Books, as a rule, have but little interest for American historical students. The Ninth Report of the Royal Commission on Historical Manuscripts, Sessional Papers, 1883, vol. xxxvii, is, however, a conspicuous exception. It contains (Appendix III) a collection of papers now in the possession of Mrs. Stopford Sackville, of Drayton House, which descended to her from Lord George Sackville, afterward Viscount Sackville, but better known in this country as Lord George Germain. Lord George was the third son of the first Duke of Dorset. He was at one time Commander-in-Chief of the English army in Germany, and was cashiered for his behavior at Minden. This, however, did not prevent his attaining high political preferment, and he was Secretary of State for the colonies from 1775-1782. Thus, during the Seven Years' War and the American Revolution, he was in correspondence with the leaders in the military, naval, and civil services. By far the greater part of the papers in this collection, therefore, are really state papers. Such are letters from Wolfe and Amherst written in 1758. Such, also, are the letters, reports, and instructions to and from Burgoyne, Clinton, Cornwallis, Rodney, Arbuthnot, Collier, and W. Eden, afterward Lord Auckland (1775-1782). Besides these, and dealing with English politics rather than with the American war, are letters from Lord North, Lord Suffolk, etc. Many of these are marked "Private" or "Most Secret." Taken altogether, they give one an inside view of the conduct of the war. Especially is the want of confidence felt by Clinton, Arbuthnot, and Rodney toward each other brought out. The despatches from Lord Cornwallis give a full account of his campaigns in the Southern colonies; while those of Burgoyne add considerably to our knowledge of his operations in the North. As throwing a sidelight on the history of the time, should be mentioned a collection of letters from Lord George to his friend, Lieut.-Gen. Sir John Irwin (1761-1784); and a few letters from Lieut.-Col. Benjamin Thompson, afterward Count Rumford, to Lord George Germain.

—No doubt in all federations there is a contest between the centralizing and the decentralizing forces. In the United States centralization has had the upper hand since the war, and perhaps the opposite tendency is to have its turn, though it is difficult to see what it can do beyond delaying the inevitable a few years. In Switzerland an era of centralization is perhaps just beginning. The particular occasion of its manifestation at present is the choice of a place of deposit for a very fine collection of lacustrine relics bought for 60,000 francs from Doctor Gross. The Federal Council, in announcing the purchase, said that probably some of the cities of western Switzerland would be glad to furnish a room for it; and if, contrary to all expectation, they should not, it would be temporarily deposited at the Polytechnic School at Zurich. Geneva, Lausanne, Neuchâtel, Neuveville, and Bienne immediately offered excellent quarters in connection with their respective scientific establishments. But, after all, the Federal Council decided to put it into the Federal palace at Bern. Of course there was great disappointment among the lake cities, and a shiver of apprehension among the partisans of State rights. With the Gross collection at the Federal capital, will there not soon be a National Museum there, which certain bolder spirits have been talking of for some time? And if a national historical and prehistoric museum is once founded, everything will go to it, and then what will become of the museums at the cities we mentioned above, and at Basle, Aarau, Lucerne, Saint-Gall, and Schaffhausen? No such fears were felt when our National Museum was founded, but we Americans proverbially take things easy, and then our country is so large that one city can never entirely dwarf the rest, particularly a city that is never likely to have either manufactures or commerce to any extent. It is otherwise with Switzerland, and it would really be a pity if any one of her cities should be the Paris of the rest.

—A French lady has sent to the *Revue Bleue* some reminiscences of Colorado, where she was (and perhaps is) living with her husband, at Golden, six miles from Denver. The familiar features of Western life are detailed—the social equality, the difficulty of getting servants, the poor quality of the service when one succeeds in getting any, the monotonously bad cooking, the enormous quantity of sweets devoured, the sudden reverses of fortune, the occasional violence and the occasional lynching, the washerwomen who own pianos and the expressmen who live in clematis-covered villas, the juxtaposition of the telephone and the Nez-Percés. We have heard of all these things from Americans and Englishmen, but one is curious to know how they strike an intelligent Frenchwoman. This one, at least, is well pleased. She thinks the climate admirable, the moonlight magnificent; she is proud of the quick growth of the eight-year-old State, of its mineral and agricultural riches, of the wonderful railroads through the mountains, and of the enchanting Middle Park. The art she laughs at, and no wonder, for American art to her was exemplified by an enormous painting in a Denver hotel, ingeniously representing Adam and Eve without navels, on the ground that as they never had been born they could not have had them. The cookery, too, she detests, and felicitates herself on having secured a Marseilles cook and a maid who, according to American custom, "is called a Swede because she is a Norwegian." Nor does she speak altogether well of the people: they are amusing for a month or two, while one is getting acquainted with the genus, but there are no species—the individuals are just alike. "Charley resembles Georgy, and Georgy does not differ more from Dicks than if Charley,

Georgy, and Dicks had been cast from the same mould." Society does not please her better. She wants something more select than a reunion of Colonel X, the hardware dealer Y, and young Z, who drives a wood-cart. She feels uncomfortable when, in a dance, she takes the hand of the sheriff, which the day before may have tied the noose round the neck of a criminal. Yet she acknowledges some of the good results of this equality—the refined manners of the expressman's wife, the musical education of the washerwoman's son, the fortitude in bearing reverses of fortune which comes from poverty being an inconvenience only, and not a disgrace. It is a curious instance of the way in which things happen in couples, that almost at the same moment this lady, who perhaps never heard of Matthew Arnold, and Matthew Arnold, who certainly never heard of this lady, should publish—the one in London, the other in Paris—the same comparison of France and America. Matthew Arnold, in his palinode in the *Nineteenth Century*, declared that in France the hatred between rich and poor is intense, because there, though the institutions may be republican, the ideas and the morals are not republican; while in America there is no such hatred, and the United States is in no danger of revolution, because ideas and morals are republican as well as institutions. Mme. G. praises the Yankees because, instead of putting Equality on the walls (alluding to the inscription "Liberté, Égalité, Fraternité" which one sees on every public building and church in Paris), they have introduced it into their social customs.

—Berlioz's Symphonie Fantastique, "Épisode de la Vie d'un Artiste," formed the principal number of Saturday's Philharmonic programme, which also contained Schumann's "Manfred" overture, Wagner's Siegfried Idyl, and Rheinberger's symphonic tone-pictures of "Wallenstein's Camp and the Capuchin's Sermon." Regarding Berlioz's symphony—if we may perpetrate a Hibernicism—we feel tempted to remark that its best feature is the twenty-page essay which Schumann wrote on it. This essay is based on the remarkable pianoforte arrangement made by Liszt; but as the instrumentation is therein briefly indicated, Schumann was enabled to form a fairly accurate estimate of Berlioz's work. This estimate is on the whole very favorable, but it is noticeable that Schumann did not preserve his interest in Berlioz's following efforts, for, although his critical pen remained active for many years, he did not again employ it in Berlioz's behalf. The essay is of interest not only as an analysis of the fantastic symphony, but as a confession of Schumann's creed regarding programme music and other questions that divide musical opinion; and it is so full of subtle suggestions that it forms a more valuable treatise on musical æsthetics than the systematic works of German metaphysicians, not excepting Hanslick's popular book on 'The Beautiful in Music.' What, for instance, could be more delicious and instructive than Schumann's remark, that the Berlioz symphony contains "many commonplace harmonies and some that are faulty or at least forbidden by the old rules, *some of which, however, have a superb effect*," or, as a topsy-turvy Frenchman put it, "que cela est fort beau, quoique ce n'est pas de la musique." Abrupt and "faulty" harmonic progressions have been made so familiar (and dear) to modern ears by Liszt and Wagner that if Schumann wrote at the present day, he would hardly deem it necessary or advisable to call attention to them. Schumann is very indignant with Fétis for asserting that Berlioz lacks melodic and harmonic ideas: "If M. Fétis asserts that in regard to melody even the warmest friends of Berlioz do not dare to defend him, then I must count myself among Berlioz's enemies; bear in mind, however, that I am not speaking of Italian melody, *which we know by heart before it commences.*" In this question we regret to be obliged to side with that old fogy, Fétis. The Fantastic Symphony was so admirably rendered under Mr. Thomas's bâton on Saturday that all its features must have been made clear; yet ideas, both melodic and harmonic, seemed to us as scarce as wild strawberries in November. It is, however, a very creditable composition for a youth of seventeen, and it gives evidence of that mastery of the orchestra which Berlioz subsequently carried to such a point of perfection. Many passages give an impression as if the orchestral effect had risen in his mind first, whereupon a musical theme was sought to wed with it; but the coy ideas refused to come at his bidding. Schumann very properly defends Berlioz's method of sacrificing "beauty" to realism (characterization) where the subject demands this; but he seems to draw the line at Berlioz's deliberate burlesque of the *Dies Iræ*. On the other hand, we do not share Schumann's objections to the elaborate programme which Berlioz wrote for his symphony, for it seems to us that this programme is a greater work of art than the symphony itself. It is a weird prose-poem in five scenes, depicting in the first three movements the dreams, sufferings, and hopes of a lover; in the fourth his despair, and an opium-dream in which he beholds himself dragged to execution for having murdered his sweetheart; and in the fifth a dream in a "Sabbath" night in which devilish orgies are witnessed, the fixed idea or typical melody associated with his love is degraded, and sacred things parodied. In this last scene bells are introduced, those used on Saturday being the set of bars that were prepared last year for the performance of selections from "Parsifal." Not many years ago it was customary to speak of a Wagner-Berlioz school, and in regard to instrumentation there is some justification for thus coupling these names together; but an examination of Berlioz's programme to his fantastic symphony shows that the two composers resembled each other more in their literary power of depicting a situation vividly with a few well-chosen words than they did in the character of their music. As for Schumann, we suspect, in view of his subsequent silence, that his championship of Berlioz was in this instance due largely to the fact that Berlioz boldly came forward and made practical demonstration of certain revolutionary principles which Schumann secretly cherished, and was eager to proclaim at the first opportunity.

INDIA IN 1857.

The Personal Adventures and Experiences of a Magistrate during the Rise, Progress, and Suppression of the Indian Mutiny. By Mark Thornhill, Bengal Civil Service, Retired. London: John Murray.

In the days of the Delhi Emperors, India, for administrative purposes, was divided into *soubahs*, or provinces, each of which was ruled by a Soubahdar; and these soubahs were further subdivided into *zillahs* or districts. The district was the administrative unit, and its administration was intrusted to an official called the Zemindar—the most powerful landed proprietor in the district being, as a rule, the person pitched upon for this office. The *sunnud*, or patent appointing him, specified that he was to "observe a conciliatory conduct toward the ryots and inhabitants at large, exerting himself to the utmost in punishing and expelling the refractory"; that he was to "pay the revenue of government into the public treasury at the stated periods"; that he was to "encourage the body of the landholders in such a manner that signs of an increased cultivation and improvement of the country may daily appear," and to "keep the highroads in such repair that travellers may pass and repass in the fullest confidence and security." This ancient system of administration remains unsubverted to this day. But the soubahs are now governed by English Governors, Lieutenant-Governors, or Chief Commissioners, according to their size and importance; and in the zillah, an English official known as a Magistrate-Collector has replaced the Zemindar of bygone times. The functions of the magistrate are identical with those of the Zemindar. He is a kind of factotum whom the Government holds responsible for everything, and the consequence is that at first hand, at least, he knows very little indeed. To execute his orders and conduct all inquiries he has under him a huge army of underpaid native subordinates, and these are, in deed and in truth, the veritable rulers of British India at this moment. They are spread out as an impenetrable wall between the magistrate and the great body of the people. The daily routine of his official work is as much as the overworked magistrate can get through in the day. He has no time to sift and examine into the statements and reports made by his native subordinates; he has to accept whatever information they choose to pour into his ears, from sheer inability to ascertain anything more authentic for himself.

The destruction of the native gentry—which has invariably been the first result of the introduction of British rule in an Indian province—has greatly aggravated the isolation of the magistrate-collector, by removing the one class which might have possessed sufficient courage and independence of spirit to resist the oppression of the subordinate officials of the Government. Indeed, the position filled in old time by this ruined aristocracy is now in a great measure occupied by men who were at one time petty employees of the British administration, or who became possessed of it by means of an illicit and nefarious collusion with them. It was due to this absolute separation from the people that such an insurrection as that of 1857 was secretly matured through a great part of the Bengal Presidency, without any forewarning of the event reaching a single one of the many scores of magistrates who imagined themselves to be governing their districts at the time. Mr. Thornhill, whose book we are about to review, was one of these magistrates, and he confesses his own entire ignorance, at the time, of the habits, feelings, and thoughts of the native population, with an ingenuous candor which disarms censure, but cannot but excite a good deal of amazement. It inevitably suggests the thought—are the relations between rulers and ruled in a healthier condition now? Or, is it not the case that the increased facilities for returning to Europe have made an even deeper gulf between them, and that a mine might be dug beneath the very feet of the unconscious ruling class as easily in 1885 as in 1857? Quitting these speculations, we can cordially commend Mr. Thornhill's "experiences" to the notice of all those interested in the history and the future of that marvellous anomaly, the British empire in India. As regards the efficient causes of the general collapse of British authority throughout Bengal, which followed almost instantly upon the occurrence of the military mutiny at Meerut, they will find more light thrown from the pages of this modestly written and unassuming little book than in any of the histories of the Sepoy War (so far, that is, as we are acquainted with them). With Mr. Thornhill's book we would couple another, published shortly after the mutiny, entitled 'Personal Adventures during the

Mutiny,' by a Mr. Edwards, like Mr. Thornhill, an Indian magistrate.

Mr. Thornhill was magistrate of the district of Muttra, in the Northwest Provinces, when the insurrection began, and the chief part of the present volume is taken up with a narrative of his personal experiences. He was frequently in situations of considerable peril, and these he describes with an unobtrusive minuteness which reminds the reader of Defoe's descriptions, and which impresses him in a very similar way. But the lasting value of the book arises from the many incidental touches revealing the weaknesses and imperfections of the British Government, the fond and wistful manner in which, beneath a resigned exterior, the people clung to the remembrance of that old order which the English had overthrown, and the zest with which they relished the brief period of recovered freedom. Take, for example, the following passage. If no other portion of the people had regretted the collapse of British rule, it might have been expected to kindle a lively regret in the minds of those native subordinates who reaped so many illicit advantages from its peculiar constitution. The termination of British rule meant the termination of their day of power, not less than that of their white official superiors. Yet this is how they greeted the intelligence:

"When breakfast was over I left my guests and went to my own room, where my office people were assembled. I had hitherto kept silence about the mutiny, so far at least as was possible, partly from fear of exciting alarm, partly lest, if the news should prove false, I might appear ridiculous. There was now no longer any object in concealment. I told them what I had heard; they expressed great astonishment; but ere long I perceived from the remarks they let fall that they had heard it all before, and, indeed, as regarded what had occurred at Delhi, that they were much better informed than I was. All regular work was suspended; when a few papers had been signed and some orders issued, there remained nothing more to do. However, to while away the time, I continued to chat with them about the events at Delhi. They soon got so interested in the country as partly to forget my presence. Their talk was all about the ceremonial of the palace, and how it would be revived. They speculated as to who would be the Grand Chamberlain, which of the Chiefs of Rajpootana would guard the different gates, and who were the fifty-two Rajahs who would assemble to place the Emperor on the throne. As I listened I realized, as I had never done before, the deep impression that the splendor of the ancient court had made on the popular imagination, how dear to them were its traditions, and how faithfully all unknown to us they had preserved them. There was something weird in the Mogul Empire thus starting into a sort of phantom life after the slumber of a hundred years."

We have referred to the annihilation of the native aristocracy as constituting the first and invariable result of the introduction of British rule in an Indian province. This annihilation, which was deliberate and intentional, was due to a cause which, in the histories of the English in India, has been allowed to fall almost out of sight, viz.: the commercial character of the East India Company. For a long time after it became the sovereign power in India, the Company continued also a trading association, having commercial dealings with India and China, and responsible for the punctual payment of dividends to the proprietors of the East India stock, as well as other heavy liabilities. But for the carrying on of these commercial operations, and the discharge of these recurring liabilities, it did not possess one farthing of capital beyond that which its Governors-General could extract from its "Indian estates" after paying the costs of the administration and that of the wars in which they were so incessantly involved. Thus the Government at Calcutta was always under a necessity to transmit annually large sums to the Court of Directors over and above the normal charges of the administration; and so urgent was the pressure put upon them from London, that when Lord William Bentinck was Governor-General, he actually contemplated the pulling down of that beautiful and unique building, the Taj at Agra, in order to sell the marble, and so for a brief period silence the clamors of the Court of Directors. The Indian landed aristocracy fell victims to the greed and impecuniosity of the East India Company in their character as a trading association. They were condemned to destruction as a class absorbing for their own uses a large amount of wealth, which under a wiser and more equitable order of things would be divided, in the form of half-yearly dividends, among the proprietors of East India stock. To justify the ruin of this class and the confiscation of their property, it was represented as sunk in indolence and debauchery; as exercising a cruel and universal tyranny over the masses of the people, the extinction of which would do more to strengthen and popularize British rule in India than any other policy that could be devised. It never occurred to the framers of this remarkable policy that the ruin of the landed aristocracy was not equivalent to their extermination from the face of the earth. Though impoverished, they still continued to dwell amid the scenes of their former wealth and influence, with hearts full of just wrath against the causes of their misfortunes, and eager to seize upon the first opportunity for retaliation. As little did it occur to the Court of Directors or their officials in India, that, though the common people might acquiesce in the destruction of the aristocracy, if they benefited by it, they would have no cause to do so if the reverse was the case. And, as it happened, their last state proved to be worse than their first. The disappearance of the aristocracy did not lighten their burdens by a single penny; on the contrary, the money which these wealthy land-owners used to expend was now carried clean out of the country, for the benefit of a trading company at the other end of the world.

As long as the Indian Government could rely upon its native soldiers to enforce its commands, the effects of this sordid policy were not apparent. But when its native army mutinied, its power collapsed everywhere except in the immediate vicinity of its few English regiments. It could not be said that the people threw it off: it merely came to an end and disappeared.

"Three weeks," writes Mr. Thornhill, "had hardly elapsed since the commencement of the mutiny, but in that short period a large portion of the district had lapsed into anarchy. Order was only maintained in the towns, *and in those few portions of the country where the ancient proprietors still held possession of their villages.*" "It was," he adds in another place, "the belief of the Government and also of the English generally, that the natives were attached to our rule, and, moreover, that, weary of the present anarchy, they longed for the reëstablishment of order. My present experience did not confirm this belief. No one regretted the loss of our rule, and, with the exception of the Bunniahs (*i. e.*, money-lenders) who suffered by it, all classes enjoyed the confusion. A large landholder once expressed his feelings to me very frankly. He said 'that the last three months had been the happiest of his life. He went about in state, and did what he liked; whom he would he punished, and whom he would he rewarded.' . . . 'Besides,' he continued, 'what with the heavy land revenue, the school rates, and all the other new cesses, the taxation had become pretty well unbearable.' In a large proprietor, these sentiments were natural, but it was a little surprising to find that very similar sentiments were entertained by the peasant cultivators, and by that still lower class who, of all others, had especially benefited by our rule. . . . They liked the freedom they were then enjoying—they liked the excitement; and, better than all, they liked paying no revenue and wiping off old scores with the Bunniahs. To a certain extent, I could enter into their feelings. The change in the appearance of the country was, even to a spectator, very agreeable. . . . In every village fortifications sprang up, the grandees resumed their ancient state, surrounded themselves with troops of attendants, hosts of armed retainers. When they appeared abroad it was with cavalcades of beautiful horses, camels gayly caparisoned, and crowds of followers carrying swords and spears, and clothed in the brightest of dresses. Life was now for them full of poetry, full of romance and wondrous rumors, vague anticipations."

Not less valuable than these authentic glimpses of native life and feeling is Mr. Thornhill's description of the British Government, its hopeless bondage to routine, and its consequent incapacity to deal with, or even to understand, a crisis so unexpected as the insurrection of 1857. The Punjab saved the rest of the Bengal Presidency because there British rule was too recent a creation to have "lost touch" of the people; but in the Northwest Provinces the officials, from long working in official grooves, were as men at work in a deep cutting. The surrounding country was now hidden from their eyes—unknown and disregarded. What saved the British dominion was the inability of the population to combine or even to form any general plan, and the non-appearance of a leader of commanding character. These elements of weakness insure the permanence of British rule in India so long as it is not menaced or assailed by foes from without. But the force of circumstances is now compelling the English to defend their interests in India by the occupation of countries which are not a part of it, and where they will come into contact—and probably into collision—with European Powers. We refer to the position of affairs in Egypt, in Afghanistan, and Burmah. It is certain that at no distant date these three countries must become outlying provinces of their Indian Empire, with the effect that Russia at one extremity and France at another will become their immediate neighbors. In the event of a rupture with either of these Powers, the stability of their rule in India would be menaced by dangers for which there is no precedent in its previous history. The Indian garrison—and especially the English portion of it—would have to be concentrated at points far outside of the Indian frontiers (properly so called), leaving British authority within those limits at the mercy of the uncoerced loyalty of the people.

THE DISTRIBUTION OF PRODUCTS.

The Distribution of Products, or the Mechanism and the Metaphysics of Exchange. By Edward Atkinson. G. P. Putnam's Sons.

THIS work consists of three essays entitled respectively, "What makes the Rate of Wages?" "What is a Bank?" and "The Railway, the Farmer, and the Public." It is evident that some of the most important questions of modern society may be treated under these heads. As a matter of fact, the first and most important essay discusses the whole subject of the distribution of wealth in our modern industrial economy. Mr. Atkinson's fundamental proposition is the formula of Bastiat, that, "in proportion to the increase of capital, the absolute share of a given product falling to capital is augmented, but the relative share is diminished, while, on the other hand, the share falling to labor is increased both absolutely and relatively." He assumes that if this statement can be proved to be true, the whole question of the future of the laboring classes is solved in an eminently satisfactory way. For if the laborers are obtaining a constantly increasing share of the product both absolutely and relatively in comparison with the capitalists, their condition must be constantly improving, and every year is bringing us nearer the time when the present strained relation of laborer and

employer will give way to an "era of good feeling" which must be permanent, since it will rest on a flourishing state of the laborers, coupled with a full recognition on their part of the beneficent service of capital.

Gladly as we would believe in the probability of such a solution of our present social problems, we are nevertheless compelled to ask for a stronger proof of it than Mr. Atkinson has given us. It is a life-and-death question in our modern world. Mr. Atkinson tells us it is solving itself in the most happy way. If so, of course, we need take no positive measures of any kind; but if, on the contrary, these problems will not solve themselves, it is possible that we may be lulled into a false security by such hope-inspiring prophets until it be too late. Two strong objections may be made to our author's view. In the first place, it cannot be admitted that either he or Bastiat has proved the proposition in question. The plan of proof adopted is very simple. It is *assumed* that capital gets only 5 per cent. of the selling price of a commodity as profit, and that 5 per cent. goes to taxes, etc., leaving the total residue of 90 per cent. for the laborer. It is further assumed that formerly capital received 10 per cent., and taxes, etc., 5 per cent., leaving only 85 per cent. for labor. It is then concluded that while, owing to the increase of production, the absolute amount falling to capital may be increased, yet the relative proportion of the total product falling to capital has been decreased, while both the absolute amount and relative proportion falling to labor have increased.

The fallacy of the reasoning, even if we grant the facts, which are far from established, is very evident. The whole conclusion rests upon an identification of two very dissimilar things, viz., the *share* of a product which capital gets and the *current rate of interest*. The difference may be illustrated by a very simple example. Suppose A borrows capital to manufacture a commodity which requires one dollar's worth of labor to every dollar of raw material and machinery in its production. The product can be sold for $2 10 if A can get capital for 5 per cent., and does not charge for his own labor, provided the commodity can be made and sold within one year. If, however, the manufacturer must keep the commodity on the average one year after finishing it, he must sell at an advance of ten cents, or for $2 20. The *rate of interest* has remained the same, but the *share* of the product which capital takes is 10 instead of 5 per cent. of the first cost. If he has to hold it two years, the share of capital is still further increased. In the same way the *share* of capital may be maintained or even increased in the face of a falling rate of interest, if the amount of capital required in the creation of a given product increases correspondingly. That this amount has increased in certain branches of industry is highly probable; whether it has not increased in all, is a question which Mr. Atkinson does not investigate, though it lies at the very basis of all satisfactory argument on this point.

But even if this proposition were firmly established, it would be very far from justifying Mr. Atkinson's conclusions. As a social question, the problem of labor and capital would not by any means be solved by proving that the laborers as a class were getting a continually increasing share of the product, both absolutely and relatively. It is perfectly possible for the share of the laboring class to be continually increasing while the share of an individual laborer is as continually decreasing, owing to the increasing number of laborers—a case which Mr. Atkinson does not even consider worthy of mention. Further, the disturbing element in the case is not after all, so much the heightened or lowered standard of life of the laborer, as his discontent with his present condition. And the practical question, from that point of view, is simply, Does this increasing share in the product, even if it be an actual thing, offer any guarantee that it will finally allay that deep and apparently ever-deepening under-current of discontent which exists on the part of the laboring classes of every civilized country? Even if the share of capital is relatively decreasing, is it not probably true that, owing to the concentration of capital in larger and larger masses, it is possible for the capitalist classes to live on such a scale of extravagance as to impress more powerfully than ever on the minds of the laborers a sense of the wide disparity of their conditions? The laborer of to-day is a very different being from his predecessor of fifty or even of twenty-five years ago. As a political factor, the latter was nothing, the former is powerful. Suppose his grandfather did live in a hut, with a dirt floor and no windows, with but one room to be shared with his pig or goat, while he lives in a house of two or three rooms in a well-drained and well-lighted city; suppose the former had nothing to eat but potatoes and black bread, while the latter can indulge in meat once a day and white bread at every meal—a case by no means universal—how will all this help matters, if the desires of the laborer of to-day have so far outrun the present possibilities of satisfying them that he is in such a permanently discontented condition as to make him ready to listen to the wildest proposals of agitator and demagogue? May not his improved condition, under such circumstances, be the source of all the greater danger, since it enables him to combine with other laborers more easily, and to use with all the greater effect the ballot which will soon be in his hand in every civilized country.

Mr. Atkinson's general conception of the subject is not always consistent with itself. He claims in one place that the rate of wages is determined by conditions over which neither employer nor employee has any control whatever; while he says in another passage that the question of the rate of wages is at bottom one of capacity and character. Surely capacity and character can be influenced by both employer and employee. Aside from the above points, however, the author's presentation of the subject suffers from two fundamental errors, of which one has been mentioned above. In the first place, he divides society into two classes—capitalists and laborers. All income must accrue either to the one or the other as profits or wages. What the one class does not get, the other must. This is a highly artificial simplification of the problem. The most superficial acquaintance with the latest discussions of the problem would have kept him from this error. The theories of Cairnes and Walker, which he expressly accepts (p. 24), certainly give no ground for any such view. It is impossible to discuss the subject on such a basis without falling into serious inconsistencies.

Mr. Atkinson defines wages to be that sum which those receive who agree in advance to work for a fixed payment, either by the piece or by the day, month, or year. Profits he identifies with interest, and fixes them at 5 per cent. Where, in this scheme, shall we class the extra profits of a manufacturer over and above the current rate of interest? It is a well-known fact that they often amount to many times the current rate of interest. They cannot be wages, according to Mr. Atkinson's own definition. This portion of national income Mr. Atkinson ignores in his main presentation, though he finally drags in a portion of it half surreptitiously on page 70, under the title of "a sum necessary to secure the best administration." Of course, under this classification the landlord and rent disappear completely—the latter, wherever mentioned, being identified with interest on capital; Mr. Atkinson attempts to ignore them both. He mentions land (p. 25) as an instrument useless and valueless in itself, and says that the annual product is made by the coöperation of labor and capital alone—a statement which is inconsistent with both previous and following statements. This is a very easy but a very unsatisfactory method of disposing of such a much-discussed class as landlords. Mr. Atkinson finds it impossible to conduct the discussion on such a basis, for when he attempts (appendix, p. 99) to refute a very common industrial sophism, he is compelled to assume the existence of the very class—landlords—and the very thing—rent—as something distinct from interest on capital, which up to that time he so persistently overlooks.

The second error appears most glaringly in his discussion of his fundamental formula, $x - d = e \div f = i$. Here x=total annual product subject to consumption and distribution, d = profits, e = wage-fund, f = number of laborers, and i = average rate of wages. Our author proceeds to say that if x increases more rapidly than d, then e must correspondingly increase, and consequently i will increase more rapidly than d—Q. E. D.! This ignores entirely the variable nature of f, which may increase so rapidly as to make i continually less; and Mr. Atkinson, feeling undoubtedly that if he would make his point good he must demolish Malthus, designates his theory as "an abhorrent and atheistic dogma" (p. 16).

In spite of these defects, the essay is a very interesting and suggestive one. The proof that a high rate of wages does not necessarily signify high cost of production and a low rate, low cost, is very complete, and much more satisfactory than usual from the distinction strongly and rightly insisted upon by Mr. Atkinson between *rate of wages* and *sum of wages* in the manufacture of a given product—the latter being a determining element in costs of production. The appendices contain much valuable matter, which, however, rather tells against than in favor of Mr. Atkinson's general position.

The essay on the "Railway, the Farmer, and the Public" shows in a most striking manner the great service done to our national economy by the railways, and presents by the graphic method the great reduction in costs of transportation which has been brought about by the consolidation of the chief lines of railway. According to Mr. Atkinson's showing, we have reason to congratulate ourselves on almost every feature of our present railway system. Every good thing which Government interference might have brought has been attained, without any of the evils which would surely have followed had Government attempted to regulate railway traffic.

A Popular Manual of English Literature. By Maude Gillette Phillips. 2 vols. Harper & Bros. 1885.

THIS manual, the preface tells us, is an attempt to combine three books in one—a school handbook, a guide to the general reader, and a book of reference. Unfortunately such a combination is impracticable. A school manual of literature should aim to give the student, in a clear, concise, and continuous form, that essential information which he ought to retain in his memory as a guide in his after reading, such as the characteristics of the chief periods and the influences operative in them, with a brief account of the chief writers and their best works, and what seems to be the final verdict of sound criticism upon them. So far as possible, nothing should be admitted that is not essential and canonical. A guide for the general reader is not a book to be studied and digested, but to be consulted as

occasion arises. Here we may be given freer glances into the various matters of interest connected with, or illustrated by, any part of literature. An account of the crusades may come in apropos of Tasso, or of mediæval philosophy and cosmology apropos of Dante. The reader of either of those poets may turn to his guide for illustration and directions for further study; and, conversely, the student of history or philosophy may here be directed to exemplifications in literature. Conflicting views should be given, that the student may balance judgments and see his subject from several sides. A book of reference, again, should contain the greatest possible number of facts, indications, allusions—references, in short—given with the utmost brevity, and so arranged, systematized, and indexed that they can be found easily and quickly. It is evident that to make a book which shall be brief and yet copious, concise, and discursive, authentic in judgment while embodying widely-varying opinions, is an impossible task.

But, for all this, we do not mean to imply that the book is a bad one because the plan is a mistake. On the contrary, there is much that is excellent in it, and in many ways it deserves a place in libraries, if not in classes. One special merit is the clear recognition of the fact that the profitable study of the literature of a country must comprise some study of alien literatures. The author justly says: "Any study of the early nineteenth-century English literature which ignores Goethe and the philosophical movement in Germany, is shallow and superficial; so would be the study of the eighteenth-century writers without considering the position of France as literary dictator, or of the Elizabethan literature without considering the supremacy of Italian influence." Familiar as this view is—embodying, indeed, the precept and practice of contemporary criticism—it is much to have it laid down as a principle for the construction of a school manual; and the way in which it is carried out constitutes perhaps the most valuable feature of the book.

We are sorry not to be able to speak so favorably of the collections of critical remarks. Never would the sieve, which a famous critical body adopted as its emblem, have done better service. Many of these criticisms are worthless, and fully half are unimportant or superfluous. What use is it, when treating of a poem, to tell us that A thought it great, B carried it in his pocket, and C could repeat pages by heart? We are thankful for, and delight in, the subtle insight of De Quincey, or the warm and tender sympathy of Lowell; but who wants a citation from Southey to the effect that he "fell to the 'Faerie Queene' with relish"; or from George III., that he thought "great part of Shakespeare sad stuff"?

The compiler seems not quite at home in the earlier periods of our literature; and we have marked a number of errors which, no doubt, riper consideration would correct. For instance, speaking of 'Piers the Plowman,' she says, "the rude followers of Wat Tyler read it eagerly, and its Protestant principles exerted almost as great an influence as the preaching of Wyclif." The first statement is improbable conjecture: we have no idea what Wat Tyler's followers read, or if they read anything at all; we have no knowledge what influence the poem exerted in the fourteenth century; and to speak of its Protestant principles is absurd. So when she says that Wyclif's translation of the Bible was "the first ever effected by one person," and that it "provided the English with a literature of the highest style," one can hardly tell which of the two statements is the more surprising.

We part from the book in the hope that it may reach a second edition, as its many merits deserve; and that such edition may have the benefit of careful revision and a liberal use of the pruning-knife. Among minor matters we suggest closer proof-reading, and a better arrangement of the useful and handy tables of authors and other persons of note. An arrangement that places Suckling before Peele, Surrey before Caxton, and sandwiches Lydgate between More and Tyndale, certainly tends to breed confusion.

Elements of Analytic Geometry. By Simon Newcomb, Professor of Mathematics, U. S. Navy. Henry Holt & Co. 1884. 12mo, pp. vii, 356.

In the first chapter of his 'Géométrie Analytique,' Auguste Comte says of that science that it constitutes "the most decisive and consequently the most difficult phase" of mathematical education, and hence concludes that "no other part of mathematical instruction so much deserves the rational solicitude of professors and the active attention of pupils." Professor Newcomb seems to be of the same opinion, and he has accordingly placed in the first chapter of his treatise a series of exercises designed to test the preparation of the student. In the note accompanying them he says: "If he [the student] can perform all the exercises with ease, he is probably well prepared to go on; if he performs them only with difficulty, he may need much assistance in understanding the subject." These exercises are in no respect more difficult than they ought to be for the purpose in view; nevertheless it is quite probable that the average college student, on first attempting them, will be inclined to think that, in the further prosecution of the study, "he may need much assistance." We may, however, remark for his encouragement, that the faithful performance of these exercises, whether "with ease" or "with difficulty," will go a long way in supplying those deficiencies of which he may become conscious.

Professor Newcomb says in his preface that he believes "it better that a student should learn a little thoroughly and understandingly than that he should go over many subjects without mastering them." He seems to have kept this principle constantly in view, and has therefore treated some subjects with great fulness and detail, while others, which usually appear in text-books, are entirely omitted. The straight line, the circle, and the three conic sections, parabola, ellipse, and hyperbola, are treated in a manner wholly in accordance with the spirit of modern geometry. After these follows a most excellent chapter devoted to the discussion of the general equation of the second degree. With this our author leaves the subject of analytic plane-geometry. Most text-books proceed to treat, generally in a very brief manner, some of the higher plane curves, such as the cissoid, conchoid, cycloid, etc. With the exception of a few exercises in chap. ii, in which the student is required to construct the *loci* of some equations in which the ordinate is equal to a trigonometrical function of the abscissa, Professor Newcomb ignores the whole subject. In justification of this omission he might and probably would urge, that the limits of a text-book make necessary a very imperfect and perfunctory treatment of the subject, and that by devoting the space to the more full and complete treatment of the conic sections, which this omission enables him to give, the student will become so imbued with the spirit and methods of analytic geometry that, if he desires, he may proceed, fully equipped, to the study of larger works in which the subject is satisfactorily treated.

Part 2 of the book treats of geometry of three dimensions, a subject which in many of our college text-books of analytic geometry is wholly omitted. It is constructed upon the same general plan as Part 1, and with an apparent desire to render the transition from plane to solid quantity as easy as possible, and to enable the student to avail himself to the fullest extent of the knowledge which he may be supposed to have already acquired. The work concludes with Part 3, which is a brief introduction to some of the methods of modern geometry, or, as it perhaps might be more properly called, the geometry of the nineteenth century.

One does not look in a college text-book for any important additions to the sum of human knowledge. Its object is to present knowledge already contained in many books in such a manner that it may be most speedily and completely acquired by those who desire it. But a text-book that is a mere compilation is generally worthless. It should be the product of a single mind, working, it may be entirely, upon materials originally discovered by others, but which it has made completely its own, and imparting the results of its operations according to a clearly conceived and self-consistent plan. Such a work Professor Newcomb's seems to us to be. One or two matters of detail are all that our space will permit us to notice. On page 5 of his treatise he introduces with the necessary explanations a new symbol, consisting of three horizontal parallel lines (≡), which he uses in two classes of equations instead of the ordinary sign of equality. For reasons which we have no room to explain, we do not regard this as necessary, and we do regard the introduction into mathematics or any other science of a new symbol or term for which very strong reasons cannot be given, as a small misfortune. But we have another objection. If our memory is not at fault, this symbol was invented by Gauss in the early part of the present century, and introduced by him to denote the notion of *congruence*, which it is not necessary to explain further than to state that it is quite different from the meaning attached to the symbol by Professor Newcomb. It was afterward used by Möbius, in his 'Barycentrischer Kalkül,' in accordance with the usage of Gauss. In the second edition of his 'Ausdehnungslehre' (1862), Grassmann introduced the symbol with due acknowledgments to Gauss and Möbius, and a few years later it was employed by Montferrier in his 'Encyclopédie Mathématique' in the same manner as by Gauss. In view of this long usage it would seem advisable not to give a different meaning to the symbol, but to invent a new one if any be necessary. To students who use Professor Newcomb's work as a text-book it will, of course, make no difference.

In treating geometry of three dimensions, Professor Newcomb uses the symbols X, Y, Z as applied to coördinates in space, in the same manner in which they are used in physics and astronomy, though this differs somewhat from the manner in which they are generally used in treatises on analytic geometry. On the whole, we think it a desirable innovation. It is certainly very absurd in a matter which, abstractly, is entirely arbitrary, to learn to use them in one way in pure mathematics, and then be obliged to use them in another in all practical applications.

A misprint of some importance occurs on p. 15, lines 23 and 24. The signs of the coördinates of points in the fourth quarter of space are there assigned to those in the third, and vice versa.

The next and concluding volume of Professor Newcomb's course, treating of the Calculus, will be looked for with perhaps more interest than any preceding one.

Studies in Animal Painting. With 18 Colored Plates from Water-color Drawings. By Frederick Tayler, late President of the Royal Society of Painters in Water Colors. Cassell & Co.

If there be no royal road to Art, there is, at least, a cheap one to drawing, though it may be doubted

if the teaching of either by chromo-lithography has done any good on the whole. What it may be supposed to have done in making good pictures superficially familiar to the masses, has been quite counteracted by its having facilitated the spread of bad methods of execution, and the unintelligent following of good methods which makes them bad in their influence. The only efficient and wise training in drawing is to teach the pupils to see clearly and draw distinctly and accurately, in the largest manner, what is set before them to draw. Nothing can be more destructive to all sense of fidelity to form or color than to be taught to draw certain things in certain conventional ways, as the old drawing-masters used to prescribe foliage and rock form, and as, since chromos came in, the modern ones compound tints for certain objects and effects. If the pupil has any genuine perception of color, this process will blunt it, and if he has none he will do nothing good in color. As to Art, there is so little notion of teaching it nowadays, except in what is done in some of the more important schools, that no mention need be made of it. What we most want in Art is individuality, and this is absolutely stifled by any such system as is taught in the drawing-books of which the one before us is an example, while for coloring (tinting, perhaps, would be a better term) in realistic drawing from nature the prescribing of tints by rule and measure is the least apt means to make the pupil see what the color of nature is.

For amateurs who have no higher object than amusement, these books furnish a cheap source of satisfaction, and when they know that a donkey is to be painted mainly in "raw umber with a mixture of light red and cobalt for the gray," "with some touches of Vandyke brown and burnt sienna about the nose-band, mane, and tail," and "in the foreground raw and burnt sienna," it makes art seem cheap and easy in their eyes—which is all that they want. This method of education is the *reductio ad absurdum* of that by which noted drawing-masters make comfortable incomes by teaching art at a guinea a lesson, and graduate their pupils in a dozen lessons, and which has had no insignificant part in the modern degradation of Art, and destruction of what influence it might have had if kept more sincere and individual, and less closely counterfeited.

Émile; or, Concerning Education. Extracts, containing the principal elements of pedagogy found in the first three books. By Jules Steeg. Translated by Eleanor Worthington. Boston: Ginn, Heath & Co. 1885.

M. STEEG's introduction and notes show him to be well aware that 'Émile' has little place in the pedagogy of our day except as a stimulus. At every turn one must doubt it, differ from it, read between the lines, as he says. Those will perhaps derive most profit from it who come to it from the most opposite reading possible—say, from a course in Darwin. The intellectual pleasure of contrasting or even of reconciling two such geniuses as Rousseau and the author of the 'Origin of Species,' is not inconsiderable, and there is much food for reflection in the conditions which made both the Frenchman and the Englishman revolutionaries in the thought of their time.

The translation of such a master of style as Rousseau must forever present great difficulties, and these are increased by the frequent subtlety and obscurity of his thought. For this reason, doubtless, English versions of the 'Émile' are neither numerous nor of recent date. A few test passages of the one before us will serve as illustrations. We read on page 13:

"Now, of these three different educations, that of nature does not depend upon us; that of circumstances depends upon us only in certain respects; that of men is the only one of which we are really masters, and that solely *because we think we are.* For who can hope to direct entirely the speech and conduct of all who surround a child?"

The phrase we have underlined has in this place no logical force or meaning. It stands for the French "par supposition," for which some such rendering as "theoretically" must be adopted. "Even of this we are masters only in imagination," runs the Edinburgh translation of 1773. Moreover, we see no good reason for departing from the punctuation of the original, which puts a period after "respects." The next sentence would then read: "That of men is the only one of which we are really masters, and that only theoretically—for who can hope, etc."

Miss Worthington's version proceeds, without a break:

"*As soon, therefore, as education becomes an art,* its success is almost impossible, since the agreement of circumstances necessary to this success is independent of personal effort. All that the utmost care can do is to approach more or less nearly our object."

Here, again, the connection is obscured. "Sitôt donc que l'éducation est un art," runs the original, and this requires to be interpreted, "To the extent, therefore, that education is artificial," or, more freely, "Our systematic education, therefore."

To go back a little, in the same chain of argument, we read: "What we learn by our own experience about things that *interest* us, is the education of circumstances." Here we have a very ill-chosen equivalent for "*affectent,*" which signifies environment and contact, quite in the neutral sense of our "affect." "The *things* that interest us" is also to be criticised as implying "*choses*" and not "*objets*" in the original, whereas the distinction between these two terms is at least as great as in English. In the next sentence but one, concerning the different lessons of the three sorts of education, the desideratum is that "they all *touch upon the same points* and tend towards the same object"—in the French, "tombent toutes sur les mêmes points." Here the sense would be more exactly expressed by "be applied to the same points." Niceties like these are not unworthy of the work itself or of the end the compiler and translator had in view; and we shall not, we trust, be thought captious in insisting upon them.

BOOKS OF THE WEEK.

Drake, C. D. A Treatise on the Law of Suits by Attachment in the United States. Sixth edition, revised. Boston: Little, Brown & Co.
Emerson, G. B., and Flint, C. L. Manual of Agriculture. Revised by Dr. Chas. A. Goessmann. Orange Judd Co. $1.50.
Encyclopædia Britannica. Vol. XVIII. Orn-Pht. Chas. Scribner's Sons.
Evans, W. F. The Primitive Mind-Cure. Boston: H. H. Carter & Co.
Evans, W. F. Mental Medicine: a Theoretical and Practical Treatise on Medical Psychology. Boston: H. H. Carter & Co.
Fiske, John. American Political Ideas, Viewed from the Standpoint of Universal History. Harper & Bros, $1.
Flemming, H. A Carpet Knight: a Novel. Boston: Houghton, Mifflin & Co. $1.25.
Fenton, F. St. Paul's Epistles in Modern English. De Witt C. Lent. $1.
Furlong, A. Echoes of Memory. Illustrated. Scribner & Welford.
Gildersleeve, B. L. Pindar: the Olympian and Pythian Odes, with an introductory essay, notes, and indexes. Harper & Brothers. $1.50.
Gray, M. A Treatise on Communication by Telegraph. Boston: Little, Brown & Co.
Griswold, W. M. An Index to the Leading British Reviews and Magazines for 1882, 1883, and 1884. Bangor, Me.: Q. P. Index.
Hare, A. J. C. Sketches in Holland and Scandinavia. George Routledge & Sons. $1.
Hearn, L. "Gombo Zhèbes." Little Dictionary of Creole Proverbs. Selected from Six Creole Dialects. Will H. Coleman.
Hovey, W. A. Mind-Reading and Beyond. Boston: Lee & Shepard.
Inspiration. A Clerical Symposium. Thomas Whittaker $1.50.
Jones, Sarah J. Words and Ways; or, What They Said, and What Come of It. Phillips & Hunt. $1.
Keese, W. L. William E. Burton: Actor, Author, and Manager. G. P. Putnam's Sons. $2.50.
Lawrence, W. Decisions of the First Comptroller of the United States Treasury Department. Vol. IV. 1883. Washington.
Lang, A. Rhymes à la Mode. Scribner & Welford.
Leslie, Emma. Dearer than Life: A Tale of the Times of Wiclif. Phillips & Stowe. $1.
Lodge, H. C. The Works of Alexander Hamilton. (Limited Edition.) Vol. I. $5. G. P. Putnam's Sons.
Ludlow, James M. Concentric Chart of History. Funk & Wagnalls. $2.
Mercer, A. G. Bible Characters. Selections from Sermons. 1817-1882. Memoir by Manton Marble. G. P. Putnam's Sons. $2.
Meyer, F. H. Havana Cigars. How they are Made and Sold. Philadelphia: F. D. Canfield & Co.
McCosh, Rev. J. The New Departure in College Education. In Reply to President Eliot. G. P. Putnam's Sons. 15 cents.
McTyeire, Bishop H. N. A History of Methodism. Nashville: Southern Methodist Publishing House.
Neill, E. D. Virginia Vetusta, during the Reign of James I. Albany: Joel Munsell's Sons.

Henry Holt & Co.

HAVE JUST READY:

AUSTIN DOBSON'S

At the Sign of the Lyre.
Square 12mo (uniform with 'Vignettes in Rhyme), $2.

Les Chansons De Roland.
Translated by Léonce Rabillon, of Johns Hopkins University. 16mo. (Library of Foreign Poetry.) $1.25.

Representative German Poems, LYRIC AND BALLAD. The original texts, with close English versions by various translators. Edited by Karl Knortz. 8vo, $3.50.

The Rise of Intellectual Liberty. From Thales to Copernicus. By Frederic May Holland. Large 12mo, $3.50.

JUST PUBLISHED.

Selected Poems from Michelangelo Buonarroti.
With Translations from various sources. Edited by Ednah D. Cheney, author of 'Gleanings in the Fields of Art.' Price, $1.25.

***This edition of the poems of the great Tuscan sculptor will be appreciated by all who have even a slight knowledge of Italian. The original text is accompanied by metrical versions, and is still further elucidated by annotations of valuable character. An appendix furnishes some biographical data relative to the celebrities referred to in the poems.

The book is sold by all booksellers, or will be sent, post-paid, by the publishers on receipt of price.

LEE & SHEPARD,
BOSTON.

WAR IN THE SUDAN.

I. Large Scale Map from Korti to Khartum, Berber and Suakin. $1.

II. Popular Map of the Seat of Military operations in the Sûdan, including Korti, Khartum, Berber, and Suakin. 40 cents.

G. P. PUTNAM'S SONS,
27 and 29 West 23d Street, New York.

A. E. BENJAMIN,

744 Broadway, New York,

Has lately issued a 54-page catalogue of Rare, Choice, Standard and Curious Books, and intends to issue shortly a catalogue of Prints and Autograph Letters.

Send address and 4 cents in stamps and both will be mailed to you.

*WRITE FOR REPORT OF EXECU*tive Committee with full information regarding the movement and form of petition to Legislature for preservation of scenery of Niagara, to J. B. HARRISON Cor. Sec. Niagara Falls Association, P. O. Box 105, New York City.

The Nation.

NEW YORK, THURSDAY, MARCH 26, 1885.

The Week.

ONE of the first arguments that must be met by an executive, State or national, who refuses to let the demands of the place-hunters of his own party control his appointments is, that such a course will "ruin the party" at the next election. A good deal of this talk has been heard in Washington since President Cleveland's election, and a good deal more of it, and in louder tones, is likely to be heard before the summer is over. To listen to such men, one must suppose that the principles of a party, which are so thoroughly discussed while a campaign is pending, and on which, at that time, so much dependence seems to be placed to influence voters, amount really to nothing; and that securing a majority at the polls is a matter entirely in the control of those comparatively few citizens who either have public offices or want them. The fallacy of such a statement becomes evident to any one who will stop to ask himself if he ever heard it advanced on the stump as a means of changing votes. Did any Republican orator last fall attempt to win Democratic votes away from Mr. Cleveland by showing that he had filled the State offices at his command with a view to the performance of the duties attached to them, rather than with a regard to the wishes of Democratic "leaders" and ward bosses? On the contrary, did not every Blaine supporter seek to find for the Governor's selections some less meritorious reason than personal fitness? The cry of the place-hunters at this juncture comes too late, and in their heart they know it. The secret about serving a party best by serving a country best has been found out. Some recent letters published in the *Evening Post* from North Carolina and Indiana furnish evidence of the fact that in both of those States, where no expression of any Democratic devotion to civil-service reform has ever been allowed, a large part of the Democratic voters will rejoice in any victory that the President may win over the selfish office-seekers who demand places on the strength of party "claims"; and that, instead of weakening his party by the course he has laid out, he will give it a strength which it has lacked ever since the war until the present time, and which, but for the timely presence of a leader with his record, it would be lacking still.

There is a striking parallel between the situation at Washington now and that at Albany when Mr. Cleveland became Governor. All the "workers" of the State Democratic party descended upon him in a body then, and kindly picked out for him the men whom he ought to appoint for various offices. He listened to them patiently, and they went about saying that it was "all right," they "had fixed it with the Governor." Shortly afterward the Governor sent in his appointments, and when the workers saw the names, they exclaimed: "Why, who are these men? These are not the men we recommended!" Not a man of them had ever heard the names mentioned, yet every appointment was a most admirable one. The President is going ahead in the same way now, and nobody is surprised at it except the spoils-hunters, and the partisans who repeated their own misrepresentations of Mr. Cleveland's acts and character so often that they came to believe them. Anything more amusing than the following exclamation from Mr. Murat Halstead's paper, we have not seen in a long time: "The President may be aiming at a national rather than a party reputation. We hope so." Not only the President, but his Mugwump supporters, were "aiming" in that direction all through his term as Governor, and they are merely going ahead on the same line now.

All the foreign appointments made on Monday are based on fitness alone, and are completely separated from purely partisan considerations. The more closely they are examined, the more clearly does their merit appear. In selecting Mr. Phelps for the English mission, Secretary Bayard has acted on the belief that, in view of the constantly increasing importance of the Irish question, and the impending fishery discussion, the English mission needs first of all the services of an able lawyer. That such a man has been found in Mr. Phelps everybody admits. Senator Edmunds, who knows him well, is reported to have said that he regards him as "the foremost lawyer at the North." Secretary Bayard holds a similar view, and is so deeply impressed with his abilities that he has repeatedly said that he considered Mr. Phelps a fitter head for the State Department than he is himself. The testimony to his personal character and general accomplishments is equally emphatic. No word of disapproval comes from any quarter. And yet, when his name was announced on Monday, the almost universal question was: "Who is he?" Not a politician had asked for his appointment, and few of them knew that such a man existed. Secretary Bayard has chosen, perhaps, the one man in the whole country who can most worthily step into Mr. Lowell's shoes, and until he named him nobody had heard him mentioned for the place. The civil-service reformers knew him because he has long been one of their most earnest disciples, and his appointment is in every way a recognition of their principles.

Equally striking in its fitness and significance is the selection of Mr. Pendleton for the Berlin mission. He is the one man in the Democratic party who stands as the personification of civil-service reform. Because of his devotion to it, the Democrats of Ohio deprived him of his seat in the Senate, and their leading newspapers have for years heaped contempt and obloquy upon him. He cannot be said to have any Democratic support in his own State, and he has very little anywhere else. Probably not a single request for his appointment has been made by Democrats, while there is no doubt that strong protests have been made by thousands of them against giving him "recognition" in any form. An effort is even made now to show that he has been slighted by being sent to Berlin rather than to London or Paris, but that will scarcely succeed. Berlin is by far the most important diplomatic post to-day. All the threads of European diplomacy now centre in Bismarck, as they once did in Napoleon at Paris. In addition to this fact, the closeness of our own relations to Germany, through the large German element of our population, makes the position one of the first importance. Mr. Pendleton is probably better fitted to represent this element at Berlin than almost any other man who could be named. His appointment is a rebuke to the spoilsmen of his own party, but it is a recognition of the independence of thousands of German voters in all parts of the country, who voted for President Cleveland because of his civil-service reform principles. Of Governor McLane an eminent American diplomatist has said, that "he is the most thoroughly equipped diplomatist in the United States, in the European sense of the term." He speaks French as fluently as his own tongue, and will be able to get at once into the inside of things in Paris. His selection, like the others, was a surprise to the politicians, but, like the others, it receives nothing but praise. To appreciate fully the merits of such a selection it is only necessary to compare his qualifications with those of some of the men who have been sent to Paris within recent years.

Secretary Manning's commission for putting the service of the Treasury Department upon a thorough business basis is the best which could be named, and we have no doubt that some very valuable results will come from its labors. It is a curious and edifying spectacle to see a Democratic Secretary of the Treasury appointing two Republicans and one Democrat as a commission to reform a service which has been under Republican control for a quarter of a century. More than this, the two Republicans are men of long and faithful service, who, better than any other two men in the Government employ, know just where the abuses are, and can suggest the most simple and direct remedies. A better associate for them than Mr. Fairchild could not be found. There is probably no branch of the Government which stands more in need of pruning than the Treasury Department. Before the inquiry has begun, there is a pretty general agreement that it will result in reducing the force of clerks at least one-third, or from 2,300 to 1,500. This is real civil-service reform, and the manner in which it is to be conducted makes criticism of its genuineness impossible. Nothing shows this more clearly than the amusing effort of the chief Blaine organ to discount its work by shouting, "Higgins!"

A Committee of the Civil-Service Reform Association of Maryland has prepared a statement in detail of the reasons why Higgins ought not to have been appointed, in the shape of proofs of his corrupt electioneering practices in Baltimore, as well as of the general unsavoriness of his private life. In this work, we believe, the Committee has had the coöperation and sympathy of all the best Democrats in Maryland. The

statement is intended for Secretary Manning, and we have little doubt that he will find it sufficient and act on it, for he is not really committed to Higgins in any way, having known nothing of him until Senator Gorman introduced him. There is every day much consolation, if not complete compensation, for the Higgins affair to be found in all the other acts of the Administration. The very slowness and deliberation with which it is acting in the matter of appointments and dismissals is something new in American politics, and is full of hope for the future. No other Administration since the war has passed the month of March after coming into power in the same way. These early weeks used to be given to dividing spoils and satisfying "claims," in the midst of a tremendous tumult and uproar, recalling vividly John Quincy Adams's illustration of the struggles of too many pigs to get their snouts into the same trough, every day bringing news of some fresh unworthy concession of the President to "pressure." There were intrigues and counter intrigues, and hurryings to and fro of "practical men," with solemn warnings of the ruin which would follow if Smith got the post-office, or did not get it, and mysterious letters, to be produced if necessary, and tapping of telegraph wires by counter plotters, and the most furious excitement among all the rascals and ne'er-do-weels in the country—both those who had money enough to go to Washington, and those whom necessity kept at home; the unfortunate people of the United States meanwhile looking on helplessly while their public offices were sacked by bands of "workers." We are this year spared this disgraceful and humiliating spectacle. The pigs, to be sure, are in Washington as usual, and squealing and jostling each other in their efforts to get to the trough; but they find it empty.

The Buffalo *Courier* fancies that it finds an objection to the reappointment of Postmaster Pearson in the cases of Postmaster-General Key, a Democrat, appointed by President Hayes, and of Insurance Superintendent Smyth, a Republican, appointed by Governor Robinson. Under the former case, says the *Courier*, gross frauds were perpetrated upon the Government, but the Republicans denied their responsibility, because the head of the Department was a Democrat. Under the latter, outrageous scandals were brought to light, but the Democrats denied their responsibility because Smyth was a Republican. There is really no similarity between either of these cases and that of the Postmaster of New York. The responsibility of the Republican party for the Star-route frauds was not a whit lessened by the fact that Mr. Key, the Postmaster-General, was a Democrat, nor was that plea ever set up by any respectable person or newspaper. The Democratic party was not held responsible for Mr. Smyth, because his nomination was forced upon Governor Robinson by a corrupt combination of Tammany and Republican Senators who refused to confirm any one else. The scandals of Smyth's office were, therefore, visited justly and in full measure upon the Republican party. Responsibility for Postmaster Pearson is something which the Democratic party ought to be solicitous to acquire, not anxious to avoid. The more they get of that kind the better it will be for them.

Under the appropriate caption, "To the Victors belong the Spoils," the *Tribune* publishes the following item:

"Postmaster-General Vilas is reported as having told Mayor Grace in Washington recently, that if no Democrat could be found in New York who was just as capable to be Postmaster of New York as Mr. Pearson, he would send one down from Wisconsin."

It is not probable that Postmaster-General Vilas ever said anything so foolish as this in all his life. But we recall a saying, well authenticated, of a late Postmaster-General, which might justify Mr. Vilas if he desired to copy the methods of his predecessor. A small post-office in Western New York became vacant by the removal of the Postmaster to another State. A petition was prepared and signed by three-fourths of the Republican voters of the town asking for the appointment of a certain person to the vacant place. This person happened to be a Democrat, and the Congressman of the district happened also to be a Democrat. The latter presented the petition to the Postmaster-General, remarking that the signers were mainly Republicans, and that they were a large majority of all the persons served by the post-office in question. "But is not the candidate a Democrat?" asked the Postmaster-General. "Yes," replied the Congressman, "but the Republicans of the town want him for Postmaster." "Can't help that," was the response; "no Democrat shall be appointed during my term of office if a Republican can be found to take the place." The Congressman was painfully impressed by the swinish instinct which refused on principle to allow the mails to be handled under any circumstances by a Democrat, even at the desire of his Republican neighbors. If the election of Cleveland has not reformed this practice, it has accomplished less than we had hoped.

An interesting case of "politics" in education has just occurred in Wisconsin. It will be remembered that the Science Hall of the State University of Wisconsin was destroyed by fire early in the winter, entailing a loss of about $200,000. The Regents immediately made a careful estimate of the appropriation that would be necessary to place the scientific department in good working order, with well-constructed and well-equipped buildings, and presented it to the Legislature. The bill passed easily through the Assembly, largely through the skill and ability of Mr. Vilas (now Postmaster-General), a graduate and Regent of the University, and, as it happened, a member of the Senate. All the Democrats were led by his personal influence to support the appropriation. At this unanimity of the wicked party the party of moral ideas at once took alarm. There must be a cat under the meal! What Democrats support, Republicans must oppose. So a caucus of the Republicans of the Senate has been held, and it has been decided that the bill shall be cut down from $279,000 to $150,000; and individual members of the party are mean-spirited enough to confess that they are in favor of the bill, but must vote with their party. Some of the Republican politicians say frankly that the object is to punish President Bascom for voting for St. John, and likewise the numerous Mugwumps of the Faculty.

A very amusing correspondence between Mr. Quincy, the Secretary of the Tariff Reform League, and Mr. Hayes, the Secretary of the National Association of Wool Manufacturers, has been published in the Boston papers. Mr. Quincy wanted Mr. Hayes to discuss the tariff question in joint debate with Professor Sumner, of Yale College. Mr. Hayes declined, on the ground that "the tariff was only incidentally within the province" of the wool manufacturers; that a defence in a debate of this kind was always weak, and that no industrial organization could afford to admit that the question of the value of the protective system can be "seriously entertained by practical men." The sum and substance, and let us add, the joke, of this is, that when once you get a high tariff enacted in a free country, its maintenance is no longer a proper subject of discussion—first, because its defenders would be at a disadvantage, and secondly, because anybody who attacks it is visionary. If this be true, however, the tariff is something which ought not to exist under a Republican Government. There are all the objections to it which can be offered to the holding of office by divine right or to an established church.

The extracts from the Congo correspondence published in the *Sun* of Monday are of great importance. They seem to show conclusively that while one object of the whole busines was to get the United States committed to the appropriation of an immense African territory by the European Powers, Messrs. Frelinghuysen, Kasson, and Sanford played into the hands of the European representatives by a piece of very questionable "diplomacy." Mr. Frelinghuysen, in his answer to the House resolution of January 5, is quoted as saying that the Conference was "not to have plenipotentiary functions"; yet the preamble to the document which Mr. Kasson signed explicitly describes the members of the Conference as "plenipotentiaries." Again, Mr. Frelinghuysen declared that the position of the United States had been limited to one of "commercial interest, dissociated from questions of territorial control," and that Mr. Kasson had been "attentive that no act on our part shall deviate from the consistent national policy." "Commercial interest" is a very wide term. It seems that our representatives had actually made a proposition (known as the "American proposition"), which pledged the United States not merely to the neutralization of the Congo country in case of a war between the European signatories, but to a provision that "no article contraband of war shall be supplied therein to either belligerent," and that "each of the signatory Powers reserves the right to cause this stipulation to be respected." That is to say, the United States, a neutral, reserves the right to forcibly prevent its own merchants from trading in contraband with either belligerent—*i. e.*, to assume a duty which the law of nations imposes on the belligerent, that of seizing and

confiscating the contraband cargo. Imagine England or the United States reserving the right to police its own trade with China, because France was at war with that country!

But this is not all. What the European representatives wanted was a regular treaty. Messrs. Kasson and Sanford, however, did not like the idea of a treaty, for the very excellent reason that, knowing what the effect in this country would be, they were afraid to sign one. Accordingly, in his despatch of February 3, of this year, Mr. Kasson describes the ingenious way in which he got out of the difficulty: "For myself, *keenly appreciating the American sensibility to even the form of joint engagements with several European Powers*, I advised the Conference of my preference for a separate act, by which my Government, in accepting the results of our deliberations, should adopt for itself the declarations which the treaty embodies, and engage itself to observe the stipulations agreed upon." Fortunately we have little doubt that Mr. Bayard's views of the beauties of a "separate act" will differ from Mr. Kasson's.

There is pending in the Senate a treaty with Mexico supplementary to a former treaty, which provided for the settlement of certain claims for losses incurred by American citizens in that country during the war with France, and the Maximilian usurpation. These claims were submitted to a commission of which Sir Edward Thornton, the English Minister, was chosen umpire. Among them were two known as the Weil and La Abra claims. One was for cotton said to have been seized by the Mexican authorities, and the other for losses incurred in the operation of a silver mine. Both were confirmed by the umpire, and one or two instalments were paid. Subsequently evidence was offered by the Mexican Government, showing that both claims were fraudulent, being literally "made out of whole cloth"; that none of the alleged cotton was ever seized or ever existed, and that no injury or interruption was ever caused to the silver mine. The State Department was asked to withhold further payments, but Mr. Evarts declined to do so, on the ground that the decision of the umpire was final under the terms of the convention. The payments continued to be made according to the terms of the treaty until Mr. Arthur became President. Then Mr. Frelinghuysen took the unassailable stand that fraud vitiates everything, reversed the policy of his predecessor, ordered the stoppage of payments to the Weil and La Abra claimants, and entered into a new convention with Mexico providing for a rehearing of the cases. It is this treaty which the Senate has now taken up. Considering the infamous character of these frauds (if the contention of the Mexican Government is true), and the disgraceful part we have taken (no doubt unwittingly) in forcing them upon a sister republic, it is to be hoped that the Senate will reopen them and let in all the light possible. Somebody must have committed awful perjury on one side or the other.

The approaching election in Rhode Island has not attracted much attention outside the State, but the vote cast will not fail of its significance as the earliest indication of the impression which the new national Administration has produced on the public mind. The candidates for Governor are George Peabody Wetmore, Republican, and Ziba O. Slocum, Democrat. The Prohibitionists have a separate ticket which may cut some figure in the campaign, this being the "off year." The Independent vote will be cast for Mr. Slocum, both as evidence of their satisfaction with the Cleveland Administration, and as a testimonial of their regard for Mr. Slocum's character and abilities. Mr. Wetmore, they believe, has been nominated because he is a rich man, his qualifications for the office being precisely those of the plutocracy which has so long governed Rhode Island with the dull mediocrity of riches. No State in the Union, not even Nevada, has been more subservient to the behests of wealth in its political action than Rhode Island. It is scarcely possible that the spell will be broken now, the State being overwhelmingly Republican.

There is nothing surprising in the news which comes from Virginia, that Mahone's power is hopelessly broken. From first to last it rested upon patronage. So long as the national Administration put all the offices for the State at Mahone's disposal, he was able to keep his party together and be a formidable boss; but, like all other boss-ships ever set up, his crumbles the moment the patronage is removed. Nothing but the "cohesive power of public plunder" brought the Mahone régime into existence, and nothing but a continual supply of plunder could keep it alive. It will be a lasting disgrace to the Republican party that such a power was ever built up by such a man. If Mahone had not been sustained by the Republican Administration, it is not improbable that Virginia would have escaped the stain of repudiation which Mahone brought upon it. The Bourbon Democrats, with all their faults, stood unflinchingly by their State's honor, and they would have preserved it had not Mahone, by skilfully combining negro ignorance with white cupidity, built up a party which outnumbered theirs

The number of business failures for the first quarter of 1885 (partly estimated) is stated by *Bradstreet's* to be 3,849, against 3,320 for the corresponding period last year. The number is said to be "much larger than the total during a like portion of any preceding year since such statistics have been collected." The amount of the liabilities and assets is not yet known, but the number of heavy failures is comparatively small. The evidence which the weekly records have presented since the beginning of the year points to a rather larger proportion of petty failures than heretofore, from 85 to 90 per cent. of all being among traders whose capital is under $5,000, some of them being as low as $200. Still, the outlook is by no means reassuring. The Clearing-house exchanges again show an important decline in the aggregate of transactions, and the demand for money, which is the surest test of business prosperity, remains as sluggish as ever.

In the present depressed condition of business it is satisfactory to hear of a prospect of wealth coming into American hands from any quarter, and this lends interest to the report that Martin Lynch, of 226 North Sixth Street, Williamsburgh, Long Island, will sail for France in May to prosecute his claim to $4,000,000, belonging to the Dunlap estate. The facts in the case of this property are most interesting. Eight years ago Martin Lynch saw an advertisement calling for the heirs of James Dunlap, a wine merchant who had died intestate in France, leaving a fortune of $4,000,000. In general an heir to a fortune is apt to be a nephew, but in this case it happened that Martin Lynch was the uncle of the deceased, and he at once wrote to a magistrate in France asking for information. The magistrate, after allowing an interval of four years to elapse, answered that the authorities knew nothing of Dunlap. Subsequently, however, a French gentleman named Valette traced the family history, in the familiar European way, on tombstones, and ascertained that Dunlap had owned estates in Ireland, France, and Italy. Mr. Lynch, it is further said, some months ago got Congressman Campbell to write to the United States Consul-General at Turin for information, and the Consul-General wrote back that there was no record there of any estate belonging to Dunlap. This only shows, of course, that Turin was not the right place to make the search. The proper course for Mr. Lynch to pursue is evidently that on which he has decided, of personal investigation on the spot.

The love of titles in America and other republican countries is a subject which has interested Englishmen ever since 1776, but they always blunder about it, and the *Pall Mall Gazette* now makes a great mistake when it says that the titles we like most are the "titles of learning," such as Professor, Doctor, Bachelor of Arts, Laws, etc. We have, indeed, an enormous supply of these, and, as they are a native American product, we endeavor to foster their production by the endowment of institutions of learning in all directions for the purpose of conferring them. But when we go to war we are no less fond of military titles, and there was a time when militia titles were in great favor throughout the United States. Then, besides this, our women are fond of foreign titles—even titles, such as count and baron, which render the bearer an object of suspicion in his own country; but this is simply because women long for anything difficult of attainment, especially if it is surrounded by an atmosphere of romance, for very few American women can ever expect to marry or have their daughters marry a titled man. The political title of "Boss" is of purely American origin, and, as a modern titular growth, is of great interest to the students of society and institutions. The love of titles is an innate human appetite, and the effect of democracy, as De Tocqueville would probably have pointed out, had his attention been called to the subject, is only to enable a greater proportion of the population to gratify it than under an aristocracy. But this is not the case with "Boss," which represents the insidious growth of the "one-man power" in the midst of Republican institutions.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, March 18, to TUESDAY, March 24, 1885, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND on Wednesday made the following nominations: Milton J. Durham, of Kentucky, to be First Comptroller of the Treasury. He is sixty-one years of age, an ex-Congressman from Kentucky, and has a good record. At one time he was a circuit judge in Kentucky. Malcolm Hay, of Pennsylvania, to be First Assistant Postmaster-General. He is forty-three years of age, never held a public office, is a prominent citizen of Pittsburgh, Pa., and was a member of the Committee on Resolutions at the late Democratic National Convention. He was favored by Mr. Randall. Martin V. Montgomery, of Michigan, to be Commissioner of Patents. He is about forty years of age and is one of the best-known lawyers in central Michigan. David S. Baker, jr., to be United States Attorney for the district of Rhode Island. He is a lawyer of good repute in that State and one of the leaders of the Democratic party in its Legislature. Ben Hill, jr., son of the late Senator, to be United States Attorney for the Northern District of Georgia. This is a very popular nomination for the South. All the nominations were a surprise to the office-seekers, and meet with the approval of the general public.

On Friday the following nominations were made by the President: John D. C. Atkins, of Tennessee, to be Commissioner of Indian Affairs; James D. Porter, of Tennessee, to be Assistant Secretary of State. Mr. Atkins has been long and honorably known in public life. He is one of the ablest men the South has sent to Congress since the war. Under Speaker Randall, he was Chairman of the Appropriations Committee. He is acquainted with the needs of the Indian service, as for four years the details of the Indian Appropriation Bill passed under his observation, and he was a thorough student of all the great questions which came before the Appropriations Committee. General Porter was Governor of Tennessee from 1875 to 1879, having served two terms. He is probably sixty years of age, and a gentleman of the old Kentucky school. He has been a practising lawyer all his life, save when he was in the Confederate army. In his administration of the affairs of Tennessee he is said to have shown marked executive ability, and to have held an honored place in a list of rather notable Governors.

President Cleveland on Monday made the following important nominations: To be Envoys Extraordinary and Ministers Plenipotentiary of the United States: Edward J. Phelps, of Vermont, to Great Britain; Robert M. McLane, of Maryland, to France; George H. Pendleton, of Ohio, to Germany; Henry R. Jackson, of Georgia, to Mexico. Mr. Phelps is Kent Professor of Law at Yale College, and is about sixty years of age. His education was received at Middlebury College. President Fillmore appointed him Second Comptroller of the Treasury. For several years he practised law in this city, but in 1857 went to Burlington, Vt., and has since been a prominent member of the bar in that State. In 1881 he was elected professor in Yale College. For more than twenty-five years he has been a Democrat. He was a member of the last Vermont Constitutional Convention. His career at Yale College has been marked with great success. Mr. McLane is at present Governor of Maryland. He is a son of Louis McLane, who was Secretary of State under Jackson, and is seventy years of age. He was Minister to China and Mexico before the war. Mr. Pendleton is the well-known Ohio statesman, civil-service reformer, and opponent of the Cincinnati *Enquirer* ring in the politics of that State. He is sixty years of age. Mr. Jackson is a Georgian, sixty-five years of age, a graduate of Yale, Minister Resident in Austria before the war, a Confederate Brigadier-General, and a writer of poetry.

It was said at the White House on Monday that the President would take no action in regard to the Postmastership at New York for some time yet. Mr. Pearson will of course continue to serve as Postmaster until a change is made.

Secretary Bayard has appointed Francis Wharton, of Philadelphia, to be his legal adviser on international questions. Mr. Wharton was once Assistant Attorney-General of Pennsylvania, and is now Lecturer on International Law in Boston University. In connection with David Dudley Field and ex-President Woolsey, he represents this country in the Institute of International Law, and has recently had the degree of LL.D. conferred on him by the University of Edinburgh. He is the author of a work on the 'Conflict of Laws' and of 'Commentaries on American Law,' together with the 'Law of Nations.'

Mr. E. D. Clarke, of Vicksburg, Miss., the newly-appointed Assistant Secretary of the Interior, who had been suffering from an attack of typho-pneumonia for about ten days, had a sudden relapse on Sunday night, and expired at 4:15 o'clock on Monday morning. Mr. Clarke was a native of Mississippi, and about forty years of age. He was a student in the University of Mississippi at Oxford. During the greater portion of the late war he was upon the staff of Gen. E. C. Walthall, the newly appointed Senator. He read law in the office of Senator Lamar until 1870. His firm has been recognized as one of the first in Vicksburg. Mr. Clarke had not entered upon the duties of his office, although he had qualified.

On Tuesday the President nominated Henry L. Muldrow, of Miss., to be Assistant-Secretary of the Interior in place of Mr. Clarke deceased; and W. A. J. Sparks, of Illinois, to be Commissioner of the General Land Office.

Secretary Lamar has given his hearty approval to plans for an investigation of industrial depressions set forth in a letter to him from Commissioner Carroll D. Wright. Three special agents will be sent to Europe.

Secretary Whitney has taken his first step to put an end to naval junketing. He has ordered that the *Tallapoosa* be refitted as a cruiser, and the boat will hereafter be used to carry supplies from one navy-yard to another.

The Secretary of the Treasury has appointed Assistant Secretaries Fairchild and Coon and Assistant Treasurer Graves a commission to examine the methods of transacting Treasury business, and to recommend a simplification of the system and a reduction of the force. Mr. Fairchild is a Democrat, Mr. Coon a Republican, and Mr. Graves an Independent, and all are civil-service reformers.

Ex-Governor John Lee Carroll, of Maryland, in a letter to Senator Gorman, says of Higgins's appointment: "There is no man in Maryland who knows better than you do the reputation that Mr. Higgins has earned in the paths of politics. No one knows better than yourself that he fully and most ably represents the type of politician that every utterance of Mr. Cleveland, both before and since he became President, pledged himself and the party most earnestly to avoid; and yet, knowing this, you have taken advantage of the confidence which men in power reposed in you to betray the Administration in the outset, and to discredit in the eyes of the whole country the promises which brought such hope to the hearts of all who believed that—in the words of the President—'public office is a public trust.'"

The United States Senate has passed the following resolution, which was introduced by Senator Edmunds: "Resolved, As the judgment of the Senate, that in view of the special and important interests of the United States, in conjunction with those of the republics of Nicaragua and Costa Rica, in the interoceanic transit across the continent now in progress of adjustment, any invasion of the territory of Nicaragua or Costa Rica by the forces of Guatemala, under the circumstances and with the purposes before stated, is regarded by the Senate, and ought to be treated by the United States, as an act of unfriendly and hostile interference with the rights of the United States, and of the republics of Nicaragua and Costa Rica in respect of said matter."

Mr. Mitchell (Rep., Pa.) offered in the Senate on Saturday a resolution providing for the appointment of a special committee of five Senators to report not later than the second Monday of next December as to the number of trade dollars put in circulation in the United States before their legal-tender quality was repealed, how said coins came into circulation subsequently, how many are still held in the several States of this country, at what rates they were taken, how much profit accrued in any way to the Government by the coinage of trade dollars, and what has been the practice of this and other governments as to the receipt or refusal by them of their own coin. The resolution also provides for the employment of a stenographer and for travelling expenses, etc. It was objected to and went over.

The United States Supreme Court on Monday affirmed the constitutionality of the Edmunds Anti-Polygamy Law.

In the Arkansas Legislature on Friday, ex-Governor James H. Berry was elected to succeed Senator Garland. He is forty-eight years old, a lawyer, and has been a judge. He commanded the State forces in the Brooks-Baxter troubles, and in that capacity and as Governor made himself popular by his non-partisan conduct with both Liberal Democrats and Republicans.

George Peabody Wetmore, of Newport, was nominated for Governor by the Rhode Island Republicans on Thursday. The Democrats on the same day nominated Zeba O. Slocum. The platform declares that "the Democracy of Rhode Island, in convention assembled, express their full concurrence in the doctrine that a public office is a public trust, and in all the other doctrines declared in the inaugural address of President Cleveland."

The Independent Republicans of Rhode Island, at a meeting on Saturday, decided not to make nominations for State officers this year, but to hold the party in readiness for any emergency. No objection was made to supporting Mr. Wetmore for Governor.

In the Senate at Albany on Thursday the Gibbs Freedom of Worship Bill, amended, was ordered to a third reading by a vote of 15 to 9. A roller-skating bill has been favorably reported to the Assembly. It prohibits girls under fourteen years from attending after 5 o'clock P. M. without the written consent of their parents or guardians, or being accompanied by them, and prohibits children from attending during school hours.

In the Senate at Albany on Tuesday the bill providing for spring municipal elections in this city was defeated by 13 to 16, all the Republicans but Mr. Gibbs voting in the negative. The Assembly on Tuesday went into Committee of the Whole on the Niagara Reservation Bill. Mr. Hubbell offered as a substitute the bill prepared by Attorney-General O'Brien, authorizing the Comptroller to take from the $3,500,000 surplus in the Treasury $400,000, and to issue bonds for $1,000,000, to run over a period of ten years. After considerable discussion the substitute was adopted and the bill ordered to a third reading, with an amendmen providing for 4 per cent. interest on the bonds.

At Trenton on Saturday morning the New Jersey State Capitol was damaged by fire to the amount of $100,000.

The Langham Hotel in Chicago was burned on Saturday night and five persons perished. Many of the guests had very narrow escapes. The loss is $300,000.

Gordon W. Burnham, a millionaire of this city, died on Wednesday evening at the age of eighty-three. He was soon to have been married to Miss Kate Sanborn, the writer.

Miss Susan Warner, the author of 'The Wide, Wide World' and other stories, died at

Highland Falls, N. Y., on March 17, at the age of sixty-seven.

Miss Charlotte Cooper, a daughter of J. Fenimore Cooper, the novelist, died suddenly at Cooperstown on Sunday morning, aged sixty-eight years.

FOREIGN.

The whole British force made a reconnoissance, on Thursday morning, from Suakim, in the direction of Hasheen. The enemy retreated before the British advance. The scouts reached the summit of the hills near Hasheen, and discovered that the Arabs had massed in the valleys. The Arabs at once retired into positions of shelter, only fifty of them remaining in sight. They remained in this position until the British advance reached the ridge of the hills. The Hadendowah tribe of hostiles then rushed from the ambush in which they had lain, and made an attack. During this Captain Birch was speared through the shoulder. The Arabs succeeded in this rush in getting within ten yards of the British line before the latter opened regular fire, which the enemy promptly returned. Three of the infantry and several of the Hadendowahs were wounded. Lieutenant O'Connor, whose horse was shot from under him, killed four Arabs with his own hand. It was ascertained by the reconnoissance that the Arabs were in large bodies along the entire range of hills, and were evidently massing. The British retired after having entered Hasheen. The rebels rapidly reoccupied the positions previously evacuated by them.

On Friday morning the whole British force marched out again to the previous battle ground near Hasheen. The first fight was on a hill near Hasheen. This engagement lasted several hours, the British calvary charging frequently upon the Arabs, while the machine-guns were worked with deadly effect. The marines drove the Arabs from the hills, and forced them to retire to the plain. Then the Indian troops charged upon the Arab position, but were outflanked, and an unsuspected body of Arabs succeeded in getting behind their line. The Indians found themselves between two fires, and they fled. During this retreat they were closely pressed by the Arabs. The Bengalese fell back in confusion upon the English infantry and guards, who had been formed in a hollow square, and the square leisurely retired, while the Arabs were yelling that they had regained their lost position. At this juncture the artillery came to the rescue, and a brisk fire of small shot from the machine-guns and shells from the Krupp field mortars drove the Arabs from their position. The marines maintained a steady firing throughout the engagement, but the honors of the day are probably due to the Irish Lancers, who changed the tide of battle by a desperate charge, and retrieved the fortunes of General Graham's command when they had seemed almost hopeless. The British troops then returned to their former camp near Suakim. The British losses were 2 officers and 2 men of the English and 5 Sepoys killed, and 2 officers and 26 men of the English and 1 officer and 10 men of the Indian contingent wounded. The rebels were estimated at 4,000, and their losses at about 400. They fought with great bravery, maintaining a steady rifle fire and avoiding close quarters.

General Graham telegraphed on Saturday to General Wolseley that the result of the operations had been to establish a strong position commanding the Hasheen Valley, and protecting the right flank and the line of communication in ensuing operations against Tamaai. All portions of the force, he said, worked admirably and gallantly, on very difficult ground covered with high thorn bushes and occupied by an agile and determined enemy, showing that the troops are able to master the Arabs in any position.

While detachments of English and Indian infantry were making a zereba seven miles southwest of Suakim on Sunday, they were surprised by a rush of Arabs who had been massed and concealed in the defiles west of Hasheen. The English formed a square as quickly as possible, but the camels, mules, and horses were driven back in confusion on the troops, causing a stampede, and the Arabs penetrated the south and north sides of the square. Meanwhile the marines and the Berkshire Regiment, who were on the east and west sides of the square, maintained a continuous fire, holding the enemy at bay, while a charge of the cavalry and the fire from the guns at the Hasheen zereba checked the onslaught of the Arabs, which threatened a serious disaster to the British. The scene during the panic which ensued at the first onslaught was terrible. The animals and men were panic-stricken, and among them glided the fierce Hadendowahs, engaging in hand-to-hand conflicts. Fifty-six of the British were killed and 170 wounded. The rebels lost about 1,000. The damage done to transport material is immense. General McNeill, who was commanding the zereba, is severely criticised for not taking precautions against a surprise. At 3 o'clock on Monday morning the enemy began another attack. After an hour's fighting they were repulsed. Osman Digna has 25,000 men at Tamaai. General Graham began a general advance upon him on Monday evening.

It was announced late on Tuesday that General Graham had postponed his attack on Osman Digna until Friday, March 27.

Advices from Massowah state that the rebels, who had been reinforced from Berber, attacked Kassala, but were repulsed. The Governor of Kassala states that he can hold out for some time, and will burn the town rather than submit to the rebels. It is supposed that he has received a fresh supply of provisions.

A rival of El Mahdi has appeared at El Obeid. Despatches confirm the reports of El Mahdi's waning power. Several dervishes have denounced him as an impostor.

Mr. Hugh Childers, Chancellor of the Exchequer, in the House of Commons on Thursday afternoon unfolded the Egyptian financial agreement which was recently signed in London by the representatives of the Powers. The agreement, he said, guaranteed a loan of $45,000,000 to be used in lifting the Egyptian debt. The guarantee of this loan by the other Powers does not, however, confer any right upon any one of them to interfere with England's internal administration of Egyptian affairs. The loan is to be liquidated by the repayment of the sum of $1,575,000 annually, and that sum is to constitute the first charge against the Egyptian revenues until the entire loan is lifted. The normal annual expenses of the Egyptian Government are fixed by the agreement at the gross sum of $26,185,000. This includes $1,000,000 to defray the cost of maintaining the army of occupation. The agreement provides for the extension of taxation to all foreigners resident in Egypt. It also arranges for an exhaustive investigation into the revenue-earning capacity of Egypt. Two years are to be devoted to this inquiry. While it is in progress there is to be a 5 per cent. reduction in the coupon payments and a ½ per cent. reduction in the interest on the Suez Canal shares. A provision for the free navigation of the Suez Canal is mentioned in the agreement as a matter that will be dealt with in the forthcoming Canal Conference at Paris. The Conservative leaders have decided to postpone action until the Convention has been presented to Parliament on March 26. The British press express satisfaction with the agreement.

Mr. Gladstone refused in the House of Commons on Monday night to grant, on the demand of Sir Stafford Northcote, a postponement of the Egyptian financial agreement. He said that Egyptian finances had reached the end of their tether, and the question must be settled before the Easter recess. The discussion was fixed for March 26.

There was renewed excitement over the Afghan question in London on Tuesday evening, caused by a Cabinet Council which, it was said, was called to consider unfavorable news of successful Russian intrigues both at Panjdeh and Constantinople. A secret treaty with Turkey is being pushed by Russia.

The London *Post* understands that Russian officers on furlough have been ordered to rejoin their regiments. General Zelenoi is waiting at Askabad to join Sir Peter Lumsden, when the matter of establishing the Afghan frontier will be arranged. It is reported in Calcutta that orders were received from England on Saturday to concentrate from 20,000 to 30,000 men at Quetta and Allahabad.

It was semi-officially stated in Paris, on Thursday, that Prince Bismarck had offered to arbitrate between England and Russia in regard to the Afghan boundary dispute.

The Prince of Wales started on Wednesday for Berlin. He had a long conference with Earl Granville before setting out. It is understood that he received hints regarding relations between England and Germany. He was accompanied by Prince Albert Victor and the Duke of Edinburgh. They arrived at Berlin on Thursday.

The Duke of Argyll has published a letter in which he says he hopes that all parties in Great Britain will firmly insist upon maintaining the independence and integrity of Afghanistan, and the dominant influence of England in that country.

The Indian budget has been submitted. It shows that for the fiscal year ended March 31, 1884, there was a surplus of over $5,000,000; for the year ending March 31, 1885, there will be a deficit of $2,500,000; and the estimated surplus for the year ending March 31, 1886, will be $2,500,000.

Sir Stafford Northcote will, it is reported, withdraw from the Conservative leadership in the House of Commons at the close of the present session, owing to the unabated discontent of many members of the party. He will be succeeded by Sir Michael E. Hicks-Beach, under the sanction of the Marquis of Salisbury and the approval of Lord Randolph Churchill.

Christopher Wordsworth, Bishop of Lincoln, Eng., is dead. He was a brother of Dr. Charles Wordsworth, Bishop of St. Andrews. He was educated at Trinity College, Cambridge, and was best known by his editions of the Greek text of the Apocalypse (1849) and the New Testament (four parts, 1856–60), of 'The Holy Bible, with Notes and Introductions' (5 vols., 1864–70), but was also a voluminous author on many other subjects.

Sir Julius Benedict, the English composer, is seriously ill with bronchitis, and his friends fear that he will not recover. He is eighty-one years of age.

Sir Harry Smith Parkes, British Minister to China, is dead at the age of fifty-seven. He entered the civil service of the Crown in 1852, and in 1865 was made Minister to Japan. A year or two ago he was transferred to China.

Mrs. Stephens, wife of James Stephens, who was recently expelled from France, telegraphed on Wednesday to Mr. E. Dwyer Gray, M. P., editor of the Dublin *Freeman's Journal*, that her husband, who is at Mons, in Belgium, was in a dying condition and was absolutely destitute. Mrs. Stephens appealed to Mr. Gray for assistance and Mr. Gray at once sent aid.

Emperor William's eighty-eighth birthday was celebrated in Berlin on Sunday with much enthusiasm. In the morning the Emperor received the members of the Imperial family and foreign princes, also the old servants, a number of whom have been attached to the household for forty or fifty years. In the evening a family dinner was held at the palace.

Two hundred and seventeen miners were imprisoned by an explosion of fire-damp in a colliery at Camphausen, near Saarbrücken, in Rhenish Prussia, on Wednesday morning. Only thirty were rescued alive.

President Barrios was on Tuesday reported to be marching on San Salvador with 15,000 men.

HOW THE STANDARD HAS BEEN RAISED.

THERE is, when one comes to think of it, a wonderful amount of encouragement in the expectations both of Republicans and Democrats with regard to the new Administration. Not only is the standard set for President Cleveland in the matter of administrative reform higher than that set for any of his recent predecessors, but there is evidently keen disappointment felt among Republicans, as well as among Democrats, if he fails to live up to it in the smallest particular. He has been criticised sharply for putting in the Cabinet a gentleman of whom it can be said, as it has been said of Mr. Manning, that he has been an able and dexterous political manager; and for putting in the Cabinet a gentleman, like Mr. Whitney, who is not well known in the field of national politics. The appointment, too, of a local politician of unsavory reputation, like Higgins, to a subordinate place in the Treasury has roused among men of both parties a great deal of indignation. So stern and exacting, indeed, are his critics that the leading Republican organ in this city can see no sign of reform in such appointments as Mr. Fairchild to be First Assistant in the Treasury, or in the excellent batch of nominations for important positions sent to the Senate on Thursday, or in such acts as Mr. Whitney's in restoring Commander Evans to his light-house inspectorship, from which he had been dismissed for refusing to connive at a gross abuse, by Secretary Chandler. This is undoubtedly an excellent state of things. It shows a great advance in public opinion—an enormous advance, when we consider the disorder and debauchery which the present generation of Republicans have been taught to expect from a return of the Democrats to power.

But how great the advance is, no one can thoroughly appreciate without a little retrospective comparison. Suppose President Cleveland had immediately, on coming into power, removed an old, experienced, and upright Democrat from the charge of the Pension Bureau, and put in his place a hardened and notorious political hack, and had acknowledged publicly that he knew it was wrong, but could not help it—that he had been compelled to yield to "pressure"; what would be said? And yet President Garfield did this very thing in the Bentley case. Suppose that immediately after the election President Cleveland had gone to a Democratic dinner given to Higgins in Baltimore, and in his speech had chuckled over the fact that Higgins had carried the State of Maryland by the use of "soap," and the audience had laughed, knowing well that by "soap" he meant money; what would be said? And yet this very thing President Arthur did in the case of Dorsey. Suppose that subsequently he had appointed another Higgins, a notorious lobbyist and jobber, to be Secretary of the Navy, in spite of the protests of all the best members of his own party, and were to support him steadily in corrupt and debasing use of the patronage to oblige politicians of the lowest class; what would be said? And yet President Arthur did this in the case of Secretary Chandler. Suppose, on coming into power, he were to find in the New York Post-office not Mr. Pearson, but a Democrat of long standing—an old, experienced servant of the Government, who had made himself conspicuous as a promoter of civil-service reform, and were, when the occasion offered itself, to kick him out incontinently; what would be said? And yet President Arthur did this very thing in the case of Colonel Burt.

Suppose, moreover, that well knowing that paymasterships in the army, being life positions, ought to be reserved for old army officers, he were to give one of them to his own brother-in-law, a civilian between fifty and sixty years of age, and, therefore, within easy reach of the retired list on which he would be supported by the Government for the rest of his life; what would be said? And yet this very thing President Arthur did in the case of Haynesworth. Suppose that a rich friend of his whose son had failed at West Point, and had to resign in consequence, were to come to him and ask him to violate the regulations of the Academy, and give this young man a commission over the heads of his comrades of two classes, in gross disregard of their rights, and he were at once to grant his request; what would be said? And yet this very thing President Arthur did in the Wright case. We might double this list of suppositions, but we have made enough.

There is no difficulty in conceiving the indignation, the uproar, and the disappointment which aberrations like these on President Cleveland's part would create. There are tens of thousands of Republicans to-day who voted for Blaine, who would mourn over them, and feel undeceived and chagrined by them. A very large proportion of the Democratic party, too, would undoubtedly do so. The great and hopeful feature of the situation is that more, far more, is to-day expected of a Democratic President than has ever been expected of a Republican President; and that a Democratic President dares not commit even one of the smaller abuses of his trust, which Republican Presidents have for the last fifteen years been committing by the dozen with impunity. A better illustration of the effect of persistent agitation in enlightening and informing the public judgment we could not desire, nor a better illustration of the beneficence of that change of last November, even to the Republican party. The Republican standard of morality was not rising under the influence of prolonged and secure tenure of office. On the contrary, it was steadily declining; and probably as long as the party remained in power it would have continued to decline. Defeat has suddenly caused it to see a great light, and for the first time to demand of men in office a rigid adherence to their professions and promises before taking office.

THE TREASURY AND THE SILVER PROBLEM.

SOME days ago it was reported semi-officially that Secretary Manning would shortly issue a new bond call, the surplus in the Treasury having reached an amount which would warrant the disbursement of $10,000,000 without encroaching upon the customary reserve. The bond call has not been issued, and it is now said that it is withheld in order to determine what proportion of the so-called "cash in the Treasury" can be considered available as against liabilities payable on demand. The reserve consists of various kinds of funds—gold bullion, silver bullion, gold and silver coin, greenbacks, national bank-notes, fractional silver, etc. The liabilities are all practically gold, since the Treasury allows its creditors to take such funds as they prefer, and thus maintains the parity of the entire circulation with gold. It is clear, however, that in case of a "run" the fractional silver would be unavailable, not being legal tender beyond five dollars in each payment. The standard silver dollars would be unavailable, because nobody would want them, and to force them upon public creditors would precipitate the much dreaded silver crisis at once. The greenbacks and national bank notes may be regarded as available assets in any condition of business likely to supervene, although the former are liabilities of the Government when in private pockets, and are merely redeemed promises when in the vaults of the Treasury.

It will be regarded as a measure of wise caution if Secretary Manning takes account of stock, and makes an independent examination of his resources, before issuing new bond calls. The situation of business is now very favorable to an increase of the Treasury reserve. The demand for money is extremely faint at all the centres of trade. The bank reserve in New York has risen to the unprecedented sum of $48,000,000, against little more than $8,000,000 at the corresponding time last year, and the rate of interest on call loans has fallen to 1½ per cent. or even less. No possible danger to trade could result from a large addition to the funds in the Treasury. On the other hand, there are weighty reasons why the Treasury should be amply fortified against the artificial and sinister demands of the Silver Coinage Act.

This act calls for $2,000,000 per month. It is a drain on the resources of the Treasury, to be provided for and guarded against in the same way as any other expenditure. It has to be met with the same regularity and promptness as the payments for the army and navy, pensions and interest on the debt. If the public credit is to be maintained and the country saved from the miseries of two standards of value, provision must be made for the disbursement of two millions per month over and above the ordinary expenditures of the Government, and the resulting coin must be laid away like so many kegs of nails manufactured in excess of the wants of house-builders. The demand for new silver certificates has practically ceased, and the Treasury is not likely to be recouped for any considerable part of its bullion investments hereafter. It becomes necessary, therefore, to take into account twenty-four millions of liabilities over and above the usual yearly disbursements. It would be prudent to accumulate this sum in advance, at a time when the money market will not feel the loss of it, and to keep a like amount ahead of the requirements of the mint until Congress shall see fit to stop the waste. If the policy is adopted of treating the purchase of silver for the mints like the purchase of gun metal and pig lead for the arsenals, or of stone for the fortifications, the silver crisis can be staved off until next December. If, on the other hand, it be assumed that the publi- will continue to relieve the Treasury of its surc

plus coin by taking out silver certificates, and no provision be made out of the current revenues for the chance of the stuff remaining uncalled for, there will be trouble before many months pass over our heads. Since, therefore, no interests are suffering for a bond call, it would be altogether prudent for the Secretary to fortify himself with a considerably larger reserve than has been customarily held, in order to save himself from the embarrassments which pressed upon Secretary McCulloch when the latter was compelled, by his declining revenues, to pay silver certificates in large amounts at the Boston Clearing-house.

It would be wise, also, to discontinue the practice of sending silver certificates from one part of the country to another for private parties at the public expense. There is no law authorizing the Secretary to pay express charges on any kind of money for the accommodation of individuals, or to deal in domestic exchange.

THE CENTRAL-AMERICAN ÉMEUTE.

THERE are now two revolutions in progress in Central America, one an intestine affair in Colombia, and the other an international scrimmage between Guatemala, party of the first part, and Nicaragua, Costa Rica, and San Salvador, parties of the second part. As throwing light on the Canal treaty recently withdrawn by President Cleveland from the files of the Senate, these outbreaks are important aids to the human understanding. The twenty-third article provided that we should forthwith advance the sum of $1,000,000 to Nicaragua, the first instalment of the $4,000,000 to be loaned to her on the security of her share in the future canal tolls. If this first instalment had been paid, the money would have been within reach of the strongest battalions; and since the contention of President Barrios is that the Central American States have been made "one republic" by the decree of Guatemala, then, since the greater includes the less, the cash would have belonged to his faction, if victorious, by the same title as the territory of Nicaragua itself. A million dollars is a sufficient incentive to a revolution in Central America at any time. Four millions would infallibly lead to a "consolidation" of all the able-bodied brigands in the country around the central nugget.

What our position would be if the treaty had been ratified can be readily discerned. We should be under the double obligation of protecting Nicaragua against invasion, as the second article of the treaty provides, and of looking after our own security in that region. This obligation, which we have but narrowly missed, the escape from which ought to be accounted a rich national blessing, there seems to be a disposition on the part of friends of the Canal treaty to assume gratuitously. The resolution offered by Senator Edmunds and agreed to by the Senate recites, that whereas there is such a treaty pending with Nicaragua, any invasion of that country by the forces of Guatemala "ought to be treated by the United States as an act of unfriendly and hostile interference with the rights of the United States." Fortunately the treaty itself had been withdrawn by the President a day or two after the news of the outbreak arrived. The issues of peace and war are therefore committed for the time being to the care of the Administration, upon whom the duty of carrying on the war, if it should be declared, would devolve. A hypothetical war need not create any uneasiness. We are well persuaded that President Cleveland and his advisers desire nothing so much as public tranquillity, and the opportunity which it affords for the prosecution of wholesome domestic reforms, and for the upbuilding of the disabled commercial fabric of the country. There can be no embroilment on our part with Central America so long as the treaty is unratified, and so long as we have no property at stake among the belligerents, the resolutions of the Senate to the contrary notwithstanding.

Respect for the sagacity and patriotism of Senator Edmunds demands careful examination of one's grounds by any public man or journal that differs from him on a question so vital as that of peace or war. Yet it is obviously this question, and nothing less, which is involved in the resolution which the Senate, upon his motion, has adopted. If the proceedings of Guatemala are to be treated by the United States as a hostile interference with our rights, they must be opposed with powder and shot. Resistance by "cablegram," as suggested by President Zaldivar, of San Salvador, will not serve the purpose. We must get in readiness to back up our cablegrams by infantry and artillery, commissary, quartermaster, and hospital stores—especially the latter. "Take all possible precautions against yellow fever," says the Secretary of the Navy in his telegram to Commander Kane at Colon, instructing the latter to cruise along the coast of San Salvador. All the miseries of war, without the smallest compensation in the way of glory, will be our portion whenever we shall take a hand in the predatory contentions of the Spanish-American republics. It is conceivable that Mr. Edmunds is right in thinking that the Canal treaty is so important that we should take all risks to carry out the purpose embodied in it, but it is certain that one of these risks is a war risk, and that an indispensable preliminary is an increased military and naval establishment, to keep order in Nicaragua and in all the neighboring countries. An army and navy on paper will not answer the end at all. A force which exists in theory, but not in fact, is the sort of thing which Spanish American chieftains and revolutionary bandits have thriven on for two generations. The task which we are to undertake, if the text of Mr. Edmunds's resolution is to be our guide, is no less than the military occupation of a vast extent of tropical country, infested with robbery and pestilence, whose permanent pacification will entail the waste of large sums of money, and no inconsiderable amount of suffering and loss of life. If any end is to be gained commensurate with such serious expenditure, we altogether fail to see it.

It should not be overlooked that Mexico has taken a hand in the affair, having despatched 15,000 soldiers to the Guatemala frontier, and that President Diaz is contemplating the seizure of the two or three disputed provinces which Secretary Blaine warned her that she must not meddle with. Evidently the limits of our interference would not be circumscribed by any defined boundaries.

A GLIMPSE OF IDA AND THE SPRINGS OF THE SKAMANDROS.

IN the golden sunlight of an October morning our little file of four Americans, headed by the gallant Zaptieh Ali Bey, and closed by a limping Greek muleteer dragging after him the ill-tempered beast which carried our blankets and provisions, left far below us the olive orchards and vineyards of the Adramyttian plain, and wound up into the belt of pines on the southern slopes of Mount Ida. But at noon the sky was overcast, and two hours later a hasty council was held, and it was decided to make at once for the logging camp of the Rumelian woodcutters, the only inhabitants of the upper range. Here for three days we shared their rude fare, crouched in Oriental fashion about the pot full of steaming soup, and for three nights we lay wrapped in our blankets on the damp earth, while the roar of Boreas in the pines, and the rushing rain on the leaky roof, almost drowned the crackling of the fire of great logs, and the bagpipe to whose screaming tones our swarthy hosts kept time in their uncouth dances. The noisy stream that came leaping down the ravine to turn the wheels of the sawmill swelled to a river. We likened ourselves at last to the good Knight Hildebrand imprisoned in the fisher-hut of Undine's foster-father, and beleaguered by her blustering kinsfolk. We were within an hour's scramble of the summit, but when, during a brief lull in the storm, we pushed on to the crest, it was shrouded in an impenetrable mist, which drenched us to the skin quicker than the heaviest rain.

At last, on the fourth morning, realizing that the voracity of our shabby old muleteer (or our own) was wearing our welcome something threadbare, we reluctantly turned our backs on the mill and our kind-hearted young entertainers, and, abandoning all hope of ever seeing the famous panorama of the Troad and the Ægean, started to descend the northern slope of the range. As our lugubrious little procession wound down through the dripping forests, clouds and sunshine were still chasing one another over the rolling ridges and plains beneath us, and occasional showers followed us all day down the mountain—and so, perhaps, our impressions were colored by circumstances; to us, at least, it will always be "many-fountained Ida." All the fountains of earth and heaven seemed opened.

Something less than half way down, we turned aside from our line of march and threaded our way into the lovely dell where the king of rivers is born. Our view was shut in by nearly perpendicular cliffs a thousand feet high. The pines cling to every projecting ledge. The damp grass was full of crocuses. A long succession of springs burst eagerly from the rock at the base of these cliffs, and form a brook that flows swiftly through the valley. Then at a sudden turn a cascade seventy feet high leaps down from a cavernous opening in the face of the cliff, breaks into foam as it falls, turns to a livelier green with its spray the mosses and ferns that cover the stones, and takes imperious possession of the rock-cut channel. A few minutes' walk further down is a large spring, which flows immediately into a bowl-like basin, whence a stream runs down a few yards and joins the little river. This is the famous "warm spring," though we found it only a few degrees warmer than the brook—just cool enough to drink.

The traveller must be world-worn indeed who does not feel the charm of this enchanted dale. It seems sequestered from the turmoil of the world and the rushing of the centuries. We

almost expected to see the long grass stealthily parted beside us, and the half-frightened, half-laughing face of a faun peeping through at us interlopers. Our comrade, who climbed to the cavern mouth from which the cascade fell, surely disturbed the Naiad with the rude blows of his geologizing hammer. At the very least it could have been but yesterday that the boy shepherd Paris, roving at will hand in hand with Oinone, and innocent as yet of any thought of far sea-wanderings or sinful love or the wild rush of battle, found his way into our vale, and gazed in wide-eyed wonder at the tumbling cataract. The singer of the 'Iliad' was our only companion on our pious pilgrimage, but even from the long rhythmic sweep of his verse our thoughts and eyes wandered, and we closed the book to listen entranced to the rushing of the many waters.

Like everything else in the Troad, this lovely scene has been drawn into the interminable debate over the true site of Priam's holy city, and the real origin of Homeric legend. In the twenty-second book of the 'Iliad,' Achilleus is chasing the panic-stricken Hector about the walls of Ilios. Passing in their headlong haste the various landmarks near the walls, "they came to the fair flowing springs, where the two sources of the eddying Skamandros leap up: the one flows with warm water, and, round about, steam rises from it as from blazing fire; the other runs forth cold as hail, or the chill snow, or crystal ice. There by the springs are the washing-troughs, beautiful, wrought in stone, where the dames and fair daughters of the Trojans washed their shining garments, of old, in the days of peace, ere the sons of the Achaians came."

We certainly cannot believe, as some writers would have us do, that Homer, having seen or heard of the head waters of the Skamandros here many miles away among the mountains, used a poet's freedom and brought them down into the plain to adorn his description. The two pictures are themselves as diverse as possible, and need only be placed side by side. In the Trojan plain there are numberless unfailing springs. Several have been discovered very near the hill of Hissarlik. It does not need much credulity to believe there were in Homer's day two springs near each other and the city wall, one cold, the other lukewarm. (It does not require water of high temperature by any means to give off steam. Hot springs are not, indeed, at all rare in the Troadic peninsula. The Greek word λιαρός is, however, merely "tepid," being applied, for example, to blood.) Of course the waste water from these two springs flowed down into the neighboring river. Now the Skamandros almost disappears in summer, the diminished stream sinking out of sight in its gravelly bed. These two springs might at such times have been apparently *the* sources *par excellence* of the enfeebled stream, though the Greek text does not expressly demand that. The traveller in the East at the present day often comes upon Laodike at the spring, or still more frequently Nausikaa at the riverside, "washing the shining garments." But she no longer greets him with the modest grace of the Phaiakian maiden. She draws her veil about her eyes, and turns her back upon him, only to stare curiously after he has passed.

Far down in the plain at the northern base of the ridge, where the free mountain-born river is already enslaved to turn the wheels of mills, lies the wretched little Turkish village of Evjilár. When we reached the rough street we turned about for a last look, and the rosy crest stood out bold and sharp against the sunset sky. Not a cloud was to be seen. Like a true Turkish maiden, coy Ida had drawn her veil aside, and was gazing at us in all her loveliness. We were young, enthusiastic, and Americans, and, of course, at dawn next day our grumbling old muleteer was disgusted by an order to turn out and prepare for a fresh ascent of the mountain. To trudge to the summit and descend again between sunrise and sunset of an October day is a serious task, but one never to be regretted. The road we followed was the good old one:

Πολλὰ δ' ἄναντα κάταντα πάραντά τε δόχμιά τ' ἦλθον—

"O'er steep, o'er glen, by straight, by winding ways,
They journeyed."

Evjilár means "Huntersville," and the mountain-range still deserves its Homeric name of μήτηρ θηρῶν, "mother of wild beasts." Wolf-tracks had appeared since the rain of the previous day. Everywhere the earth was torn up by the rooting of wild boars. We heard many stories of jackals, leopards, and bears. The crocus was very abundant almost to the summit, as well as a species of cyclamen. Half an hour before reaching the top we left the wooded belt and began the clamber up the bare cone of rock. Upon the very summit snow lay abundantly, and the cold wind compelled us to keep up a brisk walk. The traveller should visit all the chief peaks, which lie separated by slight depressions within reach of an hour's tramp. The magnificent view from the summit has been often described. The whole great island of Lesbos lay extended before us as if drawn on a map, and we could follow the outline of the Troadic peninsula almost unbroken from Adramyttion around the long point of Lekton to the Hellespont and Propontis. Further away, Chios and Lemnos, Imbros, and, high above all, Samothrake, lie along the horizon. We stand where Zeus stood to watch the battles in the Ilian plain; but we must be gifted with his power of vision before we can distinguish the Skamandros or the Simoeis, the promontory of Rhoiteion, or the tumulus of ancient Aisyetes. All the way from the sea-line at Lekton to our feet the ridges seem to come rolling up in unbroken waves to teach us the significance of a Homeric epithet, πολύπτυχος Ἴδη—"Ida with many folds."

Of one truth he who stands on the summit of Ida is sure, that the poet of the 'Iliad' had his eyes, and used them infinitely better than most men. There can hardly be a statelier conception than that he embodies in the word Ida, as the name of the whole mass of mountains that fill the Troad from Sigeion to Assos, rising in steady curves to the supreme crest of Gargaros. Surely the poet who sang of Herè, landing where the promontory Lekton meets the sea, and passing up to the topmost peak to win the heart of Zeus, must often have watched graceful cloud-shapes rise from the Ægean and roll up over ridge after ridge to rest at last on the lofty peak—a sight we ourselves saw with regretful eyes a few days later, as our little Greek caïque leaped over the waves of the Gulf of Adramyttion, and we were bidding a reluctant farewell to the land of Homer.

KAROLINE BAUER AND BARON CHRISTIAN VON STOCKMAR.

LONDON, February, 1885.

FAR from inconsiderable is the stir which the 'Posthumous Memoirs of Karoline Bauer,' or, rather, the first half of them, recently translated from the German, and published by the London firm of Remington & Co., have excited in certain social circles of England. Scandalous as they occasionally are, they abound with attractive matter, and record many an item, not by any means always unimportant, which would in vain be sought for elsewhere. Their chief value, however, consists in the light which they throw on the higher society of Germany during the first half of the present century. Among the episodical ingredients of this curious work may be specified, as markedly interesting, the narrative of the singular fortunes of Leonardus Cornelius van der Valck and Angés Barthelmy, and the very full biography of the famous songstress, Henriette Sontag.

To Karoline Bauer, who was bred an actress from her very girlhood, the only world that seems to have presented itself, ordinarily, as at all noticeable, was that which was made up of amusers and amusees. Her personality and circumstances considered, it could not, indeed, well have been otherwise. While, on the one hand, the fates had bestowed on her good looks and impressionableness, on the other hand her education and her special environment, both intellectual and moral, were such as could hardly have developed anything akin to austerity of sentiment or conduct. Taking into account her juvenile experience, we are not surprised to be told that, with the entire acquiescence of her mother, she consented, at the age of two and twenty, to "a kind of marriage ceremony"—the kind, namely, that conferred on her the style of quasi-wifehood which, to the subsequent solace of kings and princes innumerable, was sanctioned by the courtly obsequiousness of Luther. Significant, too, as being racy of her native soil, is the comment which, many years later, she made, or is alleged to have made, on the scantness of the farcical rite just referred to: "No clergyman placed his hand on my head, to invoke a blessing; no bridal wreath adorned my locks. . . . My mother pressed me to her heart amid tears of joy."

Many things gravely prejudicial to Karoline Bauer, which the original of the 'Posthumous Memoirs' contains, do not appear in the emasculated English translation; and her German editor, who claims to have known her well, represents her as having been most disingenuous and inveracious. On his evidence, such as it is, she was, in short, a person who, after whatever exertions bestowed with intent to bleach her, must remain hopelessly dingy.

Among the statements attributed to her is one, already alluded to, which an attempt, violently feeble and wholly inconclusive, has just been made to invalidate. The late Baron Stockmar, a relative of Karoline Bauer, proposed and ultimately brought about, she is made to have averred, a morganatic alliance between herself, while still a maiden, and Prince Leopold, afterward King of the Belgians. As both the Baron and the Prince were intimate associates and confidential advisers of the present occupant of the English throne, this matter, having once got into print, could not prudently be ignored by those who, whatever their private convictions, would fain have it scouted as mere vindictive romancing.

Hearing that it was in contemplation to publish the 'Posthumous Memoirs,' Baron Stockmar the son addressed himself to Herr Arnold Wellmer, their editor. Adverting to Karoline Bauer, he speaks with delicious euphemism of "that period of her life which she spent in England in the vicinity of Prince Leopold of Koburg." He goes on to admit that "my late father, to his great regret, was, in various ways, mixed up with the subject-matter of the 'Secret Memoirs.'" He then adds: "A sequel to the dissolution of that connection in England was the life-long estrangement of my father and his cousin"—that is to say, Karoline Bauer. The Baron further begs of the editor that he "would, with a gentle hand, cancel anything that might cause a public scandal," and deprecates the divulging of attacks on his father, and also on "Prince Leopold, in whose actions the memory of my father is compromised, inasmuch as he was the Prince's man of business." Once more, with reference to "so delicate and private a personal relationship" as that which subsisted between Prince Leopold and Karoline, "that episode," the Baron allows,

"was an error, soon enough recognized, in which there was hardly anything that can be regarded as beyond every-day experience." So far as is discoverable, the person by whom the error was "soon enough recognized" was the Prince, and that after the lapse of about a year, shortly before he remarried. His first wife was the Princess Charlotte, daughter of George IV., and his second was the Princess Louise, daughter of Louis Philippe; Karoline Bauer having humbly served to soothe some few months of his internuptial disconsolateness. As we now read, Karoline, when morganatically made over to her royal paramour, received the title of Countess Montgomery. It has not been revealed in what peerage she is registered under that title. Nor is the authority of the 'Posthumous Memoirs' corroborated, that the pension which she received as ex-mistress of Prince Leopold was derived from the pockets of British taxpayers.

The admissions of Baron Ernst von Stockmar which have been cited evince, despite the cautious vagueness in which they are couched, that his father was a party to transactions which redound nothing to his honor. How far his own version of those transactions would differ from that which lies before us can only be conjectured. Anyhow, it certainly behooves him to come forth with it, and to make the best he can of what is, beyond any reasonable doubt, more or less discreditable.

With a precipitancy which seems to be growing on him with growth of years, Prof. Max Müller has adventured to champion the late Baron Stockmar and also Prince Leopold. Looking to the suppressions in the English translation of the 'Posthumous Memoirs,' he calls them "a literary hoax," and he does not hesitate to ingurgitate, at one brave gulp, all the evil about Karoline Bauer that is found in the original German, just because it is what it is. "I know nothing," he says, "of the German editor of Karoline Bauer's Memoirs; but," he continues, without a break, "I must say this for him, that he has, at all events, warned the German public as to the character of his client." Avowedly ignorant of that editor's title to credibility, or of his want of it, he, however, pronounces him to have acted like "a man of honor," for reviling the dead, and, on his bare word, classes Karoline among "literary ghouls," speaks of her as an "assassin," believes her "to have been guilty of lying and falsehood, a swindler who for years had piled lie on lie, fraud on fraud," etc., etc. His accustomed mystification, his studied ambiguities, and his inexplicable hints, I shall not stop to comment on, or even to note.

The late Baron Stockmar initiated his connection with Prince Leopold by acting as his medical attendant, and rose to importance and rank only very gradually. These facts Professor Müller is careful to ignore; and one might also infer, from the tenor of his polemic, that, in his opinion, the servants and hangers-on of kings and princes are no longer capable, in modern days, of discharging pandaric offices for their masters. Although he does not categorically deny what he terms "the extraordinary charges" and "the silly charges" brought by Karoline Bauer against Baron Stockmar and Prince Leopold, he aims to produce the impression that they should be dismissed as totally without foundation. To this end, having freely bespattered his helpless victim with vituperation not exactly academic—at least, outside his fatherland—he clinches his argument in a manner which, no doubt, he reckons to be irrefragably demonstrative. Here are his words: "Lord Palmerston was not a man easily to be taken in, least of all by a German diplomatist; and he said of Baron Stockmar: 'Among politicians I have only met one man who was altogether disinterested—Stockmar.' As to the late King of the Belgians, I need not repeat the memorable words in which the *Times* passed judgment on his private and public character at the time of his death."

The implied sneer at German diplomatists would, of course, be interpreted by the Professor in Germany as, when rightly understood, not only not disparaging, but something highly complimentary. As regards the *Times*, in which he has been allowed to disport himself in large type, as above, its readings of character are, we all know, not quite irreversible. It was on the same authority that we were told, on the 7th of October, 1862, of President Lincoln, on the occasion of his issuing his famous Emancipation Proclamation: "He will appeal to the black blood of the African. He will whisper of the pleasures of slaughter, and the gratification of yet fiercer instincts; and, when blood begins to flow, and shrieks come piercing through the darkness, Mr. Lincoln will wait till the rising flames tell that all is consummated, and then he will rub his hands, and think that revenge is sweet."

Count Brol-Slater, who married Karoline Bauer, enables us by a letter written subsequently to the correspondence between Prof. Max Müller and Messrs. Remington & Co., to think considerably better of her than we might hastily be disposed to do otherwise. He is not, indeed, very communicative; but there is no obvious reason why one should not believe with him that what the Professor has said of her is "no less insulting than libellous." Besides this, Herr Wellmer, on his showing, is a person whose allegations we are under no obligation to accept oftener than we think fit. Karoline Bauer, it now transpires, lived to lose all confidence in him; and the publication of the 'Posthumous Memoirs' was in direct opposition to her known wishes.

To what extent Herr Wellmer has supplemented or distorted the information furnished him by the authoress is not ascertained. Her more flagrant self-malignment, at any rate, must, we should say, be due to his malicious invention. But her history, where the Baron and the Prince are inculpated, bears in its details an impress, all but unmistakable, of verisimilitude. Taken, moreover, as a whole, what Professor Müller is pleased to stigmatize as "these nauseous papers" and "these sickening and cadaverous memoirs" will be likely to present themselves to any unprejudiced reader under a very different aspect. Let him, in future, by all means confine himself to essay-writing, and eschew, as futile, the ambition to signalize himself as a controversialist. As such, he has, hitherto, miscarried well-nigh absolutely.

X. Y. Z.

POPULAR EDUCATION IN SWITZERLAND.

ZURICH, February 25, 1885.

THE small Republic of the Alps has published in C. Grot's seven volumes of statistics a record of the educational progress made since Professor Krönlein's 'Statistics of Public Instruction in Switzerland in 1871' took the first place among such works at the Vienna Exposition of 1873. From these two works I learn that the Federal Constitution of 1874 made the public schools free and compulsory. But the administration of the schools is left to the cantons, and the right of supervision and inspection which the Federal Government expressly reserved is practically nullified, for want of a Federal official charged with this duty. In 1882 an effort was made to create such a commissioner, but the project, approved by the Federal Assembly, was voted down by the people. The States-rights element voted against a measure tending toward centralization, and the conservative-clerical element opposed the appointment of an officer whose duty it would be to expose the bad management of the schools in cantons where the clergy rule, and compulsory education had remained a dead letter. States-rights prejudices are still deeply rooted among the people, and the commissioner was vetoed by popular vote on November 26, 1882.

Nevertheless, the Federal Government can and does indirectly ascertain the grade of educational activity of the cantons through its examination of recruits. This examination is required of every such youth as has not a school certificate of first or second rank, and is neither deaf-mute nor imbecile. The examination is conducted by a commission of teachers appointed by the War Department, and embraces the language of the canton (French, German, or Italian, as the case may be)—a short essay being required, among other things; arithmetic (rule of three and fractions), geography, history of Switzerland, and the elements of constitutional law. Such pupils as fail to pass are obliged to attend a supplementary school. The yearly report of the recruit examinations is published by the Federal Government, and acts as a spur upon the backward cantons, since it gives full and minute particulars about canton and township. The improvement registered by these yearly Federal reports is simply astounding. The recruit examinations were introduced in 1875. The recruits in round numbers reached in 1875 seventeen thousand; in 1876, eighteen thousand; in 1877, twenty-two thousand; and the number has varied between twenty and twenty-three thousand each year since. These figures embrace ninety per cent. of the Swiss male youth of twenty years of age, and serve as a fair basis for an estimate of the status of education in general, for the compulsory law applies to girls as well as boys, and the girls are conceded to be the more industrious.

The percentage of failures throws a flood of light upon the Swiss treatment of illiteracy. The average number of recruits failing to pass and condemned to enter a supplementary school was, for the first four years, 1875 to 1878 inclusive, 11.21 per cent. For the next four years, from 1879 to 1882 inclusive, the average had fallen to 8.3 per cent. In 1883 the number fell to 5.2 per cent. This enormous reduction of illiteracy—a reduction of one-half in eight years in the entire youth of the country, at the age of twenty years—is the more remarkable in view of the fact that the examination was made more difficult in 1879 by the introduction of "constitutional law." It is made still more remarkable by the appointment for each canton of examiners selected from the teachers of some other canton—an arrangement which effectually excludes undue leniency.

The stimulating influence of the publication of the Federal Government's annual report of the recruit examinations is strikingly shown by a comparison of the cantons which supplied the largest contingents of failures. In the four years 1875 to 1878 inclusive, the percentage was in Neuchâtel, 11.1 per cent.; Tessin, 12 per cent.; Graubünden, 13.6 per cent.; Schwyz, 23.8 per cent.; Bern, 14.8 per cent.; Glarus, 16.5 per cent.; Nidwalden, 13.6 per cent.; Freyburg, 24.6 per cent.; Uri, 25 per cent.; Valais, 40.6 per cent.; Appenzell, 47.1 per cent. In the next following four years, the percentages were, Neuchâtel, 7.8; Tessin, 11.1; Graubünden, 8.4; Schwyz, 19.4; Bern, 10.2; Glarus, 7.1 (a reduction more than one-half the total number of failures); Nidwalden, 8.6; Freyburg, 20.5; Uri, 15.5; Valais, 19.6; Appenzell, 30.2. In other words, the percentage of failures was reduced in four years, in the worst cantons, thirty, forty, and even fifty per cent.; while of the whole twenty-six cantons but three showed no improvement. The improvement was brought about chiefly by means of improvements in the elementary schools, by

enforcement of the compulsory law, and by the creation of supplementary classes, evening and Sunday schools. Compulsory classes have been formed in the nine most backward cantons for youth between eighteen and twenty years of age, with special reference to the examinations. These classes embrace about fifty lessons, and are a direct outcome of the publication of the Federal Government's annual report of recruit examinations.

So much for this special means of indirect central supervision of popular education. A second most striking characteristic of the Swiss school system is the now almost universal enforcement of the compulsory law. This compulsion extends over six, eight, or ten years, according to the canton. Out of 485,790 children of both sexes, of school age, 474,878, or 97 8-10 per cent., have attended elementary schools, and the remaining 2 per cent. include deaf-mutes, idiots, and sick children excused before reaching the end of the period in which attendance is compulsory. Besides the compulsory attendance, there are 20,000 children under six years of age in kindergartens, 13,000 above the compulsory age in high schools, and 20,000 in secondary schools. In many places these higher grades, arranged for children from twelve to sixteen years, are compulsory. Finally, 11,000 children are in the intermediate and 10,000 in private schools; and the total sum of all these numbers, added to the 1,700 students in the Swiss universities, is something more than 550,000 young persons undergoing instruction, or one-fifth of the whole population of Switzerland.

One of the chief causes of the excellence of the Swiss schools is the permanent tenure of office of the teachers, which atones in part for the meagreness of the salaries, though the same lamentable injustice prevails in Switzerland as elsewhere in the underpayment of women as compared with men. The salaries are, however, being gradually increased. In 1871 the average salary was 1,419 francs for men teachers of elementary schools, and 901 francs for women performing precisely the same duties. In the next ten years, ending 1881, the salaries were increased 42 per cent. for men, 38 per cent. for women, the old injustice being thus accentuated. Elementary teachers are best paid in Basel, Zürich, and Geneva, where men receive 3,213 fr., 2,228 fr., and 2,188 fr. respectively, women receiving 1,535 fr., 1,805 fr., and 1,227 fr. yearly. But these are municipal salaries, whereas the averages quoted cover the whole of Switzerland, embracing the pay of the young peasant girl in the village infant school, as well as of the head master of the highest municipal gymnasium. Moreover, the teacher usually receives a dwelling rent free, and in many cases young unmarried teachers have board and lodging (not "boarding round"), the money payment being a minor consideration. The length of tenure of office of Swiss elementary school teachers may be judged from the following averages: In 1881 the average age of such teachers was thirty-seven years for men and twenty-nine years for women. Out of more than eight thousand such teachers, less than six hundred were under twenty years of age, and but three hundred and sixty over sixty years. Very young and very old teachers are equally exceptional, and the *average* tenure is sixteen years for men and ten for women.

The long tenure and rising salaries make the teacher's lot a desirable one, and enable the Swiss people to require and obtain a high degree of qualification for persons filling this important office. Thus, of 8,365 teachers of elementary schools employed in 1881, 17 were university graduates, 63 were graduates of classical gymnasia, nearly 7,000 were graduates of normal schools, nearly 600 were graduates of progymnasia (equivalent to good American high schools), 376 had completed "courses of pedagogical instruction," 280 (having attended private schools) had obtained diplomas after special official examination; and out of the whole 8,365, but 85 teachers in the whole country were in possession of mere elementary school education. Thus, apart from the 80 elementary school teachers who boast university or gymnasial diplomas, nearly 7,000, or 83 per cent., have had special normal training. F. K. W.

Correspondence.

IRON IN THE MOUNDS.

To the Editor of The Nation:

Sir: In the able review of Nadaillac's 'Prehistoric America,' which recently appeared in your columns, the question of the discovery of iron in the mounds is touched upon, and, on the authority of Atwater's well-known relation, it is claimed that those who built and buried in the Circleville mound must have been acquainted with the use of iron. Intrusive mound burials are, of course, out of court, and the object of an inquiry into this subject must be to determine whether the people who built mounds before the advent of Europeans were acquainted with the use of iron. The analytic (as distinguished from historical) literature on the subject of prehistoric iron in America is practically limited to two papers, that by Steenstrup on the use of meteoric iron by the Greenlanders, and one by Putnam on iron in the Ohio mounds (Am. Antiq., Soc., 1883). The latter, which for some reason does not seem to be as widely known and appreciated as its merits deserve, is in reality a little monograph. Atwater's story is examined in it, and, without necessarily impeaching his good faith, it is conclusively shown that his narrative affords no basis for any conclusions as to the prehistoric use of iron. For that reason the story was dropped from the book. The language used by me, that in "numerous excavations" "not a scrap" of iron had been found, was intended to be taken literally as it stands, and its exact accuracy is beyond question. That it was not intended to say that iron had *never* been found in excavations is evident, because its discovery by Putnam is immediately mentioned. The question is of serious importance in our anthropology, or I should not trouble you with so lengthy an explanation.

There is another point on which trustworthy information is sorely needed, viz.: archæological conchology. Most of the stories about tropical shells found in mounds in the North, etc., are entirely unreliable for want of verification. I have eliminated or modified, in the interest of truth, most of Nadaillac's statements or quotations of such cases. His assertion that the present Indians disdain to eat the *Ampullaria* and *Paludina* agrees with my own personal observation, at least as regards the first genus, in Central America; and in spite of Wyman's belief that the "crackers" do not hesitate to use them, I incline for the present to the opinion that an erroneous identification of the shells may have misled him, for reasons too lengthy to inflict upon your readers. Any information as to present consumption of fresh-water mollusks by existing Indians would be a real gain to science, for it is a most remarkable thing that this source of food seems now entirely neglected by tribes such as the Yukon Indians, who nevertheless suffer from almost annual periods of semi-starvation.—I remain, respectfully yours, Wm. H. Dall.

Washington, March 14, 1885.

[In giving some of the reasons why we believed that Atwater found the remains of iron implements in the Circleville, Ohio, mound, as he says he did, we were replying to the assertion (pp. 180–1) that "except meteoric iron . . . previous statements with regard to the discovery of iron in the mounds are, without exception, unsatisfactory"; and our object in so doing was to prove that this particular mound was built after contact with the whites, and not that "the people who built the mounds before the arrival of Europeans were acquainted with the use of iron." This, we think, is evident from the context; for in speaking of Atwater's testimony, we expressly say that it is "backed by evidence, that is believed to be decisive, as to the *recent occupancy* of the earthwork" within which this mound was situated.

In regard to the use of the *Paludina* and the *Ampullaria*, as food, by the "present" Indians (using that word in the sense in which it seems to have been employed in 'Prehistoric America,' pp. 57–8, and meaning thereby the red Indians of historic times) and the "crackers," we can only say, that, so far as the "crackers" are concerned, Wyman asserts it as a fact, not a "belief"; that in Laudonnière's time, the Indians, when "in necessitie," were not particular as to what they ate; and that if any of the fresh-water shell-heaps of the St. John's were built by the red Indians or their ancestors, as the mounds of the Mississippi Valley and the shell-heaps of the Atlantic seashore are generally admitted to have been, Mr. Dall himself (p. 58) answers the question in the affirmative.—Ed Nation.]

SPEAKER AND EX-SPEAKER.

To the Editor of The Nation:

Sir: In the letter of "G. B.," in your issue of March 12, occurs this passage:

"The spectacle of the *Speaker* deliberately using his official position to postpone action on the appropriation bills till the last minute, while expressing a quiet confidence that there would be no extra session, and then sending them to the Senate, the only place where there is any discussion, so late as to render discussion impossible, and to force a settlement in secret conference committees—it seems as if this was enough to convince anybody who was not wilfully blind of the necessity of some strong and responsible outside control."

If, in the above extract, "the Chairman of the Committee on Appropriations" had been substituted for "the Speaker," the statement would have been substantially correct. As it stands, it does gross injustice to one of the purest and most conscientious men in public life, Speaker Carlisle. I am surprised that such a well-informed writer as "G. B." should have fallen into so palpable an error. The Chairman of the Committee on Appropriations, by virtue of his control of all appropriation bills, which have the "right of way," has practically the command of the business of the House for the last weeks of a session, particularly when he holds the bills back, as was done in the session just closed. The rules permit this, and Mr. Carlisle is as powerless as any other member to prevent it. I know he felt annoyance at the course of business in the House during the late session, and indicated it, if I am not mistaken, in his valedictory address. To hold him responsible for it and not Mr. Randall is such a reversal of the truth of history as I know the *Nation* will permit me to correct.

C. W. E.

Washington, D. C., March 23, 1885.

OUR FOREIGN SERVICE—ITS DEFECTS AND THE REMEDIES THEREFOR.

To the Editor of The Nation:

Sir: As we are reasonably confident of having an era of reform in the various branches of the Government service under the new Administration, it may not be amiss to direct attention to the urgent need of change and improvement in a branch of the service which ordinarily receives far less attention than its importance merits. I refer to our foreign service, and especially to the consular branch of it, in which the writer has had considerable experience in various countries, and much opportunity for observation. Comparatively few understand and appreciate the importance of this branch. It is too far away from home. The press bestows but little attention on it except to criticise and belittle it. Travellers abroad are often rather disgusted at the kind of representatives they too frequently find, and the *mean* way they are compelled to live; and the commercial community does not rely upon it, because of its too general inefficiency. The popular idea at home is that it is ornamental rather than useful; and this idea has been encouraged by the "spoilsmen," and practically also even by our State Department, which has usually made appointments to it without regard to qualifications, and as if it regarded almost any one capable of performing the duties pertaining thereto. Hardly any wonder, then, that the author of 'The True Issue' should arrive at the conclusion that the reports of American consuls are not worth the paper they are printed on, as they undoubtedly frequently are not.

And yet our consular service is practically perhaps of even greater importance to our Government and people than the diplomatic branch of our foreign service, and stands in quite as great need, to say the least, of thorough reform. To show how important it is from a financial point of view, and the necessity of having a trained and efficient consular service, I need only refer to the fact that our entire import trade, from which nearly two-thirds of our entire Government revenue—nearly $250,000,000 per annum—is derived, has to pass under the inspection of our consuls, and the invoices therefor be examined and legalized by them to prevent frauds on the revenue. The most important duty our consuls have to perform, perhaps, is examining and legalizing invoices, on account of our system (as I believe, objectionable) of levying duties *ad valorem* instead of *specific*. If on arrival at the Custom-house the invoice price is suspected of being too low, the consul is subject to blame, and receives it very freely from a certain part of the press. But what can a new and inexperienced consul, with no knowledge of his duties, no knowledge of the prices of merchandise in the place where he is located, perhaps in nine cases out of ten with no knowledge of the language of the country to enable him to procure information—what, I ask, can such a consul do to protect the interests of our Government? However excellent may be his intentions, he is necessarily incapable of performing his duties efficiently, and our Government revenue must suffer the consequences. This duty of examining and legalizing invoices is special to the American consular service, no other country, I believe, except Spain to a limited extent, requiring it.

But our consuls have, in addition, to perform all the other duties usually incumbent on the consuls of other countries. They are expected and required to protect their fellow-citizens in case of need, to keep their Government informed as to all matters pertaining to trade, commerce, manufactures, labor statistics, etc., in their respective consular districts. Especially are they required to look out for outlets for American produce, notwithstanding the protective policy of our Government makes this such an up-hill business. They must show due courtesy to all travelling Americans, especially to M. C.'s, for fear of having their scant salaries cut down or abolished at the next session of Congress. They must loan money or head subscription lists for impecunious Americans who come their way, lest they should be called to account at the instigation of some M.C. whose constituent complains to him. If an American swindler happens to be caught, as is becoming too frequent of late, and imprisoned in his jurisdiction, the consul is expected to look very specially after his interests, as the writer happens to know from experience. Of course the consul must provide for destitute American seamen, but he must be exceedingly careful in so doing, or he will have the accounts therefor thrown back on him for some slight informality.

To perform properly all the varied duties required of him, the consul should have special training, skill, and experience. He should have, at least, a general knowledge of international law, and should be well acquainted with the treaties and conventions between his own country and the country to which he is sent. He should be familiar with the general laws of trade, commerce, and exchange. An indispensable requisite for most European countries ought to be a current knowledge of the language of the country to which he is sent, or, at least, of French; and for Mexico, South, and Central America, of Spanish. A consul who is not able to converse freely with those he has to, or *ought* to, come in contact with, is unable to inform himself properly as to his duties, and is necessarily dependent on others, and too frequently on those whose interest it is to deceive him. The importance of this has not generally been sufficiently appreciated by our State Department. I have known serious questions to arise out of misunderstandings purposely created by the dragoman class in the East, and well-meaning consuls in Europe to be the helpless dupes and tools of unfit and designing clerks. The only remedy for this is to lay more stress on a knowledge of foreign languages for our consular service.

Some seem to have the idea that our foreign service is more stable and less the football of favoritism and the "spoils system" than the home service, and especially that the late Administration so treated it. I am convinced, however, that this is a very erroneous idea. I am assured by the highest authority—Mr. Eaton—that Mr. Arthur executed the Civil-Service Law in entire good faith, for which he should certainly have due credit. But was he not on oath to execute the laws? And does he merit special credit for doing so palpable a duty? It will be remembered, however, that the Civil-Service Law, as it now exists, is made applicable to a very small part of the public service. But if this law is good in principle, ought not its spirit to be carried out in all branches of the public service, and especially in our foreign service, where special training, qualifications, and experience are so absolutely essential? The frequent and gross violations of the principles of civil-service reform in our home service, and the recent almost scandalous cases of nepotism and favoritism, have been duly held up to public attention and condemnation by the most respectable part of the press. But the same practices in our foreign service have usually passed unobserved, or have been only barely mentioned. Yet I am convinced that statistics would prove that the spirit of reform has been more frequently and more grossly violated in our foreign than in our domestic service.

I have not the material in hand to establish this in the various countries. But in Italy, for instance, I am acquainted with what has been done. There, out of ten full consulates, including the Consulate-General at Rome, eight were filled anew by the late Administration; one of the other two (Venice) had just been filled with a new man by President Garfield. Of these eight new appointments made by President Arthur, only one, I believe—the new Consul-General at Rome—had had any previous experience in the consular service, or any special qualifications for the performance of its duties. If, then, Italy may be taken as a fair sample of what has been done in other countries—and I presume it may—four-fifths of our consular service was changed by the late *pretended* reform Administration, and very largely filled by new, inexperienced, and totally unqualified men. Was this not "rotation in office," the "spoils system," nepotism, favoritism, and all that reformers condemn?

The new Administration, then, will likely find good reason for making very many changes in our consular service on strictly civil-service grounds—that is, for incapacity and unfitness. Only let us hope that in making changes it will be careful not to simply substitute one unfit person for another, but will pay strict attention both to qualifications and character.

I have thus endeavored to point out a few of the present evils existing in our foreign service. With your permission, I shall in another article suggest what I think would remedy these evils, and gradually make the service more efficient and in every way more useful and creditable to the country.

B. O. D.

THE ARTISTIC VALUE OF IMPERFECTION.

To the Editor of The Nation:

Sir: Mr. Whistler and Mr. Oscar Wilde have been having their say once more about "loveliness" and "hideousness," coats and costumes, and, in general, how things look to a painter and what things are of worth to him; and those of us whom it amuses to listen to them have once more answered inwardly Yes and No to their doctrines. Mr. Whistler's setting forth of the interchangeableness to a painter of beauty and ugliness in the objects he treats seems to have been effectively put, and one welcomes all discourse which may do something to enlighten the "general" mind on this point. For it is essential that the truth of this fact should be clearly recognized to arrive at any sound judgment, not only of the painter's works but of the novelist's. When it is recognized, we shall not hear so intolerably often the complaint, "Why doesn't he choose nicer people for his personages?" And much that is now so crudely called and foolishly considered "art for art's sake" will be seen to be art based on the deepest need of art—the desire to express what lies beneath the surface.

A passage from the Swiss traveller Topffer, quoted by Sainte-Beuve for a different purpose, is worth considering in this connection as being an admirable presentation, taken figuratively, of what is equally true for the novelist as for the painter:

"One often sees the landscapist—who at bottom seeks things to express much more than things to copy—pass by sometimes a magnificent rock, sometimes a majestic group of vigorous oaks, verdant and splendid, to establish himself at the end of a footpath bordered by a few meagre bushes, or in an unused road which loses itself in the mire of a marsh, or by a little pool of black water into which dip the straggling branches of a mutilated, hollow, decayed willow. . . . He does so because this decay, this mire, this rough grass, this pathway, which, considered as objects to be beheld, are either ugly or without beauty, considered contrariwise as signs of thoughts, as emblematical of things in nature or in man, as expressing something broader and higher than themselves, have really or may be made to have every advantage over oaks which would be only beautiful, verdant, and splendid."

* *

Notes.

G. P. Putnam's Sons announce a new enterprise for the young, "a series of graphic historical studies," telling 'The Story of the Nations.' The Jews, the Goths, the Normans, and the Saracens will each have a chapter like the several countries. Prof. J. K. Hosmer will treat of the Jews, Mr. Arthur Gilman of Rome, Prof. J. A. Harrison of Greece, Mr. Charlton T. Lewis of Byzantium, Prof. H. H. Boyesen of Norway, Rev. E. E. Hale and Miss Susan Hale of Spain, etc. The volumes will be 12mo, and will be sold separately.

The same publishers have undertaken 'The Scriptures for Young Readers: an Introduction to the Study of the Bible,' edited by Prof. Edward T. Bartlett and Prof. John P. Peters. It will be constructed by selections, omissions, rearrangements, and paraphrases, with supplementary historical data drawn from all sources for the period between Malachi and Jesus. The first volume will include Hebrew story from the Creation to the time of Nehemiah, as in the Hebrew canon; the second volume will be devoted to Hebrew poetry and prophecy; the third will be derived from the New Testament.

Simultaneously with the appearance of the Revised Old Testament, Funk & Wagnalls will bring out a 'Companion' to it, by the Rev. Talbot W. Chambers, one of the Revision Committee. It will enumerate and explain the changes made.

Cupples, Upham & Co., Boston, we are glad to learn, are about to issue a new and improved edition of Mr. W. H. Whitmore's 'Ancestral Tablets.' No one with the least bent for genealogical research ever examined this ingeniously compact substitute for the "family tree" without longing to own it. It provides for the recording of eight lineal generations, and is a perpetual incentive to the pursuit of one's ancestry.

Dr. Charles Mackay has prepared for the Messrs. Blackwood 'The Founders of the American Republic,' who are taken to be our first four Presidents plus Franklin—Hamilton being conspicuous by his absence.

Mr. John Bigelow, writing to the *Critic*, desires to learn who is the present possessor of a sketch, made by Victor Hugo, of the house occupied by Franklin during his eight years' residence as Minister to the Court of France. It was sold at the great fair for the relief of our wounded soldiers held in this city "in 1865" [1864?].

The "Riverside Aldine Series" (Houghton, Mifflin & Co.) opens with two pretty 16mos, freighted with Mr. T. B. Aldrich's 'Marjorie Daw, and Other Stories,' and Mr. Charles Dudley Warner's 'My Summer in a Garden'—works eminently fitted for this handy and dainty embodiment. A plain blue cloth gives an elegant simplicity to the exterior, while the Aldine-Pickering device, of dolphin and anchor, ornaments just enough the stamp upon the back of each volume. As a matter of taste in the typography, we should prefer a different letter from that employed on the title-page for the New York address of the firm. But this is a trifle. The total effect is worthy of the reputation of the publishers.

Mr. Edward T. Mason's well-conceived and well-executed 'Personal Traits of British Authors' (Scribners) is concluded with a volume embracing Hood, Macaulay, Sydney Smith, Jerrold, Dickens, Charlotte Brontë, and Thackeray. A good deal of the material was naturally found in American books; and the observations of our own countrymen must, in the case of foreign celebrities, always have a peculiar value, both because of its presumable objectiveness and because we can rate the observer for what he is worth. From the same publishers we have a paper-cover reprint of Mr. George P. Lathrop's 'In the Distance,' and the fourth volume of Dr. Philip Schaff's 'History of the Christian Church'—Mediæval Christianity, 590-1073.

Mr. Augustus J. C. Hare's 'Sketches in Holland and Scandinavia' (Geo. Routledge & Sons) probably serve to remind the author and his friends of enjoyable excursions; but we can see no good reason for offering them to the public, such slight information as the book contains being already easily accessible.

We have from A. D. F. Randolph & Co. a series of decoratively-bound poems for Easter—Tennyson's "In the Children's Hospital," "The Old, Old Story," illustrated in outlines, and "Daybreak," an Easter poem, by Julia C. R. Dorr; and in the same series, "A Tiny Footfall within the Golden Gate," a religious child-story. Also, from E. P. Dutton & Co., "The Unknown Way," of Bryant, very copiously and very cheaply illustrated, but in a beautiful limp binding; from White, Stokes & Allen, in their usual silk-fringed and flower-illustrated style, arranged by Susie B. Skelding, "Easter Bells"—four chromo-lithographic flower groups, with illuminated cover.

The series of French reprints entitled "Contes Choisis," published by Wm. R. Jenkins, reaches its third number in 'Un Mariage d'Amour,' by Ludovic Halévy. A parallel series in German has just been begun in Chicago by L. Schick, who gives his own name to the "Collection Schick." Rudolf Lindau leads off with three short stories, and Fanny Lewald follows with two. The print is good of its kind, though the type has too many hair lines, and the paper is far too glossy. The "Contes Choisis," by the way, will have also original features. 'Peppino,' a French romance, by Prof. L. D. Ventura, of the Sauveur School of Languages, Philadelphia, will be shortly added to them, and will probably be, says Mr. Jenkins, "the first original copyright French novel published in the United States."

Parts 4-7 of the new 'Allgemeine Geschichte' edited by Theodor Flathe, Gustav Hertzberg, Ferdinand Justi, Martin Philippson, and other scholars (Berlin: G. Grote; New York: B. Westermann & Co.), deal in a popular manner with the early history of the East from Chaldæa to Greece. Few works of this kind have been more profusely or better illustrated. Every new part is introduced by a group of full-page maps, landscapes, or designs, often from photographs, while the text is thickly interspersed with excellent woodcuts. Such an enterprise seems native to Germany, and it is perhaps a little singular that, in default of original historical compendiums, our English-speaking public is denied even the benefit of translations. These would be easier to procure than first-hand work from our students.

Khartum having been already disposed of under the letter C in the new 'Brockhaus' Conversations-Lexikon,' there is but little in Parts 136-139 (New York: L. W. Schmidt) of what the world is now talking about. One may consult articles on Cameroons, with an account of its acquisition by the German Empire; on Canton, with a good text-map, and on Kelung, relating the French operations against Formosa down to November last. The other chief geographical articles in this rather barren letter K are Cape Colony and Caucasus. Kant and Kaulbach are the chief celebrities, except the royal and imperial Charleses, who are all included here.

We have already made mention of the great undertaking of the Paris house of Victor Palmé, in reproducing in facsimile the 'Sacrorum Conciliorum Collectio' of Joannes Dominicus Mansi. B. Westermann & Co. now send us the first fasciculus of the work—a small folio. Doubtless better progress will be made than with the original thirty-one volumes, which were published at Florence and Venice from 1758 to 1799, in spite of their stopping short at the fifteenth century. This first instalment is not continuous. It gives the table of contents of the first volume; a fragment of Mansi's preface; the first thirty-two columns of the text proper (beginning with the so-called "Synodus Apostolorum quadruplex"); and finally a hundred columns beginning with No. 669 and the Concilium Pergamense. This represents about a ninth part of vol. i; and although the present arrangement recalls Hood's middle-cut of salmon—"You can't make head or tail of it"—it will all come out right in the end for the binder. The quality of the facsimile is to be praised for clearness and legibility.

We receive from F. W. Christern a specimen number of a French illustrated dictionary of the fine arts, the subject being Bouguereau, with numerous illustrations in photogravure and otherwise. It is hardly to be regarded as a serious art publication, and the selection of Bouguereau as a sample perhaps indicates fairly its level.

The first number of the *American Journal of Archæology* will not disappoint the hopes of the friends of the science in America. It opens with a most interesting notice by Prof. C. E. Norton of a work which, though almost unknown, is one of the most remarkable of early studies on the prehistoric remains of the classical field, and one which, in its cautious and sagacious induction, has not been surpassed by many later studies, even with all the advantage of the progress of the science since it was written. This is a book by J. J. Middleton on Grecian remains in Italy, published in 1812. Next in order is a careful study on the Panathenaic Festival—an anticipation of a part of Doctor Waldstein's forthcoming book on Phidias; and a peculiarly interesting essay, by Professor Merriam, on a collection of vases found at Alexandria and now in the possession of Mr. Feuardent—a new type of inscribed ceramics. This essay will, we are convinced, do honor abroad to American epigraphy. Doctor Frothingham contributes the first of a series of studies on sculpture in Europe in the thirteenth century, and Mr. Marsh a review of Dorpfeld's essay on ancient brick work in Doric architecture. News, reviews, etc., make up the latter half of the number of 103 pages, and three good heliotype illustrations accompany the text. If the *Journal* is not well supported, it will be because there is little real interest in America in classical and mediæval archæology.

We imagined that the frontispiece of the *Art Journal* for March was as insignificant and vapid an example of modern art as could be seen. We were mistaken, for that of the April number is worse in every way, nor is there anything else in the number worthy of special notice. "Facilis descensus" seems to be especially true of art journals.

The American Institute of Electrical Engineers was organized in this city in May of last year. It has now begun publishing its transactions in a first volume, which includes papers read and discussions down to and including October, 1884. The contents make interesting reading. In connection with the question of underground wires, we have once more a section of ideal Broadway on the arcade plan. The office of the Secretary is at No. 9 Murray Street.

The valuable series of papers read before the Military Service Institution of the United States from time to time, appear in the quarterly *Journal* published by G. P. Putnam's Sons. The number for March contains General Sherman's discourse on the militia, and much other interesting matter. Gen. J. B. Fry reviews Gen. G. W. Smith's 'Confederate War Papers,' with special reference to the battle of Seven Pines, during

which General Smith was superseded by General Lee.

It is stated that Mr. Henry W. Grady, of the Atlanta (Ga.) *Constitution*, is the author of the reply to Mr. Cable's "Freedman's Case in Equity," which, as was promised in the *Century* for March, will appear in an early number of that magazine.

The current issue of the *Library* of Cornell University promises in the next a list of the works lately presented by Mr. Eugene Schuyler —partly the sources of his 'History of Peter the Great,' partly philological works on the Slavic and Turanian languages, with a valuable folk-lore collection, especially rich on the Slavic side.

The double number of the *China Review* for November-December, 1884, contains a noticeably full sketch of the island of Formosa, by A. R. Colquhoun and J. H. Stewart-Lockhart.

The principal paper in the Proceedings of the Royal Geographical Society for March is an account of the expedition made last year to Mount Kilimanjaro, in Eastern Africa, by Mr. Johnston, the well-known author of a book on the Congo. He spent about five months on the slopes of the mountain, principally in collecting specimens of the fauna and flora of the region. In this he was very successful, bringing home about 300 plants, 20 or 30 of which were new to science, as well as many birds and insects. He was able to ascend the mountain only to the snow line, 16,315 feet, where the cold and driving mist prevented his further progress. The scenery is described as surpassingly beautiful, while in some places there was a wonderful glow of color from the profusion of flowers. Game, including buffalos and elephants, was to be found in great plenty. As this till recently unknown region, which from the accounts of Messrs. Thomson and Johnston seems to be a terrestrial paradise, is only six weeks distant from London, it is probable that in no long time it will become as familiar to tourists as Algeria.

At last we have an illustration of a coral island that may to advantage replace the well-worn cuts of our geographies. It is an imaginary bird's-eye view of Caroline Island in the far Pacific, lately published (where no one would expect to find it) in the second volume of the Memoirs of the National Academy of Science, as a full-page frontispiece to the account of the eclipse expedition of 1883. The value of the drawing does not lie altogether in its originality, for it is evidently based on a view accompanying a narrative of Janssen's expedition to the same island, that was published in *Le Monde Illustré* for October 20, 1884; but it is so great an improvement over this as to be essentially a new drawing. Neither can it be considered a precise representation of the atoll, for a comparison with the map also printed in the Memoirs shows that the view is largely idealized. But for all this, it is a well-designed drawing, the effect of which is satisfactory to a critical observer who has visited the island, and thus adds one more number to the slowly growing list of really good illustrations for use in teaching physical geography. The circular reef, with its white beaches and dark groves, lies close on the ocean surface; the smooth lagoon is enclosed within it, and the broad ocean stretches unbroken away to the horizon outside. Surely this is one of the most individual of all the geographic forms that a child must learn about at school, and it deserves better illustration than the poor drawings and unartistic sections that have hitherto been allowed it.

The opportunities for studying savage or uncivilized races in their virgin condition are fast disappearing. Recognizing the importance of prompt action, the officials of the Museen für Völkerkunde, of Berlin, sent out in 1881 an expedition under the command of Captain Jacobsen, a hardy Arctic voyager, for the purpose of collecting materials illustrating the manners and customs of the peoples of British Columbia and Alaska, especially of the latter before they had been seriously affected by intercourse with their new rulers, the "go-ahead Yankees." The scientific results of the voyage, which lasted from 1881 to 1883, are to be reported in a publication issued by the direction of the Museum, under the title, 'Amerika's Nordwestküste.' Two parts or numbers have already appeared, containing large colored plates, with descriptive text by A. Bastian. The narrative of the voyage has been prepared by A. Woldt, from Captain Jacobsen's log-book, and recently published at Leipzig by Spohr.

A valuable addition to the works relating to Leonardo da Vinci has lately been published by G. Uzielli, under the title 'Ricerche intorno a Leonardo da Vinci' (Rome: Salviucci). This author is favorably known from his contributions to the family history of Leonardo, published about ten years ago as the first series of the present work. Among the matters considered in this volume are the botanical researches of Leonardo, and the bequest of his manuscripts to the Ambrosian Library of Milan, to which is added a catalogue of his sketches preserved at Florence, Turin, and Venice. If Ravaisson's work upon the manuscripts of Leonardo, which he has begun upon such a grand scale as is shown in the two volumes already published, is carried out in accordance with his design, means will not be lacking for a full knowledge of this artist's wonderful accomplishments. Richter's collection of facsimiles of the manuscripts is a most important work, but is only a selection. Ravaisson proposes to reproduce all. He gives a facsimile of each page, with the Italian transcription underneath, and on the opposite page adds a French translation. A summary of the subjects treated precedes the translation, with an indication of the works in which any of the passages may have been published.

—Professor Newcomb writes us:

"Your kindly notice of my 'Analytic Geometry' gives me a credit which does not belong to me, in a way to cause misapprehension on the part of teachers who are not familiar with any forms of notation except those used in English and American books. The use of three parallel lines to denote identical equality is very common among German and French mathematicians; indeed, some such symbol is absolutely necessary in analytic geometry to distinguish between an equation and an identity. The use of the same symbol as one of definition was taken by me from the work of professors at Cornell University. I am persuaded that no confusion can arise from the different ways in which the symbol is used in different books, any more than in algebra confusion arises from assigning different values to x in different problems."

—A striking feature of the eighteenth volume (Orn—Pht) of the Encyclopædia Britannica, ninth edition (New York: Scribners; Boston: Little, Brown & Co.) is the large number of important papers contributed by non-British scholars. Among the most valuable and most readable of these contributions is part i of "Philology"—"Science of Language in General"—by Prof. W. D. Whitney, while part ii—"Comparative Philology of the Aryan Languages"—an equally elaborate but less generally attractive piece of work, is from the pen of Prof. E. Sievers. Professor Nöldeke is the author of the articles on the Pahlavi language and Persepolis, and of the principal portion of the very comprehensive ancient history of Persia, the rest of which is by Prof. A. von Gutschmid, while Professors Geldner and Ethé discourse on Persian language and literature respectively. Major-General Sir Frederic Goldsmid completes, with his "Modern History and Geography" of Persia, the extensive series of essays devoted to that country, comprising in the aggregate a full hundred pages, brimful with first-class erudition. Dr. Reinhold Rost writes on the Pali language, Dr. A. Führer on the Parsees, Professor Harnack on Paul of Samosata, and Professor Schürer on Philo. Professor Socin's "Palestine" is a mine of information chiefly geographical, and Professor Wellhausen's "Pentateuch" an admirable condensation of the leading criticism of our day on the age and composition of that part of the Old Testament. "Phœnicia" is mainly from the pen of Von Gutschmid, with additions by Socin. It is needless to remark on the excellence of the editorial judgment which thus apportioned the various fields to authorities so exceptionally competent, and safe to surmise that the selection is chiefly the merit of Prof. W. Robertson Smith, who himself contributes the important articles on Palmyra, Passover, and Philistines. What is surprising is the correctness, plainness, and idiomatic neatness of style in which the contributions of the German scholars are laid before the public. Only a very attentive perusal reveals solitary slips indicative of a foreign hand and editorial oversight. Thus Socin has "Rechoboth" (for Rehoboth) and "Akhzib" (Achzib), and Nöldeke "Merodakh" (Merodach), while Wellhausen's "Hakkeleiah" (for Hachaliah, p. 514) is apparently a German reflection, in a kind of aphasia, of the mentally pronounced English form. Too English is "M'Mahon," as the spelling of the name of the ex-President of the French Republic in the article "Paris" —a contribution by two French writers, more remarkable for minuteness of topographical and statistical detail than for historical or stylistic attractiveness. Among the most important contributions by British authors are "Ornithology" (by Prof. A. Newton, 48 pages), "Palæography" (E. M. Thompson, 23), "Pathology" (Dr. Creighton, 47), "Peru" (Markham), "Photography" (Captain Abney), and "Phrenology" (Prof. A. Macalister). Of notices referring to the United States we may mention "Parker" (Rev. J. F. Smith), "Pennsylvania" (Prof. J. P. Lesley and Rev. C. G. Ames), and "Philadelphia" (C. H. Hart).

—"Dynamiting and Extra-Territorial Crime" is the title of an interesting pamphlet by Dr. Francis Wharton, the author of several well-known legal treatises (Jersey City: Frederick D. Linn & Co.). His object is to show that the prosecution of persons sending dynamite abroad for criminal purposes belongs to the American States from whose soil the dynamite is sent, or within whose jurisdiction the plot is hatched, and not to the Federal Government. So far as the latter negative proposition is concerned, Doctor Wharton does not discuss the question in sufficient detail to enable us to judge exactly by what means he reaches his conclusion; but the positive part of it he maintains with great force. The bearing of the Orsini and Bernard cases on this point he makes out to be as follows: Orsini, an Italian, concocted a plot in London to assassinate the French Emperor and bring on a revolution. Bernard, a Frenchman, was either an accessory or a principal in the conspiracy. The means used were hand-grenades, which resembled dynamite explosives in one respect—that, whatever might be their ultimate political effect, they were sure to kill and wound innocent bystanders. On January 14, 1858, several of these grenades were thrown by Orsini and a confederate at the carriage in which the Emperor and Empress were driving to the opera. There was an explosion in which the Emperor and his friends and advisers escaped unharmed, but ten innocent spectators were killed, and one hundred and fifty-six wounded. Reclamations were made upon England, but Lord Palmerston was badly advised as to the law. Not only, as afterwards appeared, was it the opinion of the best English lawyers that such a conspiracy was a common-

law offence, but there was an express statute providing for the trial of "any of his Majesty's *subjects*" charged in England with murder out of England. Sir Richard Bethell (afterwards Lord Westbury), then Attorney-General, took the extraordinary ground that an alien living in England was not a "subject," and that the statute did not apply. An objection to a common-law prosecution was, that at common law the offence was a misdemeanor, and punishable only by fine and imprisonment. Lord Palmerston, to meet both these difficulties, the serious one being, however, wholly imaginary, introduced his "Conspiracy to Murder" bill. This was defeated by a vote of 215 to 234, and the ministry resigned. The debate and the discussion among the law lords which followed, showed that there was no question that a conspiracy to murder abroad by a British subject, alien or otherwise, was indictable at common law as a misdemeanor. Meantime, Bernard had been indicted under the statute, and he was now tried by Lord Campbell, who charged the jury heavily against him. Result—a verdict of not guilty.

—Although this case may show that every American State can take jurisdiction of dynamite plots within its borders, it by no means shows that their doing so will lead to the punishment of the criminals. The only certain way of breaking up a gang of dynamiters is that resorted to by Switzerland against the Anarchists—of expelling them from the country. But in the present condition of our extradition system, to say nothing of the bearing on the matter of the "Irish vote," an attempt to expel Ford or any of his accomplices would be no joke. If a new extradition treaty with England could be drawn so as to define what is a "political" offence, and so as to make the collection of money, and other overt acts, for the purpose of murdering and destroying property abroad, extraditable offences, we should at least be nearer seeing a way to punishing the dynamiters than if the State of New York were to undertake the work of justice alone. But if there is any way to deal with them, there seems every reason why Federal as well as State authority should be invoked.

—Shakspere and the Pythagoreans would hardly, one would think, find themselves in juxtaposition or companionship; but they are, nevertheless, found arm in arm, amicably interlinked, in 'Shakespeare: Untersuchungen und Studien,' by Dr. C. C. Hense—a volume of Shakspere studies lately issued from the press of the Waisenhaus in Halle. One of the chapters is devoted to Shakspere and philosophy, and numerous paragraphs are dedicated to tracing Pythagorean analogies, principles, and reminiscences in this, that, and the other play of Shakspere. The Stoics come in for their share of this rather overabundant and far-fetched reminiscence, and comparisons are drawn between the Stoic character as depicted in the 'Tusculan Disputations' and the writings of Seneca and passages in "Othello" and "All's Well that Ends Well." The Pythagorean doctrine of the transmigration of souls is riddled by the keen shafts of Shakspere's humor, and serves with him, as with other poets, as a theme for parody. The humor of Horace, however, anticipated Shakspere in ridiculing the Pythagorean bean (Sat. 2, 6, 59-64), while Lope de Vega parodied the philosopher under the title of *Doctor Cornagoras* in one of his plays. *Rosalind*, in "As You Like It," declares herself to have been a rat in the times of the philosopher, and the "wanderings of the soul" are a theme for the jest of the clown in "What You Will." Echoes of the Pythagorean cult resound, to Hense's delicate ear, in "Henry the Eighth"; but it is particularly in reference to the famous doctrine of the music of the spheres that this chapter becomes interesting. "All is number," said Pythagoras; which was developed into "All is number and harmony," based upon the notion that the planetary bodies, in their revolution around the central fire, gave forth a sound. We know how profoundly interesting to the artists of the Renaissance was the half-visionary figure of Pythagoras. He stands in the foreground of Raphael's "School of Athens," with his doctrine of numbers and harmony displayed on a table before him. Dante had already, in the "Paradiso," referred to the spheral music (I, 74). Montaigne used the idea of a spheral music for a comparison, and *Bianca*, in "The Taming of the Shrew," is called "the patroness of heavenly harmony." Passages, too, in "As You Like It" (ii, 7), "What You Will" (iii, 1), "Pericles" (v, 1), and "Antony and Cleopatra" (v, 2) show the deep impression which this Pythagorean theory made on Shakspere. All will remember the beautiful and wonderful passage in the "Merchant of Venice" (v, 1)—a passage which impressed Milton both in his poem, "At a Solemn Musicke," and in his Latin dissertation, "De Sphærarum Concentu," not to speak of a passage from the "Arcades"; while the memorable passage in "Faust" (*Prolog im Himmel*) recalls at once Shakspere and Pythagoras. If analogies between Shakspere and Pythagoras swarm in the realm of celestial music, Hense has still more to say about the singular coincidence between the Shaksperian and the Pythagorean silence. "Control thy tongue and follow the gods" is supposed by Hense to be ridiculed by Shakspere when he makes *Gratiano* say that silence is only to be commended to *smoked tongues* and maidenly souls. His critical method, however, becomes too ethereal when he applies the doctrine of the spheral music to an analysis of the characters of *Portia* and *Shylock; Portia* symbolizing harmony of soul, and *Shylock* disharmony, dissonance, discord, etc. The Pythagoreans, moreover, as we know from Quintilian and Cicero, employed music to rouse and inflame intellectual energy, and soothe the evil passions—facts which Hense correlates with the celebrated passage in the "Merchant of Venice" (v, 1) which classes the hater of sweet music among the lovers of treasons, stratagems, and spoils.

—The third of M. Coquelin's lectures on Molière has lately appeared, 'Tartuffe' (Paris: Ollendorff; New York: F. W. Christern). Like its two predecessors on 'Le Misanthrope' and on 'L'École des Femmes,' it is a discussion of a character which the actor intends to act. In the former, M. Coquelin sought to prove that *Alceste* and *Arnolphe*, although now informed with high serious purpose, were originally, and are essentially, comic parts; and he proved his case to the satisfaction of most students of the French stage. In the present lecture-essay he attempts a far more difficult task: he tries to show that *Tartuffe* also is a comic character because he, the generally accepted type of hypocrisy, is not a hypocrite at all, but a sincere mystic, profoundly believing the Jesuitic doctrines he has been taught. This is a sufficiently startling opinion, but it is the declaration of the manner in which M. Coquelin intends to perform the part in the immediate future. If he succeeds in Paris as he has already succeeded in Brussels and in St. Petersburg, the play, which is as important to the French drama as "Hamlet" is to the English, must hereafter be regarded from a new point of view. M. Coquelin notes that *Tartuffe* is one of the most difficult parts to act; while we all know that *Hamlet* is so easy that no actor of accepted rank as a tragedian ever failed in it. In support of his theory that *Tartuffe* is sincere, M. Coquelin cites the fact that he has not a single aside, "not a word which reveals what he thinks; one might say he avoids talking to himself for fear of deceiving himself." One point is to be noted against M. Coquelin's argument that *Tartuffe*, like *Arnolphe* and *Alceste*, is the chief comic part of the play: Molière did not act *Tartuffe* himself, but he did act both the others. The author-manager cast Du Croisy as *Tartuffe*, while he himself acted *Orgon*.

—The report of the Superintendent of the United States Naval Observatory, Commodore S. R. Franklin, exhibits the operations of that establishment for the year ending October 30, 1884. The present superintendent relieved Rear-Admiral Shufeldt in February, and appears to have been even more fully impressed than his predecessors with the difficulties and responsibilities attaching to the situation; and while it cannot be expected that all the changes he has instituted will be found to contribute to the value of the work of the institution, his general acquaintance with affairs has served him well in the administration of the establishment. The superintendent earnestly urges the necessity of beginning the buildings for the new observatory—for, apparently, no good reason except the fear that the progressive reclaiming of the Potomac flats will soon render the present site healthful, and thus cancel the chief ground for changing its location at all. The new site purchased about five years ago can never secure the unqualified approval of the best judges; and while there is serious doubt whether the advantages to be gained will fully compensate for so great an undertaking, the longer Congressional appropriations are delayed the better. The great telescope, in charge of Professor Asaph Hall, United States Navy, has been kept constantly at work on observations of the satellites of the outer planets, double stars, and stellar parallax; the transit circle has continued the routine work of previous years; the small telescope has been devoted to comets, small planets, stellar occultations, and visitors. The time-service has been greatly extended, through the lines of the Signal Service, and the Baltimore and Ohio Telegraph Company, and the noon signals according to the standard time of the fifth-hour meridian are now distributed from the observatory over eleven wires. Professor Harkness reports the work of the Commission of the Transit of Venus, from which it appears that the measurements of the photographic negatives of the transit of 1882 were completed in August, and very considerable progress has been made in the computations necessary for the reductions of these measurements. The Government stations of 1882 obtained nearly 1,200 available photographs, while Professor Young at Princeton, Professor Todd at the Lick Observatory, and Mr. Willson at New Haven, obtained nearly 400 more, giving thus a total of between 1,500 and 1,600 pictures, three-fifths of which were made at stations in the northern hemisphere. It will be remembered that the number of photographs of the transit of 1874 secured by the Government parties was only slightly in excess of 200.

GALLENGA'S MEMOIRS.

Episodes of My Second Life. (American and English Experiences.) By Antonio Gallenga (L. Mariotti). Philadelphia: J. B. Lippincott & Co. 1885.

It was on the 15th of August, 1836, nearly half a century ago, that the author of these reminiscences embarked at Gibraltar for New York. Born in Parma, twenty-five years before, he inherited from his father, a Piedmontese of "a good old country family," who had served for ten years under Napoleon, a love of study and a taste for military life and adventure, which combined to make him, on arriving at his twentieth year, almost at once a conspirator, a soldier, a

state prisoner, a fugitive, and an exile. For five years he was without a country, wandering from place to place, and earning a scanty livelihood as what a lively acquaintance (who swindled him out of the savings of a year) scornfully called a *marchand de participes*. In this forlorn situation he determined, without much reason, except that it was a "new country," and therefore was supposed to promise the best opening for a young man, to try the United States.

It should be said here, that in his very candid preface the author admits that many of the facts which he narrates are blurred and faded in his memory, through lapse of time, to such an extent that "the *retentive* faculties must, almost unconsciously, fall back on the resources of the *inventive*." It would be easy for the American reader to discover many inaccuracies of recollection in the narrative, such as would of necessity arise from the substitution of the inventive for the retentive faculties; and had the book appeared a generation ago, it would probably have shared the fate on this side of the Atlantic which overtook the chronicles of Mrs. Trollope and the 'Notes' of Dickens—that is, it would have been extensively read, and have caused for its author much cordial detestation. But, having learnt to be less sensitive to the opinions of "abroad," if not, indeed, positively curious to know whether foreigners can say anything worse of us than we can say of ourselves, such a book is rather interesting as a picture of early American civilization as it presented itself to the mind of an intelligent stranger. We read on, not indignantly, but continually amused, from the time when Sig. Gallenga is strongly advised by the Hon. John Madison Leib, who is referred to as having been United States Minister to Tangiers, to give the Western Hemisphere a trial, to that of the refugee's final leave-taking. We say "referred to" as minister, because in our first interview with that official we find him "at work with his Vice-Consul, Mr. Cornelius K. Mullowney," which suggests that we must make a choice here between an improbable confusion in the diplomatic service, and an effort of memory in which retention has been subordinated to invention. But the conversation with Mr. Leib, though reported fifty years after it took place, we feel is in all essential particulars faithfully accurate. It was such a conversation as thousands of active emissaries of the United States were holding with inquirers about the country in all parts of the world, in which the phrases "a big country," "room for all," "your place all ready for you," "it is men like you we want," played an important part, and were accompanied by the most liberal offers of letters of introduction to eminent men on this side of the Atlantic, with whom the introducers often had little or no acquaintance. In Gallenga's case, the letters were to "my friend Edward Everett," Governor of Massachusetts, and "my friend Josiah Quincy," President of Harvard College, where, as Mr. Leib happened to know, they were anxious to create a professorship of Italian literature.

A dreadful voyage the young refugee had in the good ship *Independence*. It lasted fifty-two days, and gave him ample opportunity to become acquainted with his shipmates. The captain he describes as "coming up to the ideal I had, in my silly imagination, conceived of the typical Yankee," viz.: "a white-livered man, with all his blood turned to gall, and a natural intelligence hardened into low cunning." On the other hand, he lets us into the secret operations of the captain's mind, as well as his own, the former having been very curious about a passenger who was "the first Eye-talian he had ever met that was not an organ-grinder or an immidge-seller." They had the worst sort of Atlantic passage in the days when ocean voyages were nearly always bad, and did not reach New York until the morning of October 7, when, arriving half-starved, he was rejoiced to receive the unexpected information from the negro waiter of the hotel to which he found his way, that "feeding-time" was one o'clock in the afternoon.

His first day in New York is most vividly described. Like all foreigners before him, he found that it was a city of one street. He had seen nothing like the bustle and movement of Broadway. He was struck with the composite architecture, amazed at the big hotels, astonished at the lines of shop-windows. At one o'clock punctually he went in to dinner—not dinner as we know it, *à la carte*, with a small table, a special waiter, separate covers, and all the luxury of privacy in the midst of a crowd; but a regular old-fashioned Anglo-Saxon dinner, such as a hotel-keeper in the days of Athelstane might have provided—the board groaning under the smoking joints and profusion of vegetables; the Madeira brought on after dinner; the "guests" apparently all friends, and, we have no doubt, friends also of the gentlemanly host. At this table he fell in with a stranger, whose appropriate name was Peter C. Sconce, who pronounced "India wharf" "Injia hhhwaourf"—the spelling being explained by the fact of Mr. Sconce "rolling it twice or three times through his nose." Mr. Sconce befriended the Italian in various ways, and was "greatly surprised and half offended" when the latter handed him two dollars as remuneration.

But Gallenga was not destined to live in New York. His letters took him to Massachusetts, and there he remained sufficiently long to get a thorough acquaintance with the society to be found there. Cut off as New England was from the rest of the world in those days, the little invasion of it by the band of Italian refugees whom the revolutionary movements of the early part of the century brought over, was a curious historical and social episode. Foresti, Castiglia, Mariotti, Albinola, were names then as well known to a certain part of American society, and that no unimportant part, as Kossuth became afterward to the whole country. They belonged to a class of exiles which now exists no longer. All highly-educated men, most if not all were of good family; they had been driven to cast their lots in the New World through misfortune and disaster originating in the virtue which all Americans could then most easily understand—their love of country. The children and grandchildren of the men who had resisted the Stamp Act, and fought against the oppression of England with halters round their necks, and achieved the independence of their own country, could easily sympathize with the Italian gentlemen who, escaped from long years of persecution, exile, and imprisonment, came here, beggared in fortune and almost in hope, to wait for the signal that was to recall them to the struggle which was the mission and meaning of their lives. Some waited and died waiting; others lived to hear the signal of the liberation of Italy, and return, as Gallenga did, to share the dangers and triumphs of the final conflict. Their lives and hopes appealed most powerfully to the sympathy of all Americans, and gave for the time a romantic tinge to the garish daylight on this side of the Atlantic, which no refugees of our day are likely again to impart.

It must be admitted that most of those early refugees were entirely unfitted, both by habits and education, for a successful career in this country. It was true, as Mr. Leib had said, that their place was ready for them, but the place so reserved was almost in all cases that of an humble teacher of languages—the very career that Gallenga had left the Old World to avoid. Like all his compatriots, he fell into it from want of anything else to do, and the necessity of earning his bread in some way. Into the details of his life here we have not space to enter, but can commend the book to the reader as a vivid if not wholly accurate picture of the society of Boston and Cambridge—chiefly Cambridge—as seen by an "Eye-talian" fifty years ago. The author writes with a frankness unusual even in these unreserved days, and goes so far as to give a full account of his unsuccessful love affairs. It is a legal maxim that there is no better evidence than that which it is against the witness's own interest to give, and on this principle the reminiscences here bear the impress of truth.

In general the picture given by Signor Gallenga will not be found to do more than paint the reality which was caricatured in Dickens's 'American Notes' and 'Martin Chuzzlewit.' He evidently did not like the country at all. It was a barren wilderness to him, with a little oasis of enlightened, cultivated society at Cambridge. But his report is not tinged with malice, though lighted up occasionally with a sly humor, especially when he gives descriptions of some of the Massachusetts worthies of his day, as for instance in the following description of Mr. Everett:

"He was at the time forty-two years old, tall, flat-chested, with a white complexion, large, prominent eyes, a stately forehead, a bland grave countenance. He spoke with the purest English accent, and was remarkable for his sedate, well-bred, but somewhat stiff, overdone English reserve. Like many of the most polished Americans I have known, he seemed to labor under a double restraint: he was too anxious to keep his feelings under control, too much afraid of falling into some Yankee solecism of idiom or manner. . . . He achieved an almost unprecedented popularity as a sacred orator, and I shall never forget my friend, Miss Dwight, and other ladies, whose eyes filled with tears at the bare recollection of the 'sweet white hand' which the young divine waved in the air in the most thrilling moments of his heart-winning perorations—a painful recollection; for, after achieving complete success, he gave up the care of souls, and betook himself to a political career, both he and his brother Alexander being returned as members of the House of Representatives."

The book is full of that shrewd observation which has earned Sig. Gallenga such an enviable reputation all over the world. As a specimen, we may quote a line or two of what he has to say about the great Anglo-Saxon quality of good-will to helpless strangers. He has studied its influence both in this country and in England:

"If you wish to secure an Englishman's or an American's good-will, show him something that he can do for you. So long as he thinks that you need his assistance, not only will he put himself out of his way to serve you, but he will be thankful to you, and like and love you for the chance you give him to make himself useful. If he saves you from drowning, or rescues you from the flames, his affection for one who afforded him an opportunity to show his courage and humanity will know no bounds. But this helpfulness on his part should not be needed twice. . . . If you apply to him twice he will not deny you, but by overtasking his sympathy you will forfeit his esteem."

Sig. Gallenga is now seventy-four years old. He has, since he came here as an exile and a *marchand de participes*, risen to be (in the Old World, to which after a few years he returned) a historian and journalist, a diplomatist under the lead of Cavour, and was at one time called to take part in the Government of the country of his early love. Curiously enough, he admits, with his accustomed frankness, that his long absence from Italy, and his life as observer and critic in England, had denationalized him. From an ardent Italian he had become almost English, and when he went back to his own country his countrymen found him too English for their tastes, too unsympathetic, too much a reformer. But evidently he is enough of a philosopher not to mind this. He has seen the battle for which he

was always ready to give his life fought out, he has seen the dreams of his youth realized in a free and united Italy, and realized not by conspiracy and assassination, but by means of which any country might well be proud.

THE ENGLISH DRAMA BEFORE SHAKSPERE.

Shakspere's Predecessors in the English Drama. By John Addington Symonds. London: Smith, Elder & Co. 1884. Pp. xix, 668.

Mr. A. W. Ward's two volumes on 'English Dramatic Literature to the Death of Queen Anne' (Macmillan, 1875) were the first work of the kind adapted to the wants of the general reader. Those who have had, like ourselves, constant occasion to consult them, will readily bear witness to their exceeding utility. Yet, as the years roll on, the need makes itself felt of bringing them more in accord with the results of recent investigation. Whether Mr. Ward intends making a thorough revision of his work is a point on which we are not informed. Such revision is undoubtedly called for, and the present book by Mr. Symonds is the best evidence thereof. The younger writer has, of course, profited by the labors of his predecessor. In most features this book, so far as it covers the same ground, is a decided improvement. It differs both in scope and in method. In scope, Mr. Symonds has naturally the advantage, giving as he does nearly 700 pages, in lieu of the corresponding 270 in Mr. Ward's first volume. As to method, we can scarcely characterize the difference more succinctly than by stating that, whereas Mr. Ward deals more with the statistics of the subject, Mr. Symonds gives more of its organic life, its movement. Hence the present work is much more readable. The reader will gain from it a much more vivid sense of what the old English drama really meant, the circumstances amid which it grew up, the agencies and forces at work upon it. On the other hand, we suspect that the earlier work, despite its need of revision, is, in the main, a safer work to follow. Mr. Ward's style, we admit, is often pragmatic and in places even arid. It is not a style to win the reader. Yet it is honest and healthful. It never seeks to bribe the reader's judgment. Whereas Mr. Symonds writes only too often in a manner that savors more of the lyceum and the debating-hall than of the historic page. On many points craving for effect warps his style into false rhetoric, blinds his judgment, and even deflects his assertions beyond the strict line of truth. What else can we say of a writer who informs us, p. 630, that "this epic [viz., the Faust story] is strictly Northern and Teutonic. There is no conceivable period of Italian literature in which it could have been created. The cold, remorseless revelation of Hell . . . breathes the scornful imagination of Beowulf's posterity. . . . The purchase of knowledge, power, and enjoyment . . . is a tragedy . . . which has for its dim background the sublimely sombre religion of the Eddas." And more in the same strain. Now all this is not true. Had Mr. Symonds taken the pains to study the genesis of the Faust story before trying to outdo Marlowe himself, he would have discovered that Italy *had* a good deal to do with its formation, and that the posterity of Beowulf and the Eddas had *nothing*. Does Mr. Symonds suppose that the posterity of Beowulf is to be found in England or in Germany? St. Augustine, Simon Magus, Cyprian the Magician, the Magician of Norica, Faustus Andrelinus of Paris, who contributed each his quota to the witches' cauldron of the Faust book—do they belong to Teutonism? Perhaps they reflect the religion of the Eddas?

In other places Mr. Symonds errs through following Mr. Ward too closely. We cannot otherwise account for the attempt, p. 98, to connect the beginnings of the mediæval church plays with the office of the mass. In the preface he alludes to the disadvantages of composing such a work in the High Alps, away from all libraries except his own. Yet surely a book like Aubertin's 'Histoire de la Littérature Française au Moyen Age' is procurable anywhere, and Aubertin, although not professing to be an original investigator, would have given our author an altogether different estimate of the liturgical drama. In general the third chapter, Miracle Plays, is the weakest portion of the book. It abounds in inaccuracies, and is altogether too meagre and superficial a treatment of a subject that appeals to the scholar. Yet even here the author flashes upon us a brilliant idea, as p. 116: "How little can we really judge the artistic effect of a Miracle from the libretto which was merely meant to illustrate a grand spectacular effect!" This comparison of such a text-collection as the Towneley or the Coventry to a libretto is happy, and admits of a stricter application than its originator seems to be aware of. The stanza-structure of many of the speeches tells us plainly enough that they were not declaimed, but either sung outright or delivered *recitativo*. Another suggestive passage is at pp. 13 and 25, where the author calls our attention to the fact that whereas other European nations in the Elizabethan period had various modes of art-expression, England had only its poetry, still more narrowly, its drama. The stage was the sole place where the national heart could find itself. Put thus bluntly, this seems to ignore non-dramatic poets like Sidney and Spenser. Yet Mr. Symonds keeps within proper bounds.

Comedy is much harder to treat of than tragedy. Hence chapter v is inferior to chapter vi. In fact, we suspect that Mr. Symonds has not yet cleared up his mind upon the fundamental difference between true comedy and farce. Apparently he is of the opinion that the moralities developed into comedy, and that John Heywood was a prominent founder of English comedy. To our mind the morality never got and never could have got beyond the farce. And Heywood is a mere writer of farces. The late William Wagner announced this axiom seven years ago, in his searching review of Mr. Ward (*Anglia* I, 168). The latter had committed the startling blunder of ascribing to Heywood an "Aristophanic" vein. But our author matches this by discovering in the same Heywood the spirit of Chaucer, p. 185, calling him, p. 188, "a prose Chaucer," a "Chaucer without his singing robes." Whoever can find in bluff, crude John Heywood one atom of Chaucer's *Schalkheit*, *esprit*, and *grazia*, must have an uncommonly keen eye. Besides, how can the Interlude be called "a specifically English form of comedy" (p, 184)? The whole species has an unmistakably Gallic twang, as Aubertin would have shown, had he been consulted.

Mr. Symonds's critique of the Senecan tragedy and its baleful effect upon the nascent drama of Italy and of France is excellent. We do not remember seeing this part of the subject put more forcibly. Yet he overlooks, as Mr. Ward does not, one practical gain from Seneca for the modern stage, viz., the five-act arrangement. On the other hand, he gives us, and Mr. Ward does not, a realizing sense of the conflict in sixteenth-century England between the Senecan spirit of the "Gorboduc" writers and their university clique and the folk-spirit which was to triumph in Marlowe and Shakspere. We call especial attention to p. 259: "Perhaps we cannot penetrate deeper into the definition of the Romantic Drama than by saying that its characteristic was to be a represented story. In this it differed from the classic or Athenian drama; for there, although there lay a myth or fable behind each tragedy, the play itself was written on some point or climax in the fable." Without pausing to cavil at the term "Romantic" (now fashionable in England), let us admit that while we have all felt more or less the distinction thus drawn, no one before our author ever drew it so boldly and clearly. All that remained for him to do was to point out the direct influence of the church-plays and chronicle-histories in rendering the "Romantic" drama possible. This he has neglected.

With chapter viii, on Theatres, Playwrights, etc., the subject will become more familiar to the general reader. Doubtless it would be possible to detect an occasional slip; but in the main the chapter is very instructive reading. In speaking of boy-actors, the author suggests, p. 302, "that plays expressly written for them—those of Jonson [why not also Lyly?], for example—took a certain fixity of type and hardness of outline from the exigencies under which the poet worked. Compared with Shakspere's art, that of Jonson is certainly distinguished by formality." This may be true. Yet we are disposed to search for the "formality" in Jonson and Lyly themselves. And then, did not Shakspere write the parts of *Rosalind*, *Juliet*, *Desdemona*, *Cleopatra* for boys, but without a trace of "hardness of outline"?

The chapter on Masques is interesting and extremely valuable, but it seems to us out of place in a work on Shakspere's predecessors. It belongs properly to the Jonsonian period. By far the most novel and most valuable chapter is the eleventh, Domestic Tragedy. Here more than anywhere else has Mr. Symonds improved upon Mr. Ward. Jusserand, in his 'Théâtre en Angleterre,' made a fair beginning, it is true, but the present chapter leaves Jusserand far behind. It is a just and ample treatment of a commonly ignored branch of the dramatic art. We hope that some of the German readers of Mr. Symonds will utilize it in their Lessing studies, for Lessing was a stanch admirer of the English *tragédie bourgeoise*.

In the group of dramatists immediately preceding Shakspere, Lyly has fared the best at Mr. Symonds's hands. At least the chapter devoted to him is fresher, more original. What our author has to say concerning Greene, Peele, and Marlowe (for Lodge the reader is prudently referred to Mr. Gosse's 'Seventeenth Century Studies'), moves within lines too conventional to satisfy us. At the present day it is not hard to get a partial hearing for Marlowe. His genius is patent. Yet there are many points in his style and treatment which demand more minute investigation than Mr. Symonds has deemed it worth while to give. One of the English reviewers of Mr. Bullen's recent edition of Marlowe has said naïvely, that "it is next to impossible to say anything fresh about Marlowe." Is this the language of plaintive despair, or of complacent satisfaction? Either way it is absurd. "Faustus" alone can give employment to a school of critics. What we need is, not rhetorical disquisition, but exact and exhaustive scholarship. For instance, which of the Marlovians, past or present, has bethought him of the simple device of reprinting verbatim, side by side, the editions of 1604, 1609, and 1616? Yet until this is done, no student of "Faustus" can be sure of his foundation. Then as to Marlowe's blank-verse, it is not enough to praise it; one should understand it. We regard our author's account of the genesis and structure of blank-verse in general as not only unfortunate, but actually misleading. It spreads darkness rather than light. Vainly have we tried to understand such oracular utterances as these (p. 593): "The heroic line . . . is native to our language; combining, as the language itself com-

bines, indigenous Teutonic and exotic Latin qualities. The omission of the rhyme, to which it was originally linked, does not structurally alter it." What is the heroic line? The five-measure rhyming couplet, *e. g.*, as used by Chaucer. This was borrowed from the French, and has not a trace of indigenous Teutonic quality. And who can admit that the discontinuance of rhyme is not a radical alteration of the structure of verse?

Robert Greene meets with scant justice. We read the old story of debauch and death-bed repentance, of time wasted and friends alienated, of writing for ready sale and wilfully foregoing true fame. The story may be true. But we have our doubts. No one yet, to our knowledge, has sifted the evidence upon which the story rests. Is Gabriel Harvey a trustworthy witness? Are Greene's pamphlets truly autobiographical? To us the 'Story of Francesco' and the preamble to the 'Groat's Worth of Wit' do not differ, in essentials, from hundreds of the so-called moral tales of the Italian and French "novelists." If our readers will turn to the *Englische Studien*, vii, 111-124, they will find there reprinted a story entitled 'A Pennyworth of Wit,' which is at least first-cousin to 'Francesco.' It is quite among the possibilities that Greene anticipated the nineteenth-century trick of trading on a reputation for wickedness. And if we hunt down the autobiographical too closely, what will become of the author of 'Captain Jack' and 'Moll Flanders'? Greene was the most versatile writer of his day. He had, what Marlowe had not, a clear sense of humor. His "Friar Bacon" is a fair travesty of the grim horrors of "Faustus." The tone of his writings is healthy, and he certainly preaches no false doctrine. We hope that some one with the opportunities will rehabilitate him.

To revert to Lyly, we think that he has been well handled. He is, we know, caviare to the general. His pretty lines have mouldered as effectually as the lace ruffles of Queen Bess or the embroidery of Sir Walter Ralegh's cloak. Yet they are undeniably pretty, and Mr. Symonds is not slow to acknowledge it. "The lyrics are as neat and delicate as French songs. Some of the scenes suggest antique sculpture, or the subjects of engraved gems. After making due allowance for the alloy of conceits which mingles with the finer ore of his productions, Lyly's style deserves to be called Attic," p. 516. Again: "In clear simplicity and perfect outline this picture [of Diana cutting Cupid's wings and burning his arrows, in 'Gallathea'] resembles an intaglio cut to illustrate some passage of Anacreon," p. 529. Mr. Symonds calls attention to the underplot of *Phyllida* and *Gallathea*, two girls disguised in male attire. Each, knowing herself to be a girl, falls in love with the other, supposing the other to be a boy. The situation is brilliant, all the more so when we remember that the girls of the Elizabethan stage were only trained boys after all. And Lyly's handling is faultlessly delicate. "Gallathea" must have taxed to the utmost the children of Paul's, and the audience must have appreciated its cleverness. Of course it is a trifle; but was it less for the sixteenth century than the "Sleeping Car" and the "Elevator" are for the nineteenth?

How Mr. Symonds, who is in general at his best in treating Lyly, should write of Euphuism as he does, is a puzzle. Landmann's essay before him, he reiterates the old confusion of Guevarism and Italianism, speaks of Shakspere as Euphuistic, and in general obscures everything that Landmann and his reviewers have just succeeded in clearing up. We have neither time nor patience to discuss the matter here. Taken all in all, Mr. Symonds's book will attract many a reader to the study of our early drama. In view of this great practical gain, we can afford to close our eyes to many minor defects of style and inaccuracies. Perhaps a more careful writer would not have succeeded so well. The usefulness of the book would be greatly enhanced by an index.

RECENT NOVELS.

In War Time. By S. Weir Mitchell, M.D. Boston: Houghton, Mifflin & Co.

Madame. By Mrs. Oliphant. Harper & Bros.

Bound Together. Tales by Hugh Conway. [Leisure Hour Series.] Henry Holt & Co.

Noble Blood. By Julian Hawthorne. D. Appleton & Co.

True, and Other Stories. By George Parsons Lathrop. Funk & Wagnalls.

Peril. By Jesse Fothergill. [Leisure Hour Series.] Henry Holt & Co.

My Lady Pokahontas, Writ by Anas Todkill. With Notes by John Esten Cooke. Boston: Houghton, Mifflin & Co.

Doctor Grattan. By William A. Hammond, M.D. D. Appleton & Co.

Daddy Darwin's Dovecote. A Country Tale. By Juliana Horatia Ewing. Boston: Roberts Brothers.

THE author of 'In War Time' has sketched a group of very life-like personages. He has, moreover, surrounded them with an atmosphere which has a tint of its own. Nor is this effect produced by means so obvious as names of streets or the use of local customs. There is no attempt at disguise of them, but it is not through them that the stranger who may not know Philadelphia is made to recognize a society and its surroundings that are clearly neither of New York nor of Boston. One cannot cite paragraph or page, but, taken as a whole, the nameless something is in the book by which one social circle is distinguished from another. What makes this little world seem more easy and less self-conscious than Boston, more steady than New York, is not to be hit off in a single phrase about Quaker traditions, nor have we room to analyze the subtle differences. Suffice it to say that it is there to give charm to Dr. Mitchell's story.

The idea which underlies the whole can be put in more than one way, even if we forbear any special application to the medical profession: for the soul ignoble by nature there is no hope. A man capable of one cowardly act will surely fail again, under strain. Dr. Wendell could desert his helpless patients in the field-hospital when it was reached by the advancing fire of the enemy, so he can shield his own fatal mistake at the expense of others. This theme is clearly presupposed and carried on throughout the book. The people who surrounded Dr. Wendell are, as we have said, life-like. They are interesting. Some are beautiful and some are brilliant. Given, then, a well-considered theme, and characters in themselves of much more than ordinary promise, why does the book fail of great success? Simply because the third indispensable element is wanting. The story, the incidents, the action—the three terms mean the same thing—lack point and coherence. The power of combination is wanting. The moment the people who are so delightfully described are set to do anything, they become futile or illogical. More than one path is opened in which the reader's conjecture loses itself for nothing. More than one thread is started only to break off abruptly. The war furnishes only a background (and a remote one at that), not motives. A chance meeting at a hospital provides the heroine of the *ingénue* type, but the other incidents taken from the war, except the affair at the field-hospital, are not essential. Dr. Mitchell expects too much credulity from his readers. That a man endowed with every keen and fine sense becoming a gentleman should go to tell the lady who has refused him, that the man he fears she may marry is an arrant coward, is too unlikely. The same keenness of sense which is supposed to prompt him to such a duty would have told him that either the lady herself would have discovered the defect of nature, or that in the other alternative his mission would be hopeless and humiliating. The final catastrophe is too shocking. True, life itself is more dreadful than any fiction; but life proves itself always inevitable. Here the reader saves his sympathy by more than one too obvious chance of escape, and insists it might have been otherwise—so, or so.

It never can be wise to neglect the old rule, discovered long before the evolution of the modern novel, that the principal figure must, so to speak, command the reader. It will not do to make him either a villain or a coward. Be the end never so tragic, the feeling excited must be only terror or pity. If the pity passes into contempt of the man, it is all over with admiration. The sorrowful fate may be heroic, the craven heart never. To have made a man like Dr. Wendell the centre of the action involves the double difficulty, that the reader cannot care for him, and that no other character seems to be natural in any relation to him, for a high-minded, sensitive nature must have felt the fatal want in him. Let the reader drop the last quarter of the book, when it is clear that the young lovers are to be happy, and there is yet hope that Mrs. Westerley may rouse some latent good in Wendell's nature, and he will remember the pleasant pictures, the delicate characterization, the bright sayings in it, rather than the inadequate construction which the reviewer is forced to point out.

Mrs. Oliphant, in 'Madame,' shows us how the well-practised hand will make use of such a character as Wendell's only as a side figure, to supply secondary motives for the action. The small nature, incapable of anything noble or elevated, accepting any sacrifice, is never brought forward for any strong contrast. It is only a very young girl or a very silly old woman to whom he can be of consequence, except for the unquestioning, unfailing devotion of a mother. The story is slighter than we have had of late from Mrs. Oliphant, but it is a beautiful treatment of a subject by no means common—the devotion of a daughter to the father's second wife, who has been grossly wronged by him in a momentary fit of impatience. The old servant woman is the one figure that does not harmonize. She had prototypes for her harshness and violence in the earlier 'Chronicles of Carlingford,' and we are sorry to find her again.

'Bound Together' means nothing more than the binding which holds together a dozen short stories, three of them reprinted from *Blackwood's*. Like the three on our list by Mr. Julian Hawthorne, they almost without exception end with a sudden turn, a surprise. To be thus astonished is rather a pleasant experience in the mood in which one turns to a magazine story, but in a collection the sameness palls. Not that there is not great variety in the endings before us, but it is the surprise that remains in the mind, not the particular kind of it; and we grow tired. The most of the subjects are old, not to say trite. A mistaken identity, a madman's revenge, the beautiful temptress, a long-hidden right to nobility—every one can tell such a story beforehand. The best-sustained of Mr. Conway's is the shortest, "A Speculative Spirit," which is so well managed that for once the surprise is unexpected.

As to Mr. Hawthorne, his aim at effect seems to result in intensity of momentary impression,

which is by no means real strength. Realism depends for its success upon the accuracy and force of the details and upon the skill with which they are grouped. Romance depends upon the subtlety of the suggestion. If Mr. Hawthorne means to be realistic, the work is too hap-hazard; if romantic, it is too crude and bald.

Mr. Lathrop's little story of 'In Each Other's Shoes' is welcome in permanent form to those who enjoyed it as an unusually good presentation of the possible results of a happy accident, befalling a man already endowed with brains and with pluck. 'True' is a small novel, rather rapidly worked out, on the old plot of two brothers in love with the same girl. It is rather a heavy strain on the theories of heredity to apply them to imaginary descendants of the colonists lost from Roanoke Island.

Miss Fothergill loses rather than gains in her successive efforts. Even 'Kith and Kin' hardly made good the promise of 'The First Violin.' She now attempts to portray in 'Peril' the danger of yielding to caprice, and balances the weakness of her heroine by her suffering and her repentance of the consequences. It is hard to like her, for her first caprice is nothing less than a wicked fit of jealous temper; and the second, while it might be a despairing struggle for reparation, is made to seem more like the freeing of her own soul from a burden, no matter what it costs others. The plot looks so impossible when reduced to its lowest terms that we produce it, to astonish our readers.

Peril, exasperated by the discovery that her cousin Hugh loves not herself but another, betrays a kind deed of his to their old grandfather. He, being a hard-headed, unrelenting old millionaire, disinherits Hugh, leaving all the fortune to Peril, on condition that she does not marry before she is twenty-five, and dies forthwith. Peril bitterly repents, and insists on giving all to Hugh, who, of course, refuses. She will not touch a penny of the money, and goes off into the country, while Hugh learns a carpenter's trade and sets out for Australia. In no long time there turns up in the country, as the brother of a new-made friend to Peril, a clerk from her grandfather's counting-room. He has loved Peril from a distance, knowing her slightly, but she has no suspicion of this. It occurs to her (whether out of the fathomless depths of her despair, or out of the author's ignorance of feminine human nature, may be according to the reader's point of view) to ask this man in so many words to marry her. Queens do that. Mrs. Oliphant's pretty Zaidee did it, but she was a child. There is no occasion to be shocked about it, as propriety might suggest. The insurmountable difficulty is, that the idea would never come to a woman with the experience of at least one love affair. However, Lawford accepts Peril, not daring to betray his own love, and trusting to save her from misery. He discovers directly, or thinks he discovers, that she has supposed him capable of being bought off after the will is frustrated, while she discovers that Hugh is believed to be dead. Here Hugh's original love appears and sends Lawford off to find him. It is not quite clear how, but somewhere Peril's love for Hugh has died; so when he is brought back by Lawford she is ready to love the latter, after there has been a due amount of mutual misunderstanding and self-torture. It is plain that not one of the incidents is new except Peril's offer, and that does anything but give an air of reality. The style is, to say the least, rough. The mastery of a woman by a man is an accepted figure of speech, but it is not an agreeable stretch of the metaphor to say, "If Lawford should once succeed in getting a grip of the girl's spirit, . . . the crisis would be over." This, it should be noticed, is "the inner conviction" of the beloved of Hugh, of whom it is said, "Mentally and morally she was well-endowed, perhaps even in the aristocracy of that invisible world." The context supplies no antecedent for the phrase "that invisible world" except in the adverbs "mentally and morally."

'My Lady Pokahontas' is a very graceful and pleasing sketch of the Indian princess. It purports to be the tender recollections of one of Smith's companions set down when old and garrulous in his English home. "I who had laughed at Smith for calling the blessed maiden his guardian angel, now bowed down before her, and, though no vain and foolish Papist, but a good Puritan of Puritans, made her my Saint Pokahontas." To say that the author has not fully succeeded in an archaic style, is but another way of saying no one has, unless it were Thackeray. It makes but little difference, since the manner throughout is so agreeable and the handling now and then shows so true a poetic touch. By an admirable ingenuity, the notes which in fact supply the authorities, are so worded as to produce the effect that the page before us is a new and added corroboration to them, not made up from them. The book ought to find its way where it can give the first impression to young minds of the most picturesque episode in annals which they find for the most part colorless. With this thought in view we should have preferred to be spared the uncouth figure on the cover. Old Todkill's "gracious image" and "the fair flower of her small head" had better have been left to fancy. The figure we suppose taken from the De Passe engraving, which certainly is itself somewhat grotesque; but those who have seen the original picture say that it has great delicacy and beauty of expression. When from this woodcut we can reproduce the three white ostrich feathers of the fan and the golden band about the hat which should have the effect of a coronet, while the hat is merged in the background of the picture, then we can understand of the face that "she looks at once royal in birth and in nature." In all other respects the little volume, with its open type and wide margins, is most attractive.

It will be just as well merely to refer to our judgment of 'Lal' as to repeat it, for nothing better can be said of 'Doctor Grattan.' The professional part of the book is occupied with the craze of Francis Lamar, a man who believes himself to have been "a slave captain." Anything may happen within the domain of the alienist, and therefore this may pass. Grattan falls in love with the insane man's daughter, and meanwhile fills up the leisure of life in a small remote village by writing 'The Doctor's Novel.' On the last page he shows it to Miss Lamar, saying, "See how beautifully I have brought the hero and the heroine out of all their troubles!" She replies: "You have such a correct idea of women that I am sure every woman in the land will want to read your book, and see the man that wrote it." Why did not Dr. Hammond give us Dr. Grattan's novel instead of his own? The latter is very severe upon "the insipid stuff which has recently been lauded to the skies by a narrow coterie as segments of the long-looked-for American novel. . . . He skimmed over, with an indifference amounting almost to contempt, the pages filled with descriptions of uninteresting and lack-lustre men and women." What could he have thought of Dr. Hammond's description of himself? "The doctor was a widower. He had never again entered into the marriage state, though he had not arrived at the determination to remain single with that mature consideration of the subject which he gave to every matter of any importance." The climax is reached under the shelter of a friendly rock, where hero and heroine are benighted in a wild snow-storm. "He had thrown off the actor's trappings, and his true nature was once more in the ascendant." The decisive moment arrives. "And now I tell you without impulse, but with a calmness which I hope is based on my knowledge of right and wrong, that I love you." Is this "lack-lustre," or is it not? There is something amusing in the way in which the inexperienced and the unwary supply the critic with verdicts upon themselves.

From all these exaggerations and discords between intention and execution, it is like turning to the perfection of a flower to open Mrs. Ewing's last sketch. 'Daddy Darwin's Dovecote' is less than 'Jackanapes' only in that its simpler, homelier theme does not offer quite such full felicity of subject. How well done was "the setting of a wild graft on an old standard" is told from the talk of two old gaffers gossiping on a sunny wall. There is the same delightful, suggestive commentary in homely proverb or tender household word as made the earlier story a poem.

Flatland. A Romance of Many Dimensions. By A. Square. London: Seeley & Co.; Boston: Roberts Bros.

In this charming little volume a mathematician imagines a vast plane filled with a highly civilized two-dimensional race of beings, who think they know all about the universe, but who have never conceived that there is a third dimension existing on either side of them. Their mode of life is very cleverly worked out from our point of view, but of course to form a picture, free from inconsistencies, of life in a plane is no more possible to us than to conceive of a fourth dimension. The book purports to be written by a square who has been granted a vision of three-fold space, and whose attempt to enlighten his countrymen receives its natural reward in life-long imprisonment. His own initiation into a third dimension was only brought about by violent means, the argument from analogy having fallen upon dull ears. A Square is, of course, a being who imagines himself to be entirely shut in by his periphery. It is inconceivable to him that his inside can be got at without breaking through his boundary lines; and when a three-fold being suddenly knocks him out of his own plane and into another, it seems to him that he has received, by some magical means, a blow from the interior of his body, by which he is moved, but in such a way that no point passes through a point previously occupied by another point. The most amusing passage in the book is that in which the square, delighted with his new achievement, and thirsting for yet deeper knowledge, turns against his teacher his own argument from analogy, and insists upon his turning himself inside out without breaking his skin, and moving himself about in such a way that no point in his body moves in the direction of any point of the surface.

The question, What is the fourth dimension? is, we may add here, discussed by Mr. C. E. Hinton in a pamphlet of that title, but he does not propose any decisive test for its existence. Imagine a lot of threads stretched at different angles to a moving plane; an inhabitant of the plane would be aware of them only as moving points. Conical configurations of the threads would give him shifting figures in his plane, and all the phenomena of life and motion could be explained as the successive cuts made by his moving plane in the stationary threads. There would be no such thing as cause and effect, but only a gradual realization in a superficies of an already existing whole. So what seems to us a succession of events may be only the gradual passing of our space through a world of figures of a higher order; our consciousness of things may be a spatial profile of some higher actuality; semblance of change may be merely due to the shadows cast in our space by real existences of four dimensions.

Thus mathematics comes to the aid of philosophy, and shows that it is quite possible that the world as known to us exists only in the mind of the four-dimensional being who conceives us.

History of Gustavus Adolphus. By John L. Stevens, LL.D., recently United States Minister at Stockholm. G. P. Putnam's Sons. 1884. 8vo, pp. 427.

It could be said with truth, a few years ago, that the Thirty Years' War was less understood (or more misunderstood) than any event of equal magnitude in modern history. By the publication of Mr. Gardiner's little work in the "Epochs" series, and still more of the recent translation of Gindely's history, this obscurity has been largely cleared up, and the great contest has taken its proper place in its relation to other historic events. It is very well that the publication of Gindely's work is followed so soon by a biography of the principal character of the war. The historical sketch needs for its completeness a just conception of the personality of its hero; and the biography, on the other hand, gains in effectiveness by a better knowledge of the series of events. It is as a biographer, rather than an historian, that Mr. Stevens has best success. The leading characters of his work—Gustavus himself, Wallenstein, Ferdinand, and others—are delineated with care and skill; and the events of the career of Gustavus are narrated in a clear and animated manner. The historical sketch which introduces the book is, on the other hand, neither lucid nor always accurate; from the revolution which placed Gustavus Vasa upon the throne, there is an improvement in these respects, and the chapter which describes the causes of the Thirty Years' War is really good, although inferior to the biographical chapters in merit. The descriptions of battles are clear and animated, but suffer from the want of plans and maps. For an example of confused narration in the historical sketch, we will refer to the account of the origin of the Folkungar (pages 14 and 15).

We will mention a few errors or misprints which we have noticed. On page 3 the *Suiones* of Tacitus are called *Sueones*. The Union of Calmar is placed (p. 15) in 1387 instead of 1397. The son and successor of Christian I. in 1481 is said to have been Christian II., instead of John (Hans); but a few lines below Hans is spoken of as "the son of Christian"—by which the reader would certainly understand Christian II. On page 76, where the controversy between Skytte and Oxenstiern is described, "the first" is used, evidently of Oxenstiern, while the grammatical connection would require it to relate to Skytte. There is an excellent portrait of Gustavus Adolphus, but no index.

The Continuity of Christian Thought. A Study of Modern Theology in the Light of its History. By Alexander V. G. Allen, Professor in the Episcopal Theological School in Cambridge. Pp. xiii, 438. Boston: Houghton, Mifflin & Co. 1884.

In the *Princeton Review* for 1882-83 there appeared two articles by Professor Allen, upon the "Theological Renaissance of the Nineteenth Century," in which he laid down the proposition that the tendency of modern religious thought was toward an ideal of God and of Christ which could only be found by going back to the writings of the early Greek fathers. This same thesis was still further maintained by the author in a series of lectures given at Philadelphia in 1883, and now these lectures have been expanded into a considerable volume. Mr. Allen writes in a beautifully simple and vigorous style. His leading thought is clearly defined in his own mind, and hence becomes absolutely clear to the reader. He approaches his subject from the dispassionate point of view of the historian seeking after truth rather than from that of the theologian having his truth already in hand. Naturally, the greater part of the book is occupied with an explanation of how the gap between Athanasius and Schleiermacher has been filled up. If we are to accept Mr. Allen's conclusion, we must believe that fifteen out of the nineteen Christian centuries have been wholly off the track in their speculation upon the relations of God to his universe. At all events, the dominant theology of the Latin church, from Augustine to our own time, has been opposed to that view of the divine nature and activity which is found in the writings of Justin, Clement, Origen, and Athanasius, and which now again is coming to the front in the influence of Schleiermacher and his school, and in the higher thought of the "New Orthodoxy." It is, therefore, the author's purpose to show first the distortion and corruption of theology which this dominant tendency produced, and then to trace the lines of opposition, feeble and obscure, which through all this middle period were never wholly put out of sight.

The root of all evil in the Latin theology is found in the conception of God as a being removed from the universe, and governing it as an outside manager; this conception carrying with it another—the necessity of a restoration of unity between God and the universe by means of some scheme of reconciliation. From these fundamental errors we are shown how the whole great structure of mediæval theology grew up. In the reform of the sixteenth century these same errors were perpetuated. The Calvinistic God was even more sharply separated from humanity, the scheme of reconciliation even more coarsely material, than the Roman. Yet in these reformatory efforts, and growing out of the freedom of thought which they made possible, we are led to see the rise of a wholly new form of speculation, sweeping on in the eighteenth century to such extremes as agnosticism, deism, or atheism. Then, as the religious need of men began once more to make itself felt, came the reaction which Mr. Allen calls the modern renaissance in theology. In this new theology he discerns a restoration of the early Greek thought. Once again theology rises to the conception of Deity as a power indwelling in the heart of man, and of Christ as an eternal incarnation of God, not restricted to the historic Jesus, but, as Justin and Clement also believed, co-eternal with God, existing from all time, an essential element in the divine nature.

These two ideas alone—or, rather, the one idea of the incarnation in his meaning of the term—Mr. Allen regards as the sole essential of Christian theology. His list of non-essentials, given in an introductory chapter, includes almost every point upon which we have been accustomed to hear the loudest controversy. It includes the questions which have divided almost all sects from each other, which have caused this or that form of church government to seem the only proper one, which have caused persecutions and inspired martyrdom. In one word, from this point of view the whole history of Latin Christianity appears like a vague and empty contest over things which in themselves were wholly foreign to the spirit of that religion for which they seemed to stand. And, on the other hand, the recognition of the two fundamentals here pointed out would seem to break down all barriers, and open the way for a gathering of all extremes into one united church of God, resting upon the Eternal Reason as the reconciling agency between God and man.

This book cannot fail to commend itself to that great body of persons, in or out of the sects, who are tired of controversy, but who will not seek repose at the cost of either their religious instinct or their own reason. It is a valuable contribution to the literature of broad and liberal faith, but is sure to meet vigorous opposition from the narrower tendencies of all sects—perhaps most of all from that sect to which its author, by formal connection, though it is hard to see by what community of spirit, seems to belong.

Victor Hugo. By Paul de Saint-Victor. Paris: Calmann Lévy; New York: F. W. Christern.

The late Paul de Saint-Victor's notices of such of Victor Hugo's books as were written in exile or since his return to France and of some of his dramatic works on the occasion of their reappearance on the French stage after an interval of forty years, have been collected by admiring friends and are presented to the public in the handsomely printed volume before us. Opinions vary as to Saint-Victor's merit as a critic. While some extol him to the skies as the peer of Jules Janin, "ce roi des critiques," others hold that he lacked that most essential quality in a critic, judgment, while they accord to him a rare facility of expression, a dazzling and very effective use of the brilliant imagery of the Romantic school. Neither of these opinions can be accepted *in toto*. Viewed from a certain standpoint, their contradiction is more apparent than real. Janin, like Saint-Victor, was gifted with rare facility; but his style was more free from Romantic exaggeration, very brilliant, witty, and perfect in its correct elegance. No man ever wrote better French. Yet, how many of his *feuilletons*, after keeping the reader captive under their subtle charm, have left him completely ignorant of the merits or faults of the book or play discussed by the critic! It was like following the flight of a butterfly and losing sight of the particular flower from which the beautiful insect had sipped the honeyed dew. Saint-Victor never flutters so daintily; he soars high, as becomes a true Romantic, but he does not lose sight of his subject. If, as in the case of Victor Hugo's books, his affection and admiration are concerned, he raves about the author's genius, quotes and repeats to satiety what is beautiful, clothes in tinsel whatever is obscure, and shows himself so much in earnest that he almost convinces us against our will.

His style does not dazzle us with sparkling wit: it moves us by its vehemence and earnestness. He does not lack judgment, but his judgment is sometimes warped by his feelings, though only as regards the literary merit of the work before him. When he has to deal with facts or principles, he does not hesitate to speak the truth; not harshly but plainly. An ardent admirer and loving friend of Hugo, he finds excuses for the incongruities which so startlingly appear in the midst of the poet's finest inspirations—"faults as rugged and salient as the knots of an oak or the asperities of a mountain—the whimsical conceits, the metaphor carried to excess, the uncouth puns, the incongruities of thought and rhyme." To him all this is but "the overflowing of poetic animation in strength—the playfulness of a colossus. Hugo's Herculean jokes remind one of those of Samson, the Biblical hero." Well might Victor Hugo write to him, apropos of his article on 'The Toilers of the Sea': "One could write a book merely for the pleasure of having you write a page."

But the critic is more uncompromising when he takes the poet to task, regretfully, for his contempt of historical truth in portraying Mary Tudor as unchaste, or in robbing Henry of Navarre of the legendary kindness of heart and solicitude for his subjects' welfare which have so endeared him to the popular heart. Nor can he admit that the poet who found such patriotic

strains in which to deplore the misfortunes of France in 'L'Année Terrible,' can be justified in shedding tears over the vanquished Communists, and establishing a parallel between the frantic efforts of madmen and the heroism of patriots.

To conclude, let us say that this collection of articles, written at different periods, not only is interesting for the anecdotes and the dissertations on men and things in which it abounds, but will be found an excellent guide to the study of Victor Hugo's stupendous work as a poet (Saint-Victor prudently ignored him as a political writer). One of the best pieces in the collection is an unfinished review of 'Les Misérables.' The first chapters of this book were hailed with so much fervid admiration by Saint-Victor, in the journal *La Presse*, that the imperial police deemed his articles dangerous to the public peace, and an official warning checked his enthusiasm. The half-written review was hid away in the critic's drawer, whence it emerged only after his death.

Some Heretics of Yesterday. By S. E. Herrick, D.D. Boston: Houghton, Mifflin & Co. 8vo, pp. 320.

THIS is a course of lectures, called out by the Luther centennial of last year and delivered by Dr. Herrick to the young people of his church. They cover a considerable range of time (from Tauler to Wesley), but make no pretence at completeness—are rather a series of independent sketches than a continuous work. We have lectures upon Melancthon and Calvin, but not upon Luther or Zwingle; upon John Wesley, but not upon George Fox. Under the title "Coligny" we find an interesting sketch of the French Huguenots; under "William Brewster," of the "Independent" movement in England. The object of the course is ethical rather than historical—"to show that the revolt [against traditionalism and authority] neither began nor ended with Luther—if indeed it can be said to be finished yet; to follow it in its gradual development in principle, and trace it in geographical and national expansion; at the same time to exhibit it concretely in the lives of its leaders, and so to bring the reader into personal sympathy with them and awaken an interest in personal investigation." For this end the lectures are excellently suited: their style is that of the *lecture* rather than the *essay*, adapted to hearing rather than reading. Nevertheless they read well, and, while "no new facts are brought to light," and there is no claim of originality, the author has evidently taken pains to consult the most recent writers, and to acquaint himself with the best results of scholarship.

BOOKS OF THE WEEK.

A Tiny Footfall within the Golden Gate. A. D. F. Randolph & Co. 25 cents.
Aldrich, T. B. Marjorie Daw, and Other Stories. Boston: Houghton, Mifflin & Co. $1.
Alexander, Francesca. Roadside Songs of Tuscany. Part V. John Wiley & Sons. 75 cents.

NEW YORK, THURSDAY, APRIL 2, 1885.

The Week.

THE President's latest appointments are based upon the same principle as his previous ones; that is, fitness rather than party service or "pressure." It is noticeable that the President's critics are able to find no serious fault with them. The selections for important foreign posts seem to be excellent in all cases. Especially to be commended is that of Professor Anderson for the Denmark mission. He has the distinction of being the first Mugwump to receive office from the Administration, but he undoubtedly owes his appointment to his fitness much more than to his support of Mr. Cleveland for President. The only objection which is made to some of the other nominations is that they are a further recognition of the Confederate Brigadiers. The Blaine organ says that a "better way to show the magnanimity of the North toward former Rebels could hardly be devised than by sending them abroad as representatives of the Government they tried to destroy." Could a better way be devised to make them feel that they are citizens of a restored Union than to send them abroad as representatives, not of a section, but of the whole country? They go as Americans, not as Southerners, and our gloomy contemporary ought to be glad to have them there rather than in Washington working to have the Rebel debt and Rebel pensions paid out of the national Treasury, or in the South working to have the negroes put back into slavery, while he cannot send any more Mahones, Riddlebergers, Kelloggs, Spencers, and Claytons to Washington to help save the country. They cannot do much harm abroad unless they plot to have this country invaded by the Czar or some other foreign potentate.

The despatch of German-Americans to Berlin and Vienna as Consuls-General is an especially good idea. So is the transfer of the fiscal agency to Brown Brothers. This was held, apart from politics, as it ought to be, almost from the foundation of the Government by the Barings, when it occurred to the unclean band who surrounded General Grant during his first term to make it "spoils," and they took it away and gave it to a new house, which soon after "burst up," causing the Government a heavy loss. It is high time it were taken out of politics. We believe the appointment of Mr. Isaac Bell, jr., to the Dutch Mission is very acceptable to the Rhode Island Independents, though he is himself a regular Democrat. Italy goes to a highly respectable Virginian, Mr. Keiley. The appointment of Mr. McMullen to the Appraisership at this port is the first sign of the view taken by the Administration of the needs of the Custom-house, and it is a good one, for he is, we believe, a confirmed civil-service reformer, and, unlike his predecessor, will have better advisers than Mr. George Bliss.

That the reappointment of Postmaster Pearson is a most commendable act, in harmony with all of the President's professions, fulfilling the spirit as well as the letter of his engagements—an act tending to encourage and stimulate in all branches of the public service those qualities which have distinguished Mr. Pearson and made the New York Post-office a model of efficiency and public usefulness—must be acknowledged by all candid men. The credit of such an act belongs necessarily to the party in power. As the responsibility for all errors in national affairs must fall at last on the party as a whole, so the honor of successful and praiseworthy administration in all its branches must be awarded to the political body intrusted for the time being with the executive branch of the Government. To award praise to the President alone would be to come far short of the truth, since it is known that some of the most earnest advocates of Mr. Pearson's retention in office were Democrats of standing and repute, such as Mr. Hewitt, Mr. Ottendorfer, Mayor Grace, Mr. Henry Richmond, Judge Schoonmaker, Mr. Willis James, Mr. Algernon Sullivan, Mr. Sidney Webster, and Governor Tilden. These and many other representative Democrats have been quoted from time to time as favoring Mr. Pearson's reappointment upon grounds of public utility as well as of party policy. If the petitions on file at Washington were carefully scanned, they would be found to embrace the names of a goodly portion of the business men of New York who habitually vote the Democratic ticket, but who never take leading positions in the party councils. Indeed, it may be said that the Democratic politicians generally expected Mr. Pearson's reappointment from the beginning, and were prepared to acquiesce in it without a murmur, and that only the delay in making it produced the opposition which was latterly raised up against it. This delay, it is now known, was caused by charges against Mr. Pearson left on file by the late Administration, which needed to be examined by the Department and answered by the Postmaster. But for these charges, the existence of which was unknown to Mr. Pearson himself, we have good reason to believe that the appointment would have been made among the earliest acts of the President after the selection and confirmation of his Cabinet.

Mr. Phelps, our new English Minister, makes a dignified denial of the authenticity of a speech which he was reported to have made in 1864, and in which he was represented as speaking of Lincoln in very coarse language. He says that he has no recollection of making any such speech, but that he may have made at that time a speech saying that the war was unnecessary, and criticising the manner in which it was carried on. He adds: "While I was not in accord with the majority of my people in respect to the necessity of the war, or to some things connected with the prosecution of it, my opposition to the doctrine of secession and to any steps leading to the dissolution of the Union was well known. My views were the same as those entertained by Mr. Webster, and are to be found expressed in various addresses of mine." Mr. Phelps remarks that when this alleged speech was first attributed to him in 1880, he treated it with contempt because it had circulation only where he was personally known. He makes denial now only for the benefit of those who do not know him. It is doubtful if any person capable of intelligent judgment believed for a moment that he used the language attributed to him about Lincoln. Even the newspapers which have been circulating it, and who are in such deep concern about the "loyalty" of everybody who finds favor with the new Administration, know as well as anybody that it bears all the marks of gross and palpable forgery.

The *Civil-Service Reformer*, of Baltimore, gives a large share of space in its April number to the Higgins case. The mistake made in the appointment of Higgins, it says, "is such a huge one, and is so universally regretted by the true friends of the Administration, that it in some measure loses its character of a mistake, and assumes that of a valuable object-lesson, wherein an admirable opportunity is offered for the community at large to express its opinions in regard to that particular class of persons which Mr. Higgins so worthily represents." It has drawn the attention of the whole country to the methods of Senator Gorman, who was virtually Chairman of the Democratic National Committee in the last campaign. Mr. Gorman derived much *éclat* from the result of the election. He obtained a national celebrity, and secured for himself a much firmer hold upon the politics of his own State than he had previously enjoyed. People outside of Maryland said to each other: "Here is a man of note—why have we not heard of him before?" Rumors did get around that Mr. Gorman was merely an adept in low cunning, having no conception of nor belief in the larger forces which move the public mind and produce unexpected political results. But these rumors were confined to a narrow range of circulation. They did not reach the masses, to whom, on the other hand, Mr. Gorman appeared to be a rather remarkable new light in the political firmament. The appointment of Higgins has drawn attention to him again, and has exposed him to public scrutiny of the most searching character.

Secretary Bayard is evidently not at all alarmed by the charge of being "un-American" which the dynamite Irish make against him. In a letter to an Irish society in Philadelphia, which had invited him to its banquet on St. Patrick's Day, he wrote:

"The obvious and many duties of my public office here speak for themselves, and to none with more force than to American citizens of Irish blood or birth who are honestly endeavoring to secure liberty by maintaining a government of laws, and who realize the constant attention that is needful. In the midst of anarchical demonstrations which we witness in other lands, and the echoes of which we can detect even here in our own free country, where base and silly individuals seek to stain the name of Ireland by associating the

honest struggle for just government with senseless and wicked crimes, there is no class of our citizens from whom honest approbation can be more confidently expected than such as compose your respected and benevolent society. Those who worthily celebrate the birthday of St. Patrick will not forget that he drove out of Ireland the reptiles that creep and sting. The Hibernian Society can contain no member who will not resent the imputation that sympathy with assassins can dwell in a genuine Irish heart, which will ever be opposed to cruelty, cowardice, and whatever form either may take." The letter was not read at the banquet, and the chief organ of the "base and silly individuals who seek to stain the name of Ireland with senseless and wicked crimes," the *Irish World*, says that the society thus "indicated their freezing contempt for Bayard by severely ignoring his puppyism."

The letter is extremely likely to aggravate the already painful uneasiness in Irish-American circles concerning the Americanism of everybody connected with President Cleveland's Administration. The new Minister to England, in spite of the ungracious comments of some of the London journals, is heavily under suspicion. One Irish paper alludes to him as the warm friend of Edmunds, "that Mugwump who refused to support Blaine," and of Judge Field, "that brother of Cyrus Field, the well-known American who erected a monument to the British spy André." In fact, the number of public men who are really good Americans is narrowing down so rapidly, that we fear there will not be enough left presently to edit the Irish press and stand guard over the various Emergency Funds. No man born in this country is at present free from suspicion of the taint of un-Americanism. The day may not be far distant when it will be necessary for the Irish-Americans in this country to rise in dynamite warfare to shake off the "oppression" which the native Americans, like Cleveland, Bayard, Phelps, and Edmunds, seem disposed to fasten upon them.

Reports from Washington concerning the investigation now going on in the Treasury Department with reference to the mode of preparing the monthly balance sheet, showing the state of the public debt and the cash in the Treasury, encourage the belief that some wholesome reforms tending to greater clearness and closer adherence to facts are to be introduced. It seems quite certain that the thirty millions of fractional silver heretofore counted as cash on hand, and estimated as available for the payment of demand obligations, is to be cast out of the reckoning, and as a necessary consequence that its place is to be made good with legal-tender money of some sort. As we have heretofore pointed out, the money market is now in such a condition as not to feel the loss which this addition to the Treasury reserve implies. On the other hand, such an addition to the reserve would strengthen the hands of the Secretary in his endeavors to ward off the silver crisis, by giving him a fund equal to fifteen months' coinage in excess of his present supply to meet this waste. This is the great problem which Secretary Manning has to deal with, and he seems to understand how to manage it. The suspension of bond calls in the interval will not produce any discontent except among the silver fanatics, and these, it may be assumed, are as angry now as they can be, President Cleveland's letter having filled them brimful before the new Administration came in.

The troubles of Mr. John Roach about the *Dolphin* cruiser are well calculated to excite sympathy, but he has himself to blame. He ought to have got her ready for acceptance before Secretary Chandler went out of office, and he would doubtless have done so had he not been so sure of Blaine's election. All the 'cute men doubtless told him that everything was "fixed" for a Republican victory, so he made no haste. He did one smart thing, however, before Chandler went out, in securing the payment, in violation of the contract, of the 10 per cent. on each of nine instalments of the price for the ship, which, as well as the whole of the last instalment, the Government was to reserve until after she was delivered, as a security against possible undiscovered defects. He has not delivered the *Dolphin*, but he has got all the 10 per cent. reservations. That under these circumstances Mr. Roach was greatly alarmed at the prospect of seeing "the Confederacy again in the saddle," may well be imagined. The *Dolphin* was to have had steel shafts, but one of them broke on the first trial. Then Mr. Roach got leave to put an iron one in, and finally the ship on her trial did not develop the speed provided for in the contract. He says she will do better, however, with different coal and a better engineer, and in the meantime wants his "last payment," which Mr. Whitney withholds. It seems as if the Navy Department had existed for twenty years to provide Mr. Roach's yard with profitable work. This is now at an end, and we may guess how he feels about the future of the negro and of American industry.

The *Economist* quotes President Cleveland's letter on the silver coinage in full, and then observes:

"It would be difficult to put the argument against the Silver Coinage Act more forcibly or more conclusively than is here done; and the hope must be that when the people of the United States have had the issue thus plainly put before them they will not long continue to tolerate so mischievous a piece of legislation."

As Mr. Blaine has been very quiet of late, we are reluctant to refer to his political economy again. But when one recalls his exposition after the election of the effect it would have on wages North and South, one can hardly help conjuring up the kind of letter *he* would have written on the silver question, and comparing it with Mr. Cleveland's terse and forcible statement. He would probably have made one of the efforts for which he is famous to satisfy the bi-metallists, the mono-metallists, the no-metallists, the Irish, the French, and the Hindus, and the result would have been unspeakable nonsense.

This letter, and the vote taken in Congress just before the adjournment, have caused a spasmodic stir in the bi-metallic faction in England, which the *Economist* takes notice of, Mr. H. Schmidt having taken advantage of the occasion to read a paper on the subject at the Institute of Bankers. Mr. Schmidt's contention is that the continued coinage of silver in the United States is necessary to sustain the prices of the agricultural products of the West and South. Of course this beneficial effect can only result from a depreciation of the standard of value, for as long as silver dollars and silver certificates remain at par with gold in the circulation, no farmer can pay his debts or purchase his supplies at less than 100 cents on the dollar. In case of an actual depreciation, however, Mr. Schmidt assures his hearers that India would derive an advantage over America as an exporter of both wheat and cotton—that is, the American agriculturist would gain in the home market and lose in the foreign market. Both contentions the *Economist* shows are false, but if they were true the position of the American farmer and planter would certainly be worse than it is now, since the loss in the foreign market through the greater competition of India could not possibly be made good by the home market, the latter being governed absolutely by the former. The *Economist* sees no objection from the British point of view to our adopting the silver standard, but insists that the compulsory coinage and storage of two millions per month is a loss of that much capital to American trade and by consequence to British trade also, since any abstraction of wealth from business channels is a detriment to the world's commerce.

The protocols of the Congo Conference have, it is understood, been received at the Department of State. The stipulations and understandings formulated at Berlin are not binding upon the United States until they have been formally accepted by this Government. The whole subject of the Conference and its doings was carefully considered by the Foreign Affairs Committee of the last House, and the Committee was unanimous in condemnation of American participation therein, although there was some slight difference among the members of the Committee over the language in which that condemnation should be expressed. We have already referred to the elaborate report made by Mr. Perry Belmont and presented to the House. In it he discussed the question respecting the manner in which the stipulations of the Conference could be adopted by this Government if at all. Must the ratification be by the President alone, or by the President and Senate, as in case of a treaty? Probably the President will decide to pigeon-hole the protocols. As much is to be inferred from the language used in his inaugural address, which was, perhaps, intended to cover the Conference at Berlin.

The Riel insurrection in the Northwest, which is creating as much excitement in Canada as the prospect of a war with Russia is causing in England, is an almost exact revival of the insurrection led by the same man in 1869. The causes for it seem to be precisely the same, except that they are said now to be somewhat aggravated by Catholic influences. In 1869 the Hudson's Bay Company, which had for many years held complete authority over the Northwest, sold the greater part of their lands to the Canadian Government. When the Government surveyors appeared to lay out the country for settlers, the half-breeds and Indians who occupied the sections of it

fronting on the rivers objected. Under Riel's leadership they organized a fighting force, and issued a bill of rights. A brief struggle followed, but Riel and his force were suppressed in the spring of 1870, by an expedition under the command of Colonel, now Lord, Wolseley. Riel was banished for five years. The Government, as a means of quieting the half-breeds, gave each of them a grant of 240 acres of land. This insurrection of 1869 was confined to the Province of Manitoba. The present trouble has arisen in the settlements at Prince Albert, along the Saskatchewan, 500 miles northwest of the capital of Manitoba, where the Government surveyors have recently gone for the first time. The half-breeds demand substantially the same concessions which were made to the half-breeds of Manitoba, together with other rights similar to those demanded by Riel in 1869.

The speculations in Wall Street as to the effect of war on business are not always as rational as they might be. Most of them are based on the old idea that trade always means a loss to one side or the other, instead of being, as it must be in order to continue, a gain to both. Europeans cannot engage in a great war, slaughter thousands of men, destroy vast amounts of property, without becoming, for a time at least, worse customers for every country with which they deal at all, although the demand for some of our commodities may be temporarily stimulated. Every nation but China is interested in every other nation's peace and prosperity. One gentleman in Wall Street, talking to the *Herald* reporter, thought that the hostilities in India would stimulate the demand for our wheat, because the great armies would consume so much, and thus raise the price of Indian wheat. But the men who compose great armies eat just as much wheat in peace as in war. In fact, they probably eat a good deal more, because in peace they have more time for their meals and are nearer the markets. Moreover, the dead stop eating wheat altogether. Mr. Henry Clews, we observe, expects a great benefit to the American laboring classes, and to the American people generally, from having so many Europeans engaged in the work of mutual destruction, because the demand for "grain, provisions, and clothing, and war ammunition" will be greatly increased. But wars nowadays do not last long, and a "demand" for grain, provisions, and clothing, is only profitable when those who feel it have the wherewithal to make purchases. After the war is over, the demand will be less profitable than ever, because there will be fewer purchasers, and those who are left will be poorer. Nothing apparently needs more to be taught in schools than the effect of war on trade. No country was ever enriched either by its own wars or by those of other peoples, although many individual dealers and contractors make fortunes out of it.

The fall of the French Ministry followed promptly, as was expected, on the news of the defeat in Tonquin, and had the curiously characteristic accompaniment of a howling mob outside the Chamber door kept back by bayonets. It is at this writing supposed that M. Freycinet will be called on to try his luck again; but probably every politician of prominence will be reluctant to risk his reputation in the place, with the programme now prescribed by the popular fury, which includes nothing less than the capture of Peking, with a force of 60,000 men, to be paid for out of a Treasury burdened with annual deficits. Clémenceau is talked of, but Clémenceau probably knows better than to exchange the rôle of critic for that of performer before such an audience as the Parisian public in its present mood.

A year ago the French, after a contest of some months, had got everything they wanted in Tonquin. They had driven the Chinese marauders known as the "Black Flags" out of the Delta of the Red River, and had taken the fortified towns of Sontay and Bacninh without any opposition from the Chinese, who claimed suzerainty over the whole region, although the latter had formally announced that an attack on either of these places would be treated as a casus belli. In fact, it was plain that the Chinese did not want to go to war about Tonquin. The treaty known as the Convention of Tientsin was accordingly concluded between France and China in May of last year. It left the French in possession of everything they occupied; it gave up the Chinese claim of suzerainty over Tonquin, opened the Red River to navigation as far as Yunnan, and the three principal towns to foreign trade, and to the residence of a French consul in each. More than this, it gave France the fortified town of Langson, commanding the principal pass in the northern mountains through which the Chinese obtain access to the Red River Delta. Peace seemed to be secured, and a small body of French troops started to take possession of Langson. On the march they came on a Chinese post barring the road. The officer in command said he had no orders to allow them to pass, and had heard nothing of the treaty of peace, and proposed a halt, until he could get instructions. The French, however, refused to wait, attempted to force their way, and were repulsed with heavy loss. This was really an unfortunate accident. There was no reason to doubt the good faith of the Chinese. But the French would receive no excuse. They demanded an enormous indemnity for the repulse inflicted on their troops. It was refused, and they then withdrew their Minister from Pekin, but, instead of declaring war, began to make "reprisals," such as the bombardment of Kelung in Formosa, and that of the Foochow arsenal and the forts on the Min River. These operations were successful enough, but they only stung the Chinese without frightening them. The Chinese Empire is, in spite of its paternal organization, so loosely constituted that attacks on its frontier make no serious impression on the Government at Peking—a fact which the allies recognized in 1860 when they marched on the capital. Consequently, the operations of Admiral Courbet along the coast seem simply to have roused the Chinese Government into active and formidable preparations for attacking the French where they were most vulnerable, namely, in the Tonquin mountains, into which they had successfully penetrated, and had captured Langson.

As to the future, the little that can be said is not very promising for the French. The losses from sickness in Tonquin, though not published, are probably very great. During the coming hot weather they will be still greater. The earlier successes in the Delta, which turned their heads, were achieved with the aid of the gunboats, which were able to penetrate in every direction through the numerous bayous, and support the troops with the fire of their heavy guns. In the mountains, this advantage is gone. The difficulties of transportation are enormous; and the population is hostile to a man. The Chinese, too, are attacking in great force, or in other words bringing into play their enormous superiority of numbers, and that indifference to loss of life which is the strong point of the Chinese military organization. The Chinese troops of to-day are by no means the half-armed rabble they were in 1860. The experience of Gordon in suppressing the Taeping rebellion has raised them greatly in European estimation, and increased the number of European officers in the service. The men are fairly drilled, armed with the Mauser rifle, and have a large number of breach-loading guns. The force supposed to be immediately available for resistance in Tonquin is 120,000 strong, well armed and fairly disciplined, and it is recruited, of course, from a population which for military purposes may be considered limitless. Behind this, there is a territorial force or militia, estimated at 200,000, which could not keep the field against French regulars, but has probably great powers of harassing. As to the advance on Peking, the best French military authorities in Tonquin are said to doubt whether it would be safe to attempt this with less than 60,000 men. Its difficulties have been immensely increased since 1860. Entrance to the Peiho River was then found to be impossible. The forts had to be turned by a land attack. Since then they have been increased in number and completed on the land side, and are armed with Armstrong and Krupp guns, and the river is full of torpedoes as far as Tientsin.

The Graham campaign on the Suakim-Berber route is having one useful effect in silencing the noisy Jingoes in England, who were sure that that was the way Lord Wolseley ought to have gone to Gordon's aid. It is now quite plain that had he done so he would have had very few men left fit for active work by the time he reached Berber, at which place he would still have been some 200 miles from Khartum. It is more and more evident that a force advancing on that line must be followed by the railroad, and that guarding the road will be very costly work. Newspaper strategy in distant and little-known regions is always amusing reading, but it has probably never been more so than in the case of the Sudan campaign. The *St. James's Gazette* thinks General McNeill brought the late "military scuffle" on himself by neglecting precautions which any cadet would have taken. But there is probably not a camel-driver in the force whose opinion about "precautions" is not worth five times as much as that of the editor of the *St. James's Gazette*, and yet the latter is considered worth telegraphing across the Atlantic.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, March 25, to TUESDAY, March 31, 1885, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND on Wednesday nominated Samuel S. Cox, of New York, to be Minister to Turkey. Mr. Cox is sixty-one years of age, and for many terms has been a well-known Congressman from this city. He is the author of several books. Among the postmasters nominated on Thursday was Aquila Jones for Indianapolis. This was a victory for Vice-President Hendricks's faction. On Friday it was announced that the President had nominated Gen. Joseph E. Johnston, of Virginia, to be Commissioner of Railroads, and Norman J. Coleman, of Missouri, to be Commissioner of Agriculture. Mr. Coleman is a resident of St. Louis. He is about sixty years of age, and was for many years the editor of the *Rural Home*, an agricultural paper published in St. Louis. Mr. Alexander McCue, of Brooklyn, has been nominated for Solicitor of the Treasury. Mr. McCue is a lawyer of good reputation and a man of considerable means. He is about fifty-five years of age, and has just retired from the bench of the City Court of Brooklyn.

The President sent a long list of nominations to the Senate on Monday, among which were the following: To be Envoys Extraordinary and Ministers Plenipotentiary of the United States: Thomas J. Jarvis, of North Carolina, to Brazil; Alexander R. Lawton, of Georgia, to Russia; Anthony M. Keiley, of Virginia, to Italy. To be Consuls-General of the United States: Thomas M. Waller, of Connecticut, at London; Frederick Raine, of Maryland, at Berlin; Edmund Jussen, of Illinois, at Vienna, Austria. To be Ministers Resident of the United States: Isaac Bell, jr., of Rhode Island, to the Netherlands; Rufus Magee, of Indiana, to Sweden and Norway; George W. Merrill, of Nevada, to the Hawaiian Islands. To be Ministers Resident and Consuls-General of the United States: Edward Parke Custis Lewis, of New Jersey, to Portugal; Rasmus B. Anderson, of Wisconsin, to Denmark. To be Consuls of the United States: A. Haller Gross, of Pennsylvania, at Athens, Greece; Evan P. Howell, of Georgia, at Manchester, England.

Mr. Jarvis, the Minister to Brazil, is an ex-Governor of North Carolina. Alexander R. Lawton, the Minister to Russia, is a prominent lawyer of Savannah, Ga. He was born in South Carolina, was educated at the West Point Military Academy, served in the army a number of years, resigned, studied law at Savannah, and engaged in the practice of his profession there. When the civil war broke out he entered the Confederate service as a Brigadier-General, and subsequently became Quartermaster-General of the Confederacy. He is a lawyer of distinction and is about sixty years of age. A. M. Keiley, the Minister to Italy, is a lawyer in successful practice at Richmond, Va. He has been Mayor of that city, was for many years Chairman of the Democratic Funders' Committee, and is also well known as one of the counsel for the Virginia bondholders in their prolonged litigation. Edward Parke Custis Lewis, the Minister to Portugal, is a resident of Hoboken, N. J. He is said to be distantly related to Secretary Bayard, and has been a member of the Legislature and a Presidential Elector. Isaac Bell, jr., nominated to be Minister to the Netherlands, is a wealthy citizen of Newport, R. I., and a prominent Democrat, and has several times been the Democratic candidate for Governor. He is a brother-in-law of James Gordon Bennett. Thomas Waller, who receives the Consul-Generalship at London, is the ex-Governor of Connecticut. Frederick Raine, of Maryland, who is appointed Consul-General at Berlin, is the editor of the *Deutscher Correspondent*, one of the leading German newspapers of Baltimore. Edmund Jussen, of Chicago, who is appointed Consul-General to Vienna, is another prominent German-American. He is a brother-in-law of Carl Schurz.

Rufus Magee, of Indiana, the Minister to Sweden and Norway, is an especial friend of ex-Senator McDonald. Rasmus B. Anderson, of Wisconsin, Minister to Denmark, is an eminent Scandinavian scholar, and is the author of a number of books upon Scandinavian folk lore and mythology. He is a professor in the University of Wisconsin, and was a Republican when Blaine was nominated.

The most significant of the nominations of President Cleveland on Tuesday was that of Henry G. Pearson to succeed himself as Postmaster of New York city. A gentleman very near the President, and undoubtedly speaking from actual knowledge, says that the reappointment of Mr. Pearson was made after a most patient examination of all the facts connected with the charges against him, and his answer to the same, which was on Monday read by the President, and which may therefore be considered as a complete vindication. Postmaster Pearson's case was considered exceptional by President Cleveland because he has made the New York Post-office a complete illustration of the successful application of civil-service-reform principles to an immense governmental establishment. "To retain him," said the gentleman in the confidence of the President, "insures faith and confidence in the movement, which would receive a shock from his removal. His retention was earnestly requested by a large number of business men of the city, both Democrats and Republicans, and very generally by the Independent Republicans, who did such good service in support of the Democratic candidates in the last campaign." It is further authoritatively learned that this act of the President must not be regarded as indicating that in other cases persons opposed to the party of the President will either be appointed or retained after the expiration of their terms of office.

Among the other nominations made on Tuesday were: William R. Roberts, of New York, to be Minister to Chili; Charles W. Buck, of Kentucky, to Peru; Richard B. Hubbard, of Texas, to Japan.

The sentence of the Hazen Court-martial is a reprimand, which, if approved by the President, will be administered in a general order issued by the Secretary of War in the name of the President.

Pension Commissioner Black issued an order on Friday forbidding the advancing of any pension claim out of its order.

Senator Mahone's son, who is under bonds to appear for trial for assault, was discharged from a $2,220 sinecure in the United States Senate on Thursday. Ex-Auditor Allen, of Virginia, a Mahonite, takes his place. Mahone immediately appointed his son to the similarly lucrative position of clerk of his own committee.

In the New York Assembly on Wednesday the Niagara Reservation Bill was passed by 84 to 24. On Thursday a resolution for the investigation of Tontine insurance was passed by 78 to 34.

There were grand ceremonies at St. Augustine, Fla., on Friday, to celebrate the anniversary of the landing of Ponce de Leon in 1512, and the founding of the city by Menendez in 1565.

The Music Hall in Buffalo, which cost $175,000 and seated 5,000 persons, was burned on Wednesday night.

The illness of General Grant took a very unfavorable turn on Saturday night. He was almost choked to death by a secretion of phlegm in his throat. On Sunday he rallied somewhat, but continued to be in a very critical condition. He is fast losing his vitality, and it is believed that he cannot long survive.

Frederick S. Winston, President of the Mutual Life Insurance Company of this city, died in Florida on Friday. He was seventy-nine years of age. He became President of that company in 1853, and during his administration its assets have increased $100,000,000. During the war he was noted for his energy in helping the Government and his profound faith in the Union.

Gen. Anson Stager, prominent in the development of the telegraph system of the country, died in Chicago on Thursday at the age of sixty.

Perry H. Smith, the well-known railroad manager, died in Chicago on Sunday, aged fifty-seven years.

General James McQuade died in Utica on Wednesday at the age of fifty-six. He was twice Mayor of Utica, a member of the State Assembly of 1860, Colonel of the Fourteenth Regiment of New York Volunteers during the war, Inspector-General on Governor Hoffman's staff, Quarantine Commissioner at New York for two terms, a founder of the Loyal Legion, and Department Commander of the Grand Army of the Republic in 1879.

Mrs. Edwin D. Morgan, widow of ex-Governor Morgan, a lady whose many charities have made her name a household word in New York, died on Thursday.

FOREIGN.

A despatch was received in Paris on Thursday from General Négrier, dated Dong Dong, March 24, which said: "The Chinese attacked Dong Dong on Sunday. I advanced Monday and captured the first line of forts defending their camp at Bangbo. To-day renewed efforts were made by us against the enemy, but these proved unavailing in the face of superior numbers. Our artillery ammunition was exhausted and we returned to Dong Dong. Our loss in killed and wounded numbers 200."

After the Tonquin debate in the French Chamber of Deputies on Saturday a vote of confidence in the Government was passed by 273 to 227.

It was officially announced in Paris on Sunday, that the Chinese troops on the Tonquin frontier on Friday made a desperate attack upon the intrenched camp which had been established by General Négrier between Langson and Kilua, and from which General Négrier had been making reconnoissances beyond the frontier separating Tonquin from China proper. The Chinese, numbering about 50,000, drove the French back to Langson and recaptured that town, and all the strategic points in its vicinity. During this series of fights General Négrier was grievously wounded in the chest, and the French casualties were very serious. The latest accounts represent the French troops to be in full retreat, with the Chinese vigorously pursuing them. A vast quantity of commissary and other stores has been lost. The total French loss in killed and wounded is not yet definitely known, but it is put at 1,500. General Brière de l'Isle, who is in chief command in Tonquin, telegraphed for assistance in an imploring tone, which led the Parisians to expect further disasters. Intense excitement prevailed wherever the bad news became known in France. It is expected that General Négrier will recover. The French Cabinet decided to despatch immediate reinforcements to China, and to ask a war credit of $40,000,000.

Long before the hour for the convening of the Chamber of Deputies, on Monday, the streets in the vicinity were packed with crowds of excited men. A strong force of military was on duty to prevent a riot and preserve order in the Chamber. Notwithstanding this precaution, the galleries were crowded with people who plainly showed their irritation over the French defeat at Langson by keeping up a noisy discussion. When M. Jules Ferry, the Premier, arose to announce the decision of the Cabinet Council he was loudly hissed by those in the galleries. He had barely finished the declaration when a number of Deputies of the Right sprang to their feet, yelling "Down with the wretch!" while above the din could be heard M. Clémenceau screaming "Traitors!"

Prime Minister Ferry in his statement asked for the credit of $40,000,000, previously agreed upon by the Cabinet, moved for the appointment of a committee to examine and report upon the credit, and demanded that the motion be given priority. His motion was rejected by a vote of 308 to 161. M. Ferry immediately announced the resignation of the entire Ministry, and President Grévy accepted it.

President Grévy asked M. Henry Brisson, President of the Chamber of Deputies, to form a new Cabinet. M. Brisson declined. The President then asked M. de Freycinet to form a Cabinet. The latter asked twenty-four hours in which to reply. The vote against M. Ferry included the Republican Union, the Extreme Left, and the Monarchists. No group appears to be strong enough to insure a compact Ministry. At 9 P. M. on Tuesday M. de Freycinet announced to President Grévy that he had not yet succeeded in forming a Ministry.

The Chamber of Deputies on Tuesday afternoon unanimously voted the first instalment, amounting to $10,000,000, of the Tonquin credit of $40,000,000, asked for by M. Ferry before the resignation of his Cabinet. The Deputies voted to reserve action on the remaining $30,000,000 until the formation of the new Ministry.

The tension between Russia and England on the Afghan question increased on Wednesday. British consols fell ½ of 1 per cent. The Cabinet held a special session on Wednesday afternoon. It was resolved to demand of Russia that she begin forthwith the work of delimiting the Afghan frontier in accordance with the understanding by which Sir Peter Lumsden and the British surveying party have passed so many months in the Amir's dominions.

The alarm was increased on Thursday when Queen Victoria sent the following message to Parliament: "The present state of public affairs, and the extent of the demand on Her Majesty's military forces for the protection of the interests of the Empire, having constituted, in the opinion of Her Majesty, a case of great emergency, Her Majesty has deemed it proper to provide additional means for the military service. She has, therefore, thought it right to communicate to the House of Commons that she is about to cause the reserve forces, and such proportion of the militia as might be deemed necessary, to be called out for permanent service." The War Office immediately issued orders in accordance with the message. It is expected that 25,000 men in all will be called out. Fifteen thousand troops are, it is said, to be sent to India. War preparations proceeded with the greatest activity at Woolwich, Aldershot, and Portsmouth.

The decision to call out the reserves was taken in view of Queen Victoria's intended departure for Aix-les-Bains on Tuesday, in order to be prepared for an emergency.

A special Cabinet Council was held at Windsor Castle on Thursday afternoon, by command of Queen Victoria. Important despatches from the British Minister to Russia and the Viceroy of India were received and discussed. The Council of India has been authorized to raise a credit of £1,500,000 on account of the Indian Treasury for war purposes. Earl Dufferin, the Viceroy of India, will give the Amir of Afghanistan the grant which he demands to pay the Afghan troops and allay the discontent of tribal leaders. The Amir promises to place 50,000 troops on the frontier and in the forts at Balkh, Panjdeh, and Herat.

The war excitement was increased on Friday by an announcement in the London *Globe* that a proposal partaking of the nature of an ultimatum was telegraphed by the Government to St. Petersburg on Thursday. It was requested at the same time that the Russian Government would send an answer that should reach Downing Street not later than Monday. The *News* (Liberal) denied this on Saturday.

The *Globe* also declared that Earl Granville on March 16 proposed to Russia that both the Russians and the Afghans should withdraw from that portion of territory which is at present the subject of dispute, and should remain outside of it during the continuance of negotiations between Russia and England, then in progress at London. To this proposal Russia sent no reply until Wednesday. She then refused to accede to England's proposition, on the ground that the withdrawal of her troops would be a source of humiliation to Russia. After this answer was received from Russia the Cabinet decided to embody the reserves and the militia, and to send the ultimatum already referred to. In the event of war, 25,000 militia will be assigned to garrison duty in Ireland, and that number of regulars will be released for active service.

Earl Granville said, in the House of Lords on Friday night, that the Afghans occupied Panjdeh before Sir Peter Lumsden had received instructions.

Lord Dufferin has arrived at Rawalpindi, and has been given an imposing reception by the Amir of Afghanistan. The London *Times* on Saturday asserted that the Russian Government had ordered 50,000 troops to be massed at Baku, on the Caspian Sea.

The reply of Russia to England on the Afghan question was received in London on Tuesday. It is understood that it contemplates an early meeting of the Boundary Commission. The positions of the troops are to remain unchanged. The Russians are now within eighteen miles of Panjdeh.

It was announced in the House of Commons on Monday by the Government that the outlook for a peaceful settlement of the Afghan question was very promising.

In the House of Commons on Thursday evening Mr. Gladstone said that England protested against the action of France in declaring rice a contraband of war.

In the House of Commons on Friday evening the Egyptian financial agreement was adopted by 294 to 246. The Parnellites voted against the Government.

General Graham moved the headquarters of the British camp about two miles nearer to Tamaai on Wednesday. A convoy of Indian troops went on Wednesday morning to General McNeill's zereba on the Tamaai road. It acted as escort for the balloon corps. Arrived at the zereba, the balloon corps immediately sent up a captive balloon. The observers descended with valuable information concerning the positions and movements of Osman Digna's men.

A convoy of the Grenadier Guards, under command of General Graham, accompanied the Shropshire, Surrey, and Sikhs (Indian) regiments on Thursday morning on their departure for Tamaai as far as General McNeill's zereba. The start was made at 7 o'clock. The zereba was reached with a loss of but three men, who were wounded in a fight on the way. A force of Arabs recklessly charged, but were repulsed with a loss of 100 killed. Twenty thousand men, under Osman Digna, are reported entrenched at Tamaai. It was rumored at Suakim on Saturday that Osman desired to surrender.

A despatch from Dongola states that hundreds of disaffected Arabs are flocking to the standard of El Santuisi (or El Makki), who has appeared as a prophet in rivalry of El Mahdi. It is said that he has occupied El Obeid.

The examination of Cunningham and Burton, the London dynamiters, having been finished, both men were on Friday afternoon formally committed for trial on a charge of treason-felony.

Oxford defeated Cambridge in the annual boat-race on the Thames, on Saturday, by three lengths; time twenty-one minutes, thirty-six seconds.

Hanlan, the Canadian oarsman, was, on Saturday, defeated by six lengths in a sculling match by William Beach, at Sidney, N. S. W. Beach had defeated him once before, on August 16, 1884.

Despatches from Moscow show that a commercial crisis exists in that city. Within the past thirty days five of the largest tea and sugar-importing firms have failed. Their liabilities aggregate more than $10,000,000.

Prince Nikolai Orloff, the Russian diplomatist, is dead at the age of fifty-eight. He was made Minister to France in 1872, and in 1875 President MacMahon conferred on him the Grand Cross of the Legion of Honor.

A serious outbreak of a disease resembling cholera in the Province of Valencia, Spain, has caused a panic among the people.

Granada and Malaga, Spain, were on Monday visited by shocks of earthquake, which damaged many houses and injured many people in both places.

Considerable excitement has prevailed in Winnipeg and Canada throughout the week, owing to the rebellion of about 1,000 half-breeds under the leadership of Louis Riel (who headed the Red River outbreak) at Prince Albert, about 500 miles northwest of Winnipeg. There were rumors on Wednesday of fighting with the mounted police at Carlton. It was said that 15 of them had been killed and that the rebels had captured 40 white men. In the Canadian House of Commons on Friday night a telegram was read announcing that Major Crozier, in command of 100 men at Fort Carlton, had advanced that morning toward Duck Lake to secure a large quantity of supplies stored there. They were met by a body of Riel's rebels, who held a good position. The rebels fired first, and in time Major Crozier withdrew, having lost 10 civilians and 2 policemen killed, and 4 civilians and 7 constables wounded.

Troops at Montreal, Toronto, and Quebec were on Saturday ordered to hold themselves in instant readiness for service in the Northwest. The greatest excitement prevailed throughout Canada. There were rumors of another battle at Fort Carlton, and that eleven men had been killed.

Despatches were received at Winnipeg on Sunday that Colonel Irvine, with 260 police, evacuated Fort Carlton on March 27, and fell back upon Prince Albert. The fort has been burned.

News from Regina on Tuesday stated tha Riel is in a position successfully to resist a force double the strength of that now under General Middleton. Riel is getting assistance from American half-breeds. The belief that Fenian influences are at work in the Northwest is held in Canadian Government circles. On Tuesday the Indians and half-breeds captured and burned Battleford, west of Prince Albert.

Nicaragua, Costa Rica, and San Salvador have entered into a formal alliance to resist Barrios, who leads the forces of Guatemala and Honduras. President Zaldivar, of San Salvador, commands the triple allied forces, which will amount to about 20,000. Several skirmishes have already occurred between the forces of Honduras and San Salvador.

The steamer *Colon* was seized at Aspinwall on Monday, by the Colombian revolutionists, who demanded the delivery of a shipment of arms on board. Mr. Connor, local superintendent of the Pacific Mail Company, the captain and purser of the steamer were placed under arrest on board. Subsequently Captain Dow, general agent of the Pacific Mail Company, Mr. Wright, the United States Consul, and a lieutenant of the American man-of-war *Galena* were arrested. They were released at 6 o'clock on condition that the arms should be delivered. The Americans are indignant at the insult to the flag. The United States Navy Department on Tuesday ordered Commander Kane of the *Galena*, which is at Aspinwall, to afford all protection possible to Americans and their property at that place. The *Alliance* was ordered to proceed immediately thither.

THE PRESIDENT AS A SHEIKH.

When the "spoils system" was introduced into the Government of the United States, the population was about 13,000,000, there were about 8,450 post-offices, and the postal revenues amounted to $2,000,000, and it took a large part of a month to get from the Ohio or Tennessee to Washington. To-day the population is 55,000,000, the number of post-offices is 51,000, and the postal revenues $43,000,000 in round numbers, and it takes six days to reach Washington from the Pacific Coast. The business of every department of the Government, except the army, navy, and diplomatic service, has increased in much the same ratio as the post-offices. The number of offices to be filled is probably on the whole four times as great as in Jackson's days, and it is four times, at least, as easy for office-seekers to get to Washington from any part of the country, and fully ten times as easy to make written applications for places.

Nor is this all. When the act of 1820 was passed substituting a four years' term for tenure during good behavior in the case of officers having charge of public moneys, it was intended simply to insure that at the end of every four years the books of every such officer should be balanced and his accounts and vouchers filed. It was not intended that he should be removed at the end of the four years, as a matter of course, in order to give somebody else access to the public crib. This view of the intent of the law sprang up afterward, by a perfectly natural process, until it became a party custom to treat every office as vacant when the term for which the incumbent was appointed had expired, and finally it came to seem party treachery on the part of a President not to fill such vacancies with new men.

The effect of all this on the transaction of the public business we need hardly point out. The spectacle which is witnessed at Washington at the beginning of every administration would, but for use and wont, strike every business man in the country with amazement. The President is one of the most highly-paid public officers in the world. He is charged with weightier responsibilities than any public officer in the world except the British Premier. The Secretary of the Treasury and the Postmaster-General, too, have duties more serious and various than corresponding officials in any other country. The time of all three belongs, all day long, from the rising to the setting of the sun, to the people of the United States—that is, to a modern commercial nation, 55,000,000 strong, possessing a vast trade and industry, and carrying on an immense correspondence, and exposed, as all highly organized communities are, to serious injury at a thousand points from very slight agencies. It will seem a hundred years hence almost incredible, however, that the Chief Magistrate of this great modern nation, and his two principal Ministers, have in the earlier part of their official career to pass a large part of their day, just as the Arab Sheikhs and the earlier Caliphs used to pass it, in listening to individual complaints and petitions. That is to say, at the very time when all their faculties and all their moments are required to give them even an imperfect acquaintance with the vast machinery of administration in this great commercial state, they have to sit under a big tree every morning outside the city gate, listening to individual boastings or tales of sorrow or wrong, giving this man a robe of honor, and ordering that one to receive one hundred blows of a stick, hearing what the widow has to say against the knavish baker, and the blind man against the bazaar thief. There is, we venture to say, not one in one hundred of the people who take up the time of the President, or of the Secretary of the Treasury, or of the Interior, or the Postmaster-General, every morning, whose business with him is one whit more important to the community at large than that of those to whom an Emir in an Arab village listens every day. Nay, more than this, we believe, in a large number of cases, their business consists in efforts to get the national officers to do some injury to the public by removing somebody whose experience makes him valuable, or appointing somebody for whose fitness there is not one word to be said.

This abuse, though it is less grave under President Cleveland, owing to the working of the Civil-Service Law, than under some of his predecessors, has reached a point at which speedy change is inevitable. The notion that the few hundred people who go to Washington, and swarm into the White House and into the departments in working hours, to gratify their curiosity, or set forth their petty personal troubles and aspirations, have stronger claims on the time of public officers than the 54,800,000 taxpayers who stay at home and attend to their business, is one of the many delusions born of the spoils system. It has been nursed in no inconsiderable degree by the four years' term. The belief that the President can make vacancies of course breeds the desire to urge him to make them, and the four years' term, naturally enough, furnishes the excuse for making them.

But the abuse has now reached an excess, owing merely to the growth of the country, which must, paradoxical as it may seem, result in cure. It promises to break down by its own weight. As long as Presidents made it their business to yield to "pressure," it was natural enough that they should give up their time to listening to the people who pressed. But President Cleveland has set an example of not yielding to pressure. So far so good. The next step in reform is to give no time to the pressers, because the Presidential time belongs to the American public. It is for attending to their business that he receives $50,000 a year, and their business has reached such proportions that no man who charges himself with anything else can attend to it adequately. The chief support of the Sheikh system is that it is "democratic" in a public officer to be always ready to receive all comers. This may be democracy, but it is tribal democracy, the democracy of primitive and simple communities who assigned legislative, administrative, and judicial functions to the same officer. The business of large modern democracies has to be done through writing, and the place of the officer all day long is at his desk, and the only persons whom he is bound to see are those who have business which concerns the State. Private woes and aspirations should be attended to by courts of justice or charitable associations. Indeed, it is safe to say that nine-tenths of the business on which the President and the chief Secretaries just now pass their mornings in Washington is business for a police justice or a philanthropist, and not for a statesman. The President of the United States, receiving all comers in working hours, is as great an anachronism as Moltke would be heading a charge of Hadendowah Arabs, armed with a buckler and spear.

WORKINGMEN AND THE CHURCHES.

The line of severance between our American Protestant churches and the working classes has become sharply marked. It is not our purpose to discuss the causes which have brought about the fact that workingmen have little to do with organized Christianity. Explain it as one pleases, the general fact is as stated. Perhaps the best proof that it is so, the only proof we need adduce to justify our assumption of the fact, is seen in the admissions and attitude of the churches themselves. No topic is given a more prominent place in discussions of church congresses, in the editorials and contributed articles of religious newspapers, in plans for church support and church extension, than the question how to stay the growing alienation of wage-workers from the churches.

This fact, so general and so generally admitted, is often declared to be a serious element in the present state of the labor question. It is very common to hear it alleged that the growing restlessness and turbulence of the laboring classes are due to their increasing freedom from religious restraints. Appeals are often made to the selfishness of the large capitalists, in order to induce them to contribute to the support of a city mission, for instance, on the ground that Christianity will make the workingmen more contented. The pulpit frequently takes occasion to point its assertions of the dependence of social order and stability upon Christianity, by instancing the destructive tendencies of those Socialists who have lost faith in the Church and her creed. The common implication allowed to go unquestioned is, that if workingmen were only regular attendants at church, and would put themselves in contact with "the restraints and consolations of religion," the present strained relations of labor and capital would be very greatly eased if not entirely relieved.

Now, it seems to us unlikely that such a result would follow. By the "restraints" of religion are ordinarily meant the motives drawn from the fear of future punishment, or from the desire of future bliss. But the truth is, that these motives are urged from the modern pulpit only with extreme rarity and reserve. There has been a great change of emphasis in preaching since Edwards. It is true that there are still heard perfunctory appeals in the old style from those who exhibit in the pulpit simply the acquired momentum of a past age; but as a general thing the stress of instruction and urgency is very differently placed. The exhortation no longer is, Restrain passion and limit indulgence and shun lawlessness, or you

will be everlastingly damned in the world to come; but rather, Do these things, or you will waste and wreck this life. Conduct is put in the light of a present social duty. It is the day of the gospel of the "secular life." All this seems to us a great gain. It tends to make church teaching a much more practical and vital thing. Yet it tends just as surely to make the gain which, it is supposed, would result if workingmen were regular church-goers, extremely problematical. There might be a "restraint" in their being told, if they believed it, that unless they were patient and submissive here they would never attain eternal happiness; but when preaching is so largely made a matter of the present life, there does not seem to be a strong likelihood that it would make them more contented with their lot, while they felt it to be one of hardship or injustice.

So, too, would it prove, we fear, with the hopes of the influence upon the working classes, if they could be brought into the churches, of the "consolations" of Christianity. By this term is meant the comfort, and help, and resignation which the Gospel is supposed to yield to those who are in affliction or in circumstances of trial or suffering. It is maintained that church-going workingmen would be more contented, under the influence of these "consolations," in times of labor depression and agitation. Now, we have nothing to say against the assuagements of grief which Christians undoubtedly find in their religion; but we may be permitted to observe that, so far as it is a question of contentment with a lot of poverty, it is a pious fiction to say that such contentment is the general characteristic of Christians. The great mass of American Protestants are found in the middle and wealthy classes. Workingmen do not see in them a placid satisfaction with straitened circumstances, but, rather, fully as much desire and striving for the good things of life as the man of the world exhibits. It is singularly opposed to the tendencies of human nature to suppose that a workingman who has to fight for a bare existence, would be made meekly content if he were only in the habit of sitting in the gallery of a church, once or twice a week, and looking down upon a collection of the prosperous and wealthy. There is something about this which irresistibly reminds one of the French Convention condescendingly "decreeing" the immortality of the soul, "ce principe consolateur."

Turning to the other side, and looking at the attitude of Socialism toward Christianity, we discover two positions taken, diametrically opposed to each other. The Extreme Left passionately denounces all religion which "advises the poor," to quote a specimen sentence, "to submit without murmuring to injustice, insult, oppression, degradation, and even death, on the transparent fraud that full compensation will be made in the land of the hereafter." Henry George and his followers, however, are at the other extreme, and present the surprising spectacle of an appeal from Christians to Christianity—of an agitation which professes to be not alone in the interests of justice, but also in the interests and in the spirit of Christianity. We have no thought to rule out the church as an element in the great and complex question of labor and capital. Doubtless it has its place there. But we are very much disposed to doubt the efficacy of mere church-going as a solution of the labor problem.

COLLEGE GRADUATES IN GERMANY.

A YEAR or two ago Prof. Conrad, of Halle, one of the most sensible of the learned men of Germany, published an investigation of the attendance of students at the German universities during the last half century. The enormous increase in this attendance had already been the object of attention, and even of anxiety, among the Germans; and Professor Conrad laid before them the exact facts. He showed that while in the period 1861-66 there had been only about thirty-four university students for every 100,000 inhabitants, there were in 1883 as many as fifty-two and a half students for every 100,000 inhabitants, the increase being particularly noticeable in the "philosophical" branches—that is, in what we should call the non-professional studies, such as the languages, history, natural science. He pointed out that in these liberal branches the supply of highly trained and educated men, who had made a profession of study, teaching, and writing, went greatly beyond the demand. On the other hand, in branches like medicine and Protestant theology, the supply of trained men, if excessive at all, was by no means so much in excess of the demand. Of Catholic theological students the supply did not even meet the demand.

Since the publication of the volume containing these investigations two university semesters have gone by; and now there are published in the *Jahrbücher für National-Oekonomie* (which are edited by Professor Conrad), a series of tables on the same subject. The tables are printed without comment, but the facts brought out in them are very curious when taken in connection with the previous investigation. The whole number of university students shows an increase since the winter of 1883-84; it goes up from 25,478 at that time, to 26,494 in the present winter semester (1884-85). But in those departments of which Professor Conrad had said that they had too many students, we find a decrease in the attendance, whereas there is an increase in those branches in which he had noted an insufficient, or at least a not excessive supply. The theological students, both Protestant and Catholic, show an increase. Of the former he had said that there were not too many, of the latter that there were not enough. The medical faculty has a larger attendance than that of two semesters ago; here again the previous investigation had shown that the universities were not as yet turning out more doctors than there was room for in the country. On the other hand, the law students are actually less in number, being 4,914 now, in place of 4,946; while in the class of philosophical students there is a still more marked decrease—from 9,529 to 9,259. Of both the last mentioned (the law and the philosophical students) Professor Conrad had said there were altogether more of them than the demand for their services warranted. Now, of course, it may be a mere accident that these two things go together—that the branches in which there were said to be not too many students, now show a larger attendance, while those concerning which a note of warning was sounded, show a falling off. But the coincidence is certainly very remarkable. Professor Conrad's book attracted a good deal of attention when it was published, more particularly among the university men whom it specially concerned; and it does not seem rash to infer some connection of cause and effect between his warnings and the shifting in the choice of studies which has taken place since he published them.

The most striking fact brought out by the general tables is the enormous increase in the number of what we should call non-professional students. The total number of university students has about doubled in the last fifty years; but the number of philosophical students has nearly quadrupled in the same time. It may be an indication of the drift of the time that, on the other hand, the number of Protestant theologians shows only a slight increase, and that of Catholic theologians an absolute decrease. As regards the philosophical students, the impetus to the study of natural science is one great cause of the larger number of devotees. But in other branches of those liberal studies which are lumped together as "philosophical," *e. g.*, in history and philology, there is still a disproportionate increase. One great cause of this is to be found, as Professor Conrad has pointed out, in the social conditions of Germany. The career of the scholar and professor enjoys high social consideration. A man who has written learned books and has added a crumb to the stock of the world's knowledge, can hold up his head with the bureaucracy and aristocracy. The merchants and manufacturers, the men whom we call business men, are rather looked down on, unless they succeed in making very large fortunes; for even in Germany money paves the way to social position, if there be only enough of it. In general, however, a "business" means a comparatively low place in the hierarchy of polite society. Now, there is probably nothing which exercises a stronger influence on the choice of a career than the social consideration which it brings. In Germany there has been enormous pressure and competition in the occupations which have the stamp of public esteem—the profession of the scholar, and the Government service, whether in administration or in the military. The consequence is, that in both these occupations a degree of perfection has been achieved that astonishes the world. In this country, on the other hand, success in business is a ready, if not the readiest, means to social success, and our greatest achievements have been in the line of industrial and commercial ventures. The Germans are now complaining that trade and industry have been too much looked down on by them, while we might readily complain that they have been too much looked up to by us. It is not unlikely that public consideration in the two countries will shift in opposite directions, and will eventually bring about in both a less arbitrary and irrational scale of social distinction. The stir about Professor Conrad's book is one of the signs that the overcrowding of the scholarly profession in Germany is being followed by a natural reaction; and certainly with us, on the other hand, the partiality to business and money-making as the

most brilliant of careers is less strong than it was a generation ago, and shows a steady abatement as time goes on.

BRITISH FOREIGN POLICY.

LONDON, March 19, 1885.

THE irony of fate has seldom been displayed on a more conspicuous scale than in the history of the Gladstone Cabinet during the last five years. They came into power on the express understanding that domestic legislation and social reform were to be the main aims of their policy; that in foreign affairs they were to reverse the unquiet and aggressive tendencies of their predecessors, to promote peace and harmony all over the world, to limit in all possible ways the liabilities and responsibilities of Britain. Nor were these the mere pretences of partisans anxious to displace their antagonists. No fair-minded man can doubt that Mr. Gladstone and his lieutenants were as sincere in setting these objects before them as were the crowds who cheered the admirable moral doctrines which he expounded with so much earnestness on so many occasions. What has been the issue? Only two measures of first-rate domestic importance have been passed during these five years—the Irish Land Bill of 1881 and the Parliamentary Reform Bill of this present session, which, important as its results will be, is certainly not a measure of social reform. All the other great domestic topics discussed in the electoral campaign of 1880 remain untouched, and the time of Parliament has been almost wholly occupied either by Irish troubles, Coercion Acts and Crimes Acts, or by discussions on foreign affairs. And how has it fared with foreign affairs? An enormous addition has been made to the liabilities of England by the occupation of Egypt and the expedition to the Sudan. Large annexations of territory have been made in Africa and the Eastern Archipelago. Fighting has gone on in South Africa. Three campaigns have been conducted in Northeastern Africa—that of Tell el-Kebir in 1882, that near Suakim in 1884, and a third still unfinished in the present year. A grave dispute has arisen with Russia regarding Afghanistan, and at this moment peace is preserved on the frontier north of Herat with the utmost difficulty.

Pretty well, the Tories say, for the most cautious and pacific of Governments! They find an easy explanation in the incompetence of the Ministry, which has never (according to their view) foreseen and therefore never been able to avert coming troubles, and in its willingness to abandon pledges and principles for the sake of retaining office. Observers in other countries will of course look for some deeper-lying causes, and will also ask, as many persons in England ask, why it is that England seems to find foreign policy so difficult, and succeed so ill with it. During the great war with Napoleon we gained immense credit, even under Ministers vastly inferior to Pitt, for the vigor and consistency we displayed. This reputation was on the whole maintained during the decades which followed; and unpopular as Palmerston became on the Continent, no one could in his days affect to laugh at England, or accuse her of weakness or unwisdom. Have our statesmen declined since his time? or has the bold spirit of the people been exchanged for lethargy and cowardice? The French and German newspapers, whose occupation has of late years been to rail at England, tell us so. They paint us as at once grasping and timid. We are selfish, keenly alive to our smallest commercial interest, meanly anxious to keep competitors at a distance, insensible to large views of progress and civilization, using Christianity and humanity as a mere cloak to our greed. At the same time we are short-sighted and timorous, without the courage to make good our pretensions by force of arms, unwilling to undergo the sacrifices necessary for securing an imperial position. We have retained all the ambition of the days of Lord Chatham and his son, without the energy and self-confidence which alone dignified and seemed to justify that ambition. Thus our power is vanishing, and Europe need no longer trouble itself about us, for no threats we may make will be carried into effect. That this picture is untrue appears not only from its self-contradictions, but from the extent to which Europe still occupies itself with England. Were we really insignificant we should not be so closely watched nor so passionately abused. But in any case, confident that we know ourselves better than the French or Germans do, and feeling that neither the level of capacity in our statesmen nor the courage of the nation has declined, we need some other explanation of the failures and humiliations which we have had frequently to experience of late years in our foreign relations. I will endeavor to suggest one.

England is in a period of transition. Eighty years ago the middle classes and the multitude left foreign affairs entirely to the Crown and its advisers. The upper class, or rather that small section of the upper class which practically ruled, influenced the Crown and the Ministry; the mass of the people did not. Hence British foreign policy, whether wise or unwise, had in general the merits of vigor and consistency. The Executive commanded the whole force of a wealthy and martial nation. It adhered steadily, whether Whigs or Tories were in power, to a few cardinal doctrines, and its attitude scarcely changed with changes of ministry, because the class to which it belonged, and by which it was controlled, was little divided in opinion upon these matters. But since 1832 the middle classes, and since 1867 the poorer classes also, have obtained their share of power. They are supreme in all such domestic questions as are large enough to excite them. They have, through a reformed Parliament, the means of guiding and checking the Executive upon all questions, foreign policy included. Hitherto their views on foreign policy have been vague and crude, because their interest in it has been slight and their knowledge still slighter. They have usually left the Executive to itself, interfering only when their moral sentiment was roused, as it was by Mr. Gladstone against Lord Beaconsfield's pro-Turkish action in the years 1876 to 1878. But the fact that they are all-powerful and may at any time strike in, has distracted and weakened the Executive. It has no longer to look to a small class with which it is in social sympathy; it has to attempt to discover and obey the opinions of a multitude which has no opinions, but may suddenly develop them. To be sure, there is the House of Commons, consisting of better informed men, from whom some guidance might be expected. But the ordinary member of the House of Commons has little independent judgment on foreign affairs. He is far more disposed to follow than to guide, and throws back the responsibility on the Executive. Thus the Executive falls between two stools. It dare not act on its own judgment and that of the small ruling class which is chiefly interested in foreign policy, because the multitude has to be reckoned with. It cannot follow the lead of public opinion, as it would do in domestic questions, because upon foreign policy public opinion does not exist, or exists only in the form of a very few tendencies and veins of feeling too vague to give guidance in most of the emergencies which arise. Hence the uneasiness and timidity which beset our Government, and which marked Lord Beaconsfield's quite as much as they have done the present Cabinet.

That democracies were not made for foreign policy, or foreign policy for democracies, is a conclusion which many here feel themselves driven to. It is at any rate true that till we carry the democratic principle further, applying it to foreign as we have done to domestic affairs, and take no action abroad till we have secured the approval of the country to it, our present perplexities are likely to continue. They appear even in the constitutional machinery by which this part of the Administration is dealt with. Foreign affairs are still in theory the province of the Crown, and of the Crown only; the right of declaring war and making treaties is in point of law as much a part of the royal prerogative now as it was under Elizabeth. Unless where a money grant is needed, the approval of Parliament is not asked till after the decisive steps have been taken; and as negotiations must usually be conducted secretly, it is hard to arrange otherwise. Hence, Parliament is not consulted till the thing is done, and the Executive is obliged to guess how much support Parliament, and the country which Parliament obeys, will be disposed to give to its acts.

There is, it may be suggested, one way out of the difficulty. The Executive may, instead of waiting on the opinion of the country, undertake to form and lead that opinion; they may instruct the people, lay the problems of foreign policy fully before them, and then assume the responsibility of acting on their own views. It is certainly to be wished that more was done in this direction, for, ignorant as the English masses are about whatever lies outside their own islands, they are both teachable and loyal, ready to give ungrudging confidence to leaders whom they have learned to respect.

But here another trouble appears. The ruling class is larger than it used to be, and far less homogeneous, and its opinion is much more divided on principles of foreign policy than was formerly the case. That bold, unhesitating, slightly unscrupulous selfishness which used to guide England as it still guides most of the great states of Europe, has been qualified, and in many minds superseded, by sentiments of international justice, of humanitarianism, of an aversion to war and annexation so strong as to counsel the abandonment of much that we hold lest it should involve the acquisition of more. Views are much divided even as to the extent to which we are bound by existing treaty engagements, when those engagements might require a resort to arms for no plainly defensive purpose. While the bulk of the aristocracy and those who belong to the military and naval services talk and indeed exaggerate the haughty language of Nelson's and Wellington's days, many of those who aspire to lead the working class preach non-intervention, oppose an increase of armaments, and inculcate conduct which would soon bring the British Empire to an end. We have the principles of Julius Cæsar and the principles of the Sermon on the Mount commended to us with equal warmth, and the nation hangs uncertain between them. These differences reappear even in the Cabinet, where, if rumor speaks truly, there have repeatedly been dissensions which only Mr. Gladstone's unequalled personal authority sufficed to allay. Hence ministries do less than they ought to instruct the people and give them a lead in foreign troubles. Themselves distracted and hesitating, they catch on indications of public opinion, and tend to prefer a middle to a decided course, because they thus postpone the necessity for a final decision, and give themselves a better chance of keeping step with the impulses of the masses. The less responsible Opposition is in this respect no better than the responsible Government. It is equally anxious to follow rather

than to lead the nation, and even less disposed to indicate positive views of policy. Though naturally more inclined to warlike and aggressive courses than is the Liberal party, it fears to commit itself to the advocacy of any particular war or aggression, lest the multitude should turn out to be on the other side. And thus the nation loses that light and leading which it has a right to expect from its foremost men, and without which no Democracy can prosper.

It is not surprising that under these conditions we should meet with rebuffs, and find our relations with other Powers occasionally strained. Consistent boldness or consistent non-interventionism would either of them give us a better chance than an alternation of the two. That things have not gone more against us has been owing partly to the great strength which the nation can put forth, and which makes foreign states shy of quarrelling with us; partly to the good sense of the people, who are on the whole disposed to support the Executive because it is the Executive, even when not satisfied of its wisdom in the particular case. The circumstances of our present dispute with Russia illustrate this disposition. There is a general notion that the Ministry have not shown skill in their management of the Afghan and Central Asian question. There is some doubt whether the particular point now at issue is really worth fighting about. But public opinion holds that the Government must be trusted in a matter of which it knows the ins and outs, and that as Mr. Gladstone is known to be a peace-lover and has always been rather friendly than hostile to Russia, any cause which induces him to take up arms is likely to be a sufficient cause. Much as the masses of the people dislike war and the taxation it involves, hardly a voice has been hitherto raised to urge any concession on the Government, because it is felt that the national honor is involved. Considering how near we may have been to a breach, or may be still, although the wisest heads think the cloud is passing off for the present, it is surprising how little the pulse of the country has been quickened. Were England once embarked in a struggle, she would go through with it with as much constancy as in the beginning of the century. But considering how many risks she runs of being involved with civilized as well as barbarous foes or rivals in different parts of the world, it is impossible not to feel anxious at the growing difficulties of maintaining a firm and steady attitude in foreign affairs, and of adapting to their management the ancient and almost obsolete forms of our monarchical constitution. Y.

TWO NOTABLE PICTURES.

London, March 7, 1885.

The exhibition of Holman Hunt's great painting, "The Triumph of the Innocents," was opened to the public on Monday, the 2d of March. The general expectation about this picture, of which for several years we have been hearing so much, was very great, so that the room of the Fine Art Society in Bond Street in which it is shown is constantly thronged this week with visitors. The room is arranged with graduated benches, like a theatre, and the darkness secured by heavy dark draperies makes the light falling on the picture, and the picture itself, extremely brilliant. It is an understood thing that a work of Holman Hunt's cannot be seen in a hurry, and that any expressions of surprise or any remarks on the work will keep till one is outside the room; so the spectators grope their way into the first vacant seat, and gaze in awe-struck silence. The picture, the prevailing tone of which is bright blue-green, is placed on a rich background of mulberry-colored plush, which is draped behind the frame. We see a wide extent of cold wind-blown landscape, finely rendered, lighted by the moon. The Virgin, seated on an ass of the Mecca race, followed by its foal, is in the act of dressing the divine Child. She has passed his arm through one sleeve, while the Child is stretching backward and calling her attention to the holy throng of martyred children supposed to be invisible to all but his eyes. St. Joseph, with all the implements of the carpenter in a satchel on his back, is leading the ass by a rope, which he is pulling vigorously, and looking back into the landscape, fearing pursuers. They are passing over a stream, having stepping-stones, by which a tangle of Eastern cactus-like plants is growing. The travellers form the central and important group of the composition. Joseph and Mary, being clad in sombre Eastern garments, come dark against the landscape. Mary's head-dress alone is white, and some silver ornaments round her forehead catch the green light of the moonbeams. From the left corner above the Virgin and Child commences the garland of Innocents. The first group of three are just awakening to the new life: one seems stretching himself after sleep; his two companions are still asleep. One little darling sad-faced baby is hugging a dead bird as he floats along through the air above the central group, with his head resting on the shoulder of a third. Their crowns or halos are still unformed, and we see them shaping themselves in light above them. Below, from the left corner, round the ass and foal, begins a string of dancing glorified Innocents, which continues below the central group and leads out of the picture. Some seven of them are holding hands, and seem to be keeping watch round the travellers, whom they are protecting. They are garlanded and crowned with flowers, and some of them bear branches of pomegranate and almond blossom. One little child is examining a cut through its garment, in surprise that no wound shows where the death-blow fell. The foremost leads the way in priestly attitude, bearing incense in a silver cup which he holds aloft; his vestment is red and very beautiful. The brook is strewn with flowers which the children have scattered; and immense globules or bubbles, one representing as in a crystal ball the millennium,* dance along with the children.

The string of Innocents and the globules of the brook are supposed to be lighted with a celestial glowing light, in strong opposition to the rest of the picture; and this double system of coloring, treated, as Holman Hunt does everything, in a very realistic manner, brings about a garishness and inharmonious effect which are very painful. Some of the children have light bits of drapery of brightest tint; one little cap of intensest blue is prominent. The colors about them are magenta reds and pink, and the garlands of flowers, which ought to be so telling, are indicated in coarse touches of most vivid vermilion, yellow, blue, and red. The draperies are unfortunately very hard, and as if they had been melted upon the forms in metal. The children are beautifully drawn and most exquisitely composed; as to grouping and line and pathos, nothing could be more lovely. They recall the Donatello dancing group, because the action is somewhat similar. The flesh has the usual opalescent quality of Holman Hunt's flesh; the modelling is often too thoroughly insisted on; the shadows are unfortunately black. As to the types chosen, there is great variety: Syrian, street Arab, and blue-eyed English babies are holding hands together in this triumphant dance. The child Christ is beautiful. His action as he leans in delight toward the children is very fine. The Virgin is the least agreeable of all the figures. She is Eastern but very common-looking, thin and plain, and not young enough. The lazy smile and fatuous expression with which she contemplates her good fortune in having saved her son, do not at all come up to the artist's intention as he explains it in the little book which earnest admirers buy at the door, for the modest sum of sixpence, in order to understand the symbolism of the work.

We find quoted also, in this pamphlet, Professor Ruskin's laudatory remarks from the 'Art of England,' and a history of the troubles which Mr. Holman Hunt went through in the making of this work, painted firstly in the East on a linen which would not stand, and finally repainted here since 1882. We hear that £40,000 is the price the picture ought to realize; £20,000 has been offered and refused at an early stage. Those who understand these things assure me that, with the exhibition and the engraving, the price desired will be certainly attained. It is a matter of regret to true lovers of art that so much exquisite intention and such earnest study of the subject should be marred by overwork and hardness, and by a pervading dissonance in the color.

Múnkacsy's "Calvary" is now here, exhibited at Egyptian Hall with all the paraphernalia and solemnity which picture-dealers delight in—a darkened room reached through obscure passages; seats arranged; explanations printed on fans; and a wide, roped-off distance, so that no one shall get near the picture. This immense canvas is intended for a companion of the "Christ before Pilate," which excited so much attention three years ago. The qualities of Múnkacsy's work are exactly those which appeal to the general public—strong and realistic painting without any subtleties or refinements to puzzle the beholder; the drawing firm and correct; the dark and light effectively distributed; the *tout ensemble* exactly giving the effect of a tableau at the theatre. In "Calvary" Múnkacsy depicts the moment when, after having crucified Christ and the two malefactors, the spectators and perpetrators of the deed are turning to come away down the hill. The cry of the dying Christ, "It is finished," arrests many in their downward course: they turn and look at him with different expressions of terror, hatred, or fear. The crosses are placed at the summit of a hill; rocky ledges of gray stone slope downward to the left. Christ and the thieves are on the extreme right. The Virgin, in black robes, her head swathed in white, kneels in an agony of grief at the foot of the cross, embracing her son's feet. The Magdalen, in blue, with loose red hair, kneels beside her, hiding her face with her hands. St. John, in a deep-red garment, looks compassionately on the kneeling mother as he stands to the right of the cross. A centurion, admirably painted, sits in the extreme foreground to balance the composition, as the crowd is rushing toward the left corner downward from the cross. The background is formed by a hedge of centurions, very black against a murky sky, composed of yards of dirty blue and black and gray color. The composition is emphasized by the distribution of whites leading the eye to the Christ, whose white body-cloth is the highest note below the Virgin's white coif; and at the extreme left a Rabbi, in splendid white, warmly-toned vestments, on a white charger, is the lowest white note, from which our eye naturally reverts to the Saviour. The models are well-known Jewish types of the lowest order, recalling the Ghetto of Amsterdam or, in some of the more refined heads, the Paris Bourse. The

* To quote the descriptive pamphlet: "The stream is portrayed as ever rolling onward and breaking—where it might if real water be dissipated in vapor—into magnified globes which image the thoughts rife in that age in the minds of pious Jews, particularly of those in great tribulation, of the millennium which was to be the mature outcome of the advent of the Messiah."

executioner is one of the most degraded figures I have ever seen; the thieves also. The crowd of spectators rushing downhill are real and individual in movement and in face. The Rabbis discussing are very vivid figures throughout. Light against dark and dark against light is the system observed; but the want of beauty, the want of feeling, the theatrical effect, and the absence of any distinction of type or spirituality in the Christ, makes it very evident that this is not a subject to be approached by our nineteenth-century painters, however skilful they may be. As to the technique, I should judge it to be rather coarse, but the rope kept me at a respectful distance, and the attendant presented me with a pamphlet declaring this to be the finest picture of our century.

THE RÉMUSATS.

PARIS, March 12, 1885.

THE correspondence of Mme. de Rémusat has reached its fourth volume. Some families destroy all their letters; it is very fortunate that the Rémusats are not of the number. In our time of telegrams and railways, there are, I suppose, very few people who cultivate the art of letter-writing. We live too fast, we have too much to devour and to digest, we have no leisure, we are the slaves of society. Few among us have a small number of chosen people to whom we confide, year after year, day after day, our inmost thoughts; before whom we can, so to speak, think aloud. Mme. de Rémusat was, in that respect, as fortunate as Mme. de Sévigné; she was even more fortunate, for her son Charles de Rémusat was a young man of extraordinary intelligence, open to all ideas, full of wit, who took an extreme interest in all the affairs of his time, political as well as literary. Mme. de Grignan was herself a good correspondent, and her letters are sometimes charming; but she was, in many senses, inferior to Charles de Rémusat. The letters of M. de Rémusat and his mother make a sort of perpetual dialogue; and in this dialogue we must give the first place to the mother: her letters are decidedly the best. He is a little too paradoxical, he runs too much after wit; she is perfectly natural, and she has the precious faculty of saying good, sensible things with a degree of charm, with an elegance, a simplicity, which gives them their full value. Her style is like her mind—it is what we call in France very *coulant:* it runs, like a clear and gay brook, without any noise; it leaves an impression of ease and pleasure. The style of Charles, her son, is a little too much *travaillé;* he is a little more personal, and cannot forget himself.

It is to me, I confess, delightful to see Mme. de Rémusat read her classics as we read the latest magazines: "Your father is well; he reads aloud the comedies of Molière, which charm us, or the 'Lutrin' [of Boileau], or the fables of La Fontaine, or the *Contes* of Voltaire." She was then a *préfète* at Lille (in 1818). "Do read again 'George Dandin'; your father reads admirably. . . . Why should you not play it next year with Mme. Molé? I should be delighted to play the part of *Mme. de Sottenville.* But why should you not also play 'L'École des Femmes,' with the 'Critique' as a small piece, which is charming? Well, I dote just now upon Molière, and I find a hundred occasions to cite him, to the ministers, to everybody, and even to myself, in default of something better." Mme. de Rémusat was somewhat alarmed by the extraordinary interest her son took in the politics of the day. Not that she was indifferent herself, but she did not wish him to lose himself entirely in the small parliamentary and journalistic gossip. He had a curious and somewhat pedantic way of referring every possible subject to his political preoccupations. In order to counteract this tendency she always brought him back to literature. Is not this very good advice?

"You must sometimes give your mind and your heart to something different from politics; rest them both by studies of another kind. Purify your imagination with letters, which I believe more and more to be useful to mankind. They transport us into an ideal world, which contrasts with ours; they soften the bitterness which contradiction necessarily creates. If I may be allowed to use a trivial comparison, it seems to me that they give a new coat of paint to the mind fatigued by political discussions; and when you are refreshed and purified by them, you will see that you will return to business better disposed to judge of things than those who have not ceased to look at them minutely day after day. I assure you that the reasonable and fixed opinions which you see me hold are due in part to the fact that I only think momentarily of what is going on. It is quite possible that I owe to Rousseau, to Fénelon, to Molière, with whom I spend my evenings, the lucidity which allows me to pass an impartial judgment on the papers which I read in the morning."

Her son's answer to this excellent advice is characteristic. He maintains that politics has devoured everything; that to be political is merely to consider human nature in all its aspects. "Politics," says he, "is now the only source from which serious men can take their meditations, fanatical men their enthusiasm, gay men their epigrams." He finds it very pleasant, very amusing. For instance, is he not pleasant, this M. Tollivet, who the other day, when he ascended the tribune in order to speak to the ministerial proposition, felt somebody seize him by the arm and say, "What are you going to do? why speak for the Ministers? your six children are well placed"; and who answered, "Yes, but I am expecting another."

Rémusat was still very young, though his letters are often a little pedantic. He discussed the character of Louis XIV. with his mother, compared Fénelon's political views in the 'Télémaque' with Montesquieu's 'Esprit des Lois.' His mother once tells him, "Do you know that if I keep your letters and if you keep mine, and if by chance a third person ever puts his nose into our correspondence, this third person will perhaps find us a little heavy?" No, she is never heavy; her dissertations, even when they are a little didactic, have an extraordinary grace. And he is very modern: he jumps out of old times constantly into his own time, sometimes turning a somersault.

The Memoirs of Mme. d'Épinay appeared in 1818; they were particularly interesting to the Rémusats, as Mme. d'Épinay was, by alliance, sister-in-law of Mme. de Labriche, the aunt of Mme. de Vintimille; and in these memoirs there is a perpetual mention of Mme. d'Houdetot, grandmother of Mesdames Germain, de Barante, and de Bazancourt. The Memoirs of Mme. d'Épinay are a singularly candid description of the state of society at the end of the eighteenth century. The two parties which existed in 1818, the Liberals and the Ultras, fought much over it. Mme. de Rémusat was peculiarly struck by the details concerning Rousseau:

"Oh, my son, what curious people these philosophers were! what exalted brains! what violence! what activity of pride! what strong emotions about nothing! Their system was a fanaticism like any other. There is a funny word of Voltaire to all these sectarians: 'Love each other,' said he, 'for who would love you?' My friend, I make my excuses to the last century, but I continue to prefer Racine, Pascal, Nicole, Boileau, Molière, etc. Do you know what these people of the eighteenth century were in want of? Of *pudor.* Even their morality was tainted with egotism. Oh, believe me, the morality of Christianity, which recommends so much diffidence, knew well the weakness of humanity."

Charles de Rémusat agrees only partly with his mother; if he did completely, he could not write a clever letter in answer to her. In his view, the Memoirs of Mme. d'Épinay explain the French Revolution: "In a country where nothing was respected or respectable in the institutions, the new ideas, in order to spread, needed only the weapons of pleasantry and frivolity. But they denaturalized themselves; they became the weapons of malice. From the good company they descended into the ranks of the bad company. Among the people they took on the character of a passionate prejudice. What happened when the system broke up? The bad company, and what approached it, was timid, blind or frivolous. The philosophers, who had never been anything but writers, and who had thought themselves dispensed from forming their characters, were not stronger than the rest. The people were violent, and soon ferocious. You know the rest." Speaking then of the violence and the follies of the Ultramontane party, he says that the arms of combat must be changed at times: "As is the attack, must be the defence; and, as I would borrow the ideas of Pascal to defend religion against an impious writer, I would borrow sarcasms from Diderot to fight Chateaubriand." Mme. de Rémusat saw further than her son. The philosophers had employed the weapon of irony and pleasantry, not only because it was the weapon of the time, but because it strikes hard, even when it does not strike justly. She compares their attempt to the fable of the Titans, or to the idea of the Tower of Babel. "Man is a feeble creature thrown in this universe by I know not what mysterious will, the secret of which he can never know. . . . The scepticism of the philosophers confounded everything; they attacked God himself, and finally their attempts against the immensity of the Creator of all things magnified them in their own eyes, and they looked upon all things with a domineering contempt."

The affection of Mme. de Rémusat had its weaknesses; she shows in her correspondence a little too much inquietude with regard to her son's relations with his patrons and protectors in Paris. Charles, whether from shyness or from pride, or from an innate tendency to ingratitude, did not manifest toward M. Molé, who had procured him a place, and who could do much for him as well as for his parents, the sentiments which his mother would have desired him to manifest. She becomes at times very nervous, too nervous on the subject; she is alarmed when her son tells her that his conversations with M. Molé, when he meets him, are generally reduced to the single phrase: "How do you do?" She is afraid that M. Molé will lose his interest in a young man so little demonstrative, so reticent. She is even afraid that this coldness may hurt the position of her husband, who was prefect at Lille. These fears were vain; men of a certain age do not expect much from young men of twenty. I notice this nervousness as showing a little weakness of character, and too much humility of a certain sort in an otherwise high-minded person. I think I see a trace of it also in her sentiments toward Napoleon. She thinks it necessary to write to her son: "I have only wished the fall of the author of my fortune because his oppression humiliated my soul." She certainly had not been well treated by Napoleon; she had been very useful in the difficult days of the Consulate, and Napoleon had thrown her in the background during the brilliant days of the Empire. But a noble soul ought not to dwell on these comparisons, and must console itself with higher thoughts. The debt which Napoleon had not paid was paid by the Bourbons, and the Bourbons could have done nothing for Mme. de Rémusat if Napoleon had been too generous to her.

As a wife, as a mother, Mme. de Rémusat was

admirable. During a visit which she makes to Paris she speaks of her Charles to everybody—to M. Molé, to Talleyrand, to M. de Barante; she sees a hundred people, but she sees him only. "Ah! my dear friend," she writes to her husband, "under what a different aspect the world appears to us when we only look on it through a son and for a son. Last evening I saw my sister, young and pretty, surrounded with flattery, other young women busy with the noise made about themselves, and I was out of it all—indifferent to whatever was not Charles, looking only at him, speaking only of him, following him with my eyes, hearing his words, trying to understand all his motives, intent only on him, as if there were no life left to me but his life. And it is partly true, for my own life is really a poor little thing. Ah! the best of children does not know what he is to his mother."

This volume of correspondence is full of such charming passages. The literary judgments are always marked by the best sense and the most refined taste; there is in the style a certain ideality, an instinctive abhorrence of adjectives and adverbs, a certain sort of well-bred precision, which makes one think constantly of those great writers of the seventeenth century who were the favorites of Mme. de Rémusat.

Correspondence.

A FORTIORI.

To the Editor of The Nation:

Sir: If I have made a mistake, I am quite ready to apologize. In the passage to which "C. W. E." objects, I intended to refer to Mr. Randall, but inadvertently confounded his last with his former position. Excepting, however, for the possible injustice to Mr. Carlisle, the argument remains the same—that there is somebody in Congress, whether the Speaker or the Chairman of the Committee on Appropriations, who has the power of manipulating the public finances to suit his own purposes, without any public or effective responsibility for his action. Indeed, the argument will cover both cases. As I understand it, the Speaker appoints the Chairman of the Committee on Appropriations at his absolute discretion, limited only by his sense of political obligation. If he, whatever his nominee may do, is to be freed from blame by an appeal to the "rules of the House," if he is presumed to have cleared his reputation by "indicating in his valedictory address annoyance at the course of business in the House," then I say this is just what constitutes the objection to the present position of the Speaker and the whole course of business—namely, great power with little or no responsibility. Consider what a dangerous conclusion it is, that the Speaker elected to office by a party vote, and distributing important positions on committees among his supporters, should then be held free from responsibility for their conduct.

The rules of the House, again, are an elaborate network, devised, with the wonderful organizing power of our people, for getting some sort of order out of what would otherwise be perfect chaos. They cover endless possibilities of iniquity, yet they cannot be touched because nobody is responsible for them, nobody knows what to substitute for them, and without them business could not get on at all. One principal advantage of introducing, say, the Secretary of the Treasury to the floor of the House, would be that even before coming to the real business of the country, we should get a starting-point for the reform of methods. If a member now ventures to question the propriety of any of the rules, he finds himself "sat upon" by a majority which he cannot touch or question. The Secretary could not be silenced in that way. The House would not dare to suppress questions addressed to him by individual members, and still less the answer which the country would be awaiting; and little by little the light would penetrate those corners where deeds of darkness find congenial cover, and publicity and individual responsibility would gradually replace the present lamentable defect of those qualities. Nor would the Secretary in any way encroach on the right of the House to determine its own procedure, as his answers would turn merely upon the effect of this procedure upon administration, and no change could be made without the deliberate concurrence of the House. It is leadership which is wanting to replace the scattered and irresponsible authority of Speaker and committees. G. B.

Boston, March 30, 1885.

ASSOS.

To the Editor of The Nation:

Sir: The anonymous communication from a distinguished European archæologist which appeared in the *Nation* of November 13, 1884, has just been brought to my notice. His statement that the Turkish law of 1874, under which the investigations at Assos were carried on, "enacts that all indivisible sculptures shall not be divided, but valued and *given up to the finder* in exchange for their estimated value," is, unfortunately, not correct. The law by no means thus favors the excavator with the promise of ultimate possession. Article 5 of the Code directs that antiques are to be divided, as the expert appointed by the Ministry of Public Instruction may determine, either *en nature* or *en valeur*. And as, at the time of the division, the Turkish Government had decided to allow no sale and no exportation of antiques (excepting of those which they were pledged to give up by previous agreement), the lots were made out in kind. Even if this had not been the case, it would have been futile to argue with "a set of ruffians like the Turks" that the sculptures from the epistyle of the archaic temple were indivisible, when they knew that at that very time half of those sculptures were in Paris.

Since the terms of the division have been made a matter of public discussion, it is only just that Hamdi Bey should, in this business, at least, be exculpated from the impudence and encroachment attributed to him by your correspondent. Hamdi Bey was at the time travelling in Syria, and had nothing whatever to do with the arrangement made at Assos, the Turkish Government being then represented by Demetrios Bey Baltazzi. Joseph Thacher Clarke.

London, March 15, 1885.

THE LADY "BACHELORS" OF ARTS.

To the Editor of The Nation:

Sir: It is a standing jest with those of your minor esteemed contemporaries who find the education of women a very humorous idea, that their college degree should designate them "bachelors." It is a pity to diminish jocularity in any way in a sad world like this, but when the joke arrives at the *Pall Mall Gazette* it is perhaps time to throw a little cold etymology on it. The fact is that the word *bachelor*, both by its origin and its modern scholastic use, is as much feminine as masculine. Its application in common speech to an unmarried male, though as old as Chaucer, is a later and secondary meaning of the word, and has nothing to do with its use in the college degree. This scholastic use goes back to the French *bachelier* (thirteenth century), *bacheler* (twelfth century), *baceler* (eleventh century), from Latin *baccalarius* and *baccalaria*, young male and female farm-laborers (from *baccalaria*, a herd of cows, from *bacca*, for *vacca*, a cow). The use of the Latin term for both sexes is illustrated in a passage quoted by Brachet from an abbey's property-list of the ninth century: "Colonica in Campania: Stephanus, colonus; uxor Dara; Dominicus, filius *baccalarius*; Martina, filia *baccalaria*." Littré gives the word *bachelière* as applied to "a young girl in attendance on a bride" (Berry).

While the original use of the word *bachelor* in the college degree goes back to this bi-sexual term in French and Latin, its continuance in use since the middle ages is probably due, in part, to a mistaken derivation, concocted by university clerks in the sixteenth century. From the French *bachelier* had been made a Latin *baccalaureus* (equally well *bacca laurea*), then *baccalaureatus*, and they now gave all these an imaginary paternity in *bacca lauri*, the bay of Apollo and the laurel crown.

So, whether the college term "bachelor" rest upon its real derivation from the mediæval farm-laborer, or upon the prettier fancied derivation from the laurel, it is applied with equal propriety (as it is to be hoped it may some time be with equal frequency) to women as to men.

E. R. S.

"IN THE TENNESSEE MOUNTAINS."

To the Editor of The Nation:

Sir: The stories which have been published under the above title are remarkable for depth of feeling and beauty of description, and as pictures of life and character. But they are far from being accurate pictures of life and character in the Tennessee mountains. So full of minute detail are they, so carefully is local color dwelt upon, that failure to make them true to nature is all the more noticeable. But for the manifest effort at realism, one who is familiar with the mountains of Tennessee could hardly believe that Miss Murfree has meant her stories to be thought of as other than pure fiction, describing actual places only as a basis for that fiction.

From various reviews of the book, it seems to be regarded as a real representation of place and people. Strangest of all, the dialect is quoted as possessing philological accurary. One needs to go no further than the table of contents for proof that this is incorrect—*e. g.*, "The Harnt that walks Chilhowee." A Tennesseean very rarely uses *haunt* as a noun; never does he pronounce even the verb "harnt." "Mounting" is, I am sure, not commonly heard. It is contrary to the spirit of language in this section to preserve final *g* when it belongs to the word; this clipping is seen in "A-Playin'," "Electioncerin'," "Dancin'," which occur in other titles of the collection. A favorite expression of the author is "stiddier" (instead of). It is never heard. The mountaineers say *stid o'*, just as they say bed-*stid*. Nor do they say "kem" (for past tense of come), or "jowin" (*jawin'* is the word), or "brigaty" (it is *biggity*), or "you-uns" (when only one is addressed). A long list of inaccuracies might be made. I mention only a few, as they present themselves when the book is opened at random. As usual in dialect writing, there is much exaggeration—*e. g.*, *any* and *once* written "enny" and "wunse." These people have certain peculiarities of speech, consisting mainly in the retention of expressions which were in current use a century ago in the old country, and among Scotch-Irish settlers in Pennsylvania, Virginia, and elsewhere. Some of these words Miss Murfree has caught, but not always nor often just as they are spoken.

In spite of a marked attempt at localization, the most intelligent of our mountaineers would fail to recognize the scene of any one of these stories from anything in itself, except when, oc-

casionally, the real name of cove or mountain is given. And in such cases it is only the name that he can recognize. I presume that the author has seen something of life in the Cumberland Mountains, where some of the scenes are laid; of life in the Smokies she apparently knows little. 'The Prophet of the Great Smoky Mountains,' now publishing as a serial, is thus far not truer to nature than the short stories have been. Rocky might be substituted for Smoky with equal appropriateness.

The interest in these stories has been so universal that your readers may possibly wish to know where the Smoky Mountains are. The name is given to a portion of the long range parallel to and about 45 miles north of the Blue Ridge, commonly to that part of the range which forms the boundary between Tennessee and North Carolina, lying between the French Broad River on the east and the Little Tennessee River on the west. The highest peak is Clingman's Dome, 6,660 feet above sea-level, and only a few feet lower than Mt. Mitchell. The Little Tennessee River at John Howard's farm, where it cuts through the mountains, is only 899 feet above sea level; Bald Mountain, directly over that point, is 4,922 feet. The region is indescribably grand in its wildness and ruggedness. At either end of the Smokies there is a passable road, that along Little Tennessee River being humorously called a turnpike; but in the seventy miles between, there are only two trails over which wagons can be driven across the mountains. The Thomas road, made during the war, crosses at an elevation of 5,271 feet. It leads, if one has good luck in getting over it, to Quallatown, the home of some Indians who refused to go to the Indian Territory with their tribe. The State road from Newport, Tenn., to Waynesville, N. C., crosses Mt. Sterling at an elevation of about 5,000 feet. There are horse-trails to Thunderhead, the Balds, and a few other peaks where the mountains are sufficiently open for use as herding-grounds. A half-dozen herders' cabins are the only human habitations on the summit. Along the base of the range are lovely coves, from a half-mile to ten miles long, from a few hundred yards to two miles in width. In these coves are the "settleménts" (not "settlemints"), and there are some clearings further up the mountain-side. The coves are never less than seven miles, by trail, below the top of Smoky Mountains, and are walled in by other high mountains on the north. They were settled, shortly before 1800, chiefly by persons from North Carolina (the region belonged to that State until 1789), Virginia, and Pennsylvania, most of them being of Scotch-Irish ancestry. The descendants of those people have made few changes in their ways of living, not readily taking up new-fangled notions. They are almost ideally hospitable and kind; quiet and often of dignified bearing; gentle and peaceable, except when they have suffered real or supposed wrong, and at that moment the traveller, if prudent, will return to his home; never surprised at anything; exceedingly sensitive, yet largely without sentiment. Formerly there was some illicit distilling in the coves, but the people could never think of it as illicit. Now there is none. The methods of getting rid of moon-shining have made the mountaineers somewhat shy of strangers. On the whole, they are not materially different from other mountain dwellers who are secluded from intercourse with the outer world.

The United States Coast and Geodetic Survey map of the mountain region of Tennessee and North Carolina, published in 1865, and partially revised last year, is fairly good. The hypsometric observations were made chiefly by the late Professor Guyot, though, unfortunately, not all of his measurements are given. In No. 737 of the *Nation* you gave an interesting description of the country east of the French Broad. Magnificent as that country is, it is tame by comparison, and has so far forgotten its natural wildness as to submit to a railway and several hotels. The Smokies will long resist any such innovations. E. ALEXANDER.

UNIVERSITY OF TENNESSEE,
KNOXVILLE, March 25, 1885.

Notes.

G. P. PUTNAM'S SONS add to their spring announcements the following: 'Hunting Trips of a Ranchman,' by Theodore Roosevelt; and 'Afghanistan and the Anglo-Russian Dispute,' by Theo. F. Rodenbough, Bvt. Brigadier-General, U. S. A. The latter is a concise sketch of Russia's advance in Central Asia, and will be accompanied by maps and illustrations. By the same publishers Mr. George W. Williams's 'History of the Negro Race in America,' originally brought out in two volumes, is now compacted into one in a popular edition. Considering the ill-digested contents of this book, even a seeming reduction of its bulk is a gain; but it is a pity that some revision could not have been attempted.

The 'Life of N. P. Willis,' by Prof. H. A. Beers, of Yale College, will speedily be added to their "American Men of Letters" series by Houghton, Mifflin & Co.

With the recently-issued tenth volume, Messrs. Scribner's series of "Stories by American Authors" is brought to an end. In all, it embraced fifty-seven stories by fifty-two writers, nineteen of whom were ladies. One story was reprinted from an out-of-print book; another was written or rather wholly rewritten for this series; five were taken from daily papers, and two from the departed weekly *Fiction* and *Swinton's Story-Teller*, while one came from an English magazine. The remaining forty-seven were republished from the American monthly magazines—two from *Appleton's*, two from the *Galaxy*, three each from *Putnam's* and the *Overland*, four from *Lippincott's*, five from *Harper's*, nine from the *Atlantic*, and seventeen from *Scribner's* and the *Century*.

The last publication in the Johns Hopkins University Studies in historical and political science is 'Local Institutions of Virginia,' by Edward Ingle, author of a paper in the first series upon Parish Institutions of Maryland. The subject treated in the present issue is one of great importance, inasmuch as the Virginia system appears not only to have controlled the adjoining Southern States, but to have exercised a powerful influence in the neighboring Northern States (see Mr. Shaw's paper upon Local Government in Illinois in the first series). Mr. Ingle's paper is a long one (a double number), and contains six chapters besides an appendix. The first treats of Virginia and the Virginians, the others, respectively, of land tenure, the hundred, the parish, the county, and the town. The last two of these possess the most interest, inasmuch as the *county* is the distinctive institution of local self-government, while the *town* is conspicuous by its absence. There have been various efforts made to introduce the town system into Virginia, and Jefferson especially says: "We owe to them the vigor given to our Revolution in its commencement in the Eastern States, and by them the Eastern States were enabled to repeal the embargo, in opposition to the Middle, Southern, and Western States, and their large and lubberly divisions into counties which can never be assembled." The author speaks, in conclusion, of the growth, especially since the war, of numerous towns, as places of collective residence. Some method of giving them a corporate character and local self-government is, he thinks, likely to be called out by the necessities of the case.

The Publication Agency of the Johns Hopkins University are about to put forth photographic reproductions of three pages of the Bryennios manuscript, edited with notes by Prof. J. Rendel Harris. These pages include the last verse of the Epistle of Barnabas, the superscription and opening of the first, and the close of the second Epistle of Clement, the first verses of the Teaching of the Apostles, and the last verses of the Epistle of Ignatius to the Romans, etc. The edition is limited.

Meantime, Professors Hitchcock and Brown have revised and greatly enlarged their edition of the 'Teaching of the Twelve Apostles' after the above manuscript (Scribners). The discussions growing out of the already extensive literature caused by Bryennios's discovery are noticed at length, and the work now nearly fulfils the scholarly idea of the editors.

If the winter of our discontent could be made summer by the flowers of art, Prang & Co. would be entitled to a harvest festival for their abundance of floral and ornithological Easter cards, of which they also issue an illustrated catalogue, with miniature reproductions of the most salient examples. Some of them certainly surpass anything of the kind yet produced, and have given work to our best artists in this vein. Some of the toilet or "easel-back" arrangements are the ne plus-ultra of chromolithography.

We receive from John Ireland a novelty in Easter cards, consisting of a series of photographs from sacred subjects with appropriate verses, the whole held at one of the upper corners by a bit of white satin ribbon, and enclosed in tasteful decorative covers in excellent chromolithography, with various lilies framing the title, "An Easter Offering."

The usual defects of out-door photography are manifest in the several groups in which General Grant is the central figure, taken by Pach Bros. The arrangement of the trio in the stereoscopic view is the most pleasing. There is, in the set before us, a large head of Grant too much worked over to be characteristic, and also a large-sized view of his Long Branch cottage.

Of the two "souvenir albums" sent us by Adolph Wittemann—namely, of California and of New Orleans and the Exposition—the latter will probably have more vogue on account of its novelty. The fashion of these glazed prints after photographs is not to our liking. It is at best a makeshift, pending the perfecting of the processes of nature-engraving.

The *American Architect* announces the first of a series of publications under its direction, entitled 'Monographs of American Architecture.' Austin Hall, the new home of the Harvard Law School, is the subject. It will be illustrated by eighteen "gelatine plates," of which a sample is given in the *Architect* for March 28.

The portraits accompanying Mrs. Lamb's "Framers of the Constitution," in the April number of the *Magazine of American History*, seem to us as valuable as any part of the general contents. Some religious journal was deprived of "copy" when Dr. Parkhurst's "Work as an Educating Power" was allowed admission to the magazine. Except on the theory of a mixture of manuscripts in the printing-office its appearance here is unaccountable.

It is a pleasure to look upon such beautiful specimens of map-making as the newest sheets of the great "Atlas of New Jersey," upon which the Geological Survey of that State is engaged. Three sheets had already appeared, and now we have Nos. 2, "Southwestern Highlands" (embracing Easton, Penn., and the Delaware Water Gap); 6, "Central Red Sandstone" (embracing Newark, Paterson, Morristown, New Brunswick,

etc.); and 16, "Egg Harbor" (embracing Atlantic City, Egg Harbor City, Barnegat, etc.). The completion of No. 1 will give us the entire northern portion of the State as far south as the parallel of Elizabeth. The scale, our readers may need to be reminded, is a mile to an inch, so that the topographical indications are very full. The execution is in the best style of Julius Bien & Co.

Kiepert's map of the Congo region, which we lately described, is found also in No. 115 of the *Journal* of the Berlin Geographical Society (Berlin: Dietrich Reimer). Dr. Kiepert furnishes the accompanying text.

In the last *Compte Rendu* of the Société de Géographie is an interesting map of the northern part of Formosa, executed by the officers of the French expeditionary force in 1884. Not only are the physical features of the country given and the various roads, together with their character, but the places in which are the tea, rice, indigo, and sugar plantations are carefully indicated. On the east coast there is noted a forest of tree ferns more than twenty-three feet high.

We took notice, at the time, of the vindication of General Arthur Görgey on the 22d of November last. This "Declaration by Soldiers of the Hungarian Army of 1848-9" appeared in the *Nemzet* of November 23, and has been translated by Arthur J. Patterson, the full list of signers being appended. Our copy of this pamphlet bears the imprint of Warren Hall & Lovett, London.

Madam Jessie White Mario, widow of the Italian patriot, Alberto Mario, has felt it her duty to undertake a Life of Mazzini, of which the first sheets have come to hand. She apologizes in her preface (written, like the book, in Italian) for assuming the task of others—of the great agitator's own countrymen; but it is evident that, as an Englishwoman, she has exceptional qualifications for writing one among the many biographies which time is likely to produce. G. Carducci furnishes a stately poem, and the historical painter, Girolamo Induno, contributes a forcible likeness of Mazzini. There will be other full-page illustrations of excellent quality, to judge by the sample. 'Della Vita di Giuseppe Mazzini' is the title. Madam Mario's memorial volumes to her husband are still incomplete.

A few weeks ago our foreign exchanges enabled us to describe M. Clermont-Ganneau's entertaining new work entitled 'Les Fraudes Archéologiques en Palestine.' A perusal of it at first hand (Paris: Ernest Leroux) confirms all that we reported concerning it, and we can recommend the little volume as a congenial interpolation among the novels of the day. It treats of fiction, figments, and frauds, with a touch as light as it is sure. The work opens with a brief enumeration of the seven genuine ancient inscriptions that Palestine has yielded, then passes to the trade of fabrication so extensively carried on in that country, and, after taking up in detail a large number of counterfeit rings, seals, steles, statues, sarcophagi, lamps, etc., arrives at the narrative of chief interest—the unmasking of Shapira, with his false Moabite potteries and MS. of Deuteronomy. The fifth chapter demonstrates the spuriousness of certain antiquities in the museums of Vienna, Paris, and London.

It is altogether an odd sign of the breaking down of old barriers, that a catalogue of the collections, historical and archæological, of the National Museum of Mexico, by W. W. Blake, is from the press of the Burlington *Hawkeye*, Iowa. It is a little volume of 119 pages. The appendix tells of the unearthing, in October last, of an inscribed fragment of a conjectured Aztec funeral monument. Its last appearance above ground was when it served as part of a corner of an old building, for "Franceses" and "Americanos" had been painted on adjacent angles.

Mr. H. L. Braekstad, to whom we owe the fine translation of Asbjörnsen's fairy tales, has recently adapted the most popular of recent Swedish comedies, the "True Woman" of Anne Charlotte Edgren (London and New York: Samuel French & Son).

Mr. G. Eneström issued in 1884 at Stockholm (F. & G. Beijer) a quarterly *Bibliotheca Mathematica*, containing an alphabetical list of works, papers in transactions of learned societies, and magazine articles, and also some short notices of books, and in each number an essay by the editor; the last two being notices of the Latin versions of Euclid's elements published in Sweden, and on the first Swedish tables of logarithms. These numbers he has now published in a thin volume, with a list of the transactions and reviews to which reference was made and a classified index. The bibliographical work is carefully done, and the type is large and clear. The *Bibliotheca* will be continued this year.

In the first number of the new French *Revue Contemporaine* is a long and highly eulogistic criticism of Edgar Poe's works by M. Émile Hennequin, and among the articles announced for early numbers is a critical study of Walt Whitman, by M. Gabriel Sarrazin. While professing a wide catholicity of taste, this review is likely, if we may judge from the list of promised contributors, to be the organ of the more moderate naturalists. M. Edmond de Goncourt gives in the first number a foretaste of his brother's letters; criticisms of Flaubert and by M. Zola are expected, and short stories by M. Daudet and M. Guy de Maupassant.

The Seaside Laboratory at Annisquam, Mass., will be reopened to students during the coming summer, from July 1st to September 1st, under the patronage, as heretofore, of the Women's Education Association, acting through the Boston Society of Natural History. Mr. B. H. Van Vleck, an assistant in the laboratory of this institution, will have charge of the seaside work.

Mr. Edward I. Nickerson, 45 Westminster Street, Providence, is interested to ascertain the addresses, in this country, of "any really good miniature painters on ivory." This seems like a search after a "lost art."

—*Harper's* for April has a long and very readable illustrated article on "The Prince of Wales at Sandringham," by Mr. W. H. Russell. The illustrations give an excellent idea of the attractions of the place, and are well calculated to fill with envy any American not yet admitted into the "Prince of Wales's set." The estate, which contains some 8,000 acres, was bought more than twenty years ago by the Government for about $1,000,000, and has been rendered immensely more valuable by improvements since. The income of the Prince Mr. Russell puts at about $500,000 a year, and he thinks that, considering the constant drains on it for the maintenance of his establishments, subscriptions to charities, etc., the amount left for the pleasures of private life is small. Much smaller, we should say, than in the case of many of his subjects, and not any larger than that of several Americans of private fortunes whose parents have made their money, not by being kings and queens, but by bearing or bulling stocks, or by consolidating railroads, or operating in wheat or pork. The life of the heir apparent appears to be, according to the accounts given by his friends, a life of ceremonial, in which he can be only to a small extent his own master. His ancestors, of whose private life we have such full and minute accounts, had really a far better opportunity for self-indulgence than any one in the position of the heir apparent can now have. On the other hand, it can hardly be said that a ceremonial preparation consisting of after-dinner speeches and laying of corner-stones can do much to fit a prince to become a king, in the old sense of the word. But then this, the admirers of the English system maintain, is the best feature of the case, because the English people only want an ornamental and ceremonial king, and really prefer to have their governing done for them by a popular leader chosen by the House of Commons. The frontispiece this month is a fine portrait of Lincoln, from a photograph never before engraved.

—Mr. Theodore Roosevelt's article on "Phases of State Legislation," in the *Century*, is, though perhaps not intended to have such an effect, one of the strongest arguments in favor of biennial sessions, and, in fact, of as few sessions as possible, that we have ever met. In three Legislatures he and a number of other members have been interested in getting through certain important measures, and to do this it was found to be necessary to make a study of the character and associations of the different members. "As a result, and after very careful study, conducted purely with the object of learning the truth, so that we might work more effectually, we came to the conclusion that about one-third of the members were open to corrupt influences in some form or other." A single specific example of the way uncorrupt legislation has to be obtained at Albany, however, will show better than this estimate what sort of a place the capital is:

"On one occasion there came before a committee of which I happened to be a member, a perfectly proper bill in the interest of a certain corporation. The majority of the committee, six in number, were thoroughly bad men, who opposed the measure with the hope of being paid to cease their opposition. When I consented to take charge of the bill, I had stipulated that not a penny should be paid to insure its passage. It therefore became necessary to see what pressure could be brought to bear on the recalcitrant members; and accordingly we had to find out who were the authors and sponsors of their political being. Three proved to be under the control of local statesmen of the same party as themselves, and of equally bad moral character; one was ruled by a politician of unsavory reputation from a different city; the fifth, a Democrat, was owned by a Republican Federal official; and the sixth by the president of a horse-car company. A couple of letters from these two magnates forced the last members mentioned to change front on the bill with surprising rapidity."

Mr. Roosevelt's picture of the ignorance and corruption of legislation at Albany, coming from one who knows the ground so well as he, is the most striking that has been drawn anywhere. He has no new remedies to propose, but it seems to us that it is obvious that whatever tends to restrict the field and opportunities for legislation will be for the good of the State.

—The *Century's* war articles do not diminish in interest, and the sumptuous abundance of spirited illustrations even increases. Mr. Cable's description of New Orleans at the time of the surrender has all the dainty delicacy of touch which we have learned to look for in his work. It is at once realistic and artistic, and we see the event he describes through the eyes of the bright lad sharply watching things at the levee from the front or rear door of his employer's shop on Common Street. The personal element in Admiral Porter's paper distinguishes it more than anything else from the excellent narratives of the capture of New Orleans already published, such as Professor Mahan's. The Admiral distinctly claims as his own the origination of the plan of the expedition, the indication of Farragut as its commander, the success in getting the heavier ships over the Mississippi bar, and a certain initiative throughout which closely resembles a dominating influence. That Farragut was the adopted son of Commodore Porter "of the *Essex*," the father of the present Admiral, has not

been commonly known, and is an interesting fact in the relations of these officers. The portrait of Admiral Porter, while a good one at the time it was made, needs to be supplemented by one giving his more familiar appearance at and after the close of the war. That of General Butler, as he appeared "on the James," is strongly characteristic, even to his slippers.

—The *Atlantic* for April opens with three chapters of "The Prophet of the Great Smoky Mountains," the interest in which is not likely to be diminished by the discovery of the sex of the author. The story is one among several indications of the growth of a native Southern literature which gives promise of a very different harvest from the sickly literary products of the old "slavery days." Kathleen O'Meara's fourth paper on "Madame Mohl, her Salon and Friends" is full of entertaining anecdotes, and cannot fail to suggest to the reader a good many reflections on the subject of salons and society, and the differences between foreign and American society which may be supposed to make salons here out of the question. Madame Mohl's house differed from what we ordinarily think of as a salon, in dispensing an international hospitality. English, French, Germans, and Americans met there on neutral territory; and owing to the fact that they met in Europe and not in an English-speaking country, there was probably far less *gêne* in their meetings than there would possibly have been had Madame Mohl attempted the same thing in England or America. Indeed, an American or English salon is almost unthinkable. The intense pride and reserve in the expression of feeling which make most of us so *stiff;* the continual dread of saying something which may sound extravagant, or conceited, or quixotic in the ears of those present, and an unwillingness on the part of those present to make the concessions to individuality which involve concessions to extravagance, to conceit, and to the quixotic; the widespread want of interest in any but material things which palsies general conversation—how often have we observed what a hindrance all these national social peculiarities are to the simplicity and ease which make an "interior" like that of Madame Mohl's possible. It is not that we have no intellectual interests, but the very persons who have intellectual interests have not the social training that puts them at ease in society; so that literary "reunions" with us, from the publishers' dinner in 'Pendennis' down to the latest meeting of the Twentieth Century Club, are apt to be dreadful affairs.

—C. F. Gordon Cumming, a frequent contributor, has an entertaining article in *Lippincott's* called "Glimpses of Peking." It gives a better idea of the "havoc" and dirt and decay of the great Eastern capital than of its splendor; indeed, the "note" of the article may be said to be dirt—dirt in the form of the dust inches deep on the highways; dirt in the form of the same dust converted into mud; dirt in the form of vile contagion-breeding stenches; dirt in the form of contagion itself; dirt on the unswept floors; dirt under the beds; dirt on the person—a loathsome, antique, dirty metropolis. The progress of civilization is marked by nothing more than progress in individual cleanliness, and a widespread popular desire to be clean is one of the surest tests of a high degree of it. In ancient civilizations like that of Rome, for instance, we may shrewdly suspect that the desire for cleanliness was confined to the few, and that while Caracalla and his court retinue, and the wealthy men of his time, bathed a great deal, the common herd were really unwashed; and so it is in China to-day. Dirt is regarded, not as "matter out of place," but as a natural condition of things, and the consequent disease as so inevitable a concomitant of human life that it receives a religious sanction, and the epithet applied to smallpox is "first-class heaven-flowers." Thus we may perceive that, when travellers speak of the Chinese as a highly-civilized people, they mean a civilization of the antique variety; for as far as soap and water furnish a test, Peking is in a very primitive state. The condition of the roadbed of the principal street in Peking is another indication of what is meant by Chinese civilization. It is, of course, a magnificent paved causeway, built with great care and at enormous expense. But it is never repaired from one year's end to another; and when it is announced that on a certain day the Emperor will come forth from his seclusion and pass along certain streets, a squad of men are set to work to shovel all the spare dirt into the holes and ruts, till the whole is level, so that the procession may pass along it without too much jolting. Fortunately there is a system of underground drains, and once a year these are opened in order that they may be flooded by the spring rains; but house drainage is apparently entirely unknown, filth of every description being tossed into the street, where it accumulates, putrifies, breeds disease and death, and is finally washed away into the sewers by these rains, when the process begins over again.

—The decadence of science in and about Boston has lately been the theme of an editorial lament in the journal *Science*. Considering the increasing amount of publishing and research, the number of students engaged, the extent of scientific instruction in schools, and the taste for popular science as inferrible from the press, one would have expected quite the opposite view to be taken. What the editor really has in mind, we believe, is the lack of interest in society meetings; but here again he overlooks the present number of societies, and their combined attendance now as compared with that of the period to which he refers us. We may even go further, and say that the apparent lack of interest in the meetings is of itself evidence of progress in science. Conditions have changed for the better. The days when people of culture knew little of scientific matters, and, in their thirst for knowledge, crowded the halls to acquire it, have gone by. The teachings of our schools, of our books, of our papers enable us to gather our science with much less expense in time and exertion than would be necessary if we were compelled to dance attendance on the lectures. That the hearers have outgrown the need of the talkers, and that science is becoming daily more accessible, are poor evidences of decadence. Grant that there has been a falling off in the quality of communications as well as in attendance. Naturally enough, a lecturer is not likely to make elaborate preparations with the expectation of having no one to hear him. A man with an important communication hardly thinks it worth while to bring it before empty benches.

—Except that the editor of the 'Annual Statistician' (San Francisco: L. P. McCarty) has brought down his collection of facts and figures upon all sorts of subjects to a later date, the current edition of this useful work differs but little from that for last year. We observe, however, the correction of a certain number of errors, the amplification of information upon a variety of live topics, and the addition of a considerable amount of entirely new matter. If a person consulting the 'Statistician' could always feel implicit confidence in the accuracy of its statements, it would leave but little to be desired; for nowhere else are to be found so many of those facts which nobody can hope to remember, but which everybody sometimes wants to know. Unfortunately, here and there in its pages we stumble upon errors which seem to show that, even as to matters about which most people have general information, the grossest blunders can pass undetected by its compilers. Of course mere typographical slips, such as that by which Mr. Voorhees, the newly-elected delegate from Washington Territory, is put down as a Republican, can hardly be altogether avoided. Doubtless either to the same cause or to an unconscious spirit of prophecy is to be ascribed the statement that Mr. Carlisle is Speaker of the House of Representatives of the XLIXth Congress. No such excuse, however, can be set up in defence of the extraordinary assertion, made on page 263, that the population of Oceanica, exclusive (as a comparison of the figures on the next three pages will show) of the British Isles, Japan, Madagascar, Newfoundland, Ceylon, and most of the other islands lying off the coasts of the great continents, is 119,000,000, when the tables on the pages just mentioned, if carefully analyzed with the assistance of a good atlas, prove that 50,000,000 would in all probability be an outside estimate. There are some very serious errors in the table of population according to creed, on pages 338-9, especially in reference to France and Austria-Hungary. Some of the grave blunders to which we called attention last year are repeated, as, for instance, the deceptive table on page 559, purporting to give the birth and death rates in certain great cities. In future editions, it is to be hoped that care will be taken to guard against such defects, and to make the execution worthy of the design.

—The French are always "changing all that." Time was when men would set a thief to catch a thief, but now in Paris they set a detective to catch a detective. The *Cri du Peuple* publishes pen portraits of the various secret agents of the police, giving their addresses (which may be convenient if a new Commune should ever send round *pétroleuses* and raise the cry *Aux lampions*) and describing the unfortunate men, whose incognito is their stock in trade, as carefully as would be done in a passport. The revolutionary counter-police instituted by this enterprising paper actually "shadowed" three times one of the agents, and the account of the *filatures* is published in full. It is a pleasing thought, that, of one of the police of surety dogged by a revolutionist, and he by a secret agent of the Government, and he by another of the people, and so ad infinitum, just as the fleas "have smaller still to bite 'em." It would make an amusing scene on the stage or a startling chapter in a novel. Indeed, there is something like it in one of the stories of Gaboriau or Du Boisgobey—there are already too many in the long series which the new Dumas is pouring out for us to remember in which it was. But what will be the effect on the production and discovery of crime in Paris if the secret police are hereafter to work in public, if there is to be a detectives' gallery in the newspapers as we have a rogues' gallery at our police stations? Rightly done, perhaps, the effect would not be altogether bad. The discoveries in regard to the London police two or three years ago, and the revelations in connection with the Clovis-Hugues trial, show that detectives are not impeccable. Who will guard the guards themselves, asked the Roman satirist? I, says the *Cri du Peuple*. Unfortunately the object of that paper is not such as to inspire the hope that society will get much good from its surveillance.

—The subscribers to the 'Allgemeine Weltgeschichte' in ten volumes, by Professors Flathe, Hertzberg, Justi, Pflugk-Harttung, and Philippson, recently begun to be published by G. Grote in Berlin (New York: Westermann)—and already briefly noticed in our columns—are well aware what they are to receive for their money. For the new universal history is to be, to a de-

gree, an abridgment of the vast 'Allgemeine Geschichte in Einzeldarstellungen' edited for the same firm by Prof. Wilhelm Oncken, of Giessen. Of this admirable collection about one-half—upward of twenty volumes—has appeared, embracing more than a thousand illustrations and portraits, remarkable both for intrinsic importance as guides chiefly to the psychology of the past and for excellence of execution; and all, or nearly all, of these are to go into the new work. Hence, as to the pictorial part of the contents, the 'Weltgeschichte' will be four times as rich as Oncken's 'Geschichte.' The reëlaborated text will, of course, have to adapt itself occasionally to the illustrations, and may thus become slightly unsymmetrical; but skilful condensation by tried hands will save all that is most important, introduce chronological order, and eliminate repetitions unavoidable in 'Einzeldarstellungen.' Most of the writers for the 'Weltgeschichte' have contributed largely to Oncken's collection, Hertzberg being the author of four bulky volumes on Hellas, Rome before and under the Emperors, and the Byzantines and Ottomans; Philippson, of the histories of the age of Philip II. and of that of Louis XIV.; and Flathe, of the history of the period extending from the downfall of the First French Empire to the rise of the Second. Hertzberg, who is now to write 'Hellas' and 'Rome,' has only to condense his own volumes, and Philippson and Flathe, who are to divide modern history between them—the former doing the earlier periods—will largely draw upon their own books while working up the matter contained in Stern's 'English Revolution,' Brückner's 'Peter the Great' and 'Catharine II,' Oncken's 'Age of Frederick the Great' and 'Age of the Revolution, of the Empire, and the Wars of Liberation,' Wolf's 'Maria Theresa' and 'Joseph II.,' and other works. Justi, who for the 'Geschichte' has written only a short volume on 'Ancient Persia,' and has now been assigned 'The Eastern Nations,' will find excellent guides in Dümichen's 'Egypt,' Stade's 'Israel,' etc., while Pflugk-Harttung, who has no contribution of his own to abridge, will condense for his 'Middle Ages' Dahn's 'Earliest History of the Teutonic and Romanic Nations,' Winkelmann's 'Anglo-Saxons,' Kugler's 'Crusades,' Hertzberg's 'Byzantines,' Ruge's 'Age of Discoveries,' and other books edited by Oncken.

GEORGE ELIOT.—I.

George Eliot's Life, as related in her Letters and Journals, arranged and edited by her Husband, J. W. Cross. In three vols. Harper & Bros. 1885.

"If it be true that the most interesting of George Eliot's characters is her own, it may be said also that the most interesting of her books is her life."

These words of Lord Acton's have a real and important meaning, to which we shall recur; but, taken in their most obvious sense, they precisely contradict the judgment which ninety-nine readers out of a hundred have, we suspect, before this formed, and rightly formed, of Mr. Cross's book. If by "most interesting" be meant the book which most keenly interests most persons, it is difficult to believe that a single one of George Eliot's novels does not surpass in interestingness the whole of her written life. The duty of critics is occasionally to speak plain truths plainly; and an intense admiration for George Eliot, as well as infinite respect for the care, skill, and loving tact with which Mr. Cross has composed the biography of his wife, ought not to blind a candid observer to the patent fact, that even the most sympathetic reader puts down 'George Eliot's Life' with a sense of disappointment, which is mitigated only by the reflection that George Eliot lives in her works, and that the beauty and nobility of her character, no less than the brilliancy of her genius, have an everlasting memorial in the 'Scenes from Clerical Life,' in 'Adam Bede,' and in the 'Mill on the Floss.' This disappointment is due to two causes.

The first cause lies in the form in which the Life is presented to us.

Autobiography and biography have each their special value and their special defects. When a writer of moral or intellectual eminence such as Carlyle, Miss Martineau, Trollope, or Mark Pattison, leaves behind him either memoirs or autobiographical reflections, we have in any case one of the most valuable and interesting things which the world can possess—the "experiences" of a human soul. It is more than possible, it is almost certain, that a man's account of his own life will, however honest the writer, be more or less distorted or colored by his personal feelings and sympathies. Miss Martineau's autobiography is certainly not a perfectly fair estimate either of herself or of others. It were idle to suppose that Carlyle's lamentations over the injustice of the world gave us the true measure of the way in which he had been treated by his friends and his contemporaries. No sane historian would ever look upon the 'Apologia' as more than an important contribution to the understanding of Cardinal Newman's character, or to the history of the Tractarian movement. The very best of autobiographies needs constant correction from the reliable evidence of the witnesses of a man's career. But even the least trustworthy of autobiographies has the supreme value, that it does represent either an eminent man's actual estimate of his own life, or at very lowest the view of his life which he wishes to impress upon the world. The very unfairness of autobiography provides us with the means of understanding the genius of the autobiographer. Biography, on the other hand, though it does not possess the charm of presenting to us personal experiences, does, in the hands of a skilful and honest writer, give us a picture of a man's career and character superior in breadth and completeness to any of the efforts of self-portraiture. Boswell's 'Johnson' or Stanley's 'Arnold' contains such a picture of his hero as entirely satisfies the needs or wishes of posterity.

Now Mr. Cross has, with singular boldness, and, we must in fairness add, with a deftness which is manifestly the fruit not so much of literary aptitude as of the tact produced by profound reverence and affection, attempted to tell George Eliot's life as related in her letters and journals; that is to say, he has endeavored to combine in some sense the merits of a biography with those of an autobiographical memoir, or, to use his own expressions, has "endeavored to form an *autobiography*—if the term may be permitted—of George Eliot. The life has been allowed to write itself from her letters and journals." The difficulty of Mr. Cross's task, which is great enough in itself, has been increased by rules which (it may be wisely enough) he has imposed upon the performance of his work: "Each letter has been pruned of everything that seemed to me irrelevant to my purpose, of everything which I thought my wife would have wished to be omitted. Every sentence that remains adds, in my judgment, something, however small it may be, to the means of forming a conclusion about her character. . . . I have refrained," he adds, "almost entirely, from quoting the remembered sayings of George Eliot, because it is difficult to be certain of complete accuracy, and everything depends upon accuracy." In other words, the light thrown upon a person's character, either by the candor of autobiographical confession or by the candor of friendly observation, has been entirely excluded from Mr. Cross's work, while the reader is not allowed to see all the lighter and telling traits which are betrayed by the spontaneity of spoken thought. The letters, further, are, with great ingenuity, dovetailed into one another. Remarks written to a man of business, such as Mr. Blackwood, run unexpectedly into expressions used in the intimacy of effusive friendship to a dear friend, such as Miss Hennell. Moreover, the sources on which the life is based are narrow. Four-fifths of it, or thereabouts, are founded upon the correspondence with Blackwood, letters to Mrs. Bray and her sister, notes to Mrs. Congreve, and George Eliot's journal. The journal itself, moreover, to judge from the specimens given by Mr. Cross, is merely a diary of work—very remarkable, we admit, in its way—and a mass of observations which, considering they come from George Eliot, are by no means remarkable, on places and works of art noted in the course of various journeys.

The simple truth is, that a biography so constructed is as artificial a production as was ever put before the world. It is like attempts to construct a scheme of theology by simply piecing together texts, or bits of texts, torn from their context and stuck together so as to present a view which the author believes to be true and valuable. This kind of intellectual mosaic work can never produce a life-like picture. The marvel is that, according to the testimony of George Eliot's friends, Mr. Cross has, under all the difficulties of the case, given the world a portrait which recalls the great authoress to those who knew her. That to those who, like ourselves, did not know her, except through her works, the picture is wanting in life, is an inevitable consequence of the conditions which Mr. Cross imposed upon himself. These conditions produce another result which should be constantly borne in mind by every fair-minded reader. The public has no knowledge whatever as to the extent to which the aspect of George Eliot put before us represents the whole of her character. It is strange how often this is forgotten. A most intelligent writer remarks that George Eliot wrote almost wholly to women with whom she was intimate, and did not correspond with the literary characters of her day. This certainly may be so, but the public have no means of knowing that it was so. Mr. Cross never tells us that the fragments given us represent the whole of her correspondence. It is, one would think, highly improbable that there was no written interchange of thought between George Eliot and Herbert Spencer. We do not for a moment blame Mr. Cross for his reticence. He has given us a life of a very peculiar and even rare kind; but it is simple common sense to bear in mind the peculiarities of the book, and it is simple honesty to admit that its peculiarities impair its interestingness.

The second cause of disappointment lies deeper than the first. It arises from the substance, not from the form, of 'George Eliot's Life.'

"Revelations," in the vulgar sense of the word, cannot have been expected or desired by any one capable of appreciating or venerating George Eliot's genius. But it was not unreasonable to hope that a work which aimed at being a kind of autobiography, might reveal to admirers of a great writer some personal traits of character not fully apparent in her writings. The fulfilment of such an expectation does not involve any want of due reticence on the part of a biographer. No critic has ever asserted that Trevelyan's 'Macaulay' violates the sanctities of private life or the pious respect due to the dead. Yet no one can read 'Macaulay's Life and Letters' without feeling that from Trevelyan's book he learns something more of his uncle's true character than could be gathered from the most careful perusal of every line that Macaulay has published.

We all now know for certain that the brilliant historian was a man of singularly deep and strong affections, and loved those to whom he was attached with a passionate intensity which nothing but his strong common sense and his essential manliness prevented from becoming morbid from its vehemence. We know, again, what could only have been conjectured from his works, that the high public spirit which breathes in every line Macaulay wrote, was proved by his acts to be a guiding influence throughout his life. Such unveiling as this is as much an act of justice to the dead as it is a benefit to the living. George Eliot's letters or diaries add little to the knowledge of her which may be gathered from her works. They show that her own character and some of the events of her own life are depicted in parts of her novels. But this could be no news to any intelligent reader. A student must be dull indeed who needs to be told that in the 'Mill on the Floss' there is an autobiographical element, or that the moral insight and the ethical principles traceable in every word which George Eliot has written formed part of herself. The oddity of the thing is, not that the life often confirms or illustrates impressions of George Eliot gained from her writings, but that, on the whole, George Eliot's writings tell and always will tell appreciative critics far more of her intellectual and moral greatness than can be gathered from a Life written with the very view of giving to the world an opportunity of "forming a conclusion about her character."

The reason why this is so is not far to seek. Mr. Cross's book resembles in some degree biographies written by the disciples of a religious teacher. Such disciples, if worthy of their hero, will not tell you a word which is not true. And one cannot read a chapter of Mr. Cross's writing without seeing that it is inspired by that noblest form of veracity, the truthfulness which springs from love and admiration. But the disciple who writes the life of a prophet whom he reverences with his whole heart, is sure to fall into one error. He cannot let his hero be anything but a prophet. From this ault Mr. Cross has hardly escaped. All the didactic side of George Eliot's character is fairly represented by the extracts from her letters and journals. We see, and it is most interesting to see, her intense preoccupation with the truths which she pressed upon her readers. We read, for example, in the letters to Mrs. Ponsonby, her most intimate utterances on fundamental questions of morality and religion. We learn from her own writing that her books "have for their main bearing a conclusion . . . without which I could not have cared to write any representation of human life—namely, that the fellowship between man and man which has been the principle of development, social and moral, is not dependent on conceptions of what is not man; and that the idea of God, so far as it has been a high spiritual influence, is the ideal of a goodness entirely human (*i. e.*, an exaltation of the human)." We learn how entirely she valued her works as the means of propagating her convictions. We learn the sincerity and, so to speak, religious zeal with which she labored at "the improvement" of the "talents" committed to her, and we are made to feel, if we did not feel it before, how deeply George Eliot's teaching has influenced the moral sentiment of modern England. The love of a disciple has, in short, presented to us the portrait of George Eliot as a learner and a teacher; and to have this portrait is a benefit. But, unfortunately, Mr. Cross's admiration for the moral and, so to speak, religious side of his wife's character has, in the description he has given of her, caused him strangely to leave out of view the amazing gifts of humor and of imagination which rendered it possible for George Eliot to interest the world in her teaching.

We find it at any rate impossible to suppose that if Mr. Cross had wished to do so, he could not have opened to us a side of his wife's nature of which there is scarcely a trace in her published Life. If this supposition be not correct, we are forced to the conclusion that all the humor, irony, and insight which give their special flavor to George Eliot's greatest novels, to the 'Scenes of Clerical Life,' to 'Adam Bede,' or to 'Silas Marner,' left no trace in her conversation or her correspondence. To believe that this is so is almost an impossibility; and we are therefore driven to the conclusion that intentionally her biographer has left one aspect of George Eliot completely in the shade. As it is, the Life brings before us the translator of Strauss, the essayist who writes under the name of Theophrastus Such, and the author of 'Daniel Deronda.' But we can see few traces of the novelist who has added to the literary portrait gallery of England more than a score of characters as full at once of life, humor, and pathos as Adam Bede, Silas Marner, Amos Barton, or Mrs. Poyser. As we try to gather from Mr. Cross's description a true portrait of the greatest, or certainly the greatest but one, among the female novelists of England, we are reminded of the efforts which, some forty years ago, one had to make in order to see the likeness impressed in the earlier form of daguerreotype. The true features of one's friend were there, but it was only by twisting and, so to speak, humoring the picture that one could get to see the sun-painted likeness.

THE FOREST CENSUS.

The Forests of North America, exclusive of Mexico. By Charles S. Sargent, Arnold Professor of Arboriculture in Harvard University. Vol. ix of the Publications of the Tenth Census of the United States. Washington: 1884. 1 vol., quarto, with portfolio of maps.

In view of the national importance of the forest question, this publication is timely and valuable as furnishing the data by which to work out its solution. It belongs in the front rank of our Government publications. It is divided into three parts: Part 1, the catalogue of the species, remarks on synonomy, bibliography, distribution, uses, etc.; Part 2, the specific gravity, strength, and comparative values of the woods; Part 3, the economic aspects of the forests. The catalogue, with its copious index, occupies two hundred and twenty pages, and enumerates four hundred and twelve species of trees besides the recognized varieties. "To keep the catalogue within reasonable limits," the line between trees and shrubs (an arbitrary distinction) is settled by admitting as trees only "those which grow from the ground with a single stem, either wholly or over a large portion of their distribution." Much labor has been expended upon the bibliography of the species, in many cases one hundred, and in one instance one hundred and twenty-five references, being cited, exclusive of separate editions of the same work. A number of important (though questionable) changes have been made in the names of the species, based upon investigations into the works of early botanical writers. This portion of the volume will be of special interest to the botanist, while the terse descriptions of the nature of the wood, taken in connection with the distribution of the species, furnish important data for the builder and mechanic. The works, in various languages, on the strength of timber and specific gravity and component elements of the woods, deal with the subject in a very general way, referring to "fir," "pine," "oak," etc., without regard to the species, and furnish only such information as was to be collected from various sources, the results of experiments performed often under very different conditions by many different persons. In the case of the work before us, however, the tests have been made under precisely the same conditions with the wood of every available species and all recognized varieties of North American trees; and where the least doubt was attached to the identification of a specimen, it was immediately excluded. The object of the experiments, the results of which are given in detail for each specimen of every species in several tables in Part 2, was to determine, "first, the fuel value of the woods of the United States, and second, the value of the wood of the principal trees of the country as material for construction." All tests for strength were made with the United States testing-machine at the Watertown arsenal. To obtain specimens of each of the four hundred and twelve trees enumerated was in many cases very difficult, yet they were all finally secured, with the exception of seven species—trees of exceedingly limited range, or only known by the reports of early explorers, none of which possess any commercial importance.

Arranged in the order of the weight of the wood, the first sixty-three species include but one North Atlantic tree, the first sixteen on the list being heavier than water, and belonging "to the semi-tropical region of Florida, or to the arid Mexican and interior Pacific regions." There exists "a relation between aridity of climate and the weight of the wood," even in single species of wide distribution, certain Southern varieties of ashes and oaks being from twelve to twenty per cent. heavier than the Northern form of the same tree. The experiments show that equal weights of resinous woods give upward of twelve per cent. more heat than non-resinous woods. Making this allowance, the theory advanced by Count Rumford that equal weights of wood possess the same fuel value, without regard to specific distinctions, stands substantially correct; and the specific-gravity tests give a direct means for comparison for fuel values, although other factors of course enter into consideration in ordinary practice which greatly affect the result.

For transverse strength, the nutmeg hickory leads, closely followed by the locust and one of the Pacific oaks. For longitudinal strength, the heavy tropical woods of Florida stand at the head; for elasticity the larch of the Pacific Coast comes first, while the lignum-vitæ best resists indentation. Determinations made in relation to the amount of tannin in the bark of different trees suffice to point out species, not now in use, "which may be looked to as possible sources of tannin supplies." This list includes the rhizophora of Florida, which shows 31.04 per cent. of tannin, the Engelmann spruce, 12.60 to 20.56, and the Douglas fir, 13.79 per cent. So many of the determinations given in the tables above referred to fall between such narrow limits that, although in all the important woods sufficient material has been obtained to avoid errors, yet in most cases results of the experiments which are recorded must not "be considered as conclusive, but rather valuable as indicating what lines of research should be followed in a more thorough study of the subject." These tests do, however, indicate

"the important fact, that within the limits of any species the weight and strength of any specimen of wood depend upon the actual proportion of the space occupied by the annual layers of growth, with open ducts, to the space occupied with compact woody tissues, and to the size of these ducts; or, in the case of coniferæ, the proportion of space occupied by cells formed early in the season to that occupied with the cells of the summer growth. It does not appear to be the soil, age, or general climatic conditions which affect the growth of the wood, nor does the rapidity of growth affect the strength, as has been supposed, as the proportion of open to compact growth is little affected by the rapid or slow increase of the tree's diameter."

"It follows that while such experiments are

necessary to establish maximum and relative values for any species, these being established, actual values of any given specimen of wood may be determined by microscopic examination of its structure—that is, two specimens of wood of any species to which the census-tests have been applied being given, their relative values can be determined by an examination of their structure as well as, or better than, by any elaborate experiments."

The statement of the value of the forest productions and the density of forests, as shown by the maps, as well as other statistics given in Part 2, are based upon the returns received from an elaborate system of circulars sent out for the purpose; yet, in estimating the forest crop so many industries are insufficiently reported that the returns do not indicate its full value, which for the census year (1880) is reckoned at seven hundred millions of dollars. "Michigan is the greatest lumber-producing State," and the united lumber production of that State, Wisconsin, and Minnesota, "exceeds one-third of all the lumber manufactured in the United States." Wood is used for fuel in value to the amount of three hundred and twenty-two millions of dollars annually. During the year, also, it is estimated (and from the character of the returns the estimate is undoubtedly below the actual figures), that upward of ten and a quarter millions of acres of woodland were burned over, destroying timber to the value of twenty-five and one-half millions of dollars. Of the reported causes of these fires the largest number were, first, "farmers clearing land," followed in order by "hunters," "locomotives," and "malice." Though the destruction of timber is great, this loss is small compared with the injury done to the land which is burned over, for a long series of natural changes must be gone through with before a growth similar to the one destroyed can be produced. Browsing animals inflict an injury on the forests only exceeded by loss from fires, for they not only destroy all seedling trees, but they injure the bark and kill trees of maturer growth besides. In the production of railroad ties there is a very great destruction of trees in proportion to the amount of timber used, as on an average only two ties are produced from every tree cut down, and, as is the case with telegraph poles, they are taken from trees which would produce in time a far greater value as timber trees.

The forests of Maine are cited as illustrating the perfect practicability of forest protection. The prosperity of that State depends upon its forests, and where a community realizes this, fires are kept in subjection. The Maine forests, "once thought to be practically exhausted, still yield largely and continuously, and the public sentiment" which has rendered this possible "is the one hopeful symptom in the whole country that a change of feeling in regard to forest property is gradually taking place."

The forests perform a duty more important even than the production of lumber, by preventing the destructive work of mountain torrents, and by guarding and regulating the supply of water in our great rivers. In many cases the inaccessibility of these forests has heretofore preserved them, but it cannot do so much longer. Their destruction will be immediately followed by the ruin of rivers for navigation, irrigation, and mechanical purposes, the flooding of cities located on their banks, and the spoliation of large areas of the richest agricultural land. By the destruction of these protecting forests "the whole community will suffer widespread calamities which no precaution taken after the mischief has been done can avert nor future expenditure prevent." Notwithstanding the tremendous drain made upon our forests, they are capable for many years of yielding greater annual returns than have yet been reached. Changes must come in the lumber centres, and distribution by railroads will largely govern the regions from which lumber will be cut. On the Atlantic slope the Southern pine forests still contain vast quantities of valuable timber, and the hard-wood forests of West Virginia, North Carolina, Kentucky, and Tennessee have been but slightly reduced. In the Pacific region, the forests of Oregon and Washington Territory are practically intact, but the redwood, the only substitute for white pine, is rapidly disappearing, and, at the present rate of consumption, must soon cease to be of commercial importance. With the exception of these and the inaccessible forests of Arizona and New Mexico, the axe and fire have rendered the remaining forest regions of the country of secondary importance, although lumber will always be produced even from these in marketable quantities. Without doubt the forest wealth of the country is still enormous, yet not inexhaustible, and "in spite of their extent and variety, and the fact that the climatic conditions of a large portion of the country are peculiarly favorable to their growth, the forests of the United States cannot always continue productive if the simplest laws governing them are totally disregarded."

The forests of each State are taken up separately by Prof. Sargent, their nature and density being illustrated by thirty-two colored maps. In addition, sixteen large maps in the portfolio show the forest, prairie, and treeless regions, the natural divisions and relative density of the forests, and the distribution of all the important trees. These maps are finely executed, but on some of them the tints used to designate relative amounts differ so slightly that great care is required in referring to them. It is also to be regretted that the quality of the paper used for the text is so very poor. But these are trifling defects when the great practical value of the work is considered.

RECENT NOVELS.

Tarantella. By Mathilde Blind. Boston: Roberts Brothers.

The Crime of Christmas Day. By the author of 'My Ducats and My Daughter.' Harper's Franklin Square Library, and D. Appleton & Co.

Charley Kingston's Aunt. By Pen Oliver. Macmillan & Co.

The White Witch. Harper's Franklin Square Library.

Stories by American Authors. Vol. IX. Charles Scribner's Sons.

A Good Hater. A Novel. By Frederick Boyle. Harper's Franklin Square Library.

Under Which King? A Novel. By Compton Reade. Harper's Franklin Square Library.

The Wearing of the Green. A Novel. By Basil. Harper's Franklin Square Library.

Philistia. A Novel. By Cecil Power. Harper's Franklin Square Library.

Germinal. By Émile Zola. Paris: Charpentier; New York: F. W. Christern.

Too much praise cannot be given to the honest and thoughtful execution of Miss Blind's first novel, 'Tarantella.' Though it has not the grace and charm of those works of fiction which are or seem to be spontaneous creations, it promises that intelligence and high purpose may in time do duty for imagination and impressionability. The opening pages, addressed to Spring, are unfortunate, being in sentiment superficial, in style labored and cold; and throughout the first book the fidelity of the delineation of South German life does not compensate for its lack of vitality. Not till the second book does the author show the heights to which she can rise, and indicate the peaks beyond to which she may aspire. There is a genuine sense of the picturesque and dramatic in making the destiny of a poor violinist, Emanuel, turn on a chance visit to Capri, where he plays for a beautiful girl, Antonella, so that, as the superstition goes, she may dance out the venom of a tarantula's bite. In the virtuoso's narrative of his life his nature is admirably revealed—better than the author knows, for her mistake is that she has thought him more of a man than she has made him. Emanuel, the nervous, the passionate, the selfish, has no seeds of greatness in him. He is the man to compose only a famous tarantella, not a symphony that shall echo grandly and forever. He is the man to love many women desperately, not one faithfully. In his transports of grief over the death of his last love, Minna Lichtenfeld, he is hysterical, not profound. The very variableness of his character is too rooted for us to believe that such a loss should steady him, or infuse into his work the "upward-soaring, heaven-aspiring" qualities ascribed to it. The power and present limitations of the author are equally evident in the drawing of Antonella. She comes on the scene first as the Countess Staraja; she occupies the *bel étage* in the house with Frau Professorin Lichtenfeld; she piques the gossips of the coffee parties, and patronizes the little Minna. She is a tarantula of a kind most attractive to the woman-novelist, and it would be interesting to know whether men avoid her as a model through discretion or disbelief in her existence. In her cruelty and infamy she is a type of a large class of women, born, let us say charitably, as destitute of moral sense as a savage. Antonella illustrates without exaggeration the monstrous possibilities of the type; but she is a collection of clever, unsparing generalizations, not a conspicuously imperfect individual. It is, however, pretty certain that no pen but the inspired Ouida's could cope successfully with her personal seductiveness, her "enervating perfumes," her "costly litter of Louis-Quinze fans," and her "bottles of attar of roses worth their weight in gold." Miss Blind's inaptitude for this tawdry and vulgar word-painting is obvious, and her failure alone redeems the effort.

To set a fashion in fiction, as in clothes, it is not so necessary to hit upon what people want as to recognize what they are tired of. The fashion in literature runs just as long as the thunder of the originator is cleverly stolen, as long as his disciples keep above the level of feeble or grotesque copyists. The sad deterioration in the followers of the great realists accounts in a measure for the success of such a brilliantly improbable story as 'Called Back,' and that success in its turn explains the rapid production of tales in which the mystery is the thing. The author of 'The Crime of Christmas Day' starts with a clear conception of the work before him, and with all the mental equipment needful to involve a hero in an apparently hopeless coil of trouble, and then extricate him with ease and naturalness. His first situation offers a thrilling emotional contrast. On the very day that the management of the Odéon accepts the comedy of a poor student of the Latin Quarter, he is confronted by the horror of arrest for the murder of his uncle. By fitting facts to theory ingeniously, a black case is made out against him, only to be demolished through the faith of a friend, the professional rivalry of a detective, and a more ingenious demonstration of theory by fact. The many fine points in the evidence against Girard are neatly explained away, and the only approach to failure in reconcilement of probabilities is in the blindness of two witnesses to the peculiarities of the Japanese physiognomy. The whole affair is managed swiftly, clearly, and precisely; the

reader has some sympathy with the characters as well as curiosity about the events, while the clean, coherent style has no more likeness to police-reports than is inseparable from the subject.

Several dull chapters concerning the home and college life of a medical student preface the mystery of 'Charley Kingston's Aunt.' This aunt, Mrs. Parkinson, is introduced in the dissecting room of a London hospital, an unclaimed body from Marylebone Workhouse. In this daring first stroke the author exhausts his inventive power. The methods employed by Kingston to trace his aunt from a luxurious home in Cleveland, Ohio, to her grievous end are stupid and hackneyed. And when Mrs. Parkinson's misfortunes are hinged on the loss of memory after a severe illness, the author infringes Conway's patent. The work, however, is not without originality which has been strangely diverted from its proper channel. Few authors, for instance, could construct a character from so slight a clue as a man's manner of knocking at a door, and probably fewer could detect in a plain tap a "brisk, incisive initiative, and gradual subsidence in delicate notes almost like a bar of Chopin."

The intrigue of 'The White Witch' is dark and involved from the beginning. Careful to employ every conceivable complication, the author sails on triumphantly to a deadlock. The reader is convinced that Miss Mary Dixon, the White Witch, is either an abandoned criminal hiding from justice, or a victim of cruel wrong and oppression. He is inclined to hope that she is guilty, and that eventually she will be hustled off to a penitentiary, where her Paris gowns may not console her, and where her voice, "one of those voices which the world waits for, cultivated as the world demands," will not win her any special consideration. But he is doomed to disappointment. The author has not the faintest idea how he shall get out of his labyrinth. He resorts to all sorts of humiliating shifts, and finally, in sheer desperation, makes out that Miss Dixon is neither wicked nor wronged, oblivious to the fact that he thus proves her a fool.

From "Young Strong of the *Clarion*," in the ninth volume of Scribner's Short Stories, we get a lively impression of Green's Ferry, California, and its "leading men." Both the humor and pathos in the embarrassments of a young editor whose paper is "a sort of voice crying in the wilderness about Reform," are forcibly suggested. Indeed, Young Strong is altogether such a manly and attractive fellow that he cannot easily slip from the memory of those who have once had a glimpse of him. The only other noteworthy story in the volume is Mr. Leonard Kip's "——mas Has Come." It is beautifully appreciative of the fascination of the sea, while the little mistake in the dénouement seems as happy to the reader as it was fatal to the hero.

There is certainly much variety in 'A Good Hater.' The weight of novelty is too great, in fact, for the lame and unreal story which is made to carry it. To be led from a brush with the Pathans in the Guaja Pass, through the hospitalities of Danebam Castle in the north of England, dinners and adventures in several quarters of London, love-making at the Bagni di Lucca, to shooting elephants and Ashantees in Africa, is an imposition on the most willing imagination. When the perplexities of a forged will, lost and mistaken identities, and the freaks of a mild Monte Cristo are added, one is ready to cry "Enough," and let *Macbeth's* curse light where it will. In the same way that he is too profuse with his wealth of material, Mr. Boyle is too persistent with his liveliness, and one has the unpleasant sensation of associating with frivolous people in complicated situations. The continual chatter of characters that are too shallow to be cynical, and too sophisticated to be simple, grows tiresome, in spite of the deep plot and the marvellous gold ornaments of the Ashantee braves. Then the essential thing, after all, in a mysterious novel is not that the characters should be anything in particular, but rather that the story should be well rounded off at the end with every point adequately and logically explained. As Mr. Boyle has told his story, however, things refuse to explain themselves, except in a half-way fashion, and one is left to the worry of speculation.

Although it is inevitable that it should be so, now that so many novels are written, it is still interesting to notice how readily their pages reflect the more obvious movements of the time. Two of the late issues of the Franklin Square Library might almost be called tendency novels, while a third, by Compton Reade, has for a heroine "the unearned increment—the tract of land which the labor of centuries" and the growth of the London market had centupled in value. In spite of his strange heroine, Mr. Reade is obliged to revert to the stale incident of changelings to give his unearned increment a bit of human interest; but for the machinery of his story Irish agitators, dynamite, impossible Americans, and murder by typhus germs are fresh and ready to his hand. Vivisection, too, and the æsthete come in for their share of attention, and had the author gone about with a special purpose he could not well have got together a worse lot of people—from the true heir of the unearned increment to Father L'Isle, the Christian Socialist. Naturalness, of course, is not to be expected of one to whom a pill is a "bolus," and eating a "process of deglutition." But improbability is carried quite too far when the æsthete bargains to have the heir put out of the way, and then languidly explains his plans to his betrothed and to several of his friends; while the height of preposterous impossibility is reached when a judge of the United States Court, with a telegraphic warrant from the President, heads a lynching mob in California. Henry George will not receive much help from such weak and ill-considered attempts as this.

'The Wearing of the Green' is written with such a determined effort to present the Irish question that it is doubtful which is meant to be chief—the story or the moral. As far as the politics are concerned, nothing is said which has not been heard many times since Burke. The recital of Ireland's wrongs may gain emphasis when it comes from the lips of Miss Norah Wyndham—who knows her country's history with commendable accuracy—and is strengthened by the example of her own perilous adventures and the narrow escape of her love-affair from disaster; but it is a list that from much going over has lost its impressiveness. And as Miss Wyndham is finally left happy, with her lover triumphantly acquitted of complicity in an agrarian murder, one is apt to forget the misery of the peasantry in the contemplation of her pleasant fate; and, when thinking of the earlier chapters at all, to remember only the numerous and obscurely drawn quotations, the tedious explanations, and the extravagance with which the minor characters are invariably painted. The sarcasm which the author breaks into whenever England or things English are under discussion is amusing, it is so bitter; though often it is not wholly unjust.

There is a quiet, pleasant tone about 'Philistia' which recommends it to one's liking in spite of an occasional straining of the socialistic note. If Ernest le Breton is somewhat tiresome at first, in the pertinacity with which he obtrudes his socialism on all with whom he comes in contact, we forgive him afterward for the troubles his conscientiousness and his principles bring him into, and for his quiet resignation and gentleness under their weight. The main thread of the story runs very simply. Le Breton is driven by his opinions from his tutorship of Lord Exmoor's son, and then from his schoolmastership, on the strength of which he had married, into journalism. Here, but for the help of friends, he was like to have starved, again on account of his opinions, until the success of his pamphlet on the poor of London brought him prosperity and the editorship of a socialist paper. The tale is told mildly, yet with vivid incidents and with minor threads ingeniously woven in, that make it full of interest. There is no study of a social phase, as in 'Alton Locke,' no sensational use of socialistic organizations, as in 'Sunrise'; but merely the recognition that there is a new faith growing up which is already strong enough to be the guiding motive in the lives of some men of culture and breadth, as well as men of narrow and intense ideas.

On being interviewed, recently, by a Parisian reporter, the author of 'Germinal' said: "I wished to paint the miner, and in order to do so truthfully I consulted documents everywhere. The Parliamentary inquiry into the condition of the English miners has been of much service to me. I believe I have described the miners as they are." And further: "My book is a work of pity, nothing more, and I shall be content if my readers experience this sensation." It is well that we should know from M. Zola's own lips what his object was in writing 'Germinal,' for, if we discover no literary merit in the vulgar style he adopts whenever he is not describing nature, we may still ask, Has he attained that commendable object? The picture he draws of the wretchedness of the poor miners and their families is certainly calculated to excite pity, but this feeling gives way to one of disgust when he describes the sufferers as living in a state of moral depravation too general, too complete, to be true. Not one of the numerous characters—miners or bourgeois—has the faintest notion of virtue, of chastity, of common decency. The plot culminates in a dramatic situation similar to that so touchingly described by Hector Malot in 'Sans Famille'—the entombing alive of a number of miners. Here M. Zola has some thrilling passages. We forget for the moment the coarse vulgarity that fills the preceding five hundred pages. In the presence of death, the hero and heroine will surely show the better side of their nature. They have been twelve days in this living tomb; nine of these days they have passed clinging to a narrow ledge, with their feet in the icy-cold water, and without a morsel of food. They are exhausted, dying. M. Zola fills that supreme hour—the last of the poor girl who will never more see the sun—with a coarse picture of sensual passion. How very natural!

English and French statistics, and for that matter the statistics of any country, show that ignorance and corruption go hand in hand; but neither in England nor in France could there be found a community so depraved, so utterly God-forsaken as that of M. Zola's miners. A picture of wickedness without a single redeeming feature is not true art; much less is it true to nature. Where the shadow is darkest it is made so by contrast with the light. There is no such thing as utter darkness. When Eugene Sue described the slums of Paris with all their crimes and vices, he made us shudder without making us blush, and, side by side with these hideous pictures, he showed us native honesty, instinctive chastity. He painted with a master hand the humble virtues of the people, of the much maligned working classes; and public opinion said the picture was true. Zola understands patriotism and humanity in a different way. He claims to be a naturalist, and is therefore supposed to paint

French nature, since he writes about Frenchmen and French women. To speak only of the books that have bronght him notoriety, if not fame, in 'L'Assommoir' he traduced the Parisian workmen; in 'Nana' he dragged the aristocracy in the mire; in 'Pot-Bouille' the *bourgeoisie* was defamed. We have just seen what he thinks of the most wretched class of working people—*toujours sans exception*. His next novel, he says, will describe artist life, but the great work he has in contemplation is one on the French peasant. When that is done, he will have thrown mud on every class of Frenchmen. It is true that every handful of mud brought him a handful of gold; but will it always be so? 'Pot-Bouille' was a failure; 'Germinal' is another. Obscenity may grow tedious as do many better things.

The Letters and Times of the Tylers. By Lyon G. Tyler. In two volumes. Vol. I. Richmond, Va.: Whittet & Shepperson. 1884.

THIS work possesses a great and almost unique interest—a history of our Government from the beginning of the Revolution to the year 1840, from the point of view of a single Virginia family. Judge John Tyler died in 1813, having been prominent in the affairs of his State from the establishment of independence; and immediately thereafter his son, afterward President, entered into public life. "State-rights" is the governing principle of the careers of both these distinguished men; and so strongly is the author impressed with this fact, that he insists that the Whig party, to which for a short time the younger Tyler was attached, was, in its origin, "properly a State-rights party—formed out of a hotchpot of opposition." There is something to be said for this view, of course, as there is for all paradoxes, for the party of State-rights, when it has been in power, has always grasped at national authority, and never more so than under the lead of Jackson; but it is a misinterpretation of history to represent the temporary revolt of a few State-rights men like John Tyler against the one-man power of a despot like Jackson as the real foundation of the Whig party.

If the younger Tyler has a more conspicuous place, and a greater name, in history than his father, it must be confessed that his father presents in these pages an even more interesting subject to the student of American history. Probably no man embodied more thoroughly the doctrine of State sovereignty which at this period found its chief home in Virginia; and we have never found this doctrine stated more vigorously and uncompromisingly than in these pages. In his utterances we have the expression of the dominant political principle of the most influential State in the Union; and as a running comment upon public events for the whole period between the Revolutionary War and the War of 1812, these utterances possess the highest value. The boldest statement of these views we find on page 257: "Ever since the day he appeared in the Legislature of his native State he had stood out for the doctrine that the Revolution had reduced men to a state of nature, dissolving them from all allegiance to the King, and from all laws and governments not made their own by express adoption." And again (p. 259): "Judge Tyler, who thoroughly believed in the international character of the Union, and saw no mean between a consolidation and a league, had acutely felt the necessity of eradicating the whole influence of the English law and European attachments." He opposed vehemently Chief-Justice Marshall's view of the authority of the common law; and, when sitting as his associate in the Circuit Court in 1811, "it was," we are told, "no difficult task for him to pierce through the intentions of Marshall, and tear away every cobweb he had woven to catch the public fly" (p. 256). Not merely Marshall, but Washington, was consistently distrusted and opposed by him, and we read (p. 211) that "with Virginians it is a disputed question which has superior claims to his title, 'Father of his Country,' Washington or Jefferson." And in 1810 Judge Tyler wrote that "in General Washington's time, under the insurrection, as it was called, some very strong military usurpations were exercised" (p. 245).

The slavery question, too, finds an interesting commentary here, in some remarks (p. 155) about the change of attitude of Virginia upon the subject. The author apologizes for this by saying: "Expression, 'tis true, during the Revolution was more open than at a later day, but this was due to the obvious reason that the forces seeking the extermination of the evil operated mostly at home, and did not originate in a section of the country hostile to Southern interests. . . . Southern statesmen soon learned that openly denouncing slavery was merely playing into the hands of their bitterest enemies." Very well; but will any one assert that there were forces at work, at the time that Garrison began his agitation, which would have led to the peaceful abolition of slavery? It may be noted here that Nat Turner's rebellion is not alluded to, and that the South Carolina nullification movement is passed over very cursorily.

This volume contains an excellent portrait of Judge Tyler, and one of President Tyler when Governor of Virginia, at the age of thirty-five. The volume ends with his election to the Vice-Presidency in 1840, and the second volume may be expected speedily.

Memoirs of Rufus Choate. With some consideration of his Studies, Methods, and Opinions, and of his Style as a Speaker and Writer. By Joseph Neilson. Boston: Houghton, Mifflin & Co. 1884.

THIS volume consists of a series of essays by different hands. They contain reminiscences of Mr. Choate as a lawyer and as a public man, discussions of his style, learning, and manner of dealing with juries, and accounts of his connection with some noted cases. Judge Lord, of Boston, for instance, gives a conversation with Mr. Choate as to the trial of Webster for the murder of Dr. Parkman, which throws an interesting light on his notions of professional obligations. It seems that Mr. Choate did not appear in the case because they "did not want him," and they did not want him because he insisted on their making an admission which they were, no doubt, afraid to make. There was but one way, he explained, to try the case:

> "When the Attorney-General was opening the case to the jury, and came to the discussion of the identity of the remains found in the furnace with those of Dr. Parkman, the prisoner's counsel should have arisen and said substantially that in a case of this importance, of course, counsel had no right to concede any point, or make any admission, or fail to require proof, and then have added: 'But we desire the Attorney-General to understand, upon the question of these remains, that *the struggle will not be there*. But, assuming that Doctor Parkman came to his death within the laboratory on that day, we desire the Government to show whether it was by visitation of God, or whether, in an attack made by the deceased upon the prisoner, the act was done in self-defence, or whether it was the result of a violent altercation. Possibly the idea of murder may be suggested, but not with more reason than apoplexy, or other form of sudden death. As the prisoner himself cannot speak, the real controversy will probably be narrowed to the alternative of justifiable homicide in self-defence, or of manslaughter by reason of sudden altercation.'"

Professor Webster would not listen to any such defence, and, though Mr. Choate did not say so to Judge Lord, the inference must have been irresistible that he refused because he knew very well that Doctor Parkman had not come to his death by visitation of God, nor in any other of the innocent ways suggested. It is clear enough, however, that had Mr. Choate's suggested hypothesis been the correct one, an innocent man might possibly, after the accidental death, have resorted to concealment, denial, and all sorts of shifts for disposing of the remains. But Professor Webster, blinded by guilt and fear, could not see this, and made the fatal mistake of denying the existence of the *corpus delicti*. Mr. Choate's analysis of motives was perfectly correct. Denying what he should have admitted, Webster was detected in a falsehood, in face of a grave accusation involving his life. After that his case was hopeless.

Shrewd and far-seeing as Mr. Choate's suggestions were, there is nothing in them more interesting than the insight they give into his professional conscience. As in the case of most great advocates, he evidently took little or no interest in the moral question of guilt or innocence, but was governed entirely by professional considerations as to what "twelve men in a box" could be fairly induced to believe with regard to guilt or innocence. If he could present to them an argument for a verdict of not guilty based on a hypothesis consistent with the evidence, he did not care whether his client had committed murder or not; but to misrepresent the evidence, or rely on evidence which would not be forthcoming, would be a sin against his profession. It is because laymen will not discriminate between the professional and the lay point of view that they do not understand the views taken by great lawyers like Mr. Choate of professional responsibility.

East by West. A Journey in the Recess. By Henry W. Lucy. In 2 vols. London: R. Bentley. 1885. 8vo.

MR. LUCY, the well-known *Daily News* correspondent and "Toby, M. P.," of *Punch*, made, we opine, a mistake in visiting this country first in his journey around the world. Had he travelled "West by East," coming to California from Japan, instead of taking the opposite direction, he would have been in a better condition to appreciate what there is worthy of notice in a ride across the United States. In this case we believe he would have written something worth reading about us. As it is, a large part of his account of New York, which "is one of the sombrest looking cities in the world," is taken up with a scene at the "customs sheds" and his experience with a hack-driver. Naturally he has something forcible to say about the condition of the streets, but we question whether a two or three weeks' stay in the country, the greater part of which was necessarily passed in the cars, justifies his conclusion that a disregard of the cleanliness of the streets is "innate in the American character." Mr. Lucy is always entertaining, and it is disappointing that so keen an observer, with such a graphic pen, should leave distinctive characteristics unnoticed, and dwell persistently on the fact that Americans habitually sit with their feet on tables or lamp-posts. He is content to fill his pages with time-worn stories of train-robbers, cow-boys, and the various methods in which justice is defeated in mining towns, to the neglect of more valuable information. The only chapters of the ten devoted to this country worth noting are those on Salt Lake City and his interview with President Taylor, and on the labor question on the Pacific Coast as affected by the legislation against the Chinese. These contain condensed statements of facts of considerable value. The account of the home-returning Chinamen on board steamer is interesting, as is also everything which Mr. Lucy writes about Japan. Spe-

cial facilities for sight-seeing were granted him here, as well as the very rare honor of being presented to the Mikado himself. The romantic story of Ito and Inouyé, the energetic ministers who "are the founders and the sustaining forces" of "the policy of the present Government," is well told from the lips of the latter. With both of these gentlemen he had frequent intercourse, and the chapter in which he sums up the general condition of the empire is the most valuable in his book. The confidence in the Government is shown in the almost unexampled rise, "even more rapid than that of greenbacks or Italian notes," in the value of the paper money. His descriptions of the more familiar Indian scenes, though excellently done, need no special comment. A vein of humor, breaking out in odd and unexpected places, it should be said in closing, makes these volumes very agreeable reading.

Geschichte der Litteratur Nordamerikas. Von Eduard Engel. Leipzig: W. Friedrich. 1884. Small 8vo, pp. 68.

THE proverbial advantage of seeing ourselves as others see us, is, we suppose, based on the supposition that others will regard us in a light not only more impartial, but also, from the nature of the case, less favorable than our own judgment would be. Only in this way, it has been observed, can the hide of national self-complacency be pierced and the light of truth enabled to enter. But any one who takes up Mr. Engel's little work in the expectation of being thus edified will be disappointed. It is not, indeed, exclusively panegyric, but the interruptions to the even tenor of the author's praise are rare, and with these few exceptions the flattery is laid on thick enough to have made even John Neal blush. Mr. Engel (who has also written an extensive history of "English" literature) admits that our British ancestors accomplished considerable in this line, but

> "A comparison of the present condition of literature in the two countries compels us to say that a good book in the English language is, as a rule, an American book. In America there is a considerable body of authors, who, if they are to be credited with nothing extraordinary, at any rate produce highly respectable works, while England, as regards literature, is almost a desert. . . . As regards belles-lettres, American competition is approaching the colossal dimensions of its achievements in material matters."

From Franklin down, continues Mr. Engel, American authors have been easily distinguished from the British contemporaries, "more sharply separated than the German authors of Austria and Switzerland from those of the Empire." Yet it is not the language which betrays the nationality—at least not in the way a Britisher, as Mr. Freeman calls his countrymen, would suppose, for "the American English, in good books, is in no way distinguishable from British English. Only the pronunciation is sharply different, that of the Americans being the purer." Mr. Engel, however, candidly admits that considerable changes have been made in the tongue through the incorporation of foreign elements, "notably the German and the Chinese." And, best of all, the people is worthy of its language and literature, for the despised "Yankees *buy* their authors' books, famous or not famous, in quantities beyond even the imagination of the nation of thinkers and poets. . . . A more or less known American author is, under all circumstances, well-to-do"—a fact which the Copyright League will agree with Mr. Engel in thinking equivalent to intellectual independence. Nor are our public libraries forgotten, "which owe their existence exclusively to the noble public spirit of individuals."

The poets considered by Mr. Engel are "Dana, Bryant, Longfellow, Whittier, Whitman, Stoddard, Taylor, Dorgan, Miller, Osgood." His countrymen regard Longfellow as the first of these in merit—superior even to Dorgan, though Mr. Engel does not emphasize the latter fact. "But in imagination and power of expression, he is greatly inferior to Poe, and he lacks what, for a great poet, is the most essential of all things, originality." In reading Longfellow "we are frequently conscious of having read it all before. Keynotes, emotions, individual expressions, sound much too familiar." As to Whittier, Mr. Engel thinks he is the only one of the older poets whose popularity is likely to be lasting. "Whitman has not written a single *poem*." His productions are prose "of poetic character," clad in a garb "which is neither prose nor poetry." Stoddard, in his way, is a master and has great originality. But Mr. Engel's hero is Poe, who is not lumped with the common herd of Longfellows and Dorgans. "*No* American poet approaches him. His poems fill only a thin little volume, but this outweighs many tomes of Bryant, Longfellow, and Taylor"; as to fame, "Bret Harte is his only rival." It will be observed that Emerson, Lowell, and Holmes are here not even mentioned, though it is elsewhere said of the first named (who, nevertheless, has a chapter all to himself) that he "is hardly to be spoken of as a poet."

Another chapter is devoted to novelists, and a third to humorists. Mr. Engel has a high opinion of Cooper, and remarks of Hawthorne that he resembles Scott more than Cooper does, and that, in knowledge of the human soul, he is the equal of Bulwer. Howells and James receive two lines each, but Mr. Cable is favored with a more detailed notice. It seems that the latter "busies himself with the description of the American 'aristocracy,' the great families on the Eastern coast, descended from the Puritans of 1620, or the Dutch settlers." Our author evidently feels what he says when he adds that his books "assume a too close acquaintance with American social conditions to be of interest to the European reader." Next to Poe, Mr. Engel places most value on the works of Mark Twain. Such authors, he says, are a gift of merciful heaven, which sends these sunbeams into the gloom of modern life. Leland, too, is very funny in his pidgin English poems, "but we cannot perceive anything humorous in these [Hans Breitmann] which have won him a great reputation in America. Average numbers of *Fliegende Blätter* or *Kladderadatsch* contain more wit and humor than these ballads."

We have only to add that Mr. Engel's style is agreeable, that his little book is beautifully printed (in Roman type), and that we have detected very few misprints or errors of pure fact. People who abhor spelling reform will object to the "mangled" words, deprived, as they are, of the familiar silent "h" and "e," but the public will have to get used to changes like these.

Educazione Moderna. Per N. Fornelli. Turin. 1884. 8vo.

THE common-school education in Italy a generation ago was exclusively intrusted to the Catholic Church and the monastic orders, especially the Jesuits, who monopolized it, though not at the expense of their order, as some suppose, but of the several States into which Italy was then divided. It was free, but confined to a very limited number of the male population, viz., the middle class—for the aristocracy never allowed their boys to attend the public schools, but employed priest-tutors at home, while the mechanic and lower classes were absolutely illiterate. As to the girls, it was considered sufficient, both in the upper and middle class, if they knew enough to read and write correctly, which they learned either at home or in some nunnery. Statistics show that thirty years ago only three per cent. of the Italian girls knew their letters.

The change that has taken place since the revolution of 1848, which culminated in the unity of Italy in 1870, is most marvellous. As every liberal government succeeded to the old despotism, its first act was the secularization, so called, of the public instruction; that is, the withdrawal of it from the monopoly of the Church and the Jesuits, and intrusting it to the hands of lay instructors of both sexes in the regular pay of the Government, with tenure of office and promotions like other civil officials, extending it to all classes, even the lowest, both males and females. It has not yet been made obligatory, but a bill is pending in Parliament to that effect, and without doubt will be acted upon before long. Remarkable among others is the Government provision that the large number of military conscripts, which includes all the able-bodied youth of the nation, unless they already know their letters, are made to read and write during their three years of service; for which purpose, officers are detailed to give daily instruction in the primary branches, and no conscript can be discharged from the army or navy unless he has first acquired his letters.

Naturally in such a new departure in public instruction, and its extension to the whole population, many new systems and methods have been adopted, much confusion has arisen, and evident errors have been committed in the training of youthful minds; for, if the old priestly system was too strict, pedantic, and dogmatic, the new one, in its sudden transition from slavery to freedom, has assumed a too radical, unbridled, and arbitrary form. Mr. Fornelli's book is a philosophical and scientific exposition of a middle course between these two extremes. He is a public instructor of experience and learning, already well known for other publications of a more rudimentary nature. In this, however, which is intended for teachers and the literati, he sums up with philosophical acumen all the experience of such progressive nations as France, Germany, England, and especially the United States on this subject, and from the writings of such men as Taine, Spencer, Mill, and others on mental culture; deducing, for the instruction of his countrymen, the true method to adopt in the public schools. Of course, this, for us, is a twice-told tale, for the maxims inculcated in the book have been household words among us for a century back; but it gives us good hopes for the future mental and moral culture of Italy when such books are published, and their teachings spread among the educators of that country.

Philips's Historical Readers. No. 1—Stories from English History. No. 2—Early England, to 1154. No. 3—Middle England, 1154 to 1603. No. 4—Modern England, 1600 to 1884. Boston: School Supply Company.

THE idea which lies at the bottom of these readers is that expressed by Mr. Mill, in his St. Andrew's address, that no one "ever really learned history and geography except by private reading." Another sentiment, too, is growing among thoughtful people—that our ordinary scrappy school readers, while well adapted to secure a variety of elocutionary drill, are very insufficient for the other objects to be aimed at in reading-books; and that they should be, if not superseded, yet relegated to a less conspicuous place in a system of education, and supplemented by books of a different type. The books before us will be very serviceable in this direction. They are not adapted to the youngest classes—even No. 1 requires considerable mental preparation—and the style of all is a little heavy, but serious

and stimulating, and very healthy reading for our young people. A considerable proportion of the notes might have been advantageously incorporated in the text. Notes are at best a necessary evil, and the story ought so far as possible to explain itself.

Kentucky: a Pioneer Commonwealth. [American Commonwealths.] By N. S. Shaler. Boston: Houghton, Mifflin & Co. 1885.

THE several volumes of "American Commonwealths" are characterized by a freshness and individuality which bear testimony as well to intelligent editorship as to skill and industry in composition. And no one of the books is more marked in these qualities than Professor Shaler's 'Kentucky.' He does not venture, he says, to call it a history—he is, indeed, a geologist rather than an historian; but he is a loyal son of his native State, and has written its annals with pride and affection. It is, no doubt, true that no one of the younger States has a more marked individuality, or has had a more distinguished career, than Kentucky; and Mr. Shaler has taken especial pains to point out the service it rendered to the Union at the most critical period of its history. If Kentucky's most eminent citizen was called "the great compromiser," the State itself, by the peculiarity of its situation and the conservatism of its inhabitants, was led at various times to a similarly compromising attitude; and its course at this juncture, a very characteristic one, is described by Mr. Shaler with great care and at considerable length. The Peace Congress and the Crittenden Compromise are passed over with a mere mention, as belonging rather to national than State history; but, after all, this movement was so prominently a Kentucky movement that it deserved a fuller treatment. The civil war is narrated with considerable fulness, so far as relates to Kentucky. The two chapters which follow—"The Struggle for Civil Government" and "The New Commonwealth"—are admirable discussions of the new problems, although reconstruction, an event of the first interest in the history of this State, is passed over rather cursorily. The appendix contains, among other things, an authentic copy of the Kentucky Resolutions, derived from the Massachusetts archives—the original record having been destroyed by fire, and it having been generally believed "that no attested copy of the original was in existence."

BOOKS OF THE WEEK.

Stories by American Authors.—X. Charles Scribner's Sons. 50 cents.
Stowe, Harriet Beecher. Pink and White Tyranny. New ed. Boston: Roberts Bros. 50 cents.
Stoughton, J. Religion in England from 1800 to 1850: a History, with a Postscript on Subsequent Events. Two vols. A. C. Armstrong & Son. $5.
Street's Indian and Colonial Mercantile Directory for 1884-5. Tenth Issue. London: Street & Co.; New York. S. M. Pettengill & Co. $7.
Taussig, Dr. F. W. The History of the Present Tariff 1860-1883. G. P. Putnam's Sons. 75 cents.
Taylor, Rev. Wm. M. John Knox. With Portrait. A. C. Armstrong & Son. $1.25.
Tennyson, Lord. The Children's Hospital. A. D. F. Randolph. 40 cents.
The Open Door; The Portrait: Two Stories of the Seen and the Unseen. Boston: Roberts Bros. 75 cents.
Thomson, J. Through Masai Land: a Journey of Exploration in Eastern Equatorial Africa. Boston: Houghton, Mifflin & Co. $5.
Timayenis, T. T. Greece in the Times of Homer. D. Appleton & Co. $1 50.

Audubon's Birds of America

Complete in 4 vols. of plates and 5 vols of text, with a table made expressly for its exhibition; also 'Audubon and Bachmann's Quadrupeds of America,' 5 vols.

Charles Scribner's Sons'
NEW BOOKS.

The Rescue of Greely.

By Commander W. S. Schley, U. S. N., and Professor J. Russell Soley, U. S. N. With maps and numerous illustrations. 1 vol., 8vo, $3.00.

From an Advance Review in the New York Times:

"Not alone by virtue of his office was Commander Schley competent to tell the story of this memorable expedition. On his return from the north, all that the public saw of him indicated his intellectual fitness to deal with the most delicate and trying situations with the dignity and self-restraint that became his office, and a due sense of justice and the proprieties. The volume, on these grounds, is no disappointment. Bearing in mind the opportunity that was offered him for ambitious writing, not to mention the chances for other and graver indiscretions, the work has been singularly well done. The whole story is told in plain facts, plainly and intellectually stated, and the adjectives are few. Rarely is a great story narrated so simply and yet so effectively."

Teaching of the Twelve Apostles.

Edited, with a Translation, Introduction, and Notes, by Roswell D. Hitchcock, D.D., and Professor Francis Brown. 1 vol., 8vo, $2.00.

The purpose of this book is to give suitable recognition to the extensive literature of the subject which has come up since the first translation was published. The editors, deeming it one of the richest discoveries of modern times, defend the MS. from endeavors to discredit it as a forgery. A specially valuable feature will be found in the discussion concerning the relations between the "Teachings" and other early Christian documents, with translations of these *in extenso*, so far as deemed desirable for purposes of comparison.

American Presbyterianism:

Its Origin and Growth. Together with an Appendix of Letters and Documents, many of which have recently been discovered. By Charles Augustus Briggs, D.D. 1 vol., 8vo, with Maps, $3.00.

This work traces the origin and growth of Presbyterianism in Great Britain and its development in America, with the aid of much new material, including a description of New England, by John Eliot, in 1650; a letter from Matthew Hill, of Maryland, in 1669, and letters of Benj. Woodbridge, Francis Makemie, James Anderson, and others; and extracts from the minutes of the ecclesiastical bodies and missionary societies of Great Britain. It traces the origin and development of the great missionary movements of Great Britain and America in the 17th and 18th centuries, and sketches the constitutional progress of all branches of the Presbyterian family. It has so much to do with the origin and early history of towns and colonies, that it will interest not only Presbyterians, but that large class of students who are devoted to local history and genealogy. It is written in a style to interest and attract the general public.

Dr. McCosh's Philosophic Series.

8vo, paper, 50 cents per volume.

No. 8.—HERBERT SPENCER'S PHILOSOPHY, as culminating in his ethics.

ALREADY PUBLISHED:

PART I.—DIDACTIC. No. 1. CRITERIA OF DIVERSE KINDS OF TRUTH, as opposed to Agnosticism. Being a Treatise on Applied Logic. No. 2. ENERGY, EFFICIENT AND FINAL CAUSE. No. 3. DEVELOPMENT: WHAT IT CAN DO AND WHAT IT CANNOT DO. No. 4. CERTITUDE, PROVIDENCE, AND PRAYER.

PART II.—HISTORICAL. No. 5. LOCKE'S THEORY OF KNOWLEDGE. With a Notice on Berkeley. No. 6. AGNOSTICISM OF HUME AND HUXLEY. With a Notice of the Scottish School. No. 7. A CRITICISM OF THE CRITICAL PHILOSOPHY.

The Diamond Lens and Other Stories.

By Fitz-James O'Brien. Collected and edited, with a sketch of the author, by William Winter. 1 vol., 12mo, cloth, $1.00; paper, 50 cents.

Mr. Winter's selection contains the best of O'Brien's remarkable tales. Except Poe, he had no superior in the region of the fantastic and bizarre.

SCRIBNER & WELFORD, No. 745 Broadway, N. Y.

The Nation.

NEW YORK, THURSDAY, APRIL 9, 1885.

The Week.

THE first month of President Cleveland's Administration is ended, and even his enemies must admit that it finds him complete master of the situation. We do not believe that any previous President has accomplished so much in so short a time. He came into office one month ago, not merely as a new President, but as the first Democratic President in twenty-four years. His accession meant a complete transfer of the Government from the hands of one great party to the other, and there were thousands of people who believed implicitly that such a transfer would be little less than a violent political revolution. In addition to this, the new President came in as the pledged opponent of the old spoils system, and consequently as the avowed antagonist of a large section of his own party. Here were difficulties of enormous proportions, but there was still another to be added. All his appointments were subject to the approval of a Republican Senate. There were not wanting hostile critics who were sure that inevitable disaster awaited an Administration so confronted. How could a President who had never had any experience in national politics, they reasoned, meet and overcome obstacles like these?

What is the situation to-day? The Senate has adjourned without a wrangle, without a division over a single appointment. The army of office-seekers has gone home empty-handed and hopeless. There has been a political revolution, but a peaceful one. The death-blow has been given to the spoils system, and given without splitting the President's political party. The press of all parties is practically unanimous in saying that the general course of the Administration has been patriotic, and that in all matters of supreme import it has met the test without faltering. To comprehend fully what has been achieved it is only necessary to look back four years. What was the situation on April 4, 1881? Had the Senate gone home, and was Washington at peace? Not by any means. The nominations of Mr. Robertson for Collector and William E. Chandler for Solicitor-General were pending before the Republican Senate, and one of the bitterest factional quarrels ever known in the politics of this country was raging within the Republican ranks. The White House was besieged by office-seekers, and the Republican press of the country was divided into two hostile camps. The fight grew in bitterness till the middle of May, when Senators Conkling and Platt resigned. It was not till eight weeks after the appointment was made that Mr. Robertson was confirmed and the nomination of Mr. Chandler was rejected. The Senate adjourned on May 20, but it did not leave peace in Washington. The factional fight was continued there and at Albany, and culminated in the shooting of Garfield by a weak-brained and disappointed office-seeker on July 2.

The President's letter about the Rome Postmastership is one of those clear and forcible statements which are characteristic of him. It not only goes straight to the point in this particular case, but furnishes a general principle which can be laid down as the rule of the Administration in its treatment of postmasters everywhere. He says:

> "I shall do all that is in my power to rid the public service of officials who exhibit such loose ideas of their duty to the Government. The fact that I have before me documents signed by many residents of the city where this Postmaster is located, and who belong to both political parties, asserting their entire confidence in his honesty and fidelity, demonstrates the unfortunate facility with which such papers may be obtained, and gives rise to an unpleasant suspicion touching a too prevalent standard of political honesty."

Nobody doubts that the "too prevalent standard of political honesty" is a very low one. The Rome Postmaster made no other defence of his loose bookkeeping, which disclosed a deficiency of over $700 in the money-order business, than that he had trusted the management of his office entirely to his assistant. The Postmaster-General says he thinks that this idea that a postmaster can trust the business of the office to a clerk while he attends to other matters, is a very general one, which it is his intention to dispel. It is an outcome of the belief which has been dominant in the country for years, that the office of postmaster was primarily a political one, his first duties being to the party which had appointed him. He was to "run" the party organization in the town, act as agent for the party newspapers, and leave the business of his office to the clerks.

The affidavit in which Mr. Pearson disposed of the charges against him has been published in the *Times*, and is a very remarkable document. It shows with painful clearness that an attempt was made to get rid of him by the Post-office Department on charges which the Department itself knew to be false. The accusations were filed with President Arthur in March, 1883, being the result of a secret investigation of which Mr. Pearson had no knowledge, and in which he was given no opportunity to be heard. They were referred to Attorney-General Brewster, who, on the strength of them, though having seen only one side of the case, gave an opinion recommending Mr. Pearson's removal. Three months later a personal letter from Postmaster-General Gresham first acquainted Mr. Pearson with the information that such charges had been made, and had been for some time in the hands of the District-Attorney in New York. He at once sent a complete answer, in which he showed that not only were the charges against him—viz., that he had been interested in certain local despatch companies—false, but that a year before the charges were made he had on three occasions written to the Department urging upon it the necessity of taking steps to break up the business of these very companies, and in each instance had received replies disapproving his recommendations. One of these letters was addressed to the First Assistant Postmaster-General, Frank Hatton, and a reply received, like that in the other cases, discouraging further activity in this direction on the Postmaster's part. These three letters and replies must have been in the possession of the Post-office Department at the time when the accusations against Mr. Pearson were laid before the Attorney-General, but they were not, Mr. Pearson believes, alluded to in the report of the investigation, nor was the fact of their existence made known to Mr. Brewster. We should like to ask, in the interest of public information, whether or not this correspondence is on file in the Post-office Department, or whether Mr. Brewster's opinion is the only phase of the case which has been preserved?

The comments of the Democratic newspapers of this State upon the reappointment of Mr. Pearson have been most significant. With a single unimportant exception, they heartily commend the President's act. The one Democratic paper which objects, and which declares with deep feeling that the "time is ripe for an anti-humbug crusade" against the "further encroachments of these so-called 'reform' associations, composed of dudes, theorists, aristocrats, and fanatics," is the Buffalo *Times*, a journal of small circulation and very limited influence, whose editor claims to have "discovered Cleveland," and as a reward for his claim is an applicant for the position of Public Printer. The tone of his comments indicates a fear that his claim is not likely to be recognized. Every other newspaper in the party appears to be happy over the President's course, so that the demand for an "anti-reform crusade" is confined to one Democratic paper and one Butler paper, the *Sun*. That is a small beginning, but it is large enough for a nucleus. If the people are really "ripe" for the crusade, one man is enough to start it. A public meeting in this city would test the question, especially if it were presided over by the editor of the *Sun*. He declined to act upon the suggestion to call such a meeting before the reappointment of Mr. Pearson was made, but there is no excuse for declining now. If the Democratic party is in the condition of wrath which his paper and that of his friend in Buffalo say it is, it would be simply an act of mercy to afford it vent for its feelings.

Outside of New York State the tone of the press of all parties is no less noteworthy. We have yet to see a newspaper, which is in any sense a representative one, that does not warmly commend the President's act. Now we presume that few persons will deny that an act which is so generally praised must be a popular one, and that if it is a popular one it will draw support to the Administration and the party which is responsible for it. The hated Mugwumps may be poor managers and very wild theorists, but we do not recall at this moment any recommendation of a really practical politician which has exceeded in popularity this Mugwump doctrine of appointments based upon fitness. The politicians rage about it, of course, but even they will be glad to "point with pride" to it on the stump this fall. A great deal of their rage is undoubtedly due to a

realization that an act of this kind is a precedent which marks an advance to a higher standard of administration. They, whether they be Democrats or Republicans, are conscious that if this thing goes on during the four years of President Cleveland's Administration, there will be no more hope for them forever. No matter what may be the politics of his successor, the country will never tolerate a retrogression from the standard thus fixed.

None of President Cleveland's appointments has been a better illustration of his desire not only to reform, but to do justice, than his promotion of Mr. Lewis McMullen to the Appraisership at this port. Mr. McMullen has filled the place of Examiner in the Appraisers' Department for thirty years. For knowledge of metals he has probably no superior, if any equal, either in the Custom-house or the country. He is and always has been a Democrat, but has been so useful that he has had no difficulty in keeping his place through twenty-five years of Republican Administration. To promotion he was of course entitled twice over, but promotion the Republicans took care he should not get, and his avowed sympathy with the competitive system probably injured rather than helped him. When a vacancy occurred in the Assistant-Appraisership last year, President Arthur, instead of giving it to Mr. McMullen, as the interests of the service required, gave it to a much younger man in the same department, and a much inferior one as a judge of metals, who, however, enjoyed the advantage of being Barney Biglin's brother.

We fear the Administration has made a serious mistake in the appointment of Mr. W. R. Roberts to the Chilian legation. Unless we are much mistaken, he is the W. R. Roberts who was very prominent in promoting the Fenian invasion of Canada in 1866, and was arrested by the United States authorities as one of its leaders. It is difficult to say whether the crime or folly of that enterprise was the more marked. It began in a swindle, for it extracted money from the poorer Irish for purposes which the leaders must have well known were unattainable. It ended in a wretched attempt to cross the Canadian border in hostile array, which spread alarm among the unoffending farmers on the other side of the line, cost the Canadian taxpayers a considerable sum, and would have resulted in bloodshed but for a poltroonery on the part of the Fenian forces which brought ridicule on the Irish name all over the world. The serious part of it, as concerns Mr. Roberts, is, that it showed his sense of obligation to his adopted country and his respect for international law to be so feeble as to make it almost unseemly to despatch him on any diplomatic mission as a representative of the United States. He allowed himself, we believe, to be elected in 1866 as a successor to O'Mahony, "President of the Irish Republic," an organization which had its headquarters in Union Square, and was really little better than a "bucket-shop," for it sold "bonds of the Irish Republic" to poor servant girls, well knowing them to be worthless. Mr. Roberts was confirmed by the Senate, and we deeply regret that these facts of his history were not discovered in time to lay them before that body.

The request made by the Commissioner of Pensions to Miss Ada C. Sweet, Pension Agent at Chicago, for her resignation, coupled as it is with an expression of entire satisfaction with her management of the office, savors strongly of the spoils system, and appears to be in contravention of President Cleveland's letter to the Civil-Service Reform League. In this letter Mr. Cleveland distinctly indicated his purpose not to remove faithful non-partisan officers during their respective terms merely to make places for other persons. Miss Sweet's term does not expire until April, 1886. She has certainly not used her place for political ends. She is not even a voter. A good deal of interest was attracted to her during President Hayes's term by an effort, seconded by a powerful array of "influence," to displace her in order to make room for Mrs. Mulligan, the widow of the late General Mulligan. Secretary Schurz opposed the change on grounds of civil-service reform, and retained Miss Sweet against all the pressure that could be brought to bear upon him by the Illinois Senators. Miss Sweet has declined to accommodate the Commissioner with her resignation, and the question now comes up, "Shall she be removed?" This can only be decided by the President. When he comes to examine the case and compare it with the text of his letter, we presume that he will at least allow Miss Sweet to retain her place till her commission expires.

By the treaty of 1848 New Granada, which contains the Isthmus of Panama, guaranteed to the United States that "the right of way or transit across the Isthmus of Panama upon any modes of communication that then existed, or that might thereafter be constructed, should be open and free to the Government and citizens of the United States, for the transportation of any articles of produce, manufacture, or merchandise of lawful commerce, belonging to the citizens of the United States." The United States by the same treaty guaranteed "positively and efficaciously" to New Granada the neutrality of the Isthmus, in order that the traffic across it might not be interrupted. The treaty provides, further, that when any of its articles are infringed by any of the citizens of either party, they shall be held "personally responsible," and neither of the Governments is in any way to protect the offender or "sanction" his conduct. The fifth article declares that in case of such infringement, neither of the Powers shall authorize acts of reprisal, or declare war, until the injured party shall have laid before the other a statement of injuries or damages demanding justice and satisfaction, and the same shall have been denied. It will be readily perceived that all this is very vague. It is not easy to gather from it the precise extent of the responsibility imposed on the United States by such disorders as have just resulted in the burning of the town of Aspinwall. The mischief is said to have been done by "insurgents," or "revolutionists," headed by a "notorious criminal," named Prestan. But insurrection and revolution are, in the political nomenclature of Central America, the terms ordinarily applied to what we should here call riots. Every riot down there puts the established government in danger, but riots occur so frequently that if they furnished a right of active interference to a foreign Power, that Power would run some risk of having to take over the entire sovereignty of the country.

It would seem to be doubtful whether, in case of damages to American property on the Isthmus by disorderly persons, the United States troops could go in search of those "personally responsible" for the damage, and kill or arrest them, or whether the United States would have to await the action of the Government of New Granada, and lay before it a statement of damages. A case which seems to furnish a precedent arose in 1856, when much property of citizens of the United States was damaged or destroyed by a riot at Panama. To deal with this a Claims Commission was created by a convention, with power to award damages against the Government of New Granada, which was to pay them by remitting one-half of its postage claims on the Panama Railroad Company. But if "a riot" lasted long, and the Government of New Granada proved unable to suppress it promptly, should we be justified in deciding that we had waited for its suppression long enough, and in landing troops to restore order? The questions which the President and Secretary Whitney and the Attorney-General have had to decide in connection with the burning of Aspinwall, are evidently not to be settled offhand by despatching troops or ships of war to the scene of the trouble. The officer in command may have a very delicate problem to deal with after he gets there. What is most clear in the situation is our curious want of preparation to support these guarantees which we proffer so readily to our sister Republics in South America. We have neither ships nor troops for the work of interference in any grave case. As long as our troubles come only from the Central American disorders we get off very well, but if we had a grievance further south, say with Brazil or Chili, we might find ourselves in a very humiliating position.

The business of taking the next State census has got into a bad way, owing to the rivalry or antagonism, whichever one pleases to call it, of the Governor and the Secretary of State. About 3,000 census enumerators will be necessary. The Secretary, as the law stood before the Civil-Service Act, had the appointment of these officials, and he has given out that he meant to make them not only number the inhabitants of the State, but also collect a considerable body of agricultural and other statistics. Governor Hill, however, determined that the enumerators should be appointed under the civil-service rules, got the Attorney-General's opinion that they came under these rules, and called on the State Civil-Service Commission to carry out the law, and proposed to confine the work to simple enumeration. Secretary Carr agreed to this, particularly as the Commission prescribed a non-competitive or pass examination only, which would simply ascertain each candidate's fitness for the work he had to do. But this would have left the appointments, subject to the pass examination, still in the Secretary's hands; so the Governor called for an open competitive examination, which the Civil-Service Commission are willing to hold, if they get time and an

appropriation. But there is no money for the purpose, and it would be impossible to examine competitively the 6,000 candidates who are applying for the places, before May 1, by which date Secretary Carr thinks he must, under the law, have the enumerators ready. Then there is trouble about the examiners. The Civil-Service Commission has designated the School Commissioners in each district for this office, but it is feared that these gentlemen would favor members of their own party. We need hardly say that behind all this hubbub lies the nomination for the Governorship next fall, for which both the Governor and Mr. Carr are candidates in their respective parties.

The Massachusetts Tariff Reform League, having failed in its first attempt to induce the National Association of Wool Manufacturers to put forward a speaker to discuss with Prof. Sumner the tariff question, renewed its invitation on March 20, with a certain alteration of terms which it hoped would meet the wool men's objections. It proposed to put the question so that the high-tariff men should maintain the affirmative, and, consequently, have the opening of the debate, and to confine the discussion to the present tariff on wool and woollens. The high-tariff men were not, however, to be caught by any such chaff as the removal of their first objections, and their Secretary again declined the challenge. Finding necessary some new excuses, he says: "I am compelled to modify my belief in the intent of perfect fairness on your part," and he goes on to explain that over the original correspondence as published some newspaper put the heading "A Challenge that Fails of Acceptance!" and that the League "allowed" the publication to be accompanied by editorial comment to the effect that the debate was declined because the challenged party was "not capable of defence."

We doubt if any public man ever received such a tribute as Prince Bismarck received on Wednesday week from the German people on the occasion of his seventieth birthday. No form of congratulation seems to have been neglected, and no sign of gratitude and admiration seems to have been wanting. The substantial part of the testimonial was something which was probably the most welcome to him that could have been conceived, being the title-deeds of the old castle and estate of Schoenhausen, which was the *Stammschloss*, or original seat, of his family. The completeness with which, on this occasion, all his shortcomings as a politician seem to have been forgotten, shows how passionate and deep-seated the German love of unity was. The people are evidently willing to forgive everything to a man who in this one thing gratified the longing of many generations for a true German nationality.

M. Brisson, a lawyer but little known outside France, although President of the Chamber of Deputies, has succeeded in forming a Ministry, which, however, contains some notable men. M. de Freycinet figures in it as Minister of Foreign Affairs, an office he has filled before, but not successfully. M. Allain-Targé was well known as Minister of Finance in Gambetta's short-lived Cabinet; and General Campenon, who resumes the Ministry of War, resigned from it under M. Ferry only a few months ago. In fact, nearly all the new Ministers have served in some Cabinet already, and would have been more widely known but for the rapidity with which, in the period preceding M. Ferry, Cabinet succeeded Cabinet. The programme of the new Ministry, as announced, is somewhat portentous where it is comprehensible. The Senate is apparently to be made to change itself in some way, the nature of which is not very clear, but probably in the direction of a more popular mode of election. In fact, the Radicals seek either to elect it by universal suffrage or abolish it. What is meant by "the liberty of the press" it is hard to say, unless it be the withdrawal of press offences from the jurisdiction of the police courts. The most serious part of the programme is undoubtedly the separation of Church and State. At present the clergy of all denominations in France are paid by the State, and the Catholic Church has a good many allowances and perquisites besides, relics of the old time when it was really the State Church. It is the only church which supplies the peasantry through a large part of France with any sign of religious life, and, indeed, the priest in a vast number of parishes is the only reminder that there is such a thing as intellectual life. If the State stipend were withdrawn from him he would in most places disappear, and the churches would probably go to ruin; for it is only in the large towns that enough religious sentiment is left to support worship on the voluntary system.

Two brief telegrams from China announce the conclusion of peace with France on the basis of the Tientsin treaty of last year. This treaty was broken by the affair of Langson, in which a French detachment was fired upon by a Chinese garrison, whose commander had not been advised of the cessation of hostilities. After this casualty, for it could not be regarded otherwise than as an accident for which the French officer was partly to blame, France demanded a money indemnity of 100,000,000 francs, which China refused to pay. If peace has been concluded on the old basis, without the payment of any indemnity, the result, so mortifying to the national pride, must be ascribed to the stress of weather at home and to the political difficulty of getting any ministry to take the places made vacant by M. Ferry and his colleagues. The open decision now reached is that the bill of damages presented to China last year was unjustifiable. Its latent meaning is that such a bill, in the present state of French politics and finance, is uncollectable.

Marshal Bugeaud, who under the Orleans reign commanded in Algeria, although an able and upright man, suffered great discredit to the end of his life from having lighted a fire at the mouth of a cave in which some Kabyle insurgents and their families had taken refuge, and smothered them all. M. Camille Rousset is now publishing in the *Revue des Deux Mondes* an interesting history of the conquest of Algiers, the last instalment of which contains a still more atrocious charge against General Savary, an old officer of the First Empire, who commanded in Algeria in 1832–3. An Arab tribe was suspected of having made an attack on certain countrymen of theirs returning from Algiers with a French safe conduct. A detachment was sent out to punish them. Their village was surrounded in the night, and everybody in it young and old, of both sexes, was massacred, except four men, two of whom escaped. The other two were brought before a court-martial a day or two later, when it was proved that it was not the massacred tribe which had been guilty of the outrages, but another. It was expected that the acquittal of the two men would follow as a matter of course, but General Savary insisted on executing them, because to let them off would have been an acknowledgment that he had been mistaken in slaughtering their tribe. "This was not all," says M. Rousset; "in order to compromise still further in his detestable course those who had executed his orders, he paid them as blood money the proceeds of a sale of the flocks and herds of the tribe he had destroyed. The Chasseurs d'Afrique got 14,000 francs; the Foreign Legion 14,000; and the Arab guides 800." We doubt if such another story is to be found in the recent military annals of any European nation, though the Russians have done some terrible things in the Caucasus and in Central Asia, and the British were not over-particular in India during the mutiny.

Whether Osman Digna's force is breaking up or not it is hard to say, as the stories about him are conflicting. But it is quite certain that he is not disposed to fight, and his refusal to do so is undoubtedly helping to spread in England a profound disgust with the Sudan campaign. The truth is, Osman Digna ought never to have fought at all. If he had confined himself to harassing the British, the climate and the desert would have done all the fighting that was necessary to impede their advance and dishearten the troops. It is "the battles" which have cheered up the soldiers, and touched the popular imagination in England, and given this wretched war an air of respectability. What has made it possible for both Osman and the Mahdi to raise such large levies and hold the field so long against the British, is the success achieved against the Egyptians, which was a great revelation for the tribes. Seven years ago, it is said, a dozen Arabs would run from one Egyptian soldier with a gun. This has since been all changed. Of late a dozen Egyptian soldiers have been ready to run from one Arab with a spear. In fact, the lesson of the war with the Egyptians to the Arabs was that no regulars could stand against a determined rush, and that the square once broken there was nothing to do but kill. The fights with the British have probably rid them of this pleasant delusion, and their losses in killed and wounded have been terrible for a scanty population; so there may soon be peace. But if so in what a plight it will leave the Jingoes, who maintained that England must fight the Mahdi in order to keep him from overrunning Egypt proper and going to Mecca. The Sheikh-ul-Islam in that city, it is now reported, has excommunicated him, and he is at loggerheads at Khartum with a rival prophet, who can probably show a better assortment of miracles, and has a livelier lot of dervishes.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, April 1, to TUESDAY, April 7, 1885, inclusive.]

DOMESTIC.

COMMANDER KANE, of the United States steamer *Galena*, telegraphed to the Secretary of the Navy on Wednesday: "Aspinwall is in ashes. Burnt by insurgents to escape capture by Government troops. The Pacific Mail dock, railroad property on the north end of the island, and the canal property at Crispol, are the only buildings saved. The shipping is safe. I have all my force on shore protecting property. My ship is crowded with refugees. Thousands are destitute and without shelter." The particulars of the battle are meagre. The attack upon the rebel chief Prestan by the Columbian troops was led by Colonel Ulloa. Prestan's forces were utterly routed after a severe engagement. As soon as Prestan became convinced that it would be impossible for him to maintain his position, he set fire to the city in various places and then made his escape. Only a few of his followers succeeded in getting away with him. The city is almost a complete ruin. Only three houses are left standing. Much distress prevails among the people who have been rendered homeless.

Secretaries Whitney and Bayard and Attorney-General Garland had a consultation with the President on Wednesday evening in regard to the duty of the United States under the existing treaty with New Granada. In that treaty it was provided that New Granada should guarantee the Isthmian passage, and that it should always be free; that New Granada should do this was in turn guaranteed by the United States. It was decided that, while the Government has probably no responsibility for internal broils at Panama, it has by treaty guaranteed free and uninterrupted transit across the Isthmus. Secretary Whitney went from the White House to the Navy Department, and an hour of activity followed. Orders were issued to gather the available marines at the Brooklyn Navy-yard, together with a number of Gatling guns and men to handle them. Secretary Whitney telegraphed to the President of the Pacific Mail Company to delay his steamer to receive an armed force if necessary.

Secretary Whitney on Thursday telegraphed to the President of the Pacific Mail Steamship Company in this city: "We will ship 200 men by your steamer to-morrow noon, with tents and camp equipage. The *Tennessee*, with Admiral Jouett, will leave New Orleans probably to-day, with extra complement of marines for Aspinwall, and with extra provisions. This will place four ships and between 400 and 500 available men at Aspinwall for land service." 250 marines sailed on the *City of Para* on Friday.

The President of the Pacific Mail Steamship Company telegraphed to Secretary Whitney on Saturday, that he had information from the agent of the company at Panama, that the transit across the Isthmus is not sufficiently protected. Benjamin Howard's Sons, of Boston, lost property valued at about $100,000 by the fire at Aspinwall.

In a despatch from Aspinwall, dated April 4, Commander Kane, of the *Galena*, said: "Vessels now on the way to Aspinwall, together with force on the *Para*, will be sufficient to open and guard transit, if supported by two ships at Panama. Without such support, an extra force of 500 men will be required. Everything is quiet in Aspinwall, and all American property is as well protected as my force will permit. I have 112 officers and men on shore. My command is safe and well." Secretary Whitney decided to send 350 more men to Aspinwall. When these men, who started on Tuesday, arrive at their destination, the United States will have a force of about 1,200 men and 100 officers on the Isthmus. Four Gatling guns and two three-inch rifles with 100,000 rounds of ammunition were sent with the men leaving New York. The entire force is under command of Admiral Jouett.

President Cleveland on Wednesday nominated A. Leo Knott, of Maryland, to be Second Assistant Postmaster-General Mr. Knott is a successful Baltimore lawyer, and for three terms of four years each was prosecuting attorney for the city of Baltimore. In 1868 he represented the city of Baltimore in the State Legislature. He has been a delegate to several National Democratic conventions.

The Senate on Thursday confirmed the nomination of Postmaster Pearson for New York city. The nomination of Alexander R. Lawton, of Georgia, to be Minister to Russia was reported adversely by the Committee on Foreign Affairs and withdrawn. President Cleveland and Secretary Bayard held that his pardon by President Johnson removed his disabilities, but the Committee thought not. The Senate then adjourned *sine die* without acting on 12 of the 173 nominations which President Cleveland had sent in. As these nominations were not rejected, the President can at once appoint the same persons to the offices and send their names to the Senate at its next session.

On Friday the President appointed Gen. John S. McCalmont, of Pennsylvania, to be Commissioner of Customs, and John R. Garrison, of Virginia, to be Deputy First Comptroller of the Treasury. Both appointments are heartily approved.

President Cleveland has suspended G. M. Palmer, Postmaster at Rome, N. Y., for inefficiency and carelessness, has appointed James B. Corcoran to his place, and written a characteristically explicit letter to the Postmaster-General, declaring his firm purpose to "do all that is in my power to rid the public service of officials who exhibit such loose ideas of their duty to the Government."

Miss Ada C. Sweet, United States Pension Agent at Chicago, was asked for her resignation by Commissioner Black, but has telegraphed direct to the President, stating that, inasmuch as her term would not expire until April 16, 1886, she refuses to resign before that time, having been assured that there were no good reasons for the act of General Black. Miss Sweet has held the office for eleven years, having been appointed to succeed her father, a well-known Union general, upon his death in 1874.

The Mormon Commissioners had a very satisfactory interview with the President on Thursday. They found that he is in earnest on the subject, and insists upon a rigorous enforcement of the anti-polygamy law. He expressed his approval of the course of the Commissioners, and requested them to continue in their work. After making a report they will at once return to Utah. They say that the Mormons are discouraged at their prospects, and that the liberal element in the church, which favors an abandonment of polygamy, is growing stronger. The Commissioners say that if the Mormons would abandon plural marriages they would make good citizens.

General Grant's condition on Thursday morning at 5 o'clock was such that his death was believed to be imminent. He seemed sinking rapidly, and the family were called to his bedside. Stimulants were administered hypodermically, with good effect. His mind was clear, and he was able at what was deemed the critical hour to speak more freely than in the early night. When he had revived a trifle and was a little stronger, he glanced at the members of the family, the physicians, Dr. Newman, and the attendants all still grouped at the bedside, and said: "I bless you all." Throughout the day he rested comfortably, and in the afternoon was even bright. He slept well on Thursday night, and awoke on Friday morning feeling much better. On Tuesday morning he had a hemorrhage, which caused great alarm and rendered him much weaker. This condition continued through Tuesday, although he rallied to a certain extent.

Frederick T. Frelinghuysen, ex-Secretary of State, is dying at his home in Newark, N. J. Mr. Frelinghuysen was, it is said, a very sick man during the last three months of President Arthur's Administration, and performed his official duties with difficulty. This fact was kept from the public.

The reduction of the public debt for March was $403,000.

The Republican ticket was elected in Rhode Island on Wednesday, George Peabody Wetmore being the successful candidate for Governor.

Mayor Harrison, of Chicago, in a recent speech, charged that General Logan had been privy to a scheme by which Mackin and Gallagher were to have escaped the penalty for their election frauds, on condition that a sufficient number of Democrats should be secured to give the Republicans a majority on joint ballot in the Illinois Legislature. On Saturday night General Logan, while addressing a large audience in Chicago, said: "I denounce Mayor Harrison as uttering an infamous, villanous falsehood. He is a vile, infamous liar, a poltroon, and a coward." The affair has caused a sensation in Chicago.

The State Senate, on Wednesday evening, passed the Gibbs Freedom of Worship Bill by a vote of 18 to 10, six Republicans voting in the affirmative.

The Prison-Labor Bill was defeated in the Assembly at Albany on Tuesday.

A dinner was given in honor of Henry Irving at Delmonico's on Monday evening, and was attended by about 200 well-known persons, representing many interests and professions.

The Rev. Dr. William R. Williams, for fifty-two years continuously the pastor of the Amity Baptist Church in this city, died on Wednesday.

Dr. James Lawrence Little, Professor of Clinical and Operative Surgery in the New York Graduate Medical School, and Professor of Surgery in the University of Vermont, died suddenly on Saturday afternoon, in this city, at the age of 49.

FOREIGN.

M. Ferry on Wednesday handed President Grévy a despatch which had just been received, stating that the Chinese Government had accepted M. Ferry's proposals for peace, and wished to fix a date for the evacuation of the positions now occupied by the Chinese. The despatch was dated subsequent to the defeat of the French forces at Langson. This report was denied on Thursday, but subsequently confirmed. It was even asserted that it had been circulated for stock-jobbing purposes, and the charge was reiterated in the Chamber of Deputies by M. Jolibois. Amid a great tumult he urged the immediate impeachment of the Ministers, and moved that M. Henri Brisson, the President of the Chamber, be appointed a committee to go to President Grévy, and ask him to officially appoint a commission to transact the business of the State pending the formation of the new Ministry. The motion was rejected by a vote of 348 to 77.

M. Patenôtre, the French Ambassador to China, telegraphed on Tuesday that the Tsung-li-Yamen had ratified the preliminaries of peace signed on April 3. They stipulate that hostilities shall cease on April 10, and that the Chinese shall evacuate the Red River Delta on the 20th and the other positions gradually, while the French shall occupy Formosa and Pheng-Hoo, enforce the blockade of rice ports, and search neutrals, until a definitive treaty of peace has been signed. It is believed that France asks an indemnity for Frenchmen wounded in battle.

M. de Freycinet on Thursday gave up the task of forming a Ministry, but on Friday President Grévy insisted, and he resumed the task without success. M. Brisson also failed. M. Constans then undertook to form a Cabinet. The party conflicts increase in bitterness.

President Grévy proposed to obtain an ad-interim Cabinet of Moderates to act between the dissolution of the Chambers and the general election. Intense uneasiness prevailed throughout France.

Rochefort, Hugues, and other French Radicals tried to create a demonstration on Wednesday night in the Place de l'Opéra, Paris. Several thousand people were present, but the demonstration was a failure. The windows of a café on the Boulevard des Capucines were smashed, but the police immediately broke up the mob.

M. Henri Brisson, who has been President of the Chamber of Deputies since 1882, consented on Sunday to try again to form a Cabinet. On Monday it was announced that he had succeeded. The Cabinet is as follows: President of the Council and Minister of Justice, M. Brisson; Minister for Foreign Affairs, M. de Freycinet; Minister of the Interior, M. Allain-Targé; Minister of Finance, M. Clamageran; Minister of Public Instruction, M. Goblet; Minister of War, General Campenon; Minister of Public Works, M. Sadi-Carnot; Minister of Agriculture, Pierre Legrand; Minister of Commerce, Hervé Mangon; Minister of Posts and Telegraphs, M. Sarrien; Minister of Marine and the Colonies, Admiral Galiber.

Premier Brisson, in the Chamber of Deputies on Tuesday, said that France would insist upon China recognizing a French protectorate over Tonquin and Anam, according to the provisions of the treaty of Tientsin, peacefully, if possible; otherwise the war would be renewed with increased vigor. In conclusion, he demanded a vote of credit for 150,000,000 francs, to enable the Government to carry out its policy in relation to China. The credit was granted.

General Brière de l'Isle telegraphed under date of Wednesday evening: "The Second Brigade reached Chu at noon in good order. It was in contact with the enemy until 2 o'clock on Tuesday afternoon. Our losses were trifling. The enemy's pursuit was slow." General Négrier is recovering from his wound. The situation of the French troops is better than recent overdrawn accounts have indicated. The French fleet has bombarded the forts defending Pong-Hon and Makung, dismantling the forts and burning the village of Makung. The Chinese garrison suffered severely.

Comte de Pontécoulant, a French soldier and author of a number of works on music, is dead at the age of ninety-one. He was with the army which invaded Russia in 1812, and was also in the campaign of 1815.

Prince Bismarck's seventieth birthday was celebrated in Berlin and at other places on Wednesday with considerable ceremony. The Emperor and his son, Crown Prince Frederick William, attended by all the resident princes of the imperial family, called upon the Chancellor at 10 o'clock in the morning and congratulated him. During this visit the Emperor personally presented an oil copy of the great portrait of himself to Prince Bismarck as a personal memento. The Emperor himself decorated Count Herbert Bismarck, son of the Chancellor, with the order of the Red Eagle. The Birthday Testimonial Committee subsequently visited the Chancellor and formally presented him with the title-deeds of the great Schoenhausen estate. The entire afternoon was taken up by delegations which had come to present testimonials from all classes of the German people and from all parts of the Empire.

The *Pall Mall Gazette* on Wednesday afternoon asserted that Russia's answer to England's proposals on the Afghan question amounted to a cordial acceptance of the proposals as made by Earl Granville, British Foreign Minister. The *Gazette* said that Russia consented to accept as debatable territory the zone laid out as such by England, accepting the principle that the frontier line shall not be drawn further south than Karezelias and Tchemeni-baid, or further north than Shirtepe and Sariyazi. This leaves as the only point still to be discussed the Russian suggestion that it would be more practical if the zone of survey overlapped the roughly defined zone of debatable land, in order to allow for topographical and ethnographical conditions not expected. This suggested extension of the zone of survey, as it would carry the zone to the south of the boundary line run by M. Lessar, the Russian Commissioner appointed to meet Sir Peter Lumsden, the British Commissioner, to arrange the Afghan boundary dispute, may yet prove serious enough to cause further difficulty.

The chiefs and princes of the whole Indian Empire were represented in person or by deputy at Rawalpindi on Thursday. They all, without exception, earnestly tendered to the Earl of Dufferin, British Viceroy, troops and money without stint to uphold England in any possible difficulty with Russia.

Earl Dufferin has obtained from the Amir of Afghanistan a formal treaty recognizing the rights of England to lay out and fortify the northwestern frontier of that country. The news that Russia has accepted the more important proposals of England was confirmed on Thursday.

The *Pall Mall Gazette* on Saturday afternoon stated that the reply of Russia to England's proposals concerning the Afghan frontier-line dispute is most conciliatory. The Russians earnestly wish the Joint Commission to commence the work of settling the frontier line as soon as possible. The difference between the English and the Russian proposals, the *Pall Mall Gazette* says, is that the zone proposed by Russia would include a triangular piece of steppe, twenty to fifty miles wide, which would be excluded from the zone of survey within which the English propose to confine the work of the Boundary Commission.

The British Cabinet, at a council on Saturday, approved the agreement made between the Amir of Afghanistan and Earl Dufferin. The Viceroy has been instructed to invite the Amir to go to London as a guest of the Crown. The Cabinet also considered Russia's reply. It is said to be only a provisional acceptance of England's terms, and war is yet a possibility. The London papers generally declare the Russian answer regarding the Afghan frontier dispute to be elusive and unsatisfactory. Orders have been received by the Indian Government from London to actively continue the preparations for war, notwithstanding the pacific assurances of Russia. This action has created a good impression in India, and sustains the enthusiam of the British and native troops. A grand review of all the British and native troops at Rawalpindi took place on Monday before the Amir of Afghanistan.

It is stated at Berlin and Vienna that the negotiations between England and Turkey for an understanding on the Egyptian question have fallen through, as England, believing the Afghan crisis to be over, withdrew the concessions which she offered when she desired the alliance of Turkey against Russia. It is reported that the Sultan is incensed at England's action.

General Graham telegraphed on Thursday morning at 11 o'clock from General McNeill's zereba: "We are advancing upon Tamaai with our entire force." On Thursday night his force occupied a zereba three miles from Tamaai. During the night the rebels fired into the zereba. They were silenced at 1 A. M. by a volley from the advanced British picket. At 8 o'clock on Friday morning the British advanced and occupied Tamaai, meeting with slight resistance. One man was killed and eleven were wounded. The water was found of bad quality. The village was, therefore, burned by the British, and they returned to the zereba which they left in the morning. The British forces returned to Suakim on Saturday.

The Coldstream Guards and the Australian contingent marched five miles toward Handub on Monday. They exchanged a few shots with the enemy. A week's supply of stores and provisions is to be moved out to Handub, and the railway pushed on to that point.

Earl Cairns died suddenly in England on Thursday. He was the son of the late William Cairns, of Cultra, Ireland, and was born in 1819. In 1868 he became Lord High Chancellor of Great Britain, an office which he held up to the resignation of Disraeli's Ministry in December, 1868. In 1874 he was reappointed to the same place and kept it until 1880.

Madrid was excited on Thursday over the reported discovery of a plot to assassinate King Alfonso on his way to the Royal Chapel. The guards at the palace were strengthened and other precautions taken. Five persons were arrested.

Cholera has appeared in the Province of Valencia, Spain.

Franz Abt, the German composer, is dead. He is well known in this country, not only through his songs, but personally, as he visited America in 1872 at the invitation of several of our leading vocal societies.

Three men were arrested in Winnipeg on Friday afternoon while making an attempt to blow up Louise Bridge, over which the railroad train will bring troops from the East. Word was received of an engagement at Duck Lake, in which the rebels were successful and made 500 white prisoners. These they locked up in the Catholic church there. An effort will be made when the Eastern troops arrive to secure their release, and a severe engagement is then expected. There was considerable excitement in Canada on Friday over reports of Fenian conspiracies in this country to aid Riel.

A private telegram received in Montreal on Sunday said that all the Sioux Indians in the Northwest had risen and the settlers were fleeing for their lives. The troubles are said to be fast increasing. At Prince Albert the state of affairs is alarming. The Teton-Sioux Indians surround the barracks where the settlers, with their wives and children and a few soldiers under Colonel Irvine, are confined. Supplies in the barracks are known to have run short, and it is feared that the settlers cannot hold out.

The Mexican Congress was opened on Wednesday evening. In his message, President Diaz, referring to the Barrios trouble, said: "Grave, without doubt, are the difficulties which this international emergency may produce on account of the crisis which now afflicts the public Treasury; nevertheless the Executive is resolved to sustain an attitude befitting the nation, and counts on the patriotic coöperation of Congress to maintain intact the national honor and interests."

The following particulars are given of the recent repulse of Barrios: "On March 30 Barrios attacked the Salvadorian frontier position of El Coco, thus breaking the promise given by him to the United States Minister not to invade Salvador. The battle raged fiercely until nightfall, when the Salvadorian forces concentrated upon Chalchuapa. At daylight on March 31 fighting began around San Lorenzo. After a severe engagement which lasted ten hours, the Guatemalan forces were completely routed. Their losses were heavy." Barrios was again defeated at Chalchuapa on Thursday. A despatch from La Libertad, San Salvador, on Saturday, said: "According to the latest intelligence received here, President Barrios, of Guatemala, is dead. Hostilities between Guatemala and the allied Republics have been suspended; an armistice of one month's duration is announced. The Legislative Assembly of Guatemala has annulled the decree promulgated by President Barrios, on February 28, in which a union of the Central American Republics was proclaimed, and Barrios was pronounced Dictator and Supreme Military Chieftain of all Central America." Later despatches confirmed the death of Barrios on the battlefield at Chalchuapa.

WHAT THE PRESIDENT HAS DONE FOR THE DEMOCRATS.

THERE is a good deal of speculation as to the effect on the Democratic party of President Cleveland's course with regard to the appointments. It seems quite certain, however, that the Pearson appointment has not produced any of the widespread disaffection which some people predicted. The great bulk of the Democratic press has approved of it. The great mass of the Democratic party also approves of it, as far as any evidence on the subject can be obtained. There is probably hardly any Democrat, who does not get his living by "politics," who is not pleased by the effect which the general policy of the Administration with regard to offices thus far has had on the standing of his party with the people at large. It has lifted the Democratic party, one might almost say, inside four weeks, out of the slough of disrepute in which it was left by the war. No sensible Republican any longer maintains publicly that the Democrats are unfit to be trusted with the Government, and only seek to get into power in order to divide the offices among themselves, and allow the Southern Rebels to empty the Treasury. This sort of talk, which has for twenty years formed the staple of Republican stump speeches, has been killed as if by magic. It will never be heard again in any canvass. The worst the most rabid Republican now finds to say is, that the Administration is behaving well for a short time in order to behave very badly by and by, and that Higgins is a clerk in the Treasury; but this is not very effective. The truth is, that the Democratic party has regained its old place as a constitutional alternative—that is, as a party which those who are dissatisfied with the other party can entrust with the Government.

Moreover, there is one other gain for the Democrats which the President's policy has finally secured, though he did not originate it. The Democratic party has for forty years at least been suffering from the adhesion of the "vicious and ignorant" portion of the foreign vote. How it first got it nobody knows very well, but there is nothing which has done so much to discredit the party at the polls in those States and districts in which the industrious, moral, and religious native voters most abound, and which have been until now the great Republican strongholds. Now, in the last canvass, the "vicious and ignorant," under some influence about the nature of which there is more or less dispute, went over bodily to Blaine, and are now a component part of the Republican strength. One of the droll things in most of the Blaine commentaries on the result of the election was the truly naïf claim that it was Dr. Burchard's depreciatory remarks on "rum, Romanism, and rebellion" which caused the Republican defeat in this State. This was of course, *pro tanto*, an admission that the friends both of "rum and Romanism" were an important part of the Blaine forces, and it was strictly true. We mean nothing disrespectful to the Catholic Church when we say that there are more of her members who feel touchy about any disrespectful allusions to "rum" than of any other religious denomination in New York; but such is the fact. It was the "vicious and ignorant" Democrats, so often denounced on Republican platforms, whom Dr. Burchard's alliteration offended, if it offended anybody; and it is they whom the Republican ridicule and abuse of this divine since the election are intended to placate and win back to the Republican party.

Now nothing is more certain than that President Cleveland's policy with regard to the civil service will, if persisted in, save the Democrats from any return of this "vicious and ignorant" element to their ranks. It is composed, in the main, of voters whose only idea of "politics" is the division of offices among "workers"—that is, the perpetual making and filling of vacancies in all offices, high and low, in order to satisfy "claims." They will not stay long in any party in which an election is not followed by a fresh distribution of spoils, in which character and competency have any share in creating fitness, and in which the good of the service is considered of more importance than the demands of party.

If the Democratic party follows the President's lead, these voters will stay where they are now, in the Republican ranks, and the Republican managers will have to work down to their level, as the Democratic managers once did. Their views about public trusts, about international obligations, about the public debt, taxation, and currency will have to be reflected in Republican platforms, and in the speeches of Republican orators, and even in the character of Republican politicians. They will, in fact, have on their character the effect which the exactions of the old slaveholders had on the character of Democratic politicians before the war, and which ended in driving "the virtue and intelligence" of the North into the Republican party. One of the probable consequences of Cleveland's policy is the return (or desertion) of this virtue and intelligence to the Democrats. It will not certainly work long with rum and Romanism and Fenianism and communism, if it can find refuge in an organization which seeks to conduct public business in the way honest and successful men conduct their private business; and virtue and intelligence are in most States a power at the polls which nothing else can resist.

THE TREASURY CHANGES.

THE changes in methods of Treasury bookkeeping, and in the public-debt statements, adopted by Secretary Manning, upon the recommendation of Mr. Jordan, the expert employed to examine the old system, are interesting to the public only in the practical results secured—the details being for the most part as dry as algebra. The net result is, that the fractional silver and the nickel and copper coins in the Treasury are to be cast out of the reckoning as part of the funds available to meet demand liabilities; that $100,000,000 gold shall be set down as a permanent liability of the Government, as a greenback-redemption fund, that being the sum acquired by the Treasury in pursuance of law for the purpose of resuming specie payments in 1879; that the Pacific Railroad bonds and the interest thereon shall be counted as part of the public debt in the same way as any other outstanding bonds; and that the greenbacks held for the redemption of the notes of national banks going into liquidation, or voluntarily retiring their circulation, shall be held strictly as a trust fund, and not be paid out for any purpose other than that for which they were received.

These changes, of course, make no difference in the actual state of the public finances, but they simplify the monthly showing, make it more easy of comprehension by the multitude, and emphasize the fact that the greenback-redemption fund of $100,000,000 is not to be lessened or trenched upon for any other purpose than that for which it was originally acquired. This fund is about 35 per cent. of the outstanding greenbacks, and is not larger than is necessary to meet unexpected drains resulting from the balance of foreign trade. The Treasury fills the same position in the United States that the Bank of England holds in the United Kingdom—that of the keeper of the ultimate reserve of the country. Any call for gold arising out of the exigencies of international trade falls on the Treasury here as it falls on the bank there. The bank's reserve is usually 35 to 40 per cent., and ours should be no less. Raids upon the reserve have been started from time to time by madcaps in Congress. It has been argued that since the gold is not called for it is dead capital, and ought to be applied at once to the redemption of bonds and the stoppage of interest. These incendiary movements, threatening the public credit and the security of all private business, have most commonly proceeded from the Democratic party, and it may be said generally that that party embraces three-fourths of all that is unsound and perilous in the effective political force of the country as regards the currency and the nation's fiscal obligations. It is a great gain to the cause of sound finance that the national Administration is in hands which are able to control these erratic and mischievous elements, if not absolutely, yet sufficiently to prevent any great mischief from being done. The changes in the Treasury bookkeeping must be looked upon as notice to the public that Mr. Manning intends to keep his gold reserve intact, and hold it scrupulously for the purposes for which it was accumulated, and that the Department will frown upon any scheme or device to weaken the public credit in that most vital part which concerns the goodness of the paper circulation.

The next most important change is the dropping of thirty-one millions of fractional coin heretofore tabulated in the list of "quick assets." We have heretofore pointed out that this change involves the need of a corresponding addition to the reserve, which in the present state of the money market can be made without inconvenience or danger to any interest, but with manifest advantage to the Secretary, who is confronted with the silver crisis in an acute form. The only way to stave it off is to treat the silver coinage as a liability, precisely as though the Government were obliged by law to buy $24,000,000 worth of lead per annum, and store it in the form of bullets in the public arsenals. This expenditure calls for money which must be taken out of current receipts. It lessens the gold reserve by so much, unless the public revenues exceed the ordinary expenditures by an equivalent sum. In order to guard against unexpected drains or a possible falling off of cur-

rent receipts, it is important to make provision for this particular expenditure in advance; and since the reserve was no more than sufficient for all purposes when the fractional coin was counted as an available asset, it is eminently proper to make good, as speedily as possible, the deficiency which results from recognizing as a fact what has always been true—that the fractional coin is worth only 75 per cent. of its face value, and is worth this only when thrown into the melting-pot. It would not be a bad idea to make such disposition of the surplus of subsidiary coins, and use the resulting bullion for standard silver dollars. Fifteen months' coinage could thus be provided for without any new expense to the Treasury.

THE FIELD CODE.

DECIDEDLY the most important business pending at Albany is the "Field Code," which comes up in its old form, or with only slight changes, after every defeat in the Legislature and every veto by the Governor. This code if enacted might fairly be called ancient law, having been originally drafted twenty years ago. Alterations have been made in it from time to time, but they are nowhere distinguished from the original draft. Two members of the Code Commission having died, the changes in the draft since their death would be without any constitutional authority if we were at liberty to suppose that the code depends in any degree upon the Constitution for its *raison d'être*. But it clearly does not so depend. The Constitution of 1846 provided that a draft code should be prepared and submitted to the Legislature, specifying "such alterations and amendments" in the common law as the three Commissioners should see fit to propose. If the Constitution imposed any command upon the Legislature to formulate the whole body of the law in a written code, that command has been disregarded for one-third of a century, and no circumstances exist to-day which add any vigor to the force of the original command.

It results that the code now before the Legislature is Mr. Field's individual conception of what the law ought to be, and that the Legislature is asked to adopt it in place of what the law is. So many instances have been pointed out by other competent lawyers of erroneous conceptions on Mr. Field's part of what the law is, that it is fair to say that the code is in large part an amendment and a change of the existing law. If a bill were proposed to change even in the smallest degree the law of torts, of domestic relations, of partnership, of negotiable paper, of insurance, or of easements, it would be subjected to the closest scrutiny in committee and made the subject of debate in open session, and given the widest publicity before being adopted. Yet here is a measure filling 400 printed pages, purporting to freeze into a solid, inflexible mass the whole body of the common law according to the opinion of one man, himself not a member of the Legislature, and it is proposed to adopt it with only the most cursory examination, against the protest of the City Bar Association, and in the face of printed arguments against important parts of it which nobody has pretended to answer. Such a proceeding would be little short of a French Revolution in the jurisprudence of the State, and would not be without its reign of terror to litigants. The only relief from the oppressions, contradictions, and entanglements which have been pointed out by leaders of the bar at various times would be found in a resort to the common law, which the code is intended to supersede. Whether the code, if enacted, will turn out to be the main body of the law, or only a wen on its side, is a question upon which intelligent judges may differ, and can only be answered by the experiment. In California, however, where the code has been adopted, the common law holds its ground by its own vigor and through the necessities of human society, and "case law" is multiplying as rapidly there as in any State of equal size in the Union. It is well known that the Code of Procedure in this State, which was intended to simplify the *practice* of law, has enormously multiplied litigation upon points of practice, and has swollen the books on that subject from a single small volume to many thousands of pages.

The dispute between code and no code was admirably handled by Mr. James C. Carter, in a paper prepared for the Bar Association of this city last year. In this essay it was shown with philosophical clearness that the common law is the natural outgrowth of free institutions, while codes, in their original conception, were the devices of despotism. In the one, human interests have adjusted themselves as the soil has been formed by the washings of ages. In the other, an arbitrary expression has been given to the will or opinion of the king or the codifier. The former is suited to self-governing peoples; the latter to those who are accustomed to be governed by prescription, and to hold all their ideas from superior authority. But the immediate question is whether the Field code is a good code for the State of New York. That it is good enough to stand without amendment, nobody, not even the author of it, pretends. That it is an extremely defective and bad code, is the contention of lawyers who may be fairly called the foremost men at the bar of the city and State. A perfect code would be a perfect digest of the unwritten or non-statutory law. When we consider how much time and talent is spent in determining what the law is in cases arising every day, and how the Court of Appeals and the Supreme Court of the United States are often divided in opinion, it is clear that there can be no such thing as a perfect code. Is the Field code a good digest of the common law? Upon this point Mr. Carter furnishes a knock-down argument when he says that if it were such, it would be in universal demand among lawyers in all parts of the country for the valuable assistance it would render in the preparation of their cases, whereas this code has remained absolutely unnoticed by the profession for twenty years, except as they have been called upon from time to time to defend themselves and the public against it, as a coat of mail or a shirt of Nessus about to be flung upon them by the Legislature. Among the later objections brought against it is the charge that it alters the law of easements in such a way as to reopen the question of the right of property-owners to recover damages from the elevated railroads just settled by the Court of Appeals.

The stock argument in favor of the code is that it will simplify the law by making certain that which is now uncertain, thus lessening the amount of litigation, and that this is the reason why the bar is opposed to it. The truth is exactly otherwise. The greater part of the common law consists in the settling of definitions of terms in the course of centuries of litigation. The introduction of new forms of words opens up in every case a new disputation as to their meaning. Such new forms abound in all parts of the Field code, each of which will require a new interpretation, thus lengthening and multiplying litigation at every step. One example out of a vast multitude was pointed out in the columns of the *Evening Post* by Mr. Theodore Dwight, when the code was last under consideration by the Legislature, viz.:

> "For the word 'writing' in former statutes the expression 'instrument in writing' has been substituted. The California Court recently had fifty sections of the code before it to determine what the expression meant. Consider the present rule, which requires a declaration of trust in real estate to be 'in writing,' and then substitute the words 'an instrument in writing.' The declaration is found in an account book at the heading of an account. Is that an instrument in writing? It is perhaps an endorsement on the back of an envelope containing title-deeds of the land. Is that an instrument? Or, again, it is in a letter to a friend as a mere matter of gossip or information. All these are writings, but a court would have to decide in each case whether it was an 'instrument.' The title to a very valuable tract of land in Chicago recently turned upon the question whether a letter from General Kingsbury to his mother, that he held the land of his sister in trust, was a sufficient 'declaration of trust.' It was accepted by the Court as such, but it is doubtful whether it could be so regarded under this code."

If the lawyers desired to multiply the amount of litigation, to protract and lengthen it, to the increasing cost and everlasting torment of litigants, they could devise nothing so sure to produce such results as to pass this code. It is probable that any code which it is within the scope of human wisdom to strike out at a heat as a substitute for the accretion of the ages, would add to rather than subtract from the amount of labor necessary to prepare cases and reach determinations. So much, at all events, may be inferred from the entanglements thrown in the way of lawyers and suitors by the Code of Procedure. The particular objections to the Field code in this regard, as developed by the special examinations recently made of its provisions relating to the law of landlord and tenant, trusts, insurances, torts, negotiable instruments, damages, corporations, inn-keepers, loan, general average, etc., present a landscape of fresh litigation,

> "Where wilds, immeasurably spread,
> Seem lengthening as we go."

SHALL AND WILL.

AT least three or four generations have now recognized that the use of "shall" and "will," "should" and "would," is a stumbling-block to the majority of English-speaking persons; and it is as surprising as it is deplorable that the improper, unidiomatic interchange of these words, one for the other—especially the use of "will" and "would" in place of "shall" and "should"—seems to be almost unconquerable. It requires some courage to make a fresh attempt, as we now propose to do, to shame the prevalent careless

ness; but there may be those who will not turn a deaf ear to a few words, and a short untechnical presentation of the facts of the case may put it before them in a new light.

We employ two auxiliary verbs to express the future, using "shall" for the first person, "will" for the second and third persons. Of these verbs the one implies, more or less obscurely, an obligation, the other a volition, and when using them we do not always have in the mind a perfectly simple notion of futurity; associated ideas are often connected with it which induce shades of meaning in our expressions.

The most closely connected of these associated ideas are those involving the conception of *intention* on the part of the person speaking; and when this conception, and not merely a simple future, is to be expressed, we immediately exchange one auxiliary for the other; that is, "I (or we) shall die," is the expression of a simple future contingency, perfectly paralleled by "he, you, or they, will die"; but "I (or we) will die," conveys a meaning of intention, paralleled again by "he, you or they, shall die." Can anything be clearer than this? Yet how often we hear, "I am afraid I will be late"; "They say I will find the place very dull"; "He tells me we will have leave to do it"; or "We have decided the baby will go to-morrow." And frequently also, though not so frequently, such expressions as "I swear I shall repay you"; or "I doubt whether he shall succeed."

In these cases the meaning is made evident by the context, and the mistake of grammar is patent; but in other cases the whole weight of the meaning rests on the verb, and demands the strictest accuracy—a demand frequently unanswered. Yet it is not till the difference, the immense difference, is felt between "I shall be at home to-morrow" and "I will be at home to-morrow"—not till it is *involuntarily* perceived that the one phrase is only a prophecy and the other a promise, and that "he shall be at home to-morrow" is, on the contrary, the promise, and "he will be," etc., the prophecy—that a man or woman has any right to use the words at all.

The past tenses "should" and "would" follow with regard to the persons a rule precisely analogous to that which governs "shall" and "will." They are sometimes, in fact, as Sir Edmund Head (the great 'Shall and Will' censor) points out, "only hypothetical futures." When one says, "I should have caught the fever if," etc., one speaks of what would have been a future event; and "should" is here used with the first person because "shall" would be. And we say, "He would have gone to Europe if," etc., because in the future it is "He will go to Europe if," etc. There are cases, however, where "should" and "would" are not "hypothetical futures," but completely express a past condition; and when, as we have seen with "will" and "shall," the choice of the verb depends on the thing meant; and a person who is thinking one thing has no right to say another. For instance, "I should have seen him there" is a simple statement of what might have been; "I would have seen him there" means "I would by my own consent have seen him there." "We should not have done that" means only (setting aside the possible meaning "We ought not to have done that") "It would not have been done." "We would not have done that" means "We should have been unwilling to do so." (Observe in this last phrase the recurrence to we *should* to indicate the simple past, as we *shall*, the simple future.)

Sir Edmund Head gives a wonderful quotation from Chalmers, which affords the best possible illustration of carelessness with regard to this usage: "Compel me to retire and I shall be fallen indeed; I *would* feel myself blighted in the eyes of all my acquaintance; I would nevermore lift up my face in society; I would bury myself in the oblivion of shame and solitude; I would hide me from the world; I *would* be overpowered by the feelings of my own disgrace; the torments of self-reflection would pursue me." The two "woulds" in italics are unquestionably ungrammatical, because, to use Sir Edmund's words, "in these two cases the context excludes all notion of will or intention, and therefore we know they must be meant to express the simple future, which they ought not to do with the first person." The other preceding "woulds" cannot be called *manifestly* wrong, "because they are connected with acts which are voluntary at the moment, and the writer might perhaps be entitled to the benefit of the doubt, if he had not shown by the other portions of the sentence his ignorance of the English idiom."

Some few apparent anomalies in the use of these verbs are explicable by principles which it is not possible to go into fully in so short an exposition as this, but which may be hastily referred to. In some forms of dependent sentences "shall" and "will" are used for the third person as if it were the first person—that is, in a dependent sentence of which both clauses concern a third person, "shall" is properly to be used instead of "will" to express simple futurity; so that, while it is necessary to say "He will go," it is necessary to say "He says he shall go." This is probably due to a dramatic impersonation, on the part of the speaker, of the person spoken of, making the usage the same as if the phrase were "He says, 'I shall go'"; and it therefore holds good in the reverse with the use of "will"—*e. g.*, "He thinks he shall go to Europe" expresses the simple future, while "He thinks he will go to Europe" would properly convey an intention. The usage is unsettled for the second person: one may say either "You say you will go" or "You say you shall go." Sir Edmund Head is of opinion "the speaker [in this case] may, as it were, look at the sentence with reference either to himself or to the person whom he is addressing." But we must repeat that for the third person the form is fixed: "He says he shall go" and "He said he should go" are the only forms which do not imply volition. Sir Edmund justly remarks, when considering the occasional uncertainties: "It may be maintained that as 'will' is a sort of interloper, 'shall' ought always to be employed unless good cause be shown against it"; and he elsewhere states his belief that "shall" was the original future auxiliary.

It may be observed here that where there is the slightest touch of hypothesis (except in the cases in which, as we have already pointed out, the past tense has the character of a hypothetical future), the weight of "shall" and "should" is changed—*e. g.*, "You should go" or "He shall feel it" expresses duty, or compulsion, or destiny; but "If you should go" or "Whenever he shall feel it" are the natural form of our contingent future. Sir Edmund considers also akin to this the fact that in interrogative sentences the form of the first person is, so to speak, preferable for the second person. Thus, "Shall you go to Europe?" is a simple question of fact. "Will you go to Europe?" implies that the person addressed has not come to a decision. While "Will I (or will we) do it?" is wholly inadmissible, except as meaning "Do you ask if I will do it?" if used instead of "Shall I do it?" (*i. e.*, "Am I expected to do it?"), it is a mistake.

It should not, in passing, be overlooked that the effect of *emphasis* on these verbs is very extraordinary. "The letters," as Sir Edmund says, "remain the same, but they are in fact different words." In the phrases "I *will* go," "He *shall* come," the verb ceases to be an auxiliary.

Few better modes of acquiring certainty and delicacy in the use of these words can be suggested than is open to the student of Shakspere; the flexibility of his use of them, and its frequent subtlety, are astonishing, and his accuracy great. But even he stumbles sometimes—for instance, in allowing *Antipholus* to say to *Angelo*, "Perchance I will be there as soon as you" ("Comedy of Errors," iv, 1, 39). We can see here the impossibility of trusting at all to the *ear* in this matter, since *Emilia's* declaration, "Perchance, Iago, I will ne'er go home," is faultless. Other mistakes are where *Lucio* condoles with *Claudio* about his life—"who [which] I would be sorry should be thus foolishly lost" ("Measure for Measure," i, 3, 95); and *Falstaff* declares, "I will sooner have a beard grow on the palm of my hand than he [the juvenal, the Prince, your master] shall get one on his cheek" ("2 Henry IV.," i, 2, 23). *Don Pedro* says of *Beatrice*, "You amaze me; I would have thought her spirit had been invincible against all assaults of affection" ("Much Ado," ii, 3, 119); and there are some others. But let no verbal sinner console himself with the belief that he has Shakspere for his companion. He can only count on Chalmers, and on Scotch and Irish English generally. And if he continues to commit mistakes, let him at least (*not*) declare, "I 'would' feel myself blighted in the eyes of all my acquaintance, I 'would' be overpowered by the feelings of my own disgrace"; but none the less may "the torments of self-reflection pursue him"!

Correspondence.

MR. JOHN BIGELOW AND THOMAS JEFFERSON.

To the Editor of The Nation:

Sir: In *Harper's Magazine* for March Mr. John Bigelow has an article based on "a financial diary" of Mr. Jefferson, making such wild statements as led me to an examination of data to which I have access. As a specimen of these absurdities, Mr. Bigelow states that out of 140 negroes in Mr. Jefferson's possession in '98, *forty* were over ninety years of age; and only eleven under fifty. Turning to Mr. Jefferson's Farm Book, I find that Mr. Bigelow has mistaken the date of the birth of these negroes for their ages, so that a child born in '90 was set down as ninety years old. In this same Farm Book the roll of negroes for '94 gives more than the usual percentage of able-bodied hands, and not more than six over fifty-five years of age. How they changed in the next four years is rather a mystery. Even the spendthrift character Mr. Bigelow has found in Mr. Jefferson would scarcely have led him to exchange able-bodied workers for forty negroes ninety years of age.

From this absurd mistake, and from the fact that Mr. J. Bigelow is judging from a perusal of only twelve years of a diary which extended over fifty-six years, we are led to hope that he has deceived himself, and that Mr. Jefferson was not, after all, the self-indulgent spendthrift he would have us think him. Let us remember, moreover, that such other biographers of Jefferson as Messrs. Randall and Tucker had access to all Mr. Jefferson's private papers, and the advantage of contemporary evidence. Mr. Parton, following them, had the use of the materials so gathered. None of these writers, with the *whole* evidence before them, brought in the verdict which Mr. John Bigelow so wisely announces from the above-mentioned perusal of a diary of twelve years. *They* found that up to 1782, when Mr. Jefferson went into public life, he was making money, and every year investing the excess of his income in what was then deemed the best investment—*i. e.*, land and negroes (the latter, we

are glad to believe, not over ninety years of age). Between that time and 1808 he was at home not more than four years, all counted. Had Mr. Jefferson had a Lawrence Washington to manage his estates, the world might have been spared the sad spectacle of the closing years of such a life embittered by pecuniary embarrassment.

EDGE HILL.

REFORM OF LEGAL EDUCATION.

TO THE EDITOR OF THE NATION:

SIR: One of the features of our state of society, which has been recognized by nearly every intelligent foreign observer, is the predominating influence exercised by lawyers. More than in any other country, the question of legal education and the raising of the standard of the legal profession should be considered as of paramount interest to the whole community, yet comparatively little has been done in that direction. In the discussion which is now going on about the reforms to be introduced in our colleges, this necessity for higher professional education is left too much out of view. The advocates of elective studies seem to assume that, in carrying out their system, they follow in the footsteps of the German universities. But this is an erroneous view. To a foreigner, attending only during a few "semesters," without any definite object in view, it may seem that the German university is based entirely on a system of elective study, but in reality it is a professional school. It is based on broad principles, it is true, and it gives every opportunity to follow, in addition to the courses absolutely necessary for the chosen profession, other studies having only a remote connection with it; but this fact does not change its character. Nearly every young man, when, at the age of eighteen or nineteen, he graduates from the gymnasium and becomes a university student, knows what his profession in life is going to be; he becomes a member of one of the faculties; he is known, during the five or six years of his stay at the university, as a student of law, of medicine, of philosophy, as the case may be. The practical and the more theoretical parts of the law are studied together, and both gain, because, in the study of details, it is thus possible to refer to the general principle by which they are governed; and in looking at the theory, the student has before him the practical uses to which it may be put. There is time for independent research and the formation of independent opinions, and the study of law becomes, what it ought to be, something more than the mastering of dry details and the mechanical learning by heart of decisions and cases. The student does not expect that the professors will go over the entire field of law in their lectures; what above all he wants them to teach him is, the method of study he is to follow.

Now, this state of affairs cannot be brought about by the reforms contemplated; it cannot be attained by keeping the old system. Under both a young man, when he graduates from college, at the age of twenty-two or twenty-three, will have to begin his professional study. Under the elective system, he will have followed, perhaps, during a few hours a week, a course in Roman or constitutional law; but these will prove of comparatively little benefit to him, as, in order to be really useful, these subjects ought to be studied in connection with private law. In our country and in our age it cannot be expected that, under these circumstances, a young man will give up all his time during four or five years more to the study of the law. An attendance of one or two hours a day, for two or three years, a rush at break-neck speed through text-books and cases, is all that can be expected. To a cultivated man, accustomed for four years to follow the studies of his choice, such a method of work will be especially distasteful, and he will look upon law as perhaps a useful tool, but not as a science; and if, during the enforced leisure of the first years of his professional life, he takes up a subject for study, it will generally not be law, but some other more congenial one.

There is no reason why the system flourishing in Germany and adopted in more or less modified form over the whole Continent of Europe, should not be adopted, in principle at least, in this country. It is not necessary here to point out in detail what should be the course of study of a law school formed on this plan. The leading principles should be the following: The examination for admission should embrace the same subjects now required for admission to a first-class college, and include the German and French languages. The course should be four years at least, and the students should be expected to devote the whole of their working time to it. Both Roman law and common law should be studied first historically before being studied dogmatically. The impossible task should not be attempted of compassing the details of the whole domain of private law by the lectures, but the student should be encouraged to study by himself. On difficult technical subjects there should be short courses of lectures by specialists. A first departure in this line was recently made in the Columbia College Law School, where an eminent member of the bar, Mr. C. M. DaCosta, gave a course of lectures on the jurisdiction of the Federal Courts. The importance of a reform of our system of legal study is so thoroughly realized by many eminent members of the legal profession that, if once a comprehensive plan is started, it may be safely asserted that this good example will be followed by other specialists. Above all, the examinations should be severe and searching, and should be conducted in such a way as to require the candidate to show not merely knowledge of details, but evidence of having formed the habit of independent legal thinking.

Hardly any lawyer will deny that our law at present is in a chaotic state, that it is full of unnecessary and subtle distinctions, and that reform in some way is necessary. To try to obtain that reform by adopting a code like the one now before the Legislature, which is merely a defective and incomplete statement of the law as it stands, would only introduce another element of confusion. It is not by such superficial remedies that the present state of affairs can be changed, but the first step to take is to raise the intellectual standard of those who, as lawyers or as judges, have to practise and to apply the law, and upon whom, if ever codification in any form should be resorted to, would fall the burden of making it.

F. F. S.

NEW YORK, April 1, 1885.

SENATORIAL ORATORY.

TO THE EDITOR OF THE NATION:

SIR: American oratory interests so many of our people, in one way or another, that it would seem a pity that the accompanying fragment of eloquence should remain buried in the turgid columns of the *Congressional Record*, where I found it, the issue being that of this date:

"When this committee is formed I hope that the committee will go at this question of the Senate employés with reference to a desire only to discharge honestly the obligation which the Senate as a body owes to the country in regard to that control which it asserts concerning the expenditure of public money with reference to matters which are pertinent either to the convenience of Senators or the despatch of public business in which the Senate is concerned."

It would be less than justice not to mention that the orator is the Hon. Preston B. Plumb, of Kansas.

B.

WASHINGTON, April 1, 1885.

IN SENATOR GORMAN'S BEHALF.

TO THE EDITOR OF THE NATION:

SIR: In your last issue you quote from the Baltimore *Civil-Service Reformer*, with comments, in regard to the Higgins appointment and its bearings on Senator Gorman's methods. Your strictures are well deserved, perhaps, at this distance from the last campaign. It should not be forgotten, however, by Blaine organs and orators at least, that Mr. Gorman, whatever questionable methods he may believe in, would not descend to the circulation of obscene pamphlets; and that when some member of the National Democratic Committee proposed retaliation in kind after the indecent attacks had been commenced, he declared he would resign if any such plan of warfare were adopted. The refusal of a politician to countenance blackguardism was then a step requiring some degree of courage, innate respectability, and love of fair play. Mr. Jones's Committee, with at least the tacit consent of their chief, took a very different course, as all who have not very convenient memories must remember even at this late day. Those of the Baltimore civil-service reformers who voted against Mr. Cleveland, the foremost exponent of the reform they cherish, and who yet failed to protest vigorously against the indecencies perpetrated by their party machine in the supposed interest of their candidate, ought at least to apologize to Mr. Gorman, who was above such business, and purge themselves before proceeding to dissect his record.

The comments of the Opposition in the Higgins matter—many of which are doubtless sincere—would appear to indicate at least a century's progress since October, 1884, toward political sanity. Those upon the Thompson incident, on the other hand, exhibit the same "uncontrollable fury of non-combatants" familiar for the past two decades. Both manifestations are noticeable proofs, among many others, of the marked success thus far of the new Administration.—Very truly,

F. C. EATON.

COLUMBUS, O., April 4, 1885.

THE SPOILS OF ASSOS.

TO THE EDITOR OF THE NATION:

SIR: In reference to the division of the Assos sculptures alluded to by Mr. Clarke in the *Nation*, No. 1031, permit me to say that the law regulating that division is not, as Mr. Clarke supposes, the present law, but that which was in existence when the firman was granted; so that whatever the Turkish Government may have decided "at the time of the division," they cannot abrogate the law of earlier date as to these antiquities. The law does not, it is true, enact that in such cases the whole shall be given up *to the finder;* but practically it amounts to that, as the law is that sculptures which belong together shall not be separated, and the Government has never any funds to purchase the finder's share, and practically does not compete. There is no question that if the Museum authorities had insisted, and the Minister had sustained them in their insistance, they would have recovered the part of the frieze found by them, to say nothing of the fragments which were theirs by indisputable right and illegally restrained.—Yours truly,

W.

GRATITUDE.

TO THE EDITOR OF THE NATION:

SIR: In Lord Acton's altogether admirable, interesting, and weighty article in the last *Nineteenth Century* on George Eliot's Life, he speaks of the inadequacy of her delineation of persons of high birth and breeding, saying, after giving some indications of the grounds for this criticism, "the point is almost too subtle for argu-

ment, but it is one of the few marks of limitation in George Eliot's field of vision."

One of his illustrations is of more than special interest, for it touches a general matter of social ethics closely associated with moral character: "The same discordant note" (arising from Warwickshire pride), Lord Acton says, "appears in Gwendolen's impatience under the burden of gratitude. One of Charles Reade's characters exclaims: 'Vulgar people are ashamed to be grateful, but you are a born lady,' and an Academician, expounding the same text, has written: 'Avant d'obliger un homme, assurez-vous bien d'abord que cet homme n'est pas un imbécile.'"

A saying of another Frenchman, Baron d'Holbach, occurs to one in this connection, which carries its own immoral moral with it. His famous weekly dinners were rivalled only by those of Helvetius; but Helvetius once complained to him that he found himself neglected by some of his old guests. "That is because you have obliged them," said Baron d'Holbach, meaning that Helvetius had given pensions to some of his "diners." "I have never done anything for any of mine, so they are still faithful to me."

Montaigne, writing of the gratitude of beasts, uses the word itself "gratitude," which had then scarcely entered into the language, and which still is less employed than its synonym "reconnaissance," and says: "It seems to me we need to bring this word into repute." I fear there may never be an age when there will not be need to bring this virtue into repute. * *

A CURE FOR SELF-CONSCIOUSNESS.

To the Editor of The Nation:

Sir: We can no longer doubt, since we have been told it so often by our Great Mentor, that we are to the last degree self-conscious and stiff; but has the *Nation* chosen the right way to reform us? One can hardly read the *Nation* nowadays without self-consciousness; even in the middle of the admirable English letter, we have an uneasy feeling that on turning the page we shall be reminded that we are forever thinking about ourselves. I have been trying to hold a *salon* this winter, but last evening everybody who came remembered what a ludicrous description of himself everybody had been reading on Thursday, and so was more ridiculously stiff and self-conscious than ever. There may be vices which are best overcome by entering one's closet and engaging in self-communion, but there must be some better means of curing self-consciousness than to ask the culprit to sit down and consider how constantly he is occupied in considering his own exaggerated sensitiveness. H.

Notes.

Estes & Lauriat announce for the spring season 'The Works of Samuel Richardson,' in a limited edition, with preface by Leslie Stephen; three editions of Carlyle's complete works; Rambaud's 'History of Russia,' in three volumes; 'The Dæmon of Darwin,' by Dr. Elliott Coues; and 'A Buddhist Catechism,' by Henry S. Olcott.

'Watch and Clock Making,' by David Glasgow, and 'At Love's Extremes,' by Maurice Thompson, a story of which the scene is laid in North Carolina, will be published by Cassell & Co.

Other announcements are as follows: *D. Appleton & Co.*:—Owen Meredith's new narrative poem, 'Glenaveril; or, the Metamorphosis'; 'Essays and Speeches of Jeremiah S. Black'; a Life of Louis Pasteur; 'Life and Letters of Thomas Gould Appleton,' by Miss Hale; and 'Life and Letters of Maj.-Gen. Emory Upton.' *Ginn, Heath & Co.*:—'Introduction to the Study of Philosophy,' by Prof. G. Stanley Hall; 'A Science of Mind,' by President Seelye, of Amherst; and a 'Natural History Reader,' by Prof. N. S. Shaler. *Harper & Bros.*:—'The Writings and Speeches of Samuel J. Tilden,' edited by John Bigelow; and an account of M. Désiré Charnay's expedition to Mexico and Central America in 1879. *Henry Holt & Co.*:—A new seven-volume edition of Dyce's Shakspere, with a glossary to each volume edited by A. R. Macfarlane; the third and last volume of Taine's 'French Revolution,' edited by John Durand; 'Essays in Political Economy,' by Prof. W. G. Summer; and Turgeneff's 'Annals of a Sportsman,' translated by Franklin Abbott. *Lee & Shepard*:—'Selected Poems from Michael Angelo Buonarotti,' with translations from various sources, edited by Mrs. Edna D. Cheney; and 'The Hunter's Handbook.' *J. B. Lippincott & Co.*:—'Political Evolution,' by C. A. Washburn. *D. Lothrop & Co.*:—'How We Are Governed,' by Anna L. Dawes, daughter of Senator Dawes. *Macmillan & Co.*:—'The Cruise of H. M. S. *Bacchante*, 1879-1882,' being the tour of the sons of the Prince of Wales; a 'History of the University of Oxford,' by H. C. Maxwell Lyte; 'The Nature of the Fine Arts,' by H. Parker; 'Twelve English Statesmen'; 'Lyrical Poems,' by Alfred Tennyson, selected by F. T. Palgrave; 'Introduction to the Study of the Law of the Constitution,' by Prof. A. V. Dicey; 'Principles of Economics,' a fragment, by the late W. S. Jevons; and 'Zoroaster the Prophet,' by F. Marion Crawford. *J. R. Osgood & Co.*:—'A Narrative and Critical History of America,' edited by Justin Winsor, in eight volumes; and the 'Memorial History of the County of Hartford,' edited by J. Hammond Trumbull. *J. A. & R. A. Reid*:—'Three Decades of Federal Legislation,' by Samuel S. Cox.

The Earl of Malmesbury's 'Memoirs of an Ex-Minister,' which we noticed at some length in October last, has been published in a handy one-volume edition by Longmans (New York: Scribner & Welford).

A well-nigh forgotten writer, the late Fitz-James O'Brien, is recalled by a new, cheap edition of his 'Diamond Lens, with Other Stories' (Scribners).

'Eve's Daughters,' by Marion Harland (Scribners), is a book for mothers only. Its good sense and good intentions are enhanced by the earnestness and reverence of its tone. It ought to be helpful.

Professor Garnett's translation of 'Beowulf' has just been issued in a second edition, revised (Boston: Ginn, Heath & Co.). The translator has in the introduction continued his bibliography down to date, supplying previous omissions and making it as complete as anything of the sort can well be. The translation has been revised here and there; not so often as we should have liked, but perhaps as often as was practicable without recasting the plates. A much broader margin gives the book a very generous look.

An autograph letter from the Comtesse de Montalembert to Mr. Jos. Walter Wilstach, author of a biographical sketch of her late husband (published by the Catholic Publication Society), gives the work high praise for its fidelity and insight.

While the chromo edition of Brehm's 'Thierleben' was passing under review, we remarked on the desirability of a corresponding English work. An approach, at least, to this is furnished by Selmar Hess, of this city, in 'Our Living World,' which is the Rev. J. G. Wood's 'Natural History of Animate Creation,' edited for American readers by Dr. J. B. Holder, of the American Museum of Natural History. But a main if not the chief point is, that Brehm's woodcuts will be reproduced, possibly with additions for our American fauna, and the chromo plates will be imitated by L. Prang & Co. Forty-two parts, making three volumes, royal 8vo, will comprehend the work; of these the first eight are before us. The print is large and clear. The quality of the chromolithography falls somewhat short of the original. Dr. Holder's contributions will, we are sure, be worth the making, though his style is not quite conformable to that of his English author. His story, for example, of the Central Park jaguar is wanting in simplicity. To say of that beast that its "prowess is not wont to be arraigned for trifles," is to depart widely from popular exposition, not to say from good English.

G. Stechert, 766 Broadway, is the New York publisher of the Berlin Museum's sumptuous report of the excavation at Pergamon. The photogravures of which we have received examples, are the most admirable results we have thus far seen of the application of this process to the reproduction of landscape, from the original and untouched (or imperceptibly touched) negative.

L'Art (Macmillan & Co.), for February 15 and March 1, has an etched illustration, Marius Roy's "Au Quartier, 8 h. 30," a scene in a military kitchen; a grand portrait of Rembrandt, etched by J. Klaus; and a spirited portrait of Crown Prince Rudolf, of Austria, with many process illustrations after Jacquemart.

There comes to us from the United States Hydrographic Office a chart of the Polar Regions, "Baffin Bay to Lincoln Sea," showing the discoveries of the period 1871-1884, beginning with the *Polaris* disaster and ending with the Greely tragedy, and embracing the British expedition under Captain Nares. The nomenclature of this region will be a wonder to the latest generation of mankind. A large companion map (if it may be so called, considering the extremes of temperature) shows the Red Sea and the Valley of the Nile. Though not thickly studded with names, it will be found convenient for the campaigns which start from the Red Sea.

Nobody will miss the *Dial*, a daily newspaper of recent origin in this city, and short career; but the monthly *Dial*, published at Chicago by Jansen, McClurg & Co., could ill be spared. It has just completed its fifth year with the April number, and will long continue, we hope, to furnish serious, careful, and often authoritative reviews of current literature.

The *Auk* for April is fully up to the standard in interest and information. Among other matters, Mr. J. A. Allen has a very readable paper on the mating of birds, and Mr. Bicknell continues his valuable notes on bird-songs. We are pleased to see that the American Ornithologists' Union has secured a grant of $5,000 from Congress to aid them in publishing the mass of information which the Migration Committee has secured from all parts of the country. Mr. Allen has definitively accepted the curatorship of mammalogy and ornithology in the new American Museum in Central Park, and will assume its duties on the 1st of May.

Editing for the blind may naturally possess some difficulties. Kneass's *Philadelphia Magazine* for these unfortunates is now in its nineteenth volume. The March number, catering to the musical taste of its readers, has articles on "Music in all Ages" and "Doctor Damrosch," besides an "Anecdote of Queen Victoria" and a short paragraph on "The Eider Duck"—in all, ten pages. This seems rather a limited bill of fare for an entire month, even with an occasional supplement of current news. Hence we may be certain the advertisements are carefully read. Pianos, type-writers, and special apparatus for the blind are naturally brought to their attention; fancy dress goods are not neglected, however, and even an excellent book not in raised print is here worthily recommended.

The larger part of the *Revue Scientifique* for March 21 is taken up with an interesting discussion of the condition of the French navy by two writers who come to entirely opposite conclusions. The first, who signs himself X***, compares with great skill the English and French navies in respect to the number of effective vessels, the average thickness of their armor, their speed, the calibre of their guns, the state of the torpedo flotillas, and the *personnel;* and in every point, with the exception of numbers and gross tonnage, his figures and tables demonstrate the decided superiority of the French fleet. It should be said, however, that at the close of his article he shrinks from expressing his conviction that in actual war this superiority would be maintained. In answer to this, M. Gabriel Charmes, the well-known writer, who has also for a year past been calling attention in the *Journal des Débats* to the condition of the French navy, gives what he terms "the true state of our naval forces." He takes the statements of M. X*** in order, and shows his methods of comparison to be fallacious, and declares without hesitation that, so far from the navy being in a condition to cope with that of England, it is not in a condition to meet all the requirements of the war with China. With an apparently complete mastery of the facts, and with a frankness remarkable in a Frenchman, he reaches the following conclusion, which he emphasizes by putting it into small capitals: "We are ready for war neither as regards *personnel* nor as regards *matériel.*"

Alphonse Daudet continues in *La Nouvelle Revue* the beautiful sketches which are most inadequately called 'The Story of My Books.' They have all the delicacy of the 'Contes Choisis,' with the added charm of the personal note which pervades them in spite of himself, so to speak, for he takes great care to keep within the line which he has drawn between a story of his books and one of himself. In some hands such confidences might be like turning out the wrong side of the tapestry. Daudet is like a worker in precious mosaics, who tells whence his jewels came. The last sketch in February is devoted to the 'Kings in Exile.' The impressive figure of Frederika loses nothing of its pathos with the light of common day thrown upon it. The book seems not unlikely to survive to another generation with the authority of a legend truer than truth. Time only increases the distance between Daudet and the men who have been eager to claim him as of their so-called school. While it proves his superiority to them, it is beginning also to prove that the ultra-naturalist movement will not after all accomplish a lasting victory, for its leaders, as a compatriot pithily said, daring and brilliant chiefs as they are, are chiefs without soldiers.

Zola's new novel 'Germinal' started off with an edition of about 20,000 copies. It is the thirteenth volume in the series of 'Les Rougon-Macquart; histoire naturelle et sociale d'une famille sous le Second Empire.' Of this series 'L'Assommoir' was the sixth, and it is now in its one hundredth thousand. The eighth volume was 'Nana,' now in its one hundred and forty-ninth thousand. It is pleasant to note that the vogue for M. Zola's coarse work is abating. 'Pot-Bouille' attained only 65,000, and 'Au Bonheur des Dames' only 50,000, while 'La Joie de Vivre,' at once a cleaner and a duller book, has as yet not sold more than 40,000 copies.

It may not be too late to advise our readers not to let pass an interesting article by Wilhelm Scherer in the February *Rundschau*, to which he gives the modest title of *Rede*. The subject is Jacob Grimm, but of course the brother comes in for his share. Not merely is it a fine piece of intellectual and literary characterization, but there is the heartfelt sympathy with nobility of nature that stirs the reader as no mere criticism, however scholarly, can do. "On the heights of life and of fame they still were simple, manly men."

Salomon Hirzel's Goethe library, bequeathed by its collector to the University Library of Leipsic, is widely known. Less known is the catalogue prepared and issued at intervals, 1848, 1862, and 1874, for the reason that it was circulated only privately among Hirzel's friends. Copies were to be obtained only through second-hand dealers at exorbitant prices. Yet this catalogue was the basis of all exact Goethe investigation. The present head of the firm, Heinrich Hirzel, has continued, since his father's death, the work of collecting Goetheana, with the intent of ultimately adding them to those already in the Leipsic University. He has also caused to be prepared, by Prof. Ludwig Hirzel, of Berne, a revised edition of the previous catalogue, bringing it down to the end of the year 1883. This edition is for sale at a very moderate price. In a small duodecimo volume of 215 pp. one can survey Goethe's productivity year by year in the order of its appearance in print. We can rely upon editorial exactness, since nothing is cited which is not in the Leipsic Library or in Heinrich Hirzel's possession, except a few very rare publications out of the reach of acquisition. Yet even these have been at least examined by the editor personally. This 'Verzeichniss einer Goethe-Bibliothek' is a remarkable specimen of bibliography.

Dr. August Wünsche's 'Bibliotheca Rabbinica: eine Sammlung alter Midraschim, zum ersten Male ins Deutsche übertragen' (Leipzig, 1880-1885)—a work of great value to Christian theologians interested in the more or less wise sayings and hermeneutical speculations of the early rabbis—has been brought to a conclusion with its 34th *Lieferung.* In twelve volumes, each devoted to a separate book, it embraces the 'Midrash Rabbāh' to the five books of Moses and the five *Megillōth* (Canticles, Ruth, Lamentations, Ecclesiastes, Esther), the 'Midrash Mishlē' (Proverbs), and the 'Pesiktā of Rab Kahana. The volumes are unnumbered—having appeared without regard to order, Biblical or chronological—and of very unequal bulk; the largest (Numbers) containing 672 pages, and the smallest (Proverbs) only 77. The whole is a work of love and great assiduity. Undertaken with a somewhat inadequate stock of rabbinical knowledge—with which Christian scholars are, in fact, but very seldom sufficiently equipped—it has been considerably improved by supplementary 'Notes and Corrections' from competent Jewish pens, freely and modestly accepted and acknowledged by the translator.

The Appalachian Mountain Club is soliciting aid for the inhabitants of the valleys of Northern Italy lately overwhelmed by terrific avalanches—a charity in which the Italian Alpine Club is energetically taking the lead. Subscriptions may be sent to Mr. Gardner M. Jones, the Treasurer of the Club, Box 2114, Boston.

—Prof. J. E. Oliver writes us from Cornell University:

"As cited in the *Nation* of March 26, Professor Newcomb has generously given undue credit to my mathematical colleagues and myself for a notation employed in his admirable 'Analytic Geometry.' I refer to his use of the symbol of identity, three horizontal lines, to mark a definition. Possibly we were the first Americans to use this notation; but we had been anticipated in Moulton's Boole's 'Finite Differences' (Macmillan, 1872), and, I think, elsewhere. These two uses of the symbol are very closely akin; and though it has a widely different use in the Theory of Numbers, yet, as Professor Newcomb well says, this need lead to no confusion."

Mr. Witte, of Baltimore, formerly a pupil of Gauss, writes us, in substance, that Gauss did not use the sign (≡) to denote the congruence of geometrical figures. That is true, and we did not intend in our review to assert that he did. Gauss uses the sign in treating of the Theory of Numbers, and, as we said, in a sense "quite different from the meaning attached to the symbol by Professor Newcomb." The last sentence of that part of our review, viz., "To students who use Professor Newcomb's work as a text-book, it will, of course, make no difference," seems to us to preclude the necessity of any further discussion.

—The second volume of Mr. Leslie Stephen's great 'Dictionary of National Biography' (Macmillan) completes the A family, and ends with William Baird. Francis Bacon's name is the greatest on the list, and Professor Fowler's account of him occupies thirty-six pages, or about a twelfth of the book. The nearest approach to this distinction is reserved for St. Anselm, who is disposed of in twenty pages. Significant space is also accorded to Lord Anson, Arkwright, Thomas Arnold (of Rugby), Thomas Arundel, Roger Ascham, Walter Bagehot, etc. Madam d'Arblay is the first female writer we meet with, but she has the good company of Jane Austen, Sarah Austin (who has an article to herself apart from her famous husband, John Austin), and Joanna Baillie. America, as usual, furnishes its quota of characters. Of Benedict Arnold we are told that descendants of his third son George are still living in England, as, per contra, that the last known descendants of Eugene Aram came to this country. Sir Samuel Auchmuty, the famous soldier, was born in New York, and was the son of a graduate of Harvard College. Sir Samuel Argall, Deputy Governor of Virginia, abducted Pocahontas. Nathaniel Bacon was the hero of 'Strange News from Virginia.' The Rev. John Bailey, of Watertown and Boston, figures in the early annals of the Bay settlement. Francis Bailey, a many-sided man, best known as an astronomer, was a tourist in North America, and author, in the last century, of a book of travels about us. In turning over these pages one appreciates the great genealogical value which must attach to this work as time goes on, so many names of the rank and file are here saved from the oblivion of our ordinary dictionaries and encyclopædias. "From private information" is often appended to notices of lives passed in the present century. One feature we should have liked to see insisted on, that of portraiture. By no apparent system it is mentioned or not mentioned that likenesses exist. In the volumes that are to come we hope that we shall be able to report a better and more uniform practice. Or might we not have an iconographic supplement?

—After the numberless treatises on the site of Paradise with which the theology and criticism of all sects and schools had dazzled and bewildered so many generations of Bible students, it was generally believed that the subject had been exhausted without a positive result, and that there was no hope of a satisfactory solution, when Friedrich Delitzsch came forward with his 'Wo lag das Paradies?' (1881), announcing an entirely novel key to the mystery. But this brilliant product of Assyriological research (see the *Nation*, No. 924) left students of Genesis still divided in opinion. The problem continues to fascinate the curious, and at this moment two new books on the topic are simultaneously placed before us with an emphatic "Eureka." The one is 'Die Lösung der Paradiesfrage,' by Moritz Engel (Leipzig, 1885), and the other, 'Paradise Found,' by Dr. Warren, President of Boston University (Boston, 1885)—books of 200 and 500 pages respectively. There is much that is common to both works: the same ardent conviction of the certainty of the result obtained, as the titles show; evidences of eager

and extensive study and reading; a vast amount of cited testimony; a minute and lucid presentation of the arguments, regardless of repetition; a better style than is generally used in learned dissertations. The chief difference in method is, that the German author relies chiefly on the identification, through philological and geographical deductions, of the four rivers of Paradise and of the regions which three of them are specified to encompass or flow by, while the American examiner, taking a much higher ground, almost superciliously ignores the minor details of the Biblical narrative, and boldly tests his thesis by the testimony of "scientific geogony," "astronomical geography," "physiographical geology," "prehistoric climatology," "palæontological botany," "palæontological zoölogy," "palæontological anthropology and general ethnology," and "ancient cosmology and mythical geography"—to each of which sets of testimony a separate chapter, teeming with well-selected and pleasantly-grouped quotations, is devoted. The German author is, in fact, exclusively interested in the Garden of Eden of the Hebrew traditions; the American—though occupying a much more orthodox standpoint than his rival—almost exclusively in the cradle of mankind, scientifically considered. As to the results, the divergence between the two is also marked; for while the former, revolutionizing the Hebrew dictionary, identifies the Garden of Eden with an oasis of the Syro-Arabian desert—unconnected with Tigris or Euphrates, and far from Assyria—President Warren finds Eden, the cradle of the human race, Adam and Eve, and the tree of life——at the North Pole. This *was* a paradise, before the submersion. Both books are equally learned and amusing—and equally convincing.

—Mr. A. G. Sedgwick has printed, "by direction of the Committee on the Code of the New York Bar Association," a valuable review, entitled "Damages in the Code," of the fifty-four sections of the proposed "Civil Code" relating to the subject of damages. It is worthy of the most careful consideration, and ought of itself to settle the fate of that wretched and antiquated piece of work. Of only three sections is Mr. Sedgwick able to say unqualifiedly that they are "correct," and one of these is correct only in a peculiar sense, for it is stated by the codifiers to be a change of the law, when it is not; they "had here fallen into the harmless and singular error of stating the law, when they believed themselves to be engaged in altering and improving it." Some notion of the slovenly and inaccurate quality of the work may be got from the following specimen, and we add Mr. Sedgwick's comment: "Sec. 2934. The detriment caused by the breach of a warranty of an agent's authority is deemed to be the amount which could have been recovered and collected from his principal if the warranty had been complied with, and the reasonable expenses of legal proceedings taken, in good faith, to enforce the act of the agent against his principal." "The rule," says Mr. Sedgwick, "intended to be embodied in this section, as appears from the New York cases cited by the Commissioners, is the direct opposite of this—that, in the language of the late learned Judge Selden, 'the damages must be measured, *not* by the contract, but by the injury resulting from the agent's want of power.' The section as it stands is objectionable for another reason—that if the warranty had, as suggested in it, been 'complied with,' there would have been no breach of duty, consequently no injury, and no recovery of anything from the principal." Codification, if we are to have it, ought to be the work of the best legal minds. This "Civil Code" is radically bad and disgraceful. Mr. Sedgwick deserves hearty thanks for his exposure of it. Mr. G. L. Rives, of the New York bar, has contributed to the same discussion an interesting pamphlet on "Torts under the Code," likewise printed by order of the Code Committee. Mr. Rives examines in detail a number of sections relating to negligence, nuisance, and other every-day topics of the law, and his conclusion is: "I think that no lawyer who will take the trouble to turn over the leaves of the Civil Code can fail to perceive that its provisions relating to actionable wrongs are, in a remarkable degree, incomplete, inaccurate, and misleading. And not even the most zealous friends of this work can pretend that it approaches, on these topics, the most moderate standard of accuracy or completeness."

—Like the contest between birth and death, between demand and supply, between armored ships and projectiles, never ending but waged with varying fortune, is the contest between the libraries and the press—that is, between the book storers and the book producers. While the libraries are trying to get all the books that have been published, new ones are rushing into existence at an increasing rate. The fight, already unequal, is made still more one-sided by every diminution in the cost of printing. From the point of view of the library which is attempting to be universal, the new "Matrizen-Stanz-Maschinen" are an evil. The inventor, Herr H. Hagemann, proposes to prepare stereotype plates directly without the intervention of movable types, saving two-thirds of the cost of composition and the whole of the cost of distribution. His machine is a modified type-writer. When one sets a lever at the character A, for instance, one type prints A in the "proof"; and another bearing the same letter buries itself in a sheet of prepared pasteboard. A succession of such indentations makes the matrix for the stereotype plate. The chief difficulties, it is said, are two which are also noticeable in the work of the type-writer—first, that the paper moves forward an equal distance for each letter, whereas in good printing the letters are of very different width; and second, that it is not easy, if one divides words correctly, to make all the lines of the same length. Corrections can be made as easily as in any stereotype plates, but one disadvantage will be that as there is no correction in the type there will be a great deal more plate correction than under the old system. Probably it will be necessary to repunch (reset was the old term) whole paragraphs when the author makes extensive changes.

—Prof. Dr. von Riehl recently delivered in Munich a lecture on the historic significance of the piano, which is reprinted in No. 12 of the Leipzig *Signale*, and contains a number of interesting statements regarding what Doctor Riehl aptly called our "encyclopædic instrument." The compositions of different epochs and nationalities are to a certain extent modelled after the characteristics of a favorite instrument. Palestrina's typical instrument was the voice; his works, like those of most other Italian composers, breathe the spirit of song. The favorite instrument of Bach and Handel was the organ; hence even their arias and choruses are a sort of vocal organ music. The spirit of the symphonic period—Haydn to Beethoven—is largely determined by the violin; but with the later Beethoven the piano begins to assume its dominant position as the instrument of the modern composer. It is true, a great musician does not make use of the piano while composing; but he needs it as a means of correcting his work and getting a general view of it. In its want of power to sustain and swell a tone lies the greatest defect of the piano; its great advantage over all other instruments (except the organ) consists in this, that on it alone all the harmonic parts can be played simultaneously. The pianoforte scores and arrangements of operatic and symphonic works have contributed enormously to the spread of musical culture. Externally, the piano presents a sort of synopsis of the history of music. The white and the black keys respectively represent mediæval and modern music. All the compositions of the Greeks and other ancient and mediæval nations can be played on the white keys. The piano still lacks the power to indicate quarter tones and the difference between, *e. g.*, C sharp and D flat. Doctor Riehl also refers to the pathological phenomena caused by the present piano epidemic, especially among women, and thinks we might speak of music-poisoning as of nicotine-poisoning; but he suggests no remedy. We cannot share his regrets at the fact that modern audiences no longer care for the pianoforte music of former periods (preceding Beethoven). He thinks it is largely a matter of fashion, but it would be more correct to say that we care no longer for Mozart's sonatas, for instance, because he endeavored to atone for the lack of sustained tone in the instruments of his period by introducing runs and ornaments which to us appear unnecessary and meaningless.

—The celebration of the second centenary of Pierre Corneille has revived a controversy on the status of actors in France. The Curé of Saint-Roch held a religious service in his church, in honor of the poet, and invited the company of the Théâtre-Français to take part in the ceremony. For this he was criticised and praised. M. Ch. Livet wrote to the *Temps* to prove that the blame was undeserved, inasmuch as actors had never been formally excommunicated as a class by the Church, and the thunders of the clergy had been directed against them simply as persons of licentious life and immoral influence. So in some Protestant churches the ministers inveigh against rumsellers. If a large proportion of liquor-dealers should take to selling tea and coffee and drinks compounded of acid phosphate, the sturdiest prohibition preacher might invite them to his church sociables. Thus, would M. Livet say (if Paris knew anything of prohibition preachers and acid phosphates), now that the stage is reformed, the Church can afford some countenance to the better kind of actors. But those who are not favorably inclined to the Church are not ready to resign any proof of its illiberality, like that treatment of the theatre of which the refusal of the Archbishop of Paris to allow Molière to be buried in consecrated ground was only one instance. Whether actuated by this feeling or not, M. A. Gazier shows by extracts from several *rituels*, "the most official of all documents in the matter of ecclesiastical discipline," that the actors' profession is spoken of as one that the Church has always disapproved of, and that they are classed with usurers, persons who keep concubines, and persons of a notoriously criminal life, in not being permitted to have the *viaticum* or to be buried in holy ground. This, of course, was not formal nor full excommunication, for players could still be married and their children could be baptized; but it is enough to show that the action of the Curé of Saint-Roch indicates a change in the attitude of the Church toward the profession. It cannot be pretended that the stage is wholly reformed, or that the actors and actresses of Paris are all persons of irreproachable lives. If the happy time should ever come when they are, which certainly is most unlikely, other curés may be found who will depart from the traditional attitude of the Church toward the class. Then we shall no doubt be told again that there never was any attitude of the Church, that there was merely the action of individual priests. In other words, we shall have reproduced in regard to a question of morals the practice of religious teachers about scientific discoveries. First,

they say it cannot be true, because it contradicts the Bible; then they discover that by interpretation the Bible can be made to agree with it; then they declare that it is the exact teaching of the Bible. This is human nature, and the defenders of the Church manifest at times an inclination to follow the same course.

—The position of M. Francisque Sarcey in the journalism of Paris is somewhat peculiar. Outside of France he is best known as the foremost of French dramatic critics, and his weekly theatrical reviews in the *Temps* have a weight and authority allowed to no other dramatic criticisms. But in France he is perhaps better known as the chief daily contributor to the *XIXe Siècle*, in the columns of which paper he discusses daily the topic of the time, and has led many a campaign against the Clericals. By many M. Sarcey was considered the champion "priest-eater" of France, and much surprise was therefore expressed when it was known that he was going into an hospital owned and tended by priests. M. Sarcey's eyes were always feeble; he has wholly lost one, and he went into the hospital to have the other operated upon for cataract. Since he came out he has gathered into a little volume—'Gare à vos Yeux!!' (Paris: Ollendorff; New York: F. W. Christern)—the articles he wrote for the *XIXe Siècle* describing the cause and effect of his operation. It is a pleasant little volume, the offspring of that willingness to talk about one's self, and to take one's self seriously and as of interest to others, which is a marked French characteristic. On the fly-leaf of this volume is announced 'Mes Souvenirs de Jeunesse,' some of which have already seen the light in the *Revue Politique et Littéraire*. They bid fair to be as amusing as any of the literary recollections which abound just now.

—The *Preussische Jahrbücher* for March contains only three articles, exclusive of the brief political and literary chronicles; but these are of unusual interest. The first is a fifty-page paper on the late Friedrich Kapp, by Doctor von Holst; the second, an account of the Catholic Church in Belgium; the third, another fifty-page article, on the silver question in Germany, by Erwin Nasse. In one way this last paper is disappointing, since it contains little that refers particularly to Germany; but the question is admirably discussed, and none of the points of the bi-metallists are ignored. The occasion for the article is afforded by a change of base on the part of the German silver party, which, so late as the autumn of 1882, declared that Germany must hold fast to the gold standard so long as Great Britain should do this. But by December, 1884, the silver men had concluded that there was no hope of Great Britain's joining them, so they proclaimed that the union of Germany, the Latin Union, and the United States was sufficient, thereby making the question a practical one; for so long as their opponents admitted their dependence upon Great Britain, the monometallists deemed the matter so purely theoretical as not to require serious discussion. The first assumption of the silver men, that the union of the Powers named would produce a rise in the value of silver, Mr. Nasse admits to be correct; but this would not prevent a premium on gold, because London would be, then as now, the world's clearing-house. In fact, there was a slight premium from 1850 to 1865 in France; and even now, whenever there is any emergency, such as the Austrian demand for gold last December, a premium has to be paid. Moreover, the premium would constantly rise, for the silver nations would have to absorb not only the ever-increasing annual product, but the surplus stores of gold and paper countries, which would take advantage of the temporary rise in the value of silver. Nor would the increased supply be balanced by the increased consumption, because, owing to the inconvenience of using silver in considerable sums, there would be no *real* increased consumption, the place of gold (and of promises to pay in gold, which would likewise command a premium) being supplied by promises to pay in silver. For the United States is not the only country in which "cart-wheel" coins are, as far as possible, ignored. Another important consideration is the cost of recoining their present stock of silver, which the Latin Union or the United States, or both, would have to do in order to establish the same ratio. But the preliminary cost is trifling compared with what would follow. Sooner or later, one or more of the countries in the Union would withdraw, and the difficulty of preserving the conventional value would be, of course, increased in proportion to the amount of the coin which the withdrawing nation would cease to use. And even supposing that no country withdrew voluntarily, war, with a forced currency, is sure to occur occasionally, by which the same result would be produced. We may add that Mr. Nasse refuses to recognize the silver men's Hobson's choice; for if the supply of gold is decreasing, so also, with the enormously increased readiness of the public to use Government notes and commercial paper (both payable in gold), is the need of gold coin decreasing likewise.

—The years elapsed are few since seismology entered its claim to consideration as a science. Foremost among the societies engaged in research upon seismic activity is the Seismological Society of Japan, and foremost among its investigators is Prof. John Milne, who has lately published, in the second part of vol. vii. of the Society's transactions (1884), the most thorough and important contribution to earthquake research which has yet appeared. It is a discussion of nearly 400 earthquakes which have been systematically observed during two years in the island of Niphon or North Japan. He has had the assistance of some fifty observers, variously located on the islands, who for several years have been accustomed to make weekly reports to Professor Milne with regard to the occurrence and intensity of earthquake disturbances. At a few of the stations the more marked disturbances were timed with accuracy. A number of noteworthy facts have been discovered by Professor Milne's system of investigation: for example, it is found that a well-marked range of mountains south of the alluvial plain about Tokio forms a most effective barrier to the progress of seismic disturbance, only one-hundredth part of these disturbances being propagated beyond the range, thus indicating clearly the necessity of extending the network of observing-stations northward. Of 387 earthquakes the shocks for 254 were not appreciable beyond an area of fifty square miles; 198 of these affecting only the seaboard towns, while the remaining 56 were inland. Several of the great shocks had their origin far out at sea, with less marked effects, therefore, at the stations than many lesser ones originating nearer at hand. Areas remote from each other were sometimes disturbed, while no shock was felt at intermediate stations. The islands themselves do not appear in general to be the immediate seat of origin of these disturbances, but a very large proportion of the whole take their rise from beneath the ocean. The great alluvial plain of Musashi, surrounding Tokio, and forming one of the flattest parts of Japan, was the region subject to the greatest and most frequently recurring disturbance. Professor Milne regards it as remarkable that the number of earthquakes felt on the low ground is large compared with the number recorded as having been felt in the mountainous regions. The seismic activity has been small in the immediate vicinity of extremely recent, or at present active, volcanoes. Shocks are most frequent, too, where the slopes are steepest, and where there is abundant evidence of a recent and rapid elevation—the seismic regions of Japan holding, in all these respects, a close relationship to similar districts in South America. Another important deduction from Professor Milne's collected observations is the strongly-marked coincidence in a general way between the minimum of temperature and the maximum of seismic disturbance throughout the entire region observed—a connection long known as applicable to the Musashi area. And not only is the number of winter earthquakes very much greater, but the seismic intensity in winter is more than three times as great as that of the summer months. Professor Milne finds nothing in the recurrence of earthquakes in the Japan region to establish the supposed connection of such phenomena with the position of the moon in its orbit.

HAMERTON'S LANDSCAPE.

Landscape. By Philip Gilbert Hamerton. With original etchings and many illustrations from pictures and drawings. London: Seeley & Co.; New York: Macmillan & Co. 1885.

THE appearance of 'Landscape' is an event in art literature. It will of course provoke comparisons with 'Modern Painters'; but any comparison which is based on analogy will be unjust, whatever its outcome, for it would be difficult to produce a book on the same subject more completely antithetical to 'Modern Painters' than is this new work of Mr. Hamerton's. It is as remarkable for its calm, philosophical tone as was Mr. Ruskin's first work for its passionate advocacy of the claims of an artist treated with what he regarded as monstrous injustice. The fiery eloquence of 'Modern Painters' ran through the whole English-speaking world, and set aflame with enthusiasm for nature people who never before looked at a cloud, and for Turner people who never saw one of his pictures and were incapable of comprehending, if they saw, them. It was the passion of an evangelical spirit glowing with what it saw as a new faith, mingling its intense feeling with its unripe experience, the glory with the weakness of youth, and giving its best intellectual powers as an offering to Nature and Truth, and to Turner, whom it fancied to be their High-Priest. Eloquence has never outdone the fervor of some of the rhetoric of that first volume, nor has the most vehement advocacy of any cause more ingeniously and ingenuously warped a case to suit its sympathies. But through Mr. Hamerton's book runs the calm and deliberation if not the epigrammatical quality of an essay of Emerson—the slow, passionless conclusion of a mind which reflects over nature and deliberates over art—serene, just, weighing all things, rejecting nothing and accepting nothing hastily, logical and well-anchored. Every lover of noble diction, passionate eloquence, and sublime imagery reads 'Modern Painters' with the glow the Athenians felt when they heard the Philippics, though he knows nothing of art and little of nature; but no one will read 'Landscape' with equal pleasure unless he has already studied nature profoundly and knows something of art. He will then read it with a quiet satisfaction capable always of being interrupted without impatience and resumed with pleasure.

It is a simply elaborate essay on landscape as distinguished from the external inanimate world:

"We use the word in two distinct senses, a general and a particular. In the general sense the word landscape without the article means the visible material world, all that can be seen on the surface of the earth by a man who is himself upon the surface; and in the special sense *a* landscape means a piece of the earth's surface that

can be seen at once, and it is always understood that this piece will have a certain artistic unity, or suggestion of unity, in itself."

The subject is treated from all sides which have any contact with art or sentiment—from the side of our illusions; our love for nature; the power of nature over us; nature as subjective; verbal description, "word-painting"; nature as reflected by Homer, as the type of Greek nature-impression; by Virgil or Latin, Ariosto or Mediæval; then as studied by Wordsworth and Lamartine, as types of English and French; from its relation to the various graphic arts, its characteristics in Great Britain and in France, and from the geography of beauty and art. Mountains are weighed in the art balances; lakes, brooks, rivulets, and rivers in their degrees of magnitude. Then man's work on rivers and their use in art are considered; then trees, under their various aspects; then the effect of agriculture on landscape, of figures and animals, and of architecture. "The two immensities," sea and sky, conclude.

But this enumeration will hardly suggest the exhaustive manner in which the subjects are treated, or the intertwining of art study, the results of wide and thoughtful reading and ripe knowledge of the face of nature around them. One recognizes the influence of Emerson, but no imitation of him—not his vocabulary nor his views of art, for Emerson had no idea of the graphic arts; only his habit of looking at nature and accepting her influences.

The chapter on illusions opens the question of subjectivity, in which we find less to sympathize with than in any other section:

"The whole subject of landscape is a world of illusions, the only thing about it that is certainly not an illusion being the effect upon the mind of each particular human being who fancies that he sees something when he stands in the presence of nature. His feelings are a reality, but with regard to that which causes them it is hard to say how much is reality and how much a phantom of the mind."

The whole confusion here is one of nomenclature, but this is not of our author's making. It has long been formulated by the German metaphysicians. If we would only use words in a strict sense, we should not be puzzled by them, and Mr. Hamerton, in applying them to art, has less excuse for the confusion than dream-students. By illusion we mean one of two things—an hallucination, *i. e.*, an impression on the senses due not to a material object, but to spontaneous activity of some part of the nervous system; or an impression of an external object, which impression proves to be incorrect. The phantoms which a man in delirium tremens sees are, we must suppose, hallucinations—in that they are not real. An object which we took in the moonlight for a human figure and find to be a cloak hung on a peg, is an illusion to the mind, but not to the eye, for the sense saw exactly what was there, though the mind had misinterpreted it. This is not an illusion in the sense in which our author uses the term—*i. e.*, a purely subjective impression. The object seen was just as real as a man would have been. A sojourner on a mountain top will sometimes find, when he awakes, the whole valley below him filled with mist and resembling a sea. The illusion to his eye may be complete, but the sea of vapor is quite as absolute reality as the ocean. The traveller's ignorance, or the imperfection of his vision, is the cause of the deception. We must, therefore, if we would be exact, apply the word deception to one class of illusion and hallucination to the other, and restate the problem in these terms. But the latter is not to be predicated of art, which only deals with appearances, and to which a mist is as real as a mountain, so that deception is the only equivalent, in art, of illusion. But Nature never deceives—it is only that we do not in all cases understand her. It is not she but we who said this mist was the sea, and a supreme faculty in art is to accept what Nature shows us for just what it appears, and not try to see more than she shows.

But, says Mr. Hamerton (with the Germans), "Where there is no eye there is no color"; wherefore, "we must be continually exposed to illusions about color, both because we differ from our own contemporaries, and because there is every reason to believe that our degree of nervous sensitiveness is not the highest to which the human race may be slowly advancing." But here, again, the confusion is due to careless use of words. We say an object is green when it possesses the property of reflecting the green rays of sunlight to our eyes; we do not imply that it is always reflecting them, but that it is of such nature that when the light falls on it the green becomes visible. But it possesses this property without regard to the exercise of it, and the green thing is always therefore green until it becomes some other color, which in turn is no more possible in the dark than the green. We may as well say that a man is not a speaking animal because he is at times silent. We say that he speaks because we know that he can speak when occasion offers. The whole error grows out of a false definition, assuming that "green" means shining with a certain color, when what we really and always mean by it is that it has the power of showing that color and that alone. And the difference of color vision is no more a matter of illusion, for it is simply a matter of degree. One man cannot tell green from red, but all men who can, agree which one is red and which green. A blind man sees nothing, but his want of vision proves nothing.

But, adopting Gladstone's fallacy that because Homer's color vocabulary is limited, therefore the antique color sense was feeble, our author says: "The evidence that we possess, in the Homeric poems and elsewhere, of a degree of color perception very inferior to our own, points to the inevitable conclusion that we ourselves may be still very far from having attained the ultimate development of this faculty." It is curious to find so good a reasoner fall into this trap. When we know that the Greeks of to-day use the same terms for the same objects that Homer did, and call red wine black, and yet see all the intermediate colors as well as Englishmen, we need not puzzle over Homer's nomenclature. Is it to be supposed that we could not see the tints called magenta and solferino before these terms were invented? It is only when a commercial name is wanted for a tint that a distinctive one is coined. This is the solution of the whole color-word puzzle. There is not the least ground for asserting that the Greeks of Homer's time saw color otherwise than as we do, for barbarous people to-day have the same poverty of vocabulary and of dyestuffs, together with perfect color sense. Ask a Persian carpet weaver to name all the tints in his carpet! The Italians call their wine "nero" or "bianco," black or white, though they are neither the one nor the other. When the buyers begin to choose between white wine and yellow, or deep red and pale red, the sellers will make new names to distinguish them. There is no evidence whatever that men do now see color differently (speaking optically), or that they have seen it differently from what they do now, at any time since language or art was invented, though greater degrees of optical sensibility and various measures of color sympathy there are and probably always will be.

We have dwelt at length on this chapter of Mr. Hamerton's book because it is the one of which we should deprecate the influence, supported as it is by a metaphysical fallacy of long standing. It is impossible to give even an analysis of this comprehensive book in the space of a notice like ours, the more as its condensation gives little opportunity for summarizing; but the chapters on nature's power over us, on classical, mediæval, and modern landscape (even after Ruskin's remarks on the same theme), on mountains, lakes, rivers in art, and trees in art, will be found to have at least as great interest and value to painters as to unprofessional students of art. In analytic studies of this kind there is always great danger that the interest of the study warming the imagination, may modify the subtle impression to be analyzed, and impart the color of personality where the most complete impersonality is needed. But our author's contemplative and philosophical temperament gives such assurance as is possible against this result of his analysis, and we may accept his conclusions as, on the whole, being those of a normal intellect as far removed from national prejudice as is likely to be the case with any man thoroughly versed in the literature pertaining to his subject, and in the influence of literary training on the artistic mind; so deeply and widely conversant, too, with art as to possess a breadth of critical comprehension and catholicity of appreciation perhaps unique in art literature. The critic who has sought for the reason of his preferences, and the artist who has speculated on the secret of the charm which certain subjects exert over him in preference to others, and the philosophic inquirer in search of data on which to base generalizations upon all forms of intellectual activity or sensibility, will alike find some data for their use in 'Landscape.'

Among the direct criticisms of artists which are involved in the thread of our author's discourse, one passage will be found of present especial value from the interest now felt here in the artist named:

"I believe this difficulty (that of the artist making his feeling before nature intelligible to others) to be far greater in landscape than in any other department of the fine arts. Those who have overcome it by finding some expression of their feeling that is intelligible to others, are the successful and famous men. All their deficiencies are forgiven them, and they are placed in a situation almost unassailable by criticism. There is Corot, for instance, not by any means a strong painter in the representation of tangible things, such as rocks, trees, and buildings; indeed, it may safely be affirmed that in this quality of forcible representation he is surpassed every day by a multitude of painters who have not the faintest chance of escaping permanent oblivion, yet Corot is a most famous artist. All his fame is due to success in one thing: he was able to express a certain feeling about nature which some lovers of nature could understand. As it seemed to them pleasant and poetical, like a walk in the dewy fields at dawn on a summer morning, they were grateful for the gentle excitement, and repaid Corot by declaring that he was a great artist. After this, all criticism of Corot falls to the ground. It is a waste of industry to demonstrate that a man who has hit the bull's-eye has not placed his arrow in this or that circle of the target. He preferred feeling to substance, and won his prize with that, sacrificing all else as being *for him* superfluous."

In another place the author finds fault with a French critic for saying that Corot was Greek in his art; yet this very trait which he points out, of so singling out a certain quality and expressing it subjectively and to the neglect of any other, is the vital quality of Greek art. We must quote another passage, the profound truth of which will be felt by some of the most devoted students of nature who have essayed art and found it insufficient:

"On account of these various impediments, there comes a time in the life of those who take a great delight in nature when they feel art to be so disappointing (especially in their own practice) that they are tempted to give up the pursuit and study of it, and enjoy nature alone without reference to painting. The deliverance from art is then felt to be an emancipation. We go to mountain and lake, and feel like schoolboys released from school. Those highly artificial rules

invented by artists and connoisseurs, which Byron so heartily detested, are violated by Nature at every turn, and with the very happiest results. She is constantly doing things that you and I would be severely blamed or pitilessly ridiculed for doing upon canvas, but still she goes on heedless of all human opinion and prodigal in her heterodox production."

This is a side-light thrown on the eternal debate on Nature *vs.* Art. Nature offers us impartially a thousand objects of admiration. Art can accept no more than her hands full, and these she must arrange so that they shall stand for the thousand. How to do it—that is the problem. Corot did it, so did Turner; but no realist ever could do it, and so realism, as art, fails, and the painter who loves and understands Nature better than Art is ignored.

The illustrations of 'Landscape' are of a kind to which an especial and distinguishing praise must be given. In complete artistic quality no book-illustration of the day equals them. They are, as the preface asserts, at the high-water mark of what can be done in this vein, and in consonance with the purpose of the book. There is even new light thrown on Turner's art by the comparison afforded between the rendering, in several forms of reproduction, of various motives of it. A line engraving by Brandard, an etching and a mezzotint by Brunet-Debaines, are given, with photogravures; the series including seven drawings by Turner, and the whole comprising forty-one engravings, etchings, photogravures, etc., of most of the distinctly typical landscape artists from Van Eyck down to our day, each for a definite purpose admitted to the book.

The get-up of 'Landscape' is superlative—the art of book-making in our day can go no further except in the way of binding, which in the large-paper copy seems flimsy. But it is probable that most possessors of this superb book will treat themselves to a binding to their own taste.

THOMSON'S MASAI LAND.

Through Masai Land: a Journey of Exploration among the Snow-clad Volcanic Mountains and Strange Tribes of Eastern Equatorial Africa. Being the narrative of the Royal Geographical Society's expedition to Mount Kenia and Lake Victoria Nyanza, 1883-1884. By Joseph Thomson. Boston: Houghton, Mifflin & Co. 1885. Pp. 583. Maps. Illustrations. 8vo.

THE interest in African travel, which has somewhat waned of late, will be revived by this account of Mr. Thomson's remarkable journey. Not only is a great part of the country visited absolutely new, but it proves to be of wonderful beauty, swarming with game, and inhabited by a race of savages far superior to the other African tribes. Then the writer, who, though only twenty-six, has already led three expeditions into the interior of the continent, wins your confidence and sympathy at the outset by his determination, successfully carried out, to bring his men back to the coast better "morally and physically than they left it." A keen sportsman, he never shocks you by mere wanton destruction to make a great "bag," but kills simply to provide food for his caravan. In addition, the obstacles to his progress are so constant and so difficult to be overcome, that the interest in his story, told for the most part with perfect simplicity, never flags for an instant. His book is certainly a remarkable picture of a man, to quote Lord Aberdare's words in regard to him, who has "the endurance of a Stoic, the self-command of a red Indian, the meekness of a saint, and the constitution of a camel."

The object of the expedition of which Mr. Thomson was the leader was to explore the country lying between Lake Victoria Nyanza and the coast, where are the snow-covered mountains possibly referred to by Aristotle as the "so-called silver mountain" at the source of the Nile. Though that part of eastern Africa was the first to attract the attention of Europeans, yet it has been the last to be explored. Up to this time only three adventurous missionaries and as many travellers have been able to get within sight of the mountains, whose very existence even has been doubted by geographers of our own day. This is not because the country is so difficult to reach. On the contrary, it is far easier to enter the interior from Mombasa, Mr. Thomson's point of departure, than it is from Zanzibar; for there is none of that terrible swamp to be crossed, the breeding-ground of the fever and dysentery to which so many Europeans have fallen victims. The only obstacle to the explorer lies in the inhabitants, a fierce and warlike race, who invariably plunder and destroy, if possible, all strangers who enter their territory. It was with the greatest difficulty that Mr. Thomson could persuade men to enlist in his expedition, so much did the coast negroes dread the Masai. Though he offered extraordinary inducements, he was obliged to take the very refuse of Zanzibar, men whose evil reputations prevented their being engaged by other travellers. The traders assured him that three hundred men was the least number with which he could safely enter Masai Land. Stanley's advice to him on leaving England was, "Take a thousand men, or make your will." Notwithstanding this, he determined to make the attempt with one hundred and forty men, all told, on half a dozen of whom he could thoroughly rely. The most of these were porters who carried the stores, and the beads, wire, and cloth which form the principal medium of exchange with the natives. With great exertion, and constant watching night and day to prevent desertions, he brought his disreputable force to Taveta, at the threshold of the land he was sent to explore. This charming spot is situated on the southern slope of Kilimanjaro, 138 miles from the sea. A dense forest of magnificent trees, "which in many instances spring up branchless 80 to 100 feet before spreading out in a splendid umbrageous canopy," with bower-like pathways lined with ferns, creepers, and a profusion of flowering shrubs; rich banana groves; fields golden with the maize or gray with the millet; streams of pure cold water fed by the snows of the mountain—make a picture almost idyllic in its loveliness. Though close to the equator, the nights are made cool by the refreshing breeze from the neighboring snow-fields, and "mosquitoes are almost unknown." By day one may hunt all the large game of Africa amid mountain scenery of unsurpassed beauty; while the charm of the night, when "a flood of fairy notes from myriad cicadæ pervades the air," is only broken by the horrid laughter of the hyenas and the resonant thunder of the roar of the lion, "a nightly visitor to our neighborhood." The inhabitants of this earthly paradise "hardly detract from the poetical picture. True Arcadians they are in their peaceable habits, their great hospitality, their manly, pleasant manners, and surprising honesty."

Here all caravans stop to recruit after the fatiguing march from the coast, and to make the necessary preparations for entering Masai Land. In Mr. Thomson's case this consisted in making up his cloth into war dresses and stringing 60,000 strings of beads. This took more than a fortnight, during which he busied himself with hunting and exploring the adjacent country. The principal feature in the landscape was the vast mass of Kilimanjaro, referred to by the Portuguese in 1530 as the "Mt. Olympus of Ethiopia," and called by the awestruck native, who often sees the snow-clad summit "away up in mid-heaven, cut off apparently from all earthly connection" by mists and clouds, "the House of God." It is an extinct volcano with two craters, the loftier "a dome of the most perfect proportions," rising to a height of nearly 19,000 feet. The other is a conical peak which springs from the plain "at an even angle to a sheer height of 15,000 feet, unbroken by a single irregularity or projecting buttress." To the north of this mountain the Masai occupy a strip of country which may be roughly described as about 500 miles long, with an average breadth of 90 miles. It is shut in on all sides by lofty ranges of mountains, the northerly part being a plateau culminating at a height of 9,000 feet, and swept over by hail-storms of such violence as to destroy great numbers of men. The southerly portion is a sterile desert, with here and there salt-encrusted marshes, now shining in the sun like "burnished silver," now appearing like "sheets of pure white snow or lakes of charmingly clear water."

The inhabitants, who seem to be rapidly decreasing in numbers from their incessant wars, are, in some respects, the most interesting of all the African tribes. "They present no point of resemblance either to the true negroes who surround them on the east, south, and west, or to the Galla and Somal who shut them in on the north. They distinctly differ in their strange mode of life, their curious customs, form of government, and religious belief, not to speak of their curious language." The first men whom Mr. Thomson saw caused him to exclaim involuntarily, "What splendid fellows!" A party who came into camp "were magnificent specimens of their race, considerably over six feet, and with an aristocratic savage dignity that filled me with admiration." They seemed to be absolutely devoid of fear. At one time "it was wonderful to see the fearless and insolent manner in which even small boys hustled our porters from the water, and made them stand out of the way till they had finished, and equally surprising to see the meek and patient way in which these indignities were submitted to by the porters, men who in other places are accustomed to lord it." The young women are "distinctly ladylike in both manner and physique. Their figures are slender and well-formed, without the abnormal development about the hips characteristic of the negro." At the age of fourteen a boy is circumcised and sent to live in a kraal where are only the unmarried men, the warriors, and the unmarried women. There he stays, perhaps twenty years, practising in military evolutions and going on raids, until he finds his strength begins to fail, when he marries and becomes one of the elders of his tribe. It is a strange custom, and "strikingly indicative of the fact that he had exchanged the spear for the distaff," that the newly married warrior must wear for a month the dress of a maiden. With the change in his life his character softens. He becomes generous and more peaceable, often protecting those whom, as a warrior, his only thought had been to destroy, while his face loses the habitual scowl of the young man, and is replaced "by a more pleasing and genial expression." In a sense the Masai are distinctly religious, though "their conception of the Deity seems to be marvellously vague. I was Ngăi. My lamp was Ngăi. Ngăi was in the steaming holes. His house was in the eternal snows of Kilimanjaro. In fact, whatever struck them as strange or incomprehensible, that they at once assumed had some connection with Ngăi. Their prayers to him were incessant."

Mr. Thomson's first attempt to enter the country of this singularly interesting people was unsuccessful. Though he crossed the border without difficulty, he was soon convinced that his caravan was far too small for him to proceed with safety. On the eve of an attack he prudently re-

treated, and by a rapid but dangerous night march succeeded in escaping from the country unharmed, but wofully plundered. Undismayed by his failure, he left his caravan at Taveta under the charge of a Maltese sailor, the only white man with him, and went back to the coast for a new supply of goods and porters. On his return he was so fortunate as to join a large caravan of traders and in their company to again enter Masai land, and this time with entire success. Though their numbers were now large enough for safety, yet the march was a hazardous and trying one. At no time could they feel secure from attack; and the first thing on halting for the night was to surround the camp with a high thorn fence as a protection against both beasts and savages. Buffaloes and rhinoceroses frequently charged through the caravan when on the march, and one evening before camp was reached lions leaped from the jungle and killed several donkeys. "The porters threw down their loads and fled. Donkeys were doing the same, kicking off their burdens and braying lustily with fear. Many of these, breaking through the bushes, were taken for lions by the panic-stricken porters, and shot down. The cattle got away from all control and crashed through the brake, adding further to the chaos. The shouts and cries of men, mingled with the roaring of lions, the braying of donkeys, and an almost continuous fusillade from fire-arms, furnished all the elements of a night of horror." But the Masai were worse than the lions. The greed and insolent curiosity of the warriors made it extremely difficult to avoid constant quarrels. At one place, says Mr. Thomson, "I was actually pulled about as if I was a toy to be played with. They grasped my arm, pulled my hair, and took off my hat. If I went into my tent they would squeeze themselves after me, until everything was filthy. They gloried in frightening my men by making a show of stabbing them, and roars of laughter greeted their piteous terror." Yet all these indignities had to be submitted to with a feint of good humor, or further progress among them would have been impossible.

A principal object of the expedition was to examine Mt. Kenia, and, as the traders' route lay far to the west, with thirty picked men and as many traders Thomson left the caravan and marched rapidly through the heart of the country to the mountain, rejoining the caravan at Lake Baringo in the north. This was one of the most daring exploits in the annals of African travel. By the aid of his extraordinary tact in dealing with the savages, and his reputation as a medicine-man, largely due to a frequent use of Eno's fruit salts and the judicious exhibition of two false teeth, he was able to "bore" his way, through obstacles apparently insurmountable, to the desired goal. Mt. Kenia, known hitherto only from native reports, proved to be an extinct volcano, its single summit, "a dazzling white pinnacle," being only a little lower than Kilimanjaro. Later he made a similar dash, this time with a hundred men, through a country still more dangerous, in which "the last three caravans which had preceded me had each lost more than 100 men by violence," and succeeded in reaching the Lake Victoria Nyanza without bloodshed. During this excursion he visited the strange inhabited caves on the slopes of Elgon, a high mountain some fifty miles north of the lake. The chambers, with roofs supported by rough pillars hewn out of extremely solid rock, bore incontestable evidence of their artificial origin. It did not occur to him to search for evidences of precious stones or metals, but it is possible that they were mines worked by the Egyptians in the days of the Pharaohs. The day after leaving Elgon he was nearly killed by a buffalo, his only accident, amid perils without number, during the whole journey. It is pleasant to read that his men, who at the outset had to be driven to their work like a slave caravan, now "were literally quarrelling to have the honor of being my carriers." His homeward march was attended by a frightful attack of dysentery, causing "a six weeks' struggle with death," but he safely reached the coast in May, 1884, after an absence of fourteen months.

The most exciting incidents in this book, in which there is not a single dull page, are the hunting adventures, in which Thomson appears to have shown a coolness and courage not surpassed by Gordon Cumming himself. They are too long, however, to quote, and we must refer the reader to the book for them. The quantity and variety of the game in the greater part of the country traversed were very great. On one expedition his "bag" consisted of four rhinoceroses, one giraffe, four zebras, and four antelopes, all of which had fallen to my own rifle within six hours." At the same time another man shot an elephant. On another occasion he "followed a herd of nearly sixty giraffes." Indeed, we are inclined to regret these vivid descriptions, as there is reason to fear that in no long time an irruption of European sportsmen will invade the land and exterminate or drive away the game. A word should be said in praise of the pictures in this volume, the most of which are from photographs taken by Mr. Thomson. They admirably illustrate one of the most fascinating books of travels we have ever read.

William Tyndale's Five Books of Moses, called the Pentateuch, being a Verbatim Reprint of the Edition of M.CCCCC.XXX. Compared with Tyndale's Genesis of 1534, and the Pentateuch in the Vulgate, Luther, and Matthew's Bible, with various Collations and Prolegomena. By the Rev. J. I. Mombert, D.D. New York: Anson D. F. Randolph & Co.; London: Samuel Bagster & Sons. 1885.

It is not often that the lovers of early English Biblical literature are presented with a book from the modern press more inviting than this edition of Tyndale's Pentateuch. The *pièce de résistance* is a reprint, verbatim et literatim, of the sole extant and most rare edition of MCCCCCXXX. This is garnished with prolegomena and notes in profusion, and with photo-engravings of Tyndale's manuscript and of specimen pages of the early edition. There is a biographical notice, made up in great part of verbatim reprints of rare old documents on which modern knowledge rests. Then there are various bibliographical notices, collations, lists of places, of misprints in the original edition, and a glossary. These have been prepared with unstinted labor, and with the assistance of various learned and eminent admirers of Tyndale in England and America. It is pleasant to recognize among them Dr. S. Austin Allibone, to whom all workers in English literature are so much indebted. He, after his manner—and it is a manner to be honored in the observance—has enriched the volume with an Index to the Prolegomena. The whole work is plainly a labor of love, and a critic must be a cynic indeed who, with one of these noble large-paper copies before him, cannot sympathize with Doctor Mombert's paternal rejoicing over it. He dedicates it "to the memory of James Lenox," as the first book which has been prepared in the Lenox Library from material drawn from its shelves; and he rises in the preface to a certain rhythmical eloquence, as he speaks his last words of thanks and praise to all who have helped him, and of honor to the Apostle of Liberty who, at the cost of his life, gave the English Bible to the English people.

It is no wonder that they fall in love with Tyndale. He appears in the biography as a veritable saint, of the St. John type. He was a devoted student also, and deeply and soundly learned in Latin, Greek, and Hebrew, as well as Dutch and German. An autograph letter in Latin from prison, of which a facsimile is given, contains, to be sure, requests for his woollen shirts, and a warmer coat, and thicker leggings, and warmer nightcaps to relieve his catarrh, which is greatly aggravated by the prison-vaults; but, most of all, he begs for his Hebrew Bible, grammar, and lexicon, and a lamp to use in the evening. He says, in another place, that the Hebrew agrees with the English a thousand times more than with the Latin. In a thousand places the Hebrew will turn into good English word for word, where you must fetch a compass in the Latin, and yet have much work to translate it well-favoredly. He had the help, however, of Luther's German translation. Doctor Mombert makes various collations with the Latin and German to elaborate a demonstration that Tyndale translated from the Hebrew. When we compare his work with the Wycliffite translations, however, it is plain that he had the earlier English before him, and his translating from the Hebrew means little more than adjusting the earlier translations to it and correcting here and there. The adjustment, however, is a great work. If we lay the Anglo-Saxon translation alongside Wyclif and Tyndale, it looks as though Tyndale were following the Anglo-Saxon, while the Wycliffites servilely imitate the Latin syntax. But most likely the apostolic spirit determined his style, as it did Luther's, and he seems to fall back on the Anglo-Saxon only because he uses the native English idiom to reach the hearts of simple Englishmen. His success in producing moving English idiom is the despair of all subsequent translators. The felicities of our common English Bible are in great part due to him. Many of these have a new piquancy in the original spelling, which, being faithfully phonetic, continually suggests the origin of words and phrases which go incognito in the disguises of our modern orthography. Tyndale's books were publicly burned at St. Paul's Cross by the Bishop of London. He bought up every book of them he could get, to destroy them. The printers used the Bishop's money to good purpose, so that the Testaments came three-fold thick into England. He saw through it at last, and found, Hall says, "that he had the devil by the fist when he thought he had God by the toe." Finally, they burned Tyndale himself.

One can hardly understand, reading in our time a general narrative of these doings, why there was such fervency on both sides about the translations of the Bible. A look at these reprints goes far to explain it. They are plainly prepared as attacks on papacy and the Pope, and their supporters. "This is the light which the owles cannot abide," he says; "which thing moved me to translate the New Testament." Each of the books of the Pentateuch is accompanied by an introduction, and studded with marginal comments stabbing the man of sin under the fifth rib. Thus, at Genesis, 4:15, "And the Lord put a mark upon Cain," the margin says: "Of this place no doubt the pope which in all things maketh himself equal with God, took an occasion to mark all his creatures . . . so that no king or emperor dare punish them what so ever mischief they do." At Genesis 9:6, "He which shedeth mans blood shall have his blood shed by man," the margin admonishes kings not to suffer the pope's Caimes [Cains] to shed blood, theirs not shed again. At Exodus 32:11, Moses besought the Lord for his people, the margin says: "The pope wolde curse XX hundred thousande as blacke as coles, and send them to hell," followed up at verse 28 with "The pope's bull sleyeth more than Aaron's calf, even 100,000 for

one hair of them"; and at verse 32, "O pitiful Moses. . . . And O abhominable pope with all his merciless idols." There is no stint in attacks on the cruelty, and covetousness, and vice of the papists. At Exodus 36:6, Tyndale wants to know when the pope will "saye hoo" to offerings for building St. Peter's church. Deuteronomy 11:19, "Talk of my wordes when thou sittest in thine house," is margined, "Talke of robynhod [Robin Hood], saye oure prelates." The "prestes of the contre," he says (page 4), "have sene no more latin then that they read in their portesses and missales, except it be Albertus de Secretis mulierum in which they pore day and night," etc. This was not quite the kind of Gospel-book which the Pope and his "Caimes" could be expected to welcome, however lively it may be to a reviewer.

Tyndale's marginal notes are in fact much more interesting than those added by the American editor. It is a pity the latter were put in the margin, where they look like Tyndale's. They are mostly explanations of obsolete words or words in unfamiliar spelling, and will be more useful to amateurs than students. The last remark may be made of the vocabulary also. *Caimes*, which occurs in a quotation above, is explained as a misprint for *Caines* (p. 34); but it is the regular old spelling in Wyclif, and was the common spelling in Tyndale's time. He explains elsewhere (p. 153) his use of *Cain* in his text. *Bruterar*, Deut. 18:10.14, is explained as *murmurer*, but Tyndale himself explains it in another place (p. 634) as "prophesier" or "sothsayer."

Anne Boleyn. A Chapter of English History. 1527-1536. By Paul Friedmann. Macmillan & Co. 1884. 2 vols.

Since Mr. Froude made his futile attempt to "rehabilitate" Henry VIII., the life and actions of this monarch have been subjected to searching and impartial examination by a number of scholars who were by no means prejudiced against the main work of his reign; and the result has been at every step to confirm more and more the accepted judgment of history. The latest study in this field, Mr. Friedmann's 'Anne Boleyn,' is devoted to the ten most important and decisive years of this period; and his verdict is perhaps the most crushing that has yet been rendered. Not merely Henry, but all the leading personages of the tragedy—Wolsey, Cranmer, Cromwell, Anne (all but Catherine herself)—receive merciless condemnation. Possibly the last word upon the subject has not yet been spoken. No doubt there is a certain one-sidedness in a judgment based upon a single series of transactions; but it is hard to see how any one can in future attempt to defend the motives of the divorce, and of the severance of the Anglican Church from the papal authority. This great event must be judged not by the intentions of those who carried it through, but by its effects upon the character of the English people and the development of the English nation.

To say, indeed, that the English Reformation was the work of bad men, acting upon bad motives, is but to characterize the age. Public men everywhere were of the same type. They were no better in France; in Italy they were even worse. And the low tone of public morality and the terrible corruption of morals in this age must be pronounced the outcome—legitimate, if not necessary—of the political and ecclesiastical system of the middle ages. This is what centuries of unlimited ecclesiastical power had ended in. In the work of the Reformation, greed, sensuality, and selfish ambition conspired to destroy the system by which they themselves had thriven. When the convulsions of this stormy epoch were passed, humanity was found the better for them; men—Catholic as well as Protestant—were more earnest, more sincere, more pure than their fathers had been, and Catholics themselves should be thankful that it was no longer possible for a John XXIII. or an Alexander VI. to sit upon the papal throne.

Moreover, condemn Henry VIII. as heartily as we please, it appears clearly enough from these pages that he had a real grievance. In those days, says Mr. Friedmann (i, p. 48), divorces were effected "with a facility of which nobody can form an idea without being acquainted with the composition and practice of the courts before which such cases were brought. They were most corrupt, and always ready to please the strongest." There was no reason why Henry VIII. should not have a divorce, except that he was not the strongest. We suppose nobody doubts that if Charles V. had not been the nephew of Catherine of Arragon, the divorce would have been readily granted, Henry would have died a hearty "defender of the faith," and the English Reformation must have come, as that of Germany came, as a religious and ethical movement.

We find mention (vol. i, p. 264) of Henry's desire "that Elizabeth should be recognized as heir apparent." This should, of course, be "heir presumptive," inasmuch as the birth of a prince would at any moment have destroyed Elizabeth's right of inheritance, while that of an "heir apparent" is indefeasible.

Custom and Myth. By Andrew Lang, M.A., late Fellow of Merton College, Oxford. Harper & Bros. 1885. 12mo, pp. 312.

This work is, for the most part, an attack upon the "philological" method of studying comparative mythology, represented by the "orthodox" school, and especially Prof. Max Müller and Sir George W. Cox. For this method Mr. Lang would substitute the "method of folk-lore," based, not upon comparison of words in allied tongues, but of customs and legends in nations furthest removed from one another in language and physical character. That the philological method has been very one-sided and exaggerated in its interpretations, we have long felt; and we are heartily glad to see so vigorous an exposure of its inconsistencies and shortcomings. But it does not follow that the orthodox school is not often—perhaps generally—correct; or, on the other hand, that the "method of folk-lore" may not exhibit the same or equally great defects. The present volume is only a sketch, and this method, for its complete testing, needs to be worked out as elaborately, and criticised as keenly, as its rival. Mr. Lang's assault has naturally called out protests and vigorous defence on the part of the advocates of the other method. It is a little curious, however, to note how readily they fall into the very faults which they repudiate. Mr. Lang has accused them of want of agreement among themselves—their method "is discredited by the disputes of its adherents." Sir George Cox protests vigorously against this assertion in the columns of the *Academy*, and asks, by way of example, "Does any one doubt that Odin is the wind?" To which Professor Rhys replies, "My impulse would have been just as confidently to ask, Does any one still think that Odin is the wind?" appealing to Fick and Vigfusson for an etymological connection with *vates*, which would make him out to be a god of wisdom. Mr. Isaac Taylor suggests that there are two Odins—one connected with *vates* (the god of wisdom), the other with *vado* (the wind); and brings arguments for the identity of Woden with the Wild Huntsman, which Mr. Vigfusson proceeds straightway to demolish. Max Müller follows with a long argument to show that Woden, *Wuotan*, is "the striker with the thunderbolt"; and M. Gaidoz closes the discussion with a very sensible letter, in which he cites "Hamlet"—"'Tis like a camel," "very like a whale"—as an illustration of the variety of interpretations that may be put upon the same phenomenon. Evidently the science of comparative mythology has not reached the stage yet at which dogmatic assertions are advisable, whether from the point of view of philology or of folk-lore.

The History of the Present Tariff. By F. W. Taussig. G. P. Putnam's Sons.

We have here a very readable account of the protective legislation since 1860. It is a common thing for free-traders to denounce the whole body of tariff law as a mass of crudities and absurdities, flung together without plan or reason. But in fact there is not a line of it that does not show the most careful thought and the most experienced judgment. Every article that is enumerated is dealt in by somebody, and it is for the pecuniary interest of that somebody that the duty upon that article should be most judiciously regulated. To the ordinary citizen it may seem but an innocent absurdity that woollen goods should pay fifty cents a pound and thirty-five per cent. *ad valorem;* but to the blanket and flannel-maker there is no absurdity about it. It means to him a protective duty of about one hundred per cent. upon his manufactures, and entire relief from the competition of the hated foreigner. By the act of 1883, the duty upon cheap cotton goods was reduced from five cents to two and one-half cents per yard. It would be altogether too simple, however, to suppose that the Tariff Commission had any idea of reducing the burdens of the poor. Protectionists are to be feared *vel dona ferentes*. The truth is, that such goods can be made here as cheaply as anywhere, and the lower duty is just as prohibitive as the higher. The last revision of the tariff purported to bring about a general reduction of duties by twenty per cent. As a matter of fact, almost the only duties reduced were those the reduction of which could affect no domestic manufacture, while in many cases duties were materially raised. On the whole, the changes were in favor of increased protection.

Although this little book is but a sketch of the principal measures of protection, it is perhaps on that account the more valuable. There remains nothing to be said upon the theory of free trade; there remains everything to be done in arousing the American people. Tracts like this will be read by many who would not open a bulky volume of the same title, and they will find that what they regarded as the most confused and perplexing of subjects is not only comprehensible but also interesting. The discussion of the wool tariff is especially suggestive, although, of course, only an expert in the trade can speak with authority upon such a question. The style of the author is temperate throughout, and, indeed, he seems disposed rather to understate than to exaggerate his case.

Progressive Morality: an Essay in Ethics. By Thomas Fowler, President of Corpus Christi College, etc., Oxford. 12mo, pp. 201. Macmillan & Co.

Professor Fowler's essay is a clear and condensed work of sound practical good sense, but without much that is very brilliant or original. He avoids theoretical discussion, and touches disputed points too briefly to do much to convince those who differ with him; and this, although it may make the work better fitted for student use, naturally renders it less enjoyable to the general reader, who usually finds it more entertaining to hear about the mistakes of others than to be told what he should do himself. The author's main

position is the sound one that the theory and practice of morality have advanced and are capable of advancing still further, under the teaching of experience; but he modifies the current utilitarianism by making it aim, not at perfectionism or at greatest happiness, but at social welfare, thus setting up the well-being of society in the place of egoistic impulses for either one's own elevation or one's own pleasure. He admits that the strongest element in that "social sanction," as it has been called, which is perforce our main reliance for good influence outside of the narrow field of legal control, is really egoistic rather than social, being in substance a proud desire to act up to one's own standard of *noblesse oblige;* but he explains that this personal standard is, after all, determined by social and not by individual needs, and should be bettered as society grows. Here, however, we come upon the weakest side of the book—a failure to consider the moral side of the laws of growth and decay. There is no examination of either of the two great theories of evolution which have been made so prominent of late years, by Spencer and Darwin. These are far too important to be overlooked, for if it is true that progress must take place along the line of differentiation marked out by Spencer and Fiske, or by the path of natural selection made plain by Darwin and Galton, in either case our views of ethics must receive some alteration to fit them to these new conceptions of the meaning of our surroundings. If the welfare at which we are to aim is that of the future generations, and it can be effected only by means which are within our reach, but ill understood and of slow operation, then the explanation of those means becomes of transcendent importance, and the happiness of the moment is hardly worth considering in comparison with them.

In the concluding chapter on the practical application of his views to our conduct in particular cases, the author goes over ground much of which is already pretty well worn; but one can see the influence of the feeling of the day in his remarks upon the wrongfulness of bribery, and of indiscriminate charity and inconsiderate subscriptions. Of education, he says that the present dangers threaten the richer rather than the poorer classes, on account of the luxurious habits, the love of idle amusement, and the indifference to the responsibilities which wealth and position bring. It is only by teaching each class the duty of assuming its share in furthering the well-being of the community that we can avoid the threatened convulsions, for

"as intelligence expands, and a sense of the importance of social coöperation becomes diffused, it is almost certain that the existence of a merely idle and self-indulgent class will no longer be tolerated. Hence it is as much to the interests of the wealthier classes as of society at large that their children should be educated with a full sense of their social responsibilities, and equipped with all the moral and intellectual aptitudes which are requisite to enable them to take a lead in the development of the community of which they are members."

The only passages with which we should take issue in this chapter are those in which Professor Fowler speaks of avoiding the payment of Custom-house duties and other taxes, or dodging railway fares, or not paying one's other bills, as theft. Of course these are all wrong, but the legal distinction between these things and stealing should not be ignored, for it is not a legal quibble, but a profound moral distinction between acts of omission and acts of commission which is felt by almost every one, and supported by sound principle.

Artistic Anatomy. By Mathias Duval. Translated from the French by Frederic E. Fenton, M.R.C.P.E. Cassell & Co.

THE introduction of anatomy into the curriculum for artists was the beginning of the pedantry of art. There is in no direction a clearer case of counter-indicated study as qualification for any special education than that of the study of anatomy for the artistic. It is not only unsound in theory, but history practically proves its unsoundness. The great masters of the human figure, and especially in action, were the Greeks, of whom the author of this treatise says, what, for the rest, everybody knows:

"The Greek sculptors have reproduced the human form with marvellous anatomical exactness; in fact, the works of Phidias, those of Myron, those of Lysippus and of Praxiteles, those of Agasias, and other masterpieces given as models in all schools of art, are such that it is impossible to find fault with them, or to discover in them the least inexactitude, either from an anatomical or a physiological point of view. . . . At the time when these works of art were produced, the study of anatomy, or even the dissection of the human body, had not yet been attempted."

Yet the author goes on to qualify this general statement by a note as follows: "We must look for other reasons than ignorance or indifference to explain the fixed scapulæ in pre-Phidian sculpture, or the exaggerated forms given to the *extensor brevis* of the foot and other muscles"; and, he might have added, the daring violation of anatomy in the Apollo Belvedere and other statues.

That the knowledge of anatomy we now possess was not necessary to the perfection of sculpture, Greek art showed; that our possession of it does not lead to equally great art, is shown by the sculpture of our day; that the study of it is likely to divert artists from true excellence, is shown by the turgid sculpture of the imitators of Michael Angelo, and the effectless exaggerations which here and there crept into his own work.

There is sound theoretical reason for this antagonism. The business of an artist is to see, not the scientific quality of things, but their appearances; and when a man knows what a thing really is, he is likely to put the scientific fact in place of the actual appearance on which the fidelity of the art depends. He immediately inclines to show traits of his subject which do not really appear; hence exaggeration. What we want of the artist in his perception of nature is to recognize what is really seen, and this the Greek did with the human figure as no one ever will do it if dominated in his impressions by scientific facts; he will always more or less incline to see what he knows to be there, whether it is actually visible or not, and in corresponding degree to miss the exact appearance of the thing he regards.

We believe that the introduction of any science, even of geology, into art, tends immediately to pedantry and a certain insensibility to the lines of beauty in nature, and that an artist would be no better, but probably the worse, for the acquisition of all the natural sciences. Sharpening of the vision by faithful study; quickening all the perceptive faculties by simplifying and purifying the moral and intellectual conditions of life, and so protecting the sources and channels of emotion and enthusiasm; and, chief of all these (so far as a man may choose the manner of his living), a simple, energetic, and natural, as opposed to our artificial and over-civilized, life, such as the Greeks lived (and to which probably they owed, quite as much as to their unrestricted opportunities of seeing finely-developed humanity, their intellectual subtlety and delicate perception of beauty and artistic fitness), are the proper means of education of the artistic faculties with all those in sympathy with them, as well as of the education of the intellect in its roundest and fullest dimensions. Modern education drives us into specialties and one-sidedness; and the sciences, when not positive hindrances, are encumbrances to the distinctly artistic methods of vision and impression.

To the critic, anatomy and the sister sciences are an aid, because criticism is analytic and, in a certain way, scientific. To such as need and can profit by the study of the anatomy of the bones and muscles, the work of M. Duval is an unquestionably useful handbook. It is a compact and well-arranged manual, and embodies the lectures given at the École des Beaux Arts at Paris. The author errs, we believe, in common with many others, in presenting the canons of Greek sculpture as guides to artists; they were as variable with the Greeks as the types and epochs, and when they began to be adopted as authority sculpture had already found it necessary to lean on them because it was in its decline. Canons are, like anatomy, for critics and not for artists; and there is no surer sign of the lifelessness of a sculptor's art than his boast that he has discovered and applied a canon.

The Rescue of Greely. By Com. W. S. Schley and Prof. J. S. Soley, U. S. N. 8vo, pp. viii, 277. Chas. Scribner's Sons. 1885. Maps and Illustrations.

THE latest addition to our Arctic literature is an extremely satisfactory book. The text is fairly, if not luxuriously printed; the illustrations effective, though somewhat coarse; the maps excellent, and the binding quiet and tasteful. The authors state in the preface, with reason, that the history of the rescue would hardly be complete without some account of the original expedition to Lady Franklin Bay, and of the two abortive voyages undertaken for its relief. In giving this account they have aimed at a description of the events as they occurred, without criticism of the individuals concerned in them. This part of their task appears to us well done. The peculiar attitude of the late Secretary of War, which unquestionably had serious influence on the train of events recorded, is veiled or ignored—a necessary result of the official relations of the authors of the work. With this exception it seems to us that the presentation of the facts has been made to indicate very well the manner in which official incompetence, the vicissitudes of Arctic seasons, and the blundering of poor Garlington, coöperated to bring about the final catastrophe. How the unparalleled run of the *Proteus* to Lady Franklin Bay in 1881 contributed its quota to the total by inducing a false sense of ease and security in those charged with the organization of relief expeditions, is clearly brought out. How great events may turn on trifles, is shown by the results of the failure to profit by the suggestions of the celebrated Cazianc memorandum, and of Garlington's failure to carry out his prearranged programme with the *Yantic.* Had either been decided differently, the probability is that the Greely party might have been saved from starvation.

Leaving this branch of the subject, the plans of Weyprecht and Howgate are clearly set forth, and how, out of the lobbying by Howgate for an ill-considered and abortive expedition, grew the possibility of a scientific station of the Weyprecht series; which, at the same time, was bound to an objectionable locality by its connection with the earlier plan. This recalls vividly the evolution, in former days, of the Wilkes exploring expedition out of an attempt to obtain from Congress an appropriation to find "Symmes's Hole."

Confronted with the crisis, operations for a rescue were imperative. To the tireless energy, judgment, and capacity of Secretary Chandler of the Navy a well-merited testimony appears. That he was ably seconded by Schley and others, goes without saying; but it is certain that the prime

element of success was the vigor with which all hands in the bureaux were stirred up, and given to understand that Schley was to have what he wanted and when he wanted it, and that no excuse for failure would be accepted.

The graceful and timely manner in which our British cousins came forward with the *Alert* in our instant of need is appropriately described. The exertions of the daughter of a Massachusetts Senator, by which Congress was moved to provide for a reward for any whaler who should render service in the relief of the Greely party, are not alluded to; though we do not take this silence to be invidious. Nevertheless, we believe that the promptness of the rescue was materially stimulated by the emulation which the reward excited, and that the lady in question may fairly congratulate herself on having been instrumental in saving several, if not all, of the lives of those concerned.

A little more than one-third of the book is devoted to the successful relief expedition and its return. The account is less vivid than that of Engineer Melville, recently alluded to in these columns, but more details are given, and the seamanship and good qualities of the whalemen and sealers in the race are recognized in an equally frank and manly way. The pathos of the situation at Cape Sabine is inherent; we can but thank the authors that they have spared us any fine writing. The literary form of the narrative is quiet, straightforward, and businesslike, as is eminently appropriate to so serious a topic. In conclusion, we can but express our gratification that a subject, in many respects so delicate, should have been handled in so dignified and worthy a manner, and our belief that the eventual verdict of experts on the matters relating to the relief expeditions will not greatly differ from that more or less directly intimated in the work under review.

Sir Moses Montefiore: a Centennial Biography. With selections from letters and journals. By Lucien Wolf. Illustrated. Harper & Bros. 1885.

THE name of Montefiore was until lately probably atmost unknown among Christians in the United States, except through a vague echo from the English press which made itself heard from time to time in our newspapers, especially within the past few months, when its owner was accomplishing the feat of surviving his hundredth year. Nevertheless, Sir Moses Montefiore comes of what would be in this country considered an old family, and is one of the remarkable men of our time. Like many other men gifted with the faculty of money-getting, his interests are not very wide; indeed, outside of Judaism he has had few. But as a Jew, as a leader in the movements for Jewish emancipation and in all efforts to protect his race from persecution, he has played a prominent part. In the curious Mortara case, which aroused the sympathies of Christians about as much as those of Jews, and in the investigation of the Damascus atrocities of forty years ago, he was very active. But his philanthropy, or rather race-feeling, also found other channels in which to benefit his people; he encouraged the Jews, in the Holy Land itself, to devote themselves to profitable industry, and if the agricultural dream of Jewish reformers were practicable, he would have been the man to carry it out. Mr. Wolf's life is well written, and gives an evidently truthful and at the same time pleasing picture of the old man.

Richelieu. By Gustave Masson. London: The Society for Promoting Christian Knowledge; New York: E. & J. B. Young & Co.

THIS Life of Richelieu corresponds with those of Constantine, Charlemagne, and Hus, in other volumes of the "Home Library." Mr. Masson's name is a guarantee that the work is carefully and accurately done. For the historical point of view, it is enough to say that he is a hearty admirer of the great statesman, and considers his work to have been very essential in the development of the French nation. This is a question too large to discuss in our present limits, and all will admit that some such work as his was necessary in order to make France into a nation. Nevertheless, the autocracy of Louis XIV. was built upon Richelieu's foundation; the decay of the time of Louis XV. was the natural outcome of this autocracy; and all this series of events culminated by a natural sequence in the cataclysm of the French Revolution. Richelieu's contemporary, Strafford—perhaps as great a man—lost his head for attempting to establish in England a régime like that which Richelieu was successfully building up in France; and we trace back the liberties which we enjoy to the frustration of Strafford's scheme. We know very well that France was not England; but the question will obtrude—Could not unity have been established even in France without bringing with it a deadening despotism?

Architectural Perspective for Beginners; containing eleven plates of practical examples, considered with reference to a student in an architect's office. By F. A. Wright, architect. William T. Comstock. 1885.

MR. WRIGHT'S thin quarto aims at teaching the essential graphical processes of architectural perspective, without treating of them geometrically. The processes are not complicated; so far as they can be learned without personal teaching, they can be learned from this book, we should say. Probably there is nothing of the kind in the market that is so good, and it is surprising to see in how small compass the things which it is actually necessary to do can be stated. The essential difficulty—that a person so taught is taught very narrowly, and not fitted to take up new problems or to vary his procedure intelligently—is, we fancy, insuperable, though fortunately not fatal. Mr. Wright has the advantage of understanding his subject, which is not the case with most persons who have undertaken to popularize it, and so he cannot dismiss it without an effort to clear up in a supplementary chapter the rationale of his procedures. How much is accomplished by such compromises between rule-of-thumb and theory is always doubtful. Here the effort at conciseness interferes more or less with precision, and now and again leads to misstatement. Half of the dozen plates in the volume are selected illustrations of various modes of rendering. The letter-press comments give some useful hints touching practice, but we think the author overpraises the English draughtsmen, whose work, in spite of unsurpassed freedom, vivacity, and sureness of handling, is apt to be overwrought even to fussiness. The example from Collcutt, plate 9, which is commended most warmly, has suffered, it is true, from doubled reproduction, but indicates an original labored, harsh, and spotty—much inferior to the quiet breadth of Mr. Norman Shaw's clear drawing above it. We must take exception, by the way, to the distinction made here and there between "architectural" drawing and "artistic." Mr. Wright evidently means literal and picturesque.

Little Arthur's History of France. From the earliest times to the fall of the Second Empire. With map and illustrations. Thomas Y. Crowell & Co. 12mo, pp. 295.

YOUNG people who have read 'Little Arthur's History of England' will be glad to have a history of France on the same plan, and of the same high excellence. The title of both books is liable to mislead, by making it appear that they are more distinctly "children's books" than is the case. The preface to this volume says that it is "not beyond the comprehension of an intelligent boy or girl of ten or eleven"—that is, "some two years older" than those for whom the 'England' is adapted. For our part, we should consider the 'France' well suited to the age of fourteen or fifteen, and not inappropriate for an even more advanced age. Indeed, many adults who wish a short readable history of France, would find this book exactly what they want. We read on page 16 that by the Treaty of Verdun (843) "Lothaire took Italy and part of the south of France." It ought to be stated—not merely for the sake of accuracy, but as an important historical fact—that Lothaire's portion embraced *all the east* of France, a strip running from the North Sea to the Mediterranean. Excellent as the book is, the illustrations are poor, and there is only one, very inadequate, map.

The Patriarchal Theory. Based on the Papers of the late John Ferguson McLennan. Edited and Completed by Donald McLennan, of the Inner Temple, Barrister-at-Law. Macmillan & Co. 1885. 8vo, pp. 355.

MR. MCLENNAN'S 'Patriarchal Theory' is a polemic directed against the theory advanced by Sir Henry Maine in his 'Ancient Law,' and repeated in his 'Law and Custom,' that the patriarchal family is the most primitive form of society. In the latter work, when considering the points at controversy between Mr. Morgan and Mr. McLennan, Sir Henry takes issue with them both, in denying the probability of a stage of promiscuity in the history of the human race, and asserts that the patriarchal organization, if not the earliest actual form of society, was, at any rate, the earliest of which we can take cognizance. The book before us contains a strong and elaborate argument in opposition to this view, fortified by illustrations from a wide range of observation. Sir Henry Maine's principal argument, indeed, the *patria protestas* and agnatic system of relationship among the ancient Romans, was conclusively answered some years ago, as it seems to us, by Mr. Young, in the volume of 'Essays in Anglo-Saxon Law.' That the patriarch was the actual starting-point in the human race is hard to conceive; Abraham and Lot belong to a stage of society far removed from primitive savagery. The theory presented by Sir Henry Maine can at best be taken as an hypothesis, describing a phase of things through which all communities have passed, and back of which it is not at present possible to trace the steps of society with any certainty. But with the active investigation of which the book before us is an evidence, we have no doubt that the present obscurity will in time be cleared up. Of the correctness of Mr. McLennan's own theory of primitive society we have great question; but the present work is of high value, at least as a collection of significant facts and an exposure of the weak points in Sir Henry Maine's system.

The Field of Honor: being a Complete and Comprehensive History of Duelling in All Countries, etc. By Maj. Ben C. Truman. Fords, Howard & Hulbert. 1884.

THIS is a pretentious and disappointing book. It sadly lacks method. The divisions which the author makes of his subject are not clear, and even then are not adhered to. A great omission is the failure to give authorities—in a work, too, which is necessarily and confessedly a compilation. The author seems to have thrown a dragnet over the whole creation, and to have brought

all his catch to book, indiscriminately. As if his long pages of dreary chronicles of "meetings" were not enough when filled with matter that might fairly be called germane, he lugs in "artillery duels," and finds room on his "field of honor" for the "duel" of the *Kearsarge* and *Alabama*. The style is loose and careless. It may have been bad by nature, or corrupted by too much contact with the writings of newspaper correspondents and reporters, from whom Major Truman cites copiously and with great appreciation. Such phrases as "his iron mind" and "a deadly demeanor" betray their origin. In short, we fear that Major Truman indulges all too flattering expectations in believing that "descriptions of duels . . . are generally very delightful reading, and are seldom 'skipped.'" He certainly deserves credit for great industry and perseverance in having given his leisure time for twenty years, as he says he has, to the preparation of this book. We could wish that his other qualifications had equalled his diligence. The book is well printed, and, not without fitness, bound in a gory red.

To Kairwân the Holy: Scenes in Muhammedan Africa. By Alexander A. Boddy. Illustrated by A. F. Jacassey. London: Kegan Paul, Trench & Co.; New York: Scribne & Welford. 1885. Pp. xiv, 275, 8vo.

A JOURNEY to-day to the Barbary States of North Africa, even if it includes a visit to Kairwân, is robbed of all its former romance. Mr. Boddy landed at Tripoli on his outward voyage, and spent a few days in wandering about its streets and in riding across the desert of "rosy yellow sand" to the first oasis. A coasting steamer took him to Susa, whence he drove in a carriage to Kairwân. The distance is but forty miles, and western civilization is kept constantly in mind by the "tram rails" laid along the camel track by the French in 1881. Presenting his passport to the French sentinel who guarded the gates, he was allowed to enter the sacred city from which for more than twelve centuries all unbelievers were so jealously and successfully excluded. His passport even opened to him the doors of the mosques and the tombs of the saints, and, notwithstanding the risk of a fatal encounter with a religious fanatic, he penetrated to the very holiest shrines. After four days of unwearied sight-seeing under a fierce June sun, he took his carriage again and drove a hundred miles over a treeless plain to Tunis. A visit to Carthage and a few hours spent at Bouah, the home of St. Augustine, finish the story, which is told in a pleasant, though at times somewhat flippant way. Mr. Boddy represents the intercourse between the Mohammedans of all North Africa to be close and frequent. At Kairwân, especially, where is the seat of the Abd-el-Kadr el Ghelani, the great confraternity to which the Mahdi belongs, his messengers are believed to be constantly bringing information of all that takes place in the Sudan. In a khan in the heart of Tunis, Mr. Boddy, who can speak Arabic, got involved in a controversy about Arabi Pasha and the Mahdi with some Moors, which threatened to become so heated that he deemed it prudent to retire. The book is pleasantly illustrated.

BOOKS OF THE WEEK.

Allgemeine Weltgeschichte. Parts 4-7. B. Westermann & Co.
Baird, Dr. C. W. History of the Huguenot Emigration to America. In 2 vols. Dodd, Mead & Co. $5.
Barr, Amelia E. Jan Vedder's Wife. Dodd, Mead & Co. $1.25.
Beowulf. Translated by Prof. James M. Garnett. 2d edition, revised. Boston: Ginn, Heath & Co.
Briggs, Prof. C. N. American Presbyterianism: its Origin and Early History. Charles Scribner's Sons. $3.
Brinton, Prof. D. G. The Lenâpé and Their Legends, with the Complete Text and Symbols of the Walam Olum. [Brinton's Library of Aboriginal Literature, No. 5.] Philadelphia: D. G. Brinton.
Braddon, Miss M. E. Wyllard's Weird. Harper's Franklin Square Library. 20 cents.
Brown, E. W. The Life of Society. A General View. G. P. Putnam's Sons. $2.
Buswell, H. F. The Law of Insanity. Boston: Little, Brown & Co.
Bunce, O. B. The Adventures of Timias Terrystone. D. Appleton & Co. $1.
Clark, E. H. G. Man's Birthright; or, The Higher Law of Property. G. P. Putnam's Sons. 75 cents.
Clermont-Ganneau, Ch. Les Fraudes Archéologiques en Palestine. Paris: Ernest Leroux.
Custer, Elizabeth B. Boots and Saddles; or, Life in Dakota with General Custer. Harper & Bros. $1.50.
De Witt, Dr. J. Praise Songs of Israel: a New Rendering of the Book of Psalms. Funk & Wagnalls. $1.50.
Dodge, Mary B. The Gray Masque, and Other Poems. Boston: D. Lothrop & Co.
Edgren, Prof. H. The Sanskrit Language. Trübner & Co.
Engel, M. Die Lösung der Paradiesfrage. Leipzig: Otto Schulze.
Fenton, F. St. Paul's Epistles in Modern English. De Witt C. Lent.
Fenollosa, Prof. E. F. Review of the Chapter on Painting in Gonse's 'L'Art Japonais.' J. R. Osgood & Co.
Fuller, Prof. S. The Revelation of St. John the Divine, Self-Interpreted. Thomas Whittaker. $2.50.
Gibbs, J. W. M. The Works of Oliver Goldsmith. New ed. 5 vols. Vol. III. Scribner & Welford.
Giffen, Dr. R. The Progress of the Working Classes in the Last Half Century. With Note on American Wages. G. P. Putnam's Sons. 25 cents.
Gladden, Rev. W. Working People and Their Employers. Funk & Wagnalls. $1.
Greer, T. A Modern Dædalus. E. P. Dutton & Co. 75 cents.
Halévy, L. Un Mariage d'Amour. Wm. R. Jenkins. 25 cents.
Hay, Mary Cecil. Lester's Secret: a Novel. Harper's Franklin Square Library. 20 cents.
Hitchcock-Brown, Professors. Teaching of the Twelve Apostles. New edition, revised and enlarged. Charles Scribner's Sons. $2.
Holloway, Laura C. Chinese Gordon, the Uncrowned King. Funk & Wagnalls.
Jordan, W. Die Sebalds. Roman aus der Gegenwart. Two vols. B. Westermann & Co.
Kingsley, C. Madam How and Lady Why; or, First Lessens in Earth Lore for Children. Illustrated. Macmillan & Co. 50 cents.
Lewald, F. Vornehme Welt, etc. Chicago: L. Schick. 20 cents.
Litchfield, Grace Denio. The Knight of the Black Forest. Illustrated. G. P. Putnam's Sons. 75 cents.
Littell's Living Age. Vol. 164. January to March, 1885. Boston: Littell & Co.
Louis Pasteur, His Life and Labors. By his Son-in-Law. From the French. D. Appleton & Co. $1.25.
Lyall, Dr. W. R. Propædeia Prophetica; or, The Use and Design of the Old Testament Examined. New edition, with notes by Canon Pearson. London: Kegan Paul, Trench & Co.
Malmesbury, Earl of. Memoirs of an Ex-Minister. An Autobiography. New edition. Scribner & Welford.
Mansi, J. D. Sacrorum Conciliorum Nova et Amplissima Collectio. Editio instaurata. Part I. B. Westermann & Co.
Marshall, A. The Present Position of Economics. Macmillan & Co.
Marchand, C. M. New Method of French Conversation. Fourth Edition. Boston: Carl Schoenhof.
McCosh, Pres. J. Herbert Spencer's Philosophy, as Culminated in His Ethics. Charles Scribner's Sons.
McElroy, Prof. J. G. R. The Structure of English Prose. A. C. Armstrong & Son. $1.20.
Messenger, Lillian R. Fragments from an Old Inn. G. P. Putnam's Sons. $1.25.
Mitchell, S. W. Lectures on Diseases of the Nervous System, Especially in Women. 2d ed. Philadelphia: Lea Brothers & Co. $1.75.
Mommsen, Th. Römische Geschichte. Band V.—Die Provinzen von Cæsar bis Diocletian. Berlin: Weidmann; New York: Westermann. $3.30.
Monteith, J. New Physical Geography. For Grammar and High Schools and Colleges. A. S. Barnes & Co.
Murfree, W. L., Sr. A Treatise on the Law of Official Bonds, and Other Penal Bonds. St. Louis: Review Publishing Co.
Nature and Reality of Religion. A Controversy between Frederic Harrison and Herbert Spencer. D. Appleton & Co. $1.
O'Brien, F. J. The Diamond Lens, with Other Stories. Charles Scribner's Sons. 50 cents.
O'Connor, B. F. Choix de Contes Contemporains. Henry Holt & Co. $1.25.
Our Living World. An Artistic Edition of the Rev. J. G. Wood's Natural History of Animate Creation. Complete in 42 Parts. Parts 1-8. Selmar Hess. 50 cents per part.
Pater, W. Marius, the Epicurean: his Sensations and Ideas. 2 vols. Macmillan & Co. $6.
Pattison, Mark. Memoirs. Macmillan & Co. $2.50.
Perry, Bishop W. S. The History of the American Episcopal Church. 1587-1883. In two vols. Vol. I.—The Planting and Growth of the American Colonial Church. 1587-1783. Boston: J. R. Osgood & Co.
Price, Eleanor C. Gerald: a Novel. Harper's Franklin Square Library. 20 cents.
Pusey, Canon E. B. The Minor Prophets. With a Commentary. Vol. I.—Hosea, Joel, Amos, Obadiah, and Jonah. Funk & Wagnalls. $3.
Raffalovich, M. A. Tuberose and Meadowsweet. London: David Bogue.
Remsen, Prof. I. An Introduction to the Study of the Compounds of Carbon; or, Organic Chemistry. Boston: Ginn, Heath & Co. $1.30.
Riemann, Hugo. Musikalische Dynamik und Agogik. B. Westermann & Co.
Rogers, W. B. A Reprint of Annual Reports and other Papers, on the Geology of the Virginias. D. Appleton & Co.
Sack, I. Die Religion Altisraels. Berlin: Wilhelm Friedrich; New York: B. Westermann & Co.
Scomp, Prof. H. A. A Manual of the Romaic or "Modern" Greek, and its Application to Ancient Greek. Nashville: Southern Methodist Publishing House.
Schley, Commander W. S., and Soley, Prof. J. R. The Rescue of Greely. Illustrated. Charles Scribner's Sons. $3.
Shaw, Marian. Queen Bess; or, What's in a Name? G. P. Putnam's Sons. $1.

Spofford, A. R. American Almanac and Treasury of Facts, Statistical, Financial, and Political, for the Year 1885. American News Co.
Stanford's Popular Map of the Seat of Military Operations in the Sudan. G. P. Putnam's Sons. 40 cents.
Stearns, W. A. Labrador: A Sketch of its Peoples, its Industries, and its Natural History. Boston: Lee & Shepard.
Stormonth, Rev. J. A Dictionary of the English Language. The Pronunciation Carefully Revised by the Rev. P. H. Phelp. Harper & Brothers.

JUST READY.

Vol. III. Taine's

French Revolution.

Completion of the work.

By H. A. Taine, D.C.L. Oxon. Translated by John Durand. Large 12mo, $2.50. The complete work, 3 vols., $7.50.

GEO. E. WARING, JR.'S

How to Drain a House.

Practical Information for Householders. By Geo. E. Waring, jr., M. Inst. C. E., etc. 16mo, Illus., $1.25.

HENRY HOLT & CO., N. Y.

European Travel.

OVER THE OCEAN; or, Sights and Scenes in Foreign Lands. By Curtis Guild. Price $2.50.

ABROAD AGAIN; or, A Fresh Foray in Foreign Lands. Same author. Price $2.50.

EUROPEAN BREEZES. By Margery Deane. Price $1.50.

AN AMERICAN GIRL ABROAD. By Adeline Trafton. Price $1.50.

BEATEN PATHS; or, a Woman's Vacation in Europe. By Ella W. Thompson. Price $1.50.

These volumes form a complete library of European travel and should not be neglected by all who intend making the tour abroad. Sold by all booksellers.

LEE & SHEPARD, Publishers, Boston.

Have you a Collection of Books that needs Cataloguing?

THE LIBRARY CATALOGUE AND INDEX is intended for private collections. It is arranged so that books may be referred to by *author* and *title of work*. Spaces for 1,500 titles. Simple yet thorough. Highly approved by those who have used it.

THE LIBRARY CATALOGUE AND INDEX is handsomely bound and lettered in one volume, quarto (6¾x8¼ inches), made of the best paper, and will be mailed, postpaid, to any address, on receipt of $2.50 by the publishers

SHEPARD & JOHNSTON,
146 Monroe St., Chicago, Ill.

Johnson's Guide to Homœopathic Practice

Designed for the use of Families and Private Individuals.

494 pages, 8vo, bound in cloth. Price, $2.00. Sent free by mail on receipt of price.

This is the latest work on that subject issued, and will be found of great service to all desirous of treating the common ailments themselves in the most expeditious and safest manner. Address BOERICKE & TAFEL, HOMŒOPATHIC PHARMACIES at New York, Philadelphia, Baltimore, Pittsburgh, Chicago, or Washington. The Oldest Homœopathic Medicine House in the U. S. Established in 1835.

CATALOGUE for PRIVATE LIBRARY.—A blank-book of 240 pp., arranged with columns for entering Title, Author, Publisher, etc. Indexed through, alphabetically. Bound in boards, with leather back and corners; size, 8½ x 7¼. Price $2 50, post-paid. Sent on receipt of price, by Publisher of the *Nation*.

The Nation.

NEW YORK, THURSDAY, APRIL 16, 1885.

The Week.

THE number of people who are coming round to the belief that President Cleveland is honest, and is giving the country a good Administration, is very remarkable. We have commented elsewhere on Mr. William Walter Phelps's conversion. Mr. John Sherman's is almost as striking. He says he expects the affairs of the nation to be administered honestly, and is on "the bull side" of the money market. He does not like war, but if anybody else does, he is not sorry to make a little money out of the fighting. Then there is our funny sour old critic, the *Tribune*, which actually commends Mr. Phelps's and Mr. Sherman's approval of the Administration. But it had to make one "reserve." It appears that Mr. Phelps, in his youthful impetuosity, has failed to observe that Mr. Cleveland is trying not to give the country an absolutely good administration, but as good an administration as possible on the plan of "putting the gray above the blue." But then we have little doubt that if the matter were laid before Phelps in a plain, simple way, so that he could grasp it, he would admit that Mr. Cleveland's plan of putting blue and gray on exactly the same level is on the whole the best. Most of the troubles of government in this world have come from not keeping all colors on the same level. There is in every country a large body of people who are not happy unless they are "above" somebody else, for some reason or other. They always want somebody kept down—sometimes because he is a "Papist," sometimes because he is a "heretic," sometimes because he is black, and sometimes because he is gray, sometimes because he is an aristocrat, and sometimes because he is a "quondam rebel," or at some time or other in his life did something he then thought right, but which turned out to be wrong. But wise statesmen send politicians of this class to caterwaul their sorrows to each other over their tea or their rum, and pay no heed to them.

The Hard Shells of the Union League Club passed a resolution last week intended to counteract the effect of the resolution adopted a month ago, which requested the Committee on Admissions not to ask candidates for membership how they voted at the last Presidential election. The latter resolution was not rescinded, but the following was adopted as additional to it:

> "Resolved, that the Club reaffirms and declares its adherence to the resolution of 1880, which reads as follows:
>
> "'Resolved, That the Club expresses the hope that the Committee on Admissions will not report for admission the name of any person whose views on public matters do not, in their opinion, agree with those of the Republican party, as heretofore expressed.'"

The "testimony" of the Club, therefore, is to the effect that membership is to be confined hereafter to Republicans, but that it is not necessary, in order to be a Republican, that a person should have voted for Mr. Blaine at the last election. In default of this test, how is it to be learned whether a candidate for membership is a Republican? The new resolutions prescribe that he must be a person whose "views on public matters" agree with those of the Republican party. This brings up the question, what are Republican "views on public matters"? This conundrum, when put by one of the speakers, was received with a ripple of laughter, which rose to a guffaw when the counter-interrogatory was put, "What are the principles of the Democratic party?" An answer to the former question was attempted to be made by another speaker, whose effort was certainly not the greatest of his life, and was brought to a close by the most manifest signs of impatience on the part of his adherents. The answer was in effect that "loyalty" was the test of Republicanism, meaning loyalty twenty years ago, for nobody doubts that the Democrats are loyal enough to the Government to-day. A third speaker, who had announced at the previous meeting that he did not vote for Mr. Blaine, gave utterance to the feeling of the majority of the members by saying that the Union League Club was not a good place for Democrats, and that they had better not try to get in because they would be uncomfortable, but that no distinction should be made among persons who commonly act with the Republican party. This was the best possible substitute for a catechism of Republican principles, and it is well that no more drastic measures were taken to define them.

The Louisville *Courier-Journal's* Washington despatch of a recent date says that "Edmund Jussen, of Illinois, selected for Consul at Vienna, is a brother-in-law of Carl Schurz, and was appointed at the request of Mr. Schurz." The latter statement is equally injurious to both the gentlemen named. Mr. Jussen is a prominent Democrat, having acted with that party for at least twelve years. His identification with the party is of as long standing and of as distinct a character as that of Judge Trumbull or General Palmer. His position and talents are such as to qualify him abundantly for the position to which he has been appointed, without any assistance from a brother-in-law, however highly distinguished. But as a matter of fact he was not recommended by Mr. Schurz for the Vienna consulship or for any other place, and we believe it is true also that Mr. Schurz has not recommended anybody for any position under the present Administration, although he, in common with the Independents generally, favored the reappointment of Postmaster Pearson on public grounds.

The London correspondent of the *Tribune* declares that—

> "In the early days of Garfield's brief Administration, it was understood that he meant to recommend to Congress the raising of the legation to the rank of embassy. Had he lived we should perhaps have seen for the first time in history an American Ambassador at the Court of St. James. Much would have been gained by the change had it been complete. An American Minister who had been waiting an hour in Lord Granville's anteroom, would not then have had to wait another hour while the Ambassador who arrived after him walked in before him and transacted his errand. That is but one of many practical advantages to be gained by such a promotion: it would facilitate business."

The fact is, that the rule of precedence properly applies only in approaching the sovereign, and not to the course of current business at the Foreign Office. Mr. Bancroft, when American Minister at Berlin, made an issue on the question, and Prince Bismarck decided it Mr. Bancroft had waited for some time in the anteroom for audience. Lord Loftus, the British Ambassador, came in later, and when the door opened he entered and left Mr. Bancroft waiting. The American Minister retired and addressed a note of complaint to the Foreign Office, which accepted Mr. Bancroft's view as correct. Prince Bismarck ordered that henceforth all diplomatic agents, should stand on the same level in that sense, and that the rule should be, as in a barber's shop, "first come, first served."

If war be declared between Great Britain and Russia, it is likely to be fiercely waged on sea, as well as on land, and to extend to the capture of the ships and cargoes that may be under the flag of the belligerents. Not yet does international law, or do treaties between Great Britain and Russia, exempt private property at sea from capture if belonging to citizens or subjects of the enemy, and found under an enemy's flag. Both Great Britain and Russia stipulated at Paris that "Privateering is and remains abolished." President Pierce refused on the part of the United States to accede to the declaration unless an addition could be made exempting from capture all private property at sea excepting contraband of war. France, Russia, Italy, and Holland favored the addition, but Great Britain opposed it. Russia was said, at the time, to favor it. In 1857 President Buchanan withdrew what came to be known in international jurisprudence as "The Marcy Amendment." In our civil war of 1861-5 Congress authorized President Lincoln to issue letters of marque, but he never used the power. The Confederate Government also offered its letters of marque, but as the United States threatened to treat the holders as pirates, nearly all the maritime Powers warned their subjects serving in such privateers that they would not protect them. Russia can, however, arm, man, and put in commission, to scour the seas for English vessels and cargoes, as many ships as she can build or buy and own. One swift ocean steamer, well armed and cruising under the Russian flag and under Russian command, could do terrible execution on the rich and unarmed maritime commerce of England.

The second article of the Declaration of Paris in 1856, to which England and Russia assented, also proclaimed that "The neutral flag covers enemy's goods, excepting contraband of war." If war should unfortunately be waged on the ocean between England and Russia, that declaration, and the rule "Free ships, free goods," would be of enormous benefit to the Government and people of the United States if they only had (as they have not) the ships to do the carrying trade for both bellige-

rents. Why cannot the ships be quickly had? Simply because an ancient and injurious law of Congress forbids the registry of a foreign-built vessel as an American vessel, and the sailing of such vessels under the American flag. Our laws encourage the naturalization of foreign-born men, women, and children, and permit the introduction into the country and the use therein of every conceivable article (excepting obscene books and counterfeit money); but the introduction and use of a foreign-built vessel is forbidden and condemned. Why? In order (nearly a century ago) to encourage and protect the building of vessels within our territory —a purpose which was perhaps defensible in whole or in part so long as vessels were built of wood, but which ceased to be so when iron and steel vessels came to the front. It will be remembered that President Grant's Administration in July, 1870, advised Congress to repeal the obnoxious statute when the Franco-German war was imminent, and had the message not been sent to Congress on the last day of the session it is probable the repeal would then have been carried.

The absolute dulness of sterling exchange in the presence of excited markets for commodities and securities, and of the prospect of a war between two great European Powers, may be explained by the fact that a large amount of money was transferred from New York to London some weeks ago in consequence of the silver scare. The amount so transferred is estimated by competent judges at not less than $25,000,000. When the slight premium on gold was disclosed in Boston in the latter part of Secretary McCulloch's term, and when the Secretary himself entered into correspondence with the New York banks on the subject of using silver certificates at the Clearing-house, parties having considerable sums of ready money on hand commenced buying sixty-day sterling bills, in order to insure themselves against depreciation of their funds. These bills having matured, the money was either reinvested in new sixty-day bills or loaned on securities in London. At all events, it has not returned to this country. It stands as a credit to New York, offsetting *pro tanto* the call for money from this side, which would naturally have arisen in the expectation of war. Commonly the first thing done by foreign bankers as the result of a European commotion is to get together as much money as possible; and as American securities are those least affected by war, they are the first things sold. At the present time the amount of first-class American securities held abroad is small, while the amount of American money on deposit or immediately available is large beyond precedent, and this state of things is chiefly owing to the silver scare, although the rate of interest which sixty-day sterling afforded was not without its influence in the stagnant money market which has ruled here during the past winter.

Apart from expectations of war, business is on all hands reported improving with the advance of spring weather. The improvement is still uneven, and New York remains probably behind every city of importance in feeling it. The great interior markets for grain and provisions, with their dependencies, were the first to feel it and still maintain their lead; but the impulse is spreading throughout the North and West, and shows generally that quiet character which was predicted for it in the closing months of last year. The movement of goods of all kinds is increasing, and the railroads are handling an enlarged tonnage, which shows in improved receipts generally outside of the overbuilt territory between Chicago and the Atlantic Coast. Manufacturers appear to be doing rather better also, except in cotton goods, and in that line a suspension of production amounting to one month between this date and the first of July is spoken of as very desirable if not necessary. The coal trade is moving along quietly, with a good business at the low prices recently established. The iron and steel trade, taken as a whole, has not disappointed the expectations raised by the revival of January; but there are some internal disturbances, apparently caused by the growing application of some forms of steel to uses hitherto believed to be better served by iron. But the substitution of steel for iron, wherever found feasible, is an advance in the employment of metals, and likely therefore to increase the total amount of work done and wages paid.

The position of the railroads, with all the increase of business that is visible or expected, remains less favorable than could be wished, mainly in consequence of the great schemes of reorganization which are now pressing for attention. Leaving on one side the Philadelphia & Reading concern, which has been wrecked by going outside its proper business as a railroad, we have to await a great mass of purely railroad reorganization, in which the West Shore line and the so-called Nickel-Plate line involve the whole question of the business of the trunk lines between Chicago and New York. Something must be done to bring the fixed charges of these companies down to a point where they can be met with reasonable certainty; and, until this is done, nothing short of a wonderful expansion of traffic can restore the former prosperity of the other trunk lines. Further West there is the vast and sprawling Wabash system to be reformed or expunged, and the Denver & Rio Grande Railway and its Western extension, not to speak of smaller concerns both in the Middle States and the West. The process of arranging new plans for all these companies, with the inevitable long labor of conciliating different interests, has a very unsettling effect upon railroad stocks generally; and to this, more than to anything else, seems due the comparative dulness of the Stock Exchange.

The Connecticut Legislature has been devoting a great deal of time to the subject of railway passes during the present session, and has at last hit upon a solution which is to be commended. The lower house has adopted a proposition for the submission to the people of a constitutional amendment authorizing the Legislature to arrange for the transportation of its members from their homes to the capital at public expense. At present the members receive a salary of $300 for each session, and as the average length is four months, this is small pay. The present allowance for mileage is inadequate to pay the railway fares, and in order to make both ends meet the railway companies are allowed to give the members free passes. A feeling has got abroad in the State that by this indirect and cheap method of bribery the railway companies are enabled to control the railway legislation of the State absolutely, and there is not lacking strong evidence in confirmation of this view. One solution of the trouble which was seriously proposed was very funny. It was that a law be passed compelling the companies to grant the passes which they now give voluntarily, in order to relieve the members of all sense of obligation. This was promptly disposed of by the remark of the Speaker that the State would receive it with "scorn and derision," which we have no doubt was true prophecy.

The verdict of the jury upon the financial operations of James D. Fish is likely to insure his imprisonment for the remainder of his life. There is some doubt concerning the number of years for which he may be sentenced on the eleven counts upon which he has been found guilty, but the total is likely to be from ten to twenty. A clearer case of rascality has not been put before a jury within our recollection. In audacity Fish's operations equalled if they did not surpass those of Tweed; and in open violation of all obligations, legal, moral, and every other, they went even beyond Tweed's limits. The rascality of it all was so plain that even a modern jury could not fail to comprehend it. Fish, as President of the bank, used its funds in such a way as to steal nearly the whole of them for the benefit of Ward and himself, his own share being between a half and three-quarters of a million of dollars. He and Ward together contrived to steal, in the short space of three years, something like two millions of dollars, by pretending to be engaged in a business which never had any existence, not even on paper. They kept no books, and had no capital except that which they borrowed from the Marine Bank without security, and that which they induced confiding people to "invest." They stole what they wanted for themselves, distributed the remainder in "dividends" of such enormous size as to encourage further investments, and, when any questions were asked, spoke mysteriously of "Government contracts," winked at each other, and went ahead.

There has always been one inexplicable phase of this memorable swindle—and the testimony of Fish has thrown no light upon it—and that is why this precious pair did not foresee the inevitable collapse in time to get out of the reach of the law. They must have known that the end was only a question of very brief time. A man need not be a "Napoleon of Finance" to understand that a business which consisted entirely of taking in money and paying it out again in extravagant dividends, could not last long. They seem never to have done enough actual business in stocks or other speculative ventures to pay their office rent. All their collateral was pledged three or four times over, and they must have known that the sure outcome of such financiering was detection and

ruin. Yet they both stayed here and allowed themselves to be caught. Ward could have locked up his office and disappeared three days before the crash came, and nobody would have found out what the condition of affairs was till he was safely beyond the reach of the law. Fish could have done the same. When men engage in a swindle, get the money out of it, and run, their course is comprehensible enough. But when two men, both sharp enough to deceive some of the sharpest men in Wall Street, engage in a swindle, succeed in it far enough to steal millions of dollars, and then, instead of running away with the money, sit still and allow themselves to be put in prison for years, if not for life, their conduct passes comprehension.

The Board of Overseers of Harvard College have followed the decisive example of the Corporation, and voted that it is inexpedient not to compel attendance at morning prayers. The report which was adopted was drawn up by the Rev. Dr. Peabody, who for many years officiated at the College chapel. He had, we believe, as a colleague on the special committee, the Rev. Phillips Brooks, who now occasionally performs the service asked to be made voluntary. There was a manifest impropriety in putting any clergyman on such a committee, much more two who may fairly be called interested parties. The petition of the undergraduates was the largest ever known, and the College Faculty is notoriously strongly in favor of making prayers "elective." The incident is one more evidence of the growing antagonism between the Overseers and the Faculty, the only natural governing power in the University.

The news from the Canadian Northwest is very conflicting, and the greater part of it is clearly untrustworthy. The only facts which seem to be established are that the Indians have pretty generally joined Riel, and that the rebellion is much more formidable than it was a week ago. The Government forces are advancing steadily toward the scene of the troubles, and at last accounts were in good condition. By all accounts the rebels are well armed and abundantly supplied with food. They are eager for fight, and there are enough of them to make the task of suppressing them one which may cover many months and cost many lives. In such a war the English, Scotch, and other settlers will be the greatest sufferers. They will be robbed of their herds, their farms will be pillaged, and those of them who are not massacred will be driven from the country. No further information comes to hand about the commission of inquiry which it was said the Government had appointed, but it is to be hoped in the interest of humanity that this or some other plan of peaceful settlement will be tried before hostilities are carried much further. It is claimed by the Opposition to the Macdonald Ministry that a majority of the people believe that the half-breeds have real grievances. In addition to this belief, there is the precedent of 1869 in favor of concessions. The rebellion of that year was based upon precisely the same grounds as the present one, and it ended in the accordance to the rebellious half-breeds of Manitoba of rights which their brethren in the Saskatchewan country have never received, although their title to them is equally good.

The Mexican Congress began its second session on April 1. The message of President Diaz was a long and detailed review of affairs both domestic and foreign. He congratulated the country upon the fact that for the second time since 1877 a change in Executive had been effected "without the occurrence of any incident to disturb the solemnity of the act." Mexico is extending her foreign relations. Sweden and Norway for the first time have accredited an ambassador at the Mexican capital, and ministers plenipotentiary are now en route from Portugal and from China. The President referred with pride to the favorable reception accorded his prompt and energetic interference with the aspirations of Barrios. Among the matters to be submitted to Congress, he mentioned the consideration of the additional article to the commercial treaty with the United States deferring until May, 1886, the passage of laws in pursuance of the treaty; and of a new treaty of extradition arranged between Mexico and the United States. He announced that the negotiations for the conversion of the English debt were suspended for the present. The more important domestic matters requiring the attention of Congress were laws to be submitted with a view to the reduction of postal rates and the establishment of city delivery, the simplification and reduction of the tariff, and the cutting down of the force of employees and the use of better methods in the Treasury Department.

As the later and fuller accounts begin to come in, it appears that Barrios displayed not only audacity but also no small shrewdness and resource. He caused to be established a newspaper for the furtherance of his projects, the *Central American Union*, in which were published glowing assurances of the success of the great plan of federation. He secured from several of the foreign ambassadors at his capital expressions of sympathy, which of course were purely personal, but which were published as if they implied the countenance and support of the countries represented by these ministers. The legations of Germany, Italy, Spain, and Peru allowed themselves to be made tools of in this way. The representatives of Mexico, England, and the United States were not so easily caught, however, and confined their notes to the bare statement that they would hasten to communicate with their Governments. What is still more surprising and indicative of the address of Barrios, he obtained the approval of the Church, the Archbishop of Guatemala having been induced to issue a pastoral letter exhorting all his clergy to give their prayers and best support to "the grand idea of union." It is but a short time since Barrios was most fiercely denounced by the Church on account of his suppression of the Jesuits and the establishment of religious liberty. The inference is that he had used arguments with the Archbishop of the sort that have always proved so convincing to the Church of Spanish America.

The visit of the Prince and Princess of Wales to Ireland has been a great success in Dublin, which is distinctly a loyalist stronghold. On the population there, the Nationalist counsel of neutrality has apparently made little impression, as the welcome of the crowd was most hearty, and the Princess seems to have done one of the little things which touch the Irish heart in a way Englishmen find it difficult to understand, by wearing a green velvet dress. In fact, when one sees how powerful such trifles are in Ireland, the neglect of them by the English Government is an extraordinary illustration of the national stolidity. To have put Irish regiments in the army into green uniforms, as the Scotch have been allowed to wear the kilt and bonnet, would probably, laughable as it seems, have been a master stroke of policy, and yet it has never been done. The most extraordinary mistake of all is the failure of any of the very large royal family to live in Ireland, or even spend part of the year in it. These brief royal visits are made at intervals of twenty years, by people who receive large salaries for simply being ornamental, gracious, kindly, and well-mannered. That terrible Canadian Englishman, Goldwin Smith, who watches over the British empire from the heights of Toronto, has written a great deal of sonorous nonsense about the Irish question, but he has been sane and sound and useful in the sharp comments which he every now and then directs against royal neglect of Ireland.

The bringing of British troops into collision with the Russians on Afghan soil is evidently going to be a matter of much delicacy. Nothing is more certain than that the Afghans, left to themselves, cannot stop a Russian advance up the Robat valley, or hold Herat against a Russian army. So that the advance of British troops by the Bolan Pass from Quettah will be a necessary consequence of the outbreak of hostilities. Quettah is not in Afghanistan, but close to the line, in Kelat, one of the principalities of Beluchistan, and is admirably fitted to furnish a base for operations in the direction of Herat. But Kandahar, which is on Afghan soil, would have to be a very important stage on the road. Luckily neither the province of Kandahar nor Herat lies in what may be called Afghanistan proper. The march of the British would be for the most part through a fertile country, along the edge of the mountains, among a much less warlike and better disposed population than the Afghans, whose connection with Kabul has been fitful and uncertain. The railroad to Lahore from Kurrachee on the Indian Ocean passes at Rokko within one hundred miles of Quettah. A branch line connecting the two places, which would bring Quettah within a few hours of the sea, has been long projected, and, we believe, work on it is already in progress, but it will be of little use in this campaign, in which the bulk of the transportation will have to be done, as in Sir Frederick Roberts's, with camels, which are hard to get and hard to keep alive after they have been obtained. The valley of the Murghab and of the Heri-Rud used to be among the most productive spots on the earth's surface. But they were converted into a desert by the Turkoman raids, and are only beginning to recover since the capture of Merv by the Russians put a curb on these ferocious brigands of the desert.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, April 8, to TUESDAY, April 14, 1885, inclusive.]

DOMESTIC.

SECRETARY WHITNEY on Friday received the following telegram from Commander Kane, of the *Galena*, at Colon: "Our forces are now guarding both ends of transit. Relief trains are running, but much uneasiness still exists. News from Cartagena to-day reports no change in the situation. The arrival of the *Svatara* at Aspinwall is reported." Secretary Bayard received on Friday official information from Mr. Hall, American Minister to Central America, that General Barrios was killed in battle on April 2. General Barrilas, being the constitutional successor, assumed the duties of President of Guatemala. Later the Congress of Guatemala declared Señor Sinivaldy provisional President until a general election can be held.

Admiral Jouett telegraphed Secretary Whitney on Saturday from Colon as follows: "The *Tennessee* arrived to-day. All well. I shall open transit to-morrow and keep it open. Everything is quiet here, but trouble is feared at Panama. I shall send 100 men to Panama to-morrow."

Secretary Lamar told Couch, the leader of the Oklahoma "boomers," on Monday, that the Administration regards Oklahoma as not a part of the public domain open to entry and settlement under the laws of the United States, and that the policy of the President is to protect that territory from the intrusion of white persons.

The Civil-Service Commission furnishes the following for publication: "We have information that in many of the States the numbers applying to be examined are greatly in excess of what is needed to secure competent persons for all vacancies likely to occur for at least six months. The Commission does not wish to be responsible for the many disappointments which must follow the examination of a needless number."

It is found that General Henry R. Jackson, the newly appointed Minister to Mexico, is under the same disabilities as General Lawton, whose appointment as Minister to Russia was not confirmed.

General Grant spent remarkably comfortable days from Wednesday till Saturday. Queen Victoria telegraphed her sympathy on Wednesday and inquired after the General's condition. He had very uncomfortable days on Sunday and Monday, but on Tuesday was feeling better than for several weeks. He was able to walk around his room and read the papers.

It is conceded that Carter Harrison (Dem.) is elected Mayor of Chicago on the returns, but there will be a contest.

There were some fears of a riot in Chicago on Sunday in view of the excitement over the recent election and the talk of vigilance committees. The day force of policemen slept in the station houses on Sunday night. The City Hall was under guard, and a large detachment of armed police was at the armory station under waiting orders.

Senator Murphy's Skating-Rink Bill, prescribing that school children shall not be permitted in the rinks during school hours, or to attend them without guardians at night, and prohibiting the sale of liquor in the rinks, was passed by the Senate at Albany on Wednesday night. The Republican Senators in caucus decided to reduce the additional appropriation for the new Capitol from $1,000,000 to $500,000. On Thursday in the Assembly the Field Civil Code Bill was ordered to a third reading by 62 to 35.

The Low Forestry Bill was ordered to a third reading by the Senate at Albany on Monday. As amended, it now provides for the appointment of a Forestry Commissioner by the Governor and Senate, to hold office for three years, and to receive a salary of $3,000. He is to have charge of all forest and waste lands of the State, with a special view to preventing fires and to encouraging tree planting, the sum of $5,500 yearly to be allowed him for expenses in these directions, including the moneys paid to agents and assistants. The Senate ordered the Niagara Park Bill to a third reading on Tuesday night.

The General Term of the Superior Court of this city on Monday handed down its decision in the case of the people upon the relation of Roosevelt against ex-Mayor Franklin Edson, in which it reverses the order of Judge Freedman, adjudging ex-Mayor Edson guilty of contempt of court, fining him $250, and directing his incarceration in Ludlow Street Jail for fifteen days, and directs that an order be entered dismissing all proceedings with costs.

Decisions were handed down in the Court of Appeals at Albany on Tuesday—one in favor of Police Commissioner McClave as against Mason, and the other in favor of Corporation Counsel Lacombe as against Wood. Mr. McClave was appointed a Police Commissioner by Mayor Edson, and his appointment was contested by Mr. Mason on the ground that the latter's term had not expired. Mr. Wood was appointed Corporation Counsel by Mr. Kirk, President of the Board of Aldermen, under authority which he assumed as acting Mayor.

The trial of James D. Fish, late President of the Marine Bank of this city, ended on Saturday. The indictment originally contained twenty-five counts, and the jury found Mr. Fish guilty on twelve counts. These charged specific acts of misapplication of the bank moneys and making false entries. On three of the counts, or, as afterward condensed, one count, charging abstraction of the bank's securities, he was found not guilty. The prisoner was remanded to Ludlow Street Jail.

Eight tenement houses on West Sixty-second Street, in this city, which were nearly completed, collapsed on Monday afternoon, burying a number of workmen in the ruins. About twelve were injured, one of whom has since died. C. A. Buddensiek, the contractor for the work, has been arrested.

General Jacob D. Cox, ex-Secretary of the Interior, was on Monday elected President of the Cincinnati University, and will accept the office.

The Harvard College Overseers on Wednesday adopted the following resolution: "That it is inexpedient to grant the petition of sundry undergraduates of Harvard College for the repeal of the rules now requiring attendance on daily prayers."

The Cathedral of the Incarnation at Garden City, L. I., erected by Mrs. Cornelia M. Stewart as a memorial of her late husband, A. T. Stewart, was formally opened on Thursday morning with appropriate and impressive services.

The Farmers' Bank of Norfolk, Va., failed on Thursday. It had a capital stock of $50,000.

Richard Grant White died in this city on Wednesday, at the age of sixty-three, after a lingering illness. He was the son of Richard Mansfield White, and eighth in descent from John White, a prominent Puritan and one of the founders of Cambridge, Mass. In 1839 he was graduated from the University of the City of New York. He was admitted to the bar in 1845. While waiting for practice he wrote articles upon music for the *Courier and Enquirer*, and afterward upon art. Upon the establishment of the *World*, he became one of its editors. Mr. White's first magazine article was on Beethoven, and appeared in the *American Magazine* in 1853. His first ventures in Shaksperian criticism were made in a series of articles upon the marginal notes of the Collier folio of 1632. These articles were printed in *Putnam's Magazine*. In 1857 appeared the first parts of Mr. White's edition of Shakspere. 'Words and their Uses,' one of the best known of Mr. White's books, appeared in 1865. In 1861 Mr. White received an appointment to the head of the Revenue Marine Bureau in New York, which position he held until he resigned in 1878. For nearly thirty years Mr. White has been constantly before the public as a writer of magazine and newspaper articles upon literary and art matters. He made a special study of the violin, and wrote much about it.

FOREIGN.

England was startled on Thursday morning by a report published in the London *Standard* that there had been a collision between the Russian and Afghan troops. This news was confirmed later by the following from the St. Petersburg *Official Messenger*: "General Komaroff reports that, in consequence of provocative and manifestly hostile proceedings of the Afghans, he was compelled to attack them on March 30 on both banks of the Kushk River. The result was the defeat of the Afghans, with the loss of 500 men, all their artillery, two standards, and their entire camp and provisions. The Russian loss was 1 officer and 10 soldiers killed, and 3 subalterns and 29 soldiers wounded. When the fighting ended, General Komaroff returned across the river to the positions he had formerly occupied."

A despatch to the London *Times* from Gulran, dated April 3, stated that the Russians, while making a pretext of changing the position of their outposts on the Afghan frontier, attacked Panjdeh on March 30 and drove the Afghans out of their position. The Afghans stubbornly resisted their assailants. Two companies held one position against the Russians until its defenders were killed. The Afghans retreated to Merutchak in perfect order. The Russians made no pursuit. The Saruks remain neutral, but plundered the Afghans' camp.

Parliament reassembled on Thursday afternoon after the Easter recess. In the House of Commons, Mr. Gladstone confirmed the intelligence of the battle between the Russians and Afghans, and said: "From the information which the Government have received of the fight, the Russians have apparently been guilty of an unjustifiable attack on the Afghans. England has demanded from Russia full explanations in regard to the affair." In conclusion, he said that the Government had received no information corroborative of the report that the Russians had occupied Panjdeh.

The London Stock Exchange was thrown into a panic by the news. British consols fell from 97 7-16 to 94⅞. Russian bonds fell from 90½ to 80. In the Paris market there was a fall in 3 per cent. rentes from 78f. 20c. to 76f. 47½c. In the United States, wheat rose at Chicago from 83 to 88¼.

In the House of Commons on Thursday evening Mr. Gladstone said it was evident that the Russians had attacked the Afghans. The Afghans had in this attack been defeated after making a gallant resistance. It was apparent also that the Russians, after the fight, had returned to their former positions, or at least to the left bank of the Kushk River, which might be equivalent to such a retirement. The Government had been informed, the Premier went on, that the Russians had made every endeavor to induce the Afghans to begin the fighting. Russian troops had even twice attempted to pass forcibly through the Afghan picket lines. The Government had asked for an explanation of this attack from Russia. Sir Edward Thornton, the British Ambassador to St. Petersburg, had telegraphed that M. de Giers, the Russian Prime Minister, had expressed for himself and for the Czar an earnest hope that this unhappy incident might not prevent the continuation of the negotiations for peace. This remark was greeted with shouts of derisive laughter. Later Mr. Gladstone said that the Government had no reason to believe that any aggressive act had been done by the Afghans to provoke the attack on Panjdeh. This declaration caused a sensation, and for a

moment the House resounded with cries of "Hear! hear!"

On Friday afternoon Mr. Gladstone announced that Russia had already asked General Komaroff to explain his conduct in attacking Panjdeh. Mr. Gladstone stated that Sir Edward Thornton, British Ambassador at St. Petersburg, had informed him that the Russians did not occupy Panjdeh, but had retired to the positions they occupied before the battle with the Afghans.

The total effective Russian force ready for an immediate advance on the strategic points of the Afghan frontier is 95,000. The British forces actually mobilized and ready for an advance are 92,000.

On Friday the sentiment of both the Russian and English press was unanimous for war. The London stock market was, however, stronger.

Sir Peter Lumsden began on Friday his march toward the Robat Pass, which he has orders to occupy to prevent the Russians from advancing to Herat, and has since taken a strong position at Tirpul. He is believed now to be able to prevent the Russians from attempting a *coup de main* in the direction of Herat.

The British Government received on Monday official despatches confirming reports of a Russian advance in force. 45,000 Russian troops are on the march to Sarakhs. Troops were recently massing rapidly from all stations in Daghestan at Baku. Ten thousand passed through Tiflis during the last fortnight in March. Lord Dufferin informed the Government on Monday that the Amir consents to the passage of British troops through Afghanistan. Bismarck's organ, the Berlin *North German Gazette*, puts the blame for the recent collision upon the Afghans.

General Komaroff has made a detailed statement to the Russian Government tending to show that the Afghans provoked the recent attack. He says: "On the 29th I sent the Afghan commander an energetic summons to evacuate the left bank of the Kushk and the right bank of the Murghab as far as the mouth of the Kushk. He replied that, acting on the advice of the English, he would not retire beyond the Kushk. I then sent him a private letter couched in amicable terms. On the 30th, in order to support my demand, I marched with my detachment against the Afghan position, still expecting a pacific issue; but fire from the Afghan artillery and an attack of their cavalry compelled me to accept a combat." It was reported on Sunday that a council of war had been held at St. Petersburg, at which the Czar presided, and that the Czar had appointed General Komaroff Commander-in-Chief in Turkestan, and had issued orders to push 50,000 troops forward to the Afghan border.

Mr. Gladstone, in the House of Commons on Monday afternoon, stated that the Government had telegraphed to Sir Peter Lumsden for information as to the correctness of the Russian commander's justification of his conduct in attacking the Afghans. Explaining the delay of the Government in reaching a final decision with Russia, Mr. Gladstone said that the reports of the Russian officers who took part in the Panjdeh battle, and those of the English officers who witnessed the engagement, differed so materially in substance and effect that the Government felt obliged to make an independent inquiry. This was proceeding now, and the Government were doing everything in their power toward ascertaining the facts. Russia had, the Premier admitted, failed to answer the material parts of England's communication sent on the day of the receipt of the news of the battle.

A grand durbar was held on Wednesday at Rawalpindi in honor of the Amir of Afghanistan, and proved a great success. The scene was brilliant and impressive. The Earl of Dufferin, Viceroy of India, sat upon a dais, with the Amir upon his right and the Duke of Connaught upon his left. After the presentation of a number of gifts the Amir made an address, during which he said he was greatly obliged for the favors bestowed upon him by Queen Victoria and the Earl of Dufferin, and that in return he would render every service in the power of his army or of his people. As the British promised to help the Afghans to beat off external enemies, the Afghans would in the firmest manner stand side by side with the British.

General Wolseley says he has not abandoned the idea of capturing Khartum in the autumn.

The rebellion against El Mahdi is spreading. He has been severely defeated at El Obeid by Abdullah El Safia. He has made the announcement that he will not attack Dongola until after the fast of the Ramadan, three months hence. Italy will garrison the Sudan, permitting the British troops to be withdrawn for service in Afghanistan. The Italians will also take the place of the British at Cairo.

An official proclamation has been issued at Constantinople stating that the Mahdi, acting in opposition to the principles of Islamism, has carried his seditious audacity to the extent of issuing further incendiary manifestoes in Hedjaz and Yemen against Ottoman domination; that Mussulmans will regard the Sudanese agitator as an impostor and robber chief of the worst kind, and will treat the new appeal of fanaticism and barbarism with the same profound contempt as heretofore.

The British have occupied Handub and the adjacent wells. Four miles of the Suakim-Berber railway have been constructed. The country around Handub appears to be quite clear of the enemy.

The latest advices from Kassala state that the garrison there has a sufficient supply of provisions for a month, and plenty of ammunition. The rebels attacked an Abyssinian caravan which was en route to Galla and killed thirteen persons.

The Prince and Princess of Wales and Prince Albert Victor arrived at Kingstown, Ireland, on Wednesday noon, on the royal yacht *Osborne*. Earl Spencer, Lord Lieutenant of Ireland, received the Prince and his party, and the Town Commission presented an address of welcome. The Princess at the same time was made the recipient of numerous bouquets. The crowd, which numbered thousands, kept up a continuous cheering during the reception, and cheered loud and long as the royal guests proceeded to Dublin. They arrived at Dublin at 2 o'clock and were accorded a splendid reception. All along the route to Dublin Castle they were heartily cheered. Earl Spencer, the Irish Viceroy, was loudly cheered as he drove through the streets. Lord Mayor John O'Connor, who is a strong Nationalist, but who drove in official state with the royal escort, was loudly hissed by the Nationalists. Not a sign of welcome was visible on the City Hall of Dublin.

Dublin was brilliantly illuminated in the evening. The police had some difficulty at one time in preventing a collision when some Nationalists began shouting "God save Ireland!" and attempted to raise cheers for Parnell. An attempt was made to burn the union jack which had been stolen from the Mansion House by students, but the attacking party was driven off by a combined force of students and loyalists, headed by one hundred policemen with drawn revolvers. The mob took revenge by breaking the windows of the house from which the flag was flying

The Prince of Wales visited the slums in Dublin on Thursday, and freely denounced the wretched condition of the dwellings. He expressed the hope that such buildings would soon be swept from the face of the earth. He held a levee at Dublin Castle in the afternoon, which was attended by more than 3,000 people. The royal party left for the South of Ireland on Monday.

A serious riot occurred in Mallow, Ireland, on Monday, upon the arrival there of the Prince of Wales. A large concourse of Nationalists, headed by Messrs. O'Brien, Harrington, and Deasy, members of Parliament, gathered at the railway station. Fearing trouble, the railway officials, with the aid of the constabulary, ejected the Nationalists from the station. One report says the police charged the crowd at the point of the bayonet. Messrs. O'Brien and Harrington were somewhat injured. Others were seriously hurt. Upon the arrival of the Prince and Princess they were warmly cheered, and addresses of welcome were presented to them. John O'Connor, member of Parliament for Tipperary, made an inflammatory speech at Cork on Monday night at a meeting of the Irish National League. The result of this oration was a repetition at Cork of the riot at Mallow. Windows and doors of houses which had been decorated in honor of the Prince of Wales were smashed. The Prince and Princess of Wales, on their way to Cork on Tuesday, were well received by the people. The loyalists made a good demonstration at Cork. The procession in the evening was, however, attacked by Nationalists. Severe rioting occurred.

Sir Edward Sullivan, Lord Chancellor of Ireland, died on Monday in Dublin at the age of sixty-three. He was created a baronet of the United Kingdom in 1881, and, on the retirement of John Thomas Ball, was appointed Lord Chancellor of Ireland.

Mr. George Samuel Nottage, Lord Mayor of London, died on Saturday morning, of pleurisy. Alderman Fowler has been elected to succeed him.

The Earl of Selkirk, a representative peer for Scotland, is dead. He was born April 22, 1809.

Admiral Sir George Rose Sartorius, who was present with Nelson at the battle of Trafalgar in 1805, when only fifteen years of age, is dead. He was born August 9, 1790. He became a British Admiral of the Fleet in 1869.

In the French Senate on Wednesday, M. de Freycinet, Minister of Foreign Affairs, stated that the preludes of a treaty of peace with China had been virtually concluded. Before, however, giving effect to the recent negotiations he was anxious to ascertain the opinion of the Chinese Government, and had telegraphed to Pekin. He would be, therefore, unable to announce the conclusion of a peace treaty until China should reply. M. Floquet was elected President of the Chamber of Deputies. Both French and Chinese troops have been ordered by their Governments to cease hostilities.

The Emperor of China has issued a decree informing the people that the French humbly sued for peace, and that he has graciously granted their prayer. Viceroys and Governors are warned to exercise great care to prevent acts of treachery before the conclusion of a definitive treaty.

Despatches from Shanghai received on Tuesday stated that there is a hitch in the final arrangements for the execution of the treaty owing to some concessions which China asks and which M. Patenôtre, the French Ambassador, refuses to grant. The Peking *Official Gazette* has, however, published an Imperial decree ordering the execution of the preliminaries of peace.

Despatches were received at Winnipeg on Thursday stopping all troops at their present camps. This action was taken because the Government had appointed a commission to adjust matters with the half-breeds, and endeavor to satisfy their claims. More than fourteen persons at Frog Lake were massacred on Thursday by the Indians. The troops under General Middleton, however, are advancing toward the Saskatchewan, and a battle is expected in a few days.

A treaty of peace has been signed between the Governments of San Salvador and Honduras, and the latter republic has joined the alliance against Guatemala. The armies of San Salvador and her allies are advancing on the city of Guatemala, and are everywhere welcomed by the populace.

THE PRESIDENT'S CRITICS.

THE number and variety of ways in which the Administration is disappointing its enemies are without parallel or precedent in American history. Take Mr. William Walter Phelps's case for example. During the canvass, we presume that he, like all Mr. Blaine's adherents, anticipated that Mr. Cleveland, if elected, would abolish or greatly lower the tariff, so as to throw immense bodies of workingmen out of employment, would make arrangements to pay the Rebel debt, pension the Rebel soldiers, and compensate the old slaveholders for the loss of their slaves—and all out of the United States Treasury. This was bad enough; but in addition to this he was to make a clean sweep of all Republican office-holders (especially such of them as had served in the Union armies), and put dishonest and dissolute Democrats in their places. But Mr. Phelps now says, in an interview at Washington, that the trouble with President Cleveland is that instead of wrecking the Government, as per programme, he refuses to wreck it, and that instead of sacrificing his country to his party, he is sacrificing his party to the country. As all this sounds very strange, we had better give it in Mr. Phelps's own words:

"My opinion is that Mr. Cleveland is going to give a very good Administration to the country, but a very bad one for the party. He is doing nothing at all for his party. The party managers are dissatisfied, and they have a right to be. They have a right to expect him to do something for the good of the party. He might get just as good men for these prominent appointments, and yet give them where they would do the party some good. Now there's the case of my namesake, who was given the English mission. No better man for the place could have been found, but just as good a one might have been had, and the appointment have gone where it would have been of advantage to the party. So with all the rest. It would be just as easy for him to serve his party if he wanted to, but he wants to ignore party altogether. He has made up his mind to stubbornly resist party pressure and refuse to recognize party claims.

"This will meet with the approval of the people," said Mr. Phelps, "but will bring about a party disruption. The process of disruption will go on all through his Administration, and at the end of the four years he will have driven the party managers off. They will be growing more and more discontented as he continues to ignore them, and from time to time the more outspoken will come out and denounce the Administration. The Republicans and the non-partisans will applaud his action, and give him all possible encouragement to go on, and this will more thoroughly disgust the old Democratic leaders. I know there are lots of Democratic Senators who would be better satisfied if Blaine were in the White House. There were some, last November, who had no favors to ask of Mr. Blaine, who would just as lief have seen Blaine elected. They would like his methods better and would be closer to him. Then, too, the South would have had more to expect from his election. There were millions of dollars in the East ready to be put in business enterprises in the South had he been elected. This money is now locked up in New York. I meet with fresh proof every day that Democrats voted for Blaine. If he were to be nominated in 1888, Democratic managers would support him, and he would get an immense Democratic vote."

"But will not Cleveland gain great strength among the people who are not politicians? Will he not draw off all those of no particular politics who have always voted with the Republicans?"

"Yes, he will draw off all those; but they, with all their numbers, cannot make up for the loss of party managers."

This is all very odd, for most of the Blaine managers offered us a positive guarantee that even if Mr. Cleveland was all that the silly Mugwumps said he was, in the matter of good intentions, his inherent weakness of character and his want of experience were such that, instead of ruling his wicked old party, the wicked old party would rule him. Moreover, one of the reasons why Republicans were urged to vote for Blaine was, that the Democratic Senators dreaded his coming into power, knowing how he would confound their politics and frustrate their knavish tricks. But now it appears they actually wish Blaine had been elected, so little to their taste is Cleveland. Was there ever an odder revolution in the wheel of fortune than this? We must say, however, that we were a little wiser during the canvass on this point than Mr. Phelps. We have always held and boldly declared that Blaine was the choice of the corrupt element in both political parties, and that the wicked old Democrats did not desire Cleveland's nomination or his election, and would have gladly assisted in counting him out after his election if the opportunity had offered itself. It is not news to us that they are now sorry that Blaine was not elected. They always desired his election. He and not Cleveland was really their man. Corruptionists belong to no country and no party. The world, with all that it contains, is their oyster.

The fate which Mr. Phelps foresees for Mr. Cleveland is a sad one enough from the Blaine point of view. He thinks that if the President keeps on as he is going, he will end by satisfying the friends of good government and disgusting everybody else. That a Blaine man should consider this the tragic termination of a career is not surprising. To the true Blainite, in fact, it indicates a mild but hopeless form of insanity. The case of the Mugwumps, which Mr. Phelps so deftly analyzes, is perhaps more puzzling than any. The part the Mugwumps played in the canvass, as described by Blaine orators, was that of silly dupes. They had filled their imagination with an ideal candidate, who, if elected, was to respect civil-service reform and refuse to be overruled by "the politicians." Of course it was not possible to show them by actual experiment how foolish they were, because Mr. Blaine's election had been already arranged. But if the experiment could be tried, if they could be allowed to put their doll in the White House, they were to find out that it was stuffed with sawdust, and that the world was hollow; and shrewd men like Mr. Phelps, disgusted with their blubbering, were to rebuke them sharply and bid them attend to things they understood better than politics. The Mugwumps, however, elected their man, and now, confound him, he is doing all they said he would do. He is actually satisfying that absurd portion of the American people who care more for honest government than for party.

One admission of Mr. Phelps's we especially enjoy—that in which he reports large sums of money "locked up" in New York, which would have been actively employed at "the South" and other places had Blaine been elected. We pointed out frequently during the campaign that the Blaine canvass was really a business enterprise, and that his Cabinet would be rather a firm than a council of political advisers. His administration was intended to be the greatest money-making scheme ever launched in this country, and that his defeat has caused a great deal of money to lie idle in New York will surprise no careful observer. What is surprising in the matter is Mr. Phelps's truly frank confession. There are plenty of reasons in Cleveland's Administration why political rogues and jobbers should keep their funds lying idle, but not one why an honest man should not invest freely in the South or anywhere else.

THE WABASH SWINDLE.

MUCH has been said and printed during the past eighteen months concerning the "Wabash swindle," but the avenues to correct information have been so well guarded that it has been impossible until recently for anybody not in the original secret to find out its true proportions. It has been stated in general terms that the Wabash Railway, consisting at the close of the year 1879 of the consolidated Toledo, Wabash & Western and St. Louis, Kansas City & Northern lines, and embracing about 1,000 miles of fairly paying road, was made the nucleus for the reorganization of some 2,400 miles of broken-down non-paying roads, the former to serve as a bladder for "floating" several millions of new bonds and an equal amount of preferred and common stock upon the confiding public of two hemispheres. The accounts of the whole system having been kept in a lump so far as the public was concerned, so that it was impossible for investors to know what the real facts regarding these fag-ends of railways were. Dividends of one and one-half per cent. quarterly were paid on the preferred stock during the year 1881, until the securities were fairly swimming. Then the company was said to be "in difficulties." Dividends ceased, and the securities declined with alarming rapidity. Then there was a shortage of money to pay the interest on the general-mortgage bonds, and Mr. Jay Gould advanced or raised the money necessary to pay one or more instalments, taking as security such collaterals as the company happened to have, not already in pawn. Then the whole concern, embracing upward of 3,400 miles of road, was leased for ninety-nine years to the St. Louis, Iron Mountain & Southern Railroad Company, which was itself under lease to the Missouri Pacific Railroad Company, the lessee company agreeing to pay to the lessor (the Wabash, St. Louis & Pacific) all the earnings over and above taxes, operating expenses, and bond interest! One year later the lessee company threw up the lease, assigning as a reason that the leased property did not earn sufficient money to meet these several charges. Then the road passed into the hands of receivers, one of them being Mr. Solon Humphreys, who was President of the Company in 1880, when the "floating" took place. It was plaintively remarked, in the circular announcing the receivership, that the step was taken in consequence of the action of the St. Louis, Iron Mountain & Southern Company, and that it would be necessary to ask the bondholders to "coöperate in a plan of relief."

Nobody could doubt that underneath this default there must be hidden some awful rottenness, but nobody could accurately state its character and dimensions. Means for taking

its measurement are furnished by the report just filed by the receivers, showing the results of operation of the separate pieces of railway for the six months ending November 30, 1884. This report is accompanied by a map of the "Wabash system," showing in red lines the parent stem as it existed before the floating, and in black lines the things floated. The *tout ensemble* resembles a cobweb wrecked by a gale of wind, with one corner fastened at Toledo and the threads dispersed at random over the States of Ohio, Michigan, Indiana, Illinois, Iowa, and Missouri. All evidences of a "system" vanish at a glance. It is a congeries of predestined bankruptcies, the details of which are set forth in the body of the report. We doubt if any such exhibit was ever made in any part of the civilized world. The report first states that the parent stem—the old Wabash Railway of 1879—has earned sufficient money to pay all the expenses of operation, "and interest on all the bonds issued before the date of said consolidation," November 10, 1879. Then follows a detailed statement of the earnings, operating expenses, and rental of the twenty-five leased lines. These may be grouped under two heads showing (1) earnings and operating expenses only, (2) earnings, operating expenses, and rental—viz.:

I.

EARNINGS LESS THAN OPERATING EXPENSES.

St. Joseph & St. Louis	$52,118 83
St. Louis, Ottumwa & Council Bluffs	13,006 13
Council Bluffs & St. Louis	5,288 64
Clarinda & St. Louis	4,624 69
Quincy, Missouri & Pacific	10,201 93
Des Moines & St. Louis	33,508 35
Des Moines & Northwestern	9,557 38
Eel River	7,011 64
Champaign, Havana & W	24,170 69
Cairo Division	73,294 44
Attica, Covington & S	1,750 26
Peoria, Pekin & Jacksonville	11,484 42
Springfield & Northwestern	35,760 19
St. Louis, Jerseyville & Springfield	18,788 00
Champaign & Southern	2,045 89
Havana, Rantoul & E	9,785 28
	$312,396 76

EARNINGS EXCEEDING OPERATING EXPENSES.

Boone Co. & Booneville	$5,436 56
St. Louis, Council Bluffs & Omaha	15,766 56
Brunswick & Chillicothe	14,666 13
Missouri, Iowa & Nebraska	10,188 96
Centerville, Moravia & Albia	1,861 71
Toledo, Peoria & Western	98,257 91
Chicago Division	208,308 45
Detroit, Butler & St. Louis	37,463 61
Indianapolis Division	94,270 33
	$486,220 22
Deficit	312,396 76
Surplus for six months over operating expenses on 25 leased lines	$173,823 46

II.

EARNINGS LESS THAN OPERATING EXPENSES AND RENTAL.

St. Joseph & St. Louis	$77,212
St. Louis, Ottumwa & Council Bluffs	24,293
St. Louis, Council Bluffs & Omaha	3,013
Council Bluffs & St. Louis	87,538
Clarinda & St. Louis	12,544
Missouri, Iowa & Nebraska	57,881
Quincy, Missouri & Pacific	46,327
Centreville, Moravia & Albia	10,138
Des Moines & St. Louis	33,508
Des Moines & Northwestern	9,557
Eel River	70,431
Toledo, Peoria & Western	117,242
Champaign, Havana & W	72,402
Detroit, Butler & St. Louis	24,096
Indianapolis Division	10,354
Cairo Division	169,719
Attica, Covington & S	1,750
Peoria, Pekin & Jacksonville	11,484
Springfield & Northwestern	35,760
St. Louis, Jerseyville & Springfield	50,828
Champaign & Southern	2,045
Havana, Rantoul & E	20,285
Total	$948,407

EARNINGS EXCEEDING OPERATING EXPENSES AND RENTAL.

Boone County & Booneville	$1,937
Brunswick & Chillicothe	5,531
Chicago division	95,808
Total	$103,276
Deficit	948,407
Net deficit, 6 months, on 25 leased lines	845,131

This does not furnish the full measure of the Wabash deficit, there being $17,000,000 of general-mortgage 6 per cent. bonds outstanding, covering all the leased lines as well as the parent stem. The total bonded debt of the consolidated company is stated in Poor's Manual to be $76,394,854 (including collateral trust bonds for $5,671,000), the interest charge upon which is $4,755,000. Deducting the original bonded debt of the parent stem, say $35,500,000, for which the interest is earned, there remains a balance of $41,000,000 of bonds, to say nothing of stock, for which only $206,000 per annum (the surplus of the three lines which pay more than their own first-mortgage interest) is visible for purposes of distribution to the investors.

THE AFGHAN WAR.

Sir Henry Rawlinson, whose work on 'England and Russia in the East' entitles him to the foremost position as an authority on Central Asian affairs, contributes an article to the current number of the *Nineteenth Century* on the Russian advance, in which that now exciting topic is treated with great breadth of vision and fulness of information. The keynote of the Russian advance, in Mr. Rawlinson's view, was sounded soon after and in consequence of the Crimean war. It was disclosed to Russia by the event of that conflict, that in her aspirations toward Constantinople she would always find an enemy in England—an enemy unassailable by reason of her insular position, an enemy whose only exposed point lay across Central Asia. To reach this exposed point so as to put a pressure upon England, causing her to relax her vigilance in Europe, and withdraw in part her strength from the Dardanelles, was the mainspring of her Central Asian policy. Her advance to the eastward has not been without its beneficent influences. It has suppressed rapine, promoted peaceful industry, protected life and property, and rescued large districts of fertile country from barbarism. But these have been the incidents, not the end, of the inexorable forward movement. The movement would be impossible unless the nomadic tribes were subjected to the rules of civilized life. Civilized or partly civilized they must be in order that the next forward step might be taken safely.

The movement began in 1867 from Orenburg. Thorough work was made. Every advanced post taken was well secured before the next step was taken. In 1869 the Russians crossed the Caspian, and invaded the country of the Turkomans, without provocation and without apology. Khiva was taken in 1873, Geok-Tepe in 1880, and Merv in 1884. The occupation of this capital position had a sort of electrical effect upon all the Asiatic peoples. Persia and Afghanistan were alarmed for their immediate safety, and the Anglo-Indian Government took the most active measures to settle the northern boundaries of the latter country by negotiations with Russia which had been dragging along more than ten years, but had been prevented from reaching a definitive conclusion through the inability or unwillingness of the Russian Government to make stipulations respecting a territory beyond her military reach. Nevertheless, a tentative agreement had been reached as early as 1872, that the "dependencies of Herat" were a part of Shir Ali's dominions and that these extended westward as far as the Heri-Rud, and northward to the foothills which skirt the Turkoman desert. Puli-Khatun is within this territory, very near its northwestern angle, and Puli-Khisti and Panjdeh are on its northern frontier. This tentative agreement is known as the Granville-Gortchakoff memorandum. It was not put into the form of a treaty, but was accepted by both Governments as the basis for one when the proper surveys should have been made.

It is worthy of note that Russia was the first to move the definitive settlement of this boundary. In 1882 she suggested in the interest of peace that the Granville-Gortchakoff arrangement should be perfected by actual surveys. This proposition, says Sir Henry, "was received by us at the time with some coldness." Not until the fall of Merv did the English Government bestir itself to mark out the boundary with precision. Then (in July, 1884), the joint commission, consisting of Sir Peter Lumsden and General Zelenoi, was appointed to make the survey. Once established at Merv, the Russian authorities discovered that the Parapamisus range of mountains was much fitter to be the boundary of Afghanistan than the foothills skirting the Turkoman desert, and began to argue that the "dependencies of Herat" to the north of this range had been forfeited by *non user*, having been swept by Turkoman raids for fifty years. Russia, it was claimed, had succeeded to all the rights of the Turkomans, and had expressly received the allegiance of a tribe one of whose clans occupied Panjdeh and the Kushk Valley within the Afghan frontier. In order to settle this question of the right of succession to Turkoman claims and Turkoman occupation before proceeding with the survey, General Zelenoi was ordered back to Tiflis, and a Russian force was moved forward to Puli-Khatun, within the disputed territory. The Afghans then despatched to Panjdeh the military force whose collision with the Russians took place on the 30th ult., as already known. The latest news received leaves no doubt that the Russians are in occupation of Panjdeh, and have no intention of retiring from it.

Mr. Gladstone's statement in the House of Commons on Thursday showed that the Ministry look on General Komaroff's attack on the Afghans as probably deliberate and not accidental. The disavowal of the Czar and M. de Giers, which was received by telegraph, was greeted with "shouts of derisive laughter." It also came out that the instructions not to advance which M. de Giers had assured the British Government on the 17th of March should be at once sent to the military commander on the Afghan frontier, had not been heard of by that officer at a very recent date. It is not quite clear yet, however, that the Afghans have offered no provocation by changing their position; for, although Mr. Gladstone, in his first statement, declared they had not moved up to March 3, a telegram from Sir Peter Lumsden, received subsequently, showed that they had made one very serious move forward prior to that date. Sir Peter's story is, that, owing to the Russians threaten-

ing to advance in force on Ak-Tapa, which lies on the other side of the Kushk Valley, and about fifteen miles from Panjdeh, the Afghans had moved their whole force down and across the river beyond Ak-Tapa, and as far as Puli-Khisti. This brought them within ten miles of Sara-Yazis, on the river, where the Russians had until then had their advanced guard, and of course greatly increased the chances of a collision. It is not likely, however, that this fact of the Afghan advance will produce much impression on the British mind in its present state of anger and mistrust.

The way in which the Russians have pushed their advances in Central Asia accounts for this mistrust. Every one of them for fifty years has been preceded by assurances that it was not to take place. When Khiva was captured by General Kaufmann in 1873, in spite of solemn assurances that nothing of the kind was in contemplation, the Czar declared that he had given him strict orders to evacuate the place immediately; but he afterward acquiesced in the General's representations that this was impossible, as, if he did, the Khanate would become a prey to the wandering Turkomans. Similiar assurances were given subsequently, that Merv was in no way an object of Russian desire, but within three or four years this too was seized on, the reason being the turbulence and aggressiveness of the Tekke Turkomans who had their headquarters there. Merv is within ten easy stages of Herat, and attainable from the Caspian by a road for nearly the whole distance through an inhabited country, where an abundant supply of water exists, with rich pasturage and a healthy climate. In fact, long before Merv was occupied, the road to it from the Caspian was carefully surveyed. All this, with a good deal more, has produced in England a sort of passionate belief in Russian perfidy, which Komaroff's fighting without orders only intensifies.

THE LATE LORD CAIRNS.

LONDON, April 3, 1885.

ONE of the sudden weather changes of our treacherous English spring has just carried off the greatest English judge of this generation, a man who, like so many of our great advocates and judges, also played a part, second only to the highest, in the politics of his time. Many of your readers, and especially of your professional readers, who have been accustomed to study his exposition of the law in the English Law Reports, may be glad to hear something about so prominent a figure in contemporary English life.

He was one of those Scoto-Irishmen of Ulster who combine in a remarkable way the passionate partisanship of Ireland with the shrewd sense and solid persistency of Scotland. Born an Episcopalian, he grew up an Orangeman and Tory in politics, an earnest Low-Church Evangelical in religion; nor did his opinions in either respect ever seem to alter during his long life. His great abilities were perceived both at school and at college (Trinity College, Dublin), and so much impressed the counsel in whose chambers he studied for a year in London that he strongly dissuaded the young man from returning to Dublin to practise at the Irish bar, promising him a brilliant career on the wider theatre of London. His prediction was verified by the rapidity with which Cairns, who, it is fair to say, had also the advantage of influential connections in the City of London, rose into note. He obtained a seat in Parliament for his native town of Belfast when only thirty-three years of age, and was appointed Solicitor-General to Lord Derby's second Ministry six years later—a post which most eminent lawyers have not reached till near fifty. In the House of Commons he proved himself a very powerful as well as ready speaker, and would doubtless have remained in an assembly where he rendered such valuable services to his party but for the weakness of his lungs and throat, which had threatened his life since boyhood. He therefore accepted the office of Lord Justice of Appeal in 1867, with a seat in the House of Lords, and next year was made Lord Chancellor by Mr. Disraeli, then Prime Minister.

After Lord Derby's death, he led the Tory party in the House of Lords for a time, but his strong anti-High-Church proclivities, and a certain jealousy felt toward him as a newcomer, prevented him from becoming popular there, so that ultimately the leadership of that House settled itself in the hands of Lord Salisbury, a man much inferior to Cairns in judgment, and indeed in mental power altogether, but in far closer sympathy with the feelings and habits of the titled order. He took prominent part in all great debates in the House of Lords and in the discussion of legal measures, and was indeed so absolutely master of the Chamber when such measures came under discussion, that the Liberal Government of 1868 to 1874, and again from 1880 till now, could do nothing in the Lords except by his permission, which, of course, was never given when a political issue was affected. Yet the vehemence of his party feeling did not overcast his judgment. It was mainly through his interposition that the House of Lords consented to pass the Irish Church Bill of 1869—a measure which, of course, Lord Cairns disliked as heartily as any one did, but which he thought it best to accept for the sake of saving to the disestablished Church a part of her funds, which might have been lost had the bill been rejected then and passed next year by an angrier House of Commons. Of all the members of Lord Beaconsfield's late Ministry, he was the one whom Lord Beaconsfield himself had been wont most to respect and to rely on. In January, 1874, when Mr. Gladstone's suddenly announced dissolution of Parliament startled all England one Saturday morning, Disraeli, who heard of it while still in bed, was at first frightened, thinking that the Liberal leaders had played boldly and would carry the elections. When one of his party managers came to see him, he was found restless and dejected, and cried out, "Send for Cairns at once." Lord Cairns was sent for, came full of vigor, hope, and counsel, and after an hour's talk so restored the confidence of his ally that Disraeli sat down in the best spirits to compose his electoral manifesto. As everybody knows, Cairns's forecast was right, and the Tories won by a large majority.

For political success Lord Cairns had several qualities of the utmost value—a clear head, a resolute will, and splendid oratorical gifts. He was not an imaginative speaker, nor specially skilled in touching the emotions; but he had a matchless power of statement and no less matchless closeness and cogency in argument. His diction, without being exceptionally choice, was pure and precise, and his manner had a dignity and weight which seemed to compel your attention even when the matter was uninteresting. A voice not naturally powerful, for the chest was weak, and sometimes apt to sound hollow, was managed with great skill; action and gesture were used sparingly, but effectively, and the tall, well-built figure and strongly-marked, somewhat Roman features helped to strengthen the impression of power, courage, resolution, which belonged to the whole man. The qualities of oratory I have described in him may seem better fitted to a sober and dignified assembly like the House of Lords than to a changeful and impulsive body like the House of Commons. Yet, in point of fact, he spoke better in the Commons than in the Lords, and would have left a higher oratorical reputation had his displays been more numerous in the popular House. The reason seems to be that the heat of that House warmed his somewhat chilly temperament, and roused him to a more energetic and ardent style of speaking than was needed in the Lords, where he and his friends, commanding a large majority, had things all their own way. In the Commons he confronted a crowd of zealous adversaries, and put forth all the forces of his logic and rhetoric to overcome them. In the Lords he was apt to be didactic, sometimes even tedious; he overproved his own case without meeting the case of the other side; his manner wanted animation and his matter variety. Still, he was a great speaker, greater in his own line, especially upon legal topics, where a power of lucid exposition was required, than any one he has left behind him.

Why, it may be asked, with these gifts, and with so much firmness and energy of character, did he not play an even more leading part in politics, and succeed, after Lord Beaconsfield's death, to the chieftaincy of the Tory party? The answer is to be found partly in the prejudice which still survives in England against legal politicians, partly in certain defects of his own personality. Although sincerely pious, and exemplary in all the relations of domestic life, he seemed ungenial, unbending, in ordinary social life. Few men of our time equally eminent have had so few personal friends. There was a dryness, a coldness, and what appeared (for it may not have been really so) a hauteur about his manner which repelled strangers and kept acquaintanceship from ripening into friendship. To succeed as a leader, a man must usually (I do not say invariably, because there are a few remarkable instances—Mr. Parnell's would appear to be one of them—to the contrary) at least seem sympathetic: must be able to enter into the feelings of his followers, and show himself interested in them not merely as partisans but as human beings. There must be a certain glow, a certain *abandon* about him, which makes them care for him as a human being, and not merely as a general. Whether Lord Cairns wanted warmth of heart, or whether it was that a real warmth failed to pierce the cloak of reserve and pride which he habitually wore, I do not attempt to determine. But the defect told heavily against him. He never became a familiar figure to the mass of his party—a person whose features they knew, at whose name they would cheer; and nowadays all leaders, even of the aristocratic party, must have won this kind of popularity if they are to sway the state.

In the field of law, where passion and emotion have no place, and even imagination must be content to move with clipped wings along the ground, the merits of Lord Cairns's intellect showed to best advantage. At the Chancery bar he was one of a trio who have been rarely, if ever, equalled during the present century, and whom none of our now practising advocates rivals. The other two were Mr., afterward Lord Justice, Rolt, and Mr. Roundell Palmer, the present Lord Chancellor Selborne. All were admirable lawyers, but, of the three, Rolt excelled in his spirited presentation of a case and lively acuteness of his arguments. Palmer was conspicuous for exhaustless ingenuity, and for a subtlety which sometimes led him away into reasonings too fine for a court to follow. Cairns was broad, massive, convincing, with a robust urgency of logic which seemed to seize and hold you, so that while he spoke you could fancy no con-

clusion possible save that toward which he moved. All these famous men were raised to the judicial bench. Rolt sat there for too short a time (a few months only) for him to be able to enrich our jurisprudence or leave a memory of himself in the Reports. Palmer has sat in the House of Lords for twelve years, and, while sustaining his reputation as a man of eminent legal capacity, has been, on the whole, less brilliant as a judge than he was as an advocate, because his tendency to over-refinements is more dangerous in the judicial than in the forensic mind. He has made in many respects an admirable Chancellor, more industrious and more zealous for law reform than Cairns was. But Cairns was the greater judge, and has become to the present generation a sort of model of judicial excellence. In hearing a cause he was singularly patient, rarely interrupting counsel, and only to put some pertinent question. He remained so still that sometimes people doubted whether he was really attending to all that was passed upon. But when the time came for him to deliver judgment, which in the English House of Lords is done in the form of a speech addressed to the House in moving or supporting a motion which is, in fact, the judgment, it was seen how fully he had apprehended the case in all its bearings. His deliverances were never lengthy, but they were exhaustive. They went straight to the vital principles on which the question turned, stated these in the most luminous way, and applied them with unerring exactitude to the particular facts. It is as a storehouse of principles that his judgments are so valuable. They display less case knowledge than those of some other judges. But Cairns was not one of those men who love cases for their own sake, and he never cared to call upon more learning than was needed for the present purpose. It was in the grasp of the principles involved, in the breadth of view which enabled him to see these principles in their relation to one another, in the perfectly lucid language in which he expounded and applied them, that his strength lay. Herein he surpassed the most eminent of his contemporary judges, the late Master of the Rolls, for while Sir George Jessel had perhaps a quicker mind than Cairns, he had not so large a one, nor one so thoroughly philosophical in the methods by which it moved.

It was very characteristic of Lord Cairns that in law he was wholly free from the partisanship which so much tinged his politics. No one was more perfectly fair upon the bench; no one seemed more honestly anxious to arrive at a true decision. And as a law reformer, although he effected less than might have been hoped from his abilities or expected from the absolute sway which he exercised while Chancellor in Lord Beaconsfield's Government, he was free from prejudice, and willing to sweep away antiquated rules or usages if they seemed to block the channel of speedy justice. But in politics all this impartiality and elevation vanished. He was not merely a party man, which an English politician is forced to be, but a partisan—that is, a man wholly devoted to his party, who argued every question in its interests, seemed unable to rise to a higher and more national view, and often condescended to arguments whose unsoundness his penetrating intellect could hardly have failed to detect. While his professional tone was always singularly pure and blameless, he seemed to set for himself a less exacting standard of political conscientiousness. Yet if in this he failed to reach so high a level as his splendid abilities might have warranted, the defect was due not to self-interest, but rather to that intensity of partisanship which marks the Irish Orangeman. It is therefore rather as a judge than as a politician that he will be, and that his friends must desire him to be, held in honorable remembrance. Y.

CATHERINE DE MÉDICIS.

PARIS, March 26, 1885.

COUNT HECTOR DE LA FERRIÈRE has undertaken the task of publishing the correspondence of Queen Catherine de Médicis. His publication is a part of the "Documents inédits sur l' Histoire de France." The first volume appeared a few years ago, and a second has just made its appearance. It opens at the period of the Peace of Amboise, which was made between the Catholics and the Protestants against Queen Elizabeth, as one of the objects of the peace was the retaking of Havre, which was in the hands of the English.

It was not very easy for the Queen to force the Peace of Amboise on her subjects. First of all, she had to meet the resistance of the *parlements*, especially of the Parliament of Paris, which had then and until the reign of Louis XIV. a singular sort of power. There is nothing in history which can exactly be compared to this Parliament of Paris. It was vested with the right of verifying the royal edicts, and these had not the force of law before verification. It had a right of general remonstrance against the abuses and the disorders of the kingdom. It easily became, especially during the minorities, the instrument of the princes; at times, it was in open rebellion, especially when it could have on its side a prince of the blood. When the Peace of Amboise had been concluded, Catherine de Médicis sent two deputies to the Parliament of Paris, De Losses and De Gounor. I must here say a word of Gounor, who was a very important man in his time. He was a perpetual sort of arbiter between the Protestants and the Catholics, and he was fitted for this task by a total absence of fanaticism and a sort of easy scepticism which had endeared him to Catherine de Médicis, who was very much attached to the forms of the Catholic religion, but very little to its dogmas. Catherine was not a theologian; she liked the *old* Church, with its pomps and ceremonies, but the discussions of the Bishops and of the Protestant ministers meant nothing for her. As for Gounor, one word will show his state of mind; during one of the first *collogues* (such was the name given to the meetings in which Catholics and Protestants together discussed the points on which they differed), after a long discussion on the Eucharist, Gounor said: "I really don't know why you debate so long; for," he added, turning toward the Protestants, "if God is in the Eucharist, you cannot take him out of it; and," turning to the Catholic side, "if he is not, you cannot put him in."

The two deputies of the Queen were received by the Parliament. De Losses explained the necessity of verifying at once the letters patent; a single day's delay placed the Queen and the King at the mercy of the Protestants, who were still in arms. The First President, Christophe de Thou, asked him two questions: "Will the cities which are still in the hands of the Protestants be given back to the King? Will the Germans leave the kingdom?" "They have promised to," said De Losses, "and the cities will be given back." Gounor spoke in his turn, and showed the deplorable state of the country: the royal army had not been paid for three months; the receivers of taxes had deserted Normandy and taken refuge in Brittany; in Languedoc the King had only three cities left—Toulouse, Narbonne, and Carcassonne; in Dauphiny he had only one—Vienne. "I speak without passion," said he finally; "I am not a Huguenot, and I beg the court not to postpone the registration of the edict."

The court, however, asked, by the mouth of De Thou, that two princes of the blood should be sent, and be present on the day of the registration. Catherine sent the Cardinal de Bourbon and the Duc de Montpensier, and the registration was made with great solemnity. The First President, having taken the sense of all the members, declared that the letters patent would be inscribed with the special mention, "Read and published in presence of the Cardinal de Bourbon and of the Duc de Montpensier, specially delegated by the King." In the other Parliaments of the kingdom the Queen was obliged to exert a strong pressure in order to obtain the verification of the edict.

She had even more difficulties with the foreign Powers. It was the interest of all these Powers that France should be convulsed and enfeebled by civil war. One of the articles of the Peace of Amboise was the "expulsion of the foreigners." This article was directed not only against the *Reiter*, who returned to Germany with Prince Porcien as a hostage and guarantee of the sums still due to them, but also against the English, still masters of Havre. It was not to be hoped that Queen Elizabeth would give away this stronghold; she pretended to have the right to keep it till Calais should be given to her. The Protestant chiefs had bound themselves to her by the Treaty of Hampton Court. Coligny and D'Andelot, his brother, had advised Catherine de Médicis that they could not bear arms against Elizabeth. Catherine counted on the pertinacity and the pride of Elizabeth; she knew that the Queen of England, who was very much offended with the Protestants of France, would accept no composition and would make war inevitable. Elizabeth refused to give back Havre; Briquemant, the French envoy, told her that war was then certain. Elizabeth wrote to Warwick: "I make no account of his threats; I have for a long time been accustomed to the bragging of the French. I have dismissed Briquemant without any hope of an adjustment as long as I have not Calais."

The Queen of England had a special envoy, Middlemore, accredited to the Prince of Condé and the Protestant chiefs. The ambassador to the Queen was Smith. Both Middlemore and Smith did their best to bring over Condé to their cause, but their efforts were vain. Condé always maintained that he had never consented that Elizabeth should keep Havre till she got Calais. He had, to be sure, given a *blanc-seing* to his envoy at the time of the negotiation of his treaty with Elizabeth; but the Ministers of Elizabeth had surreptitiously introduced this article. Coligny spoke in the same sense, and said to the English ambassadors that it was not in his nor in anybody's power to give away what belonged to the crown.

Catherine de Médicis sent a new envoy to England, M. d'Alluye, the youngest of her secretaries, proud, presumptuous, just the sort of man who was sure to rouse Elizabeth and to throw her off her guard. He took with him La Haye, who represented more particularly Condé. Elizabeth was imprudent enough, in her conversations with D'Alluye, to tell him that the occupation of Havre had been the revenge of Calais. This was the magical word which Catherine de Médicis expected; with this word she was sure to excite the national passion in France. Condé ceased to hesitate: he was a French prince. As M. de la Ferrière says: "The honor of France overcame his ingratitude. The old Constable of Montmorency felt young again, and from his mouth fell the word which rallied under the same flag Protestants and Catholics: 'From here to Bayonne, one cry—*Vive la France!*'" The rest is well known. Elizabeth was as unwilling to spend money for the protection of Havre as she was to abandon the place. When the English fleet arrived it was too late, and Havre surrendered. Catherine made her entry, and she had the satisfaction of seeing the English fleet, which brought

six thousand men, depart with the English garrison.

The majority of Charles IX. was declared at Rouen, and Catherine came and kneeled before her son, who kissed her and told her that it was still for her to command. A short time afterward the Queen-mother, who was a very good rider (see Brantôme's 'Lives of Illustrious Women'), but who had become very heavy, had a fall from her horse at Mantes.

"If," says M. de la Ferrière, "death had taken her at that moment of her life, what a page she would occupy in our history! She had, in the same year, under the happy inspiration of patriotism, put an end to the first civil war, preserved Metz, which was threatened by Germany, retaken Havre from the English, and, effacing the shame of the Treaty of Cateau-Cambrésis, had forever preserved in our hands Calais, one of the keys of France. The blood of Saint Bartholomew would not have reddened her hands, and France, saved by her, would have erected statues to her. Why was it not so?"

During her convalescence, she occupied herself in writing counsel for the conduct of her son Charles. A copy of this letter "au Roy Monsieur mon fils" is in the National Library. This is the place she makes for him: to receive at his *lever*, "quand il prenait sa chemise et que les habillemens entraient," all the princes, knights, captains, chevaliers de l'ordre, gentlemen of the bedchamber; to see them and converse with them. After this *lever*, nobody was to remain but the members of the Council and four secretaries; after mass, dinner, and after dinner, once at least in the week, "give audience; a thing which infinitely contents your subjects. Then retire, and come to me or to the Queen, and keep a certain sort of court, which is a thing the French like infinitely." I cannot follow these instructions in all their minute details; they concern the police of the court, but have little to do with general politics. It has pleased some historians, and M. de la Ferrière has somewhat indulged in this view, to represent Catherine de Médicis as a deep politician, a predecessor of Richelieu and of Mazarin. I cannot admit this conception of her character. She was a shrewd Italian, astute, designing, capable of secrecy, firm, courageous; but to talk of her patriotism seems an exaggeration. She was very fond of her children, and invariably when she speaks of the kingdom she speaks of it as the property of her children. She defends the kingdom as a good trustee defends the capital he keeps in hand. Her love for her children was very blind, and, in one sense, very selfish; she wished them always to be completely under her influence: she was the Queen-mother, but she wished to be also the Queen. Her children were the instruments of her ambition, and her ambition had no other object than the greatness of her children. In all her correspondence I do not find any national view, any theoretical or general policy, any preference for the Spanish alliance or the English alliance. She changed friends as she changed enemies, with the greatest ease; she had but one or two fixed hatreds. Coligny was one; she disliked him profoundly, she feared him, she knew that she was nothing in his eyes, and she could not conquer his pride and his indomitable character.

The second part of the new volume of M. de la Ferrière is filled with the documents and letters which refer to the famous interview at Bayonne. Catherine thought herself strong enough to deal with Philip II. and with the Duke of Alba; she was soon undeceived, and she really left Bayonne disappointed. She had not secured the friendship of Spain, and she had alarmed the whole Protestant world, and the rumors which followed the interview were the preface of new wars of religion. She would have done much better to adhere to the edict of Amboise. The Protestants were able to represent her as the tool of Spanish fanaticism, when she had in reality obtained nothing from the bigoted and perverse Philip.

Correspondence.

TENNESSEE MOUNTAIN DIALECT.

To the Editor of The Nation:

Sir: Professor Alexander's interesting letter in the *Nation* of April 2 inspires the wish for a fuller analysis, from his pen, of the dialect of the Tennessee mountain region of which he writes. It appears to be difficult to report dialect speech accurately. But the expression "stiddier," which occurs so often in Miss Murfree's stories, is certainly "instead of your," when correctly used; and in the speech of the people of the region, as I have heard it, it appears as "'stid o' yer," as I should represent it: "'Stid o' yer takin' up with sich a forehanded gal as Emiline, ye have to run arter a doless thing like that." Miss Murfree does not always use it correctly. But "brigaty" I have heard as often as the other form, not only in that region, but among descendants of the "Scotch-Irish settlers in Pennsylvania, Virginia, and elsewhere." The people of the same region do not all speak their dialect precisely alike. "Jawin'," for jawing (scolding), is right, but these people also say "jourin'" (sounding the "r" distinctly) for speech or actions intended to excite anger or produce a personal collision. I think they generally say *shore* for *sure*, but Miss Murfree does not so represent their speech, I believe. Though sometimes inaccurate, she uses many characteristic expressions correctly. I should like to ask Professor Alexander if he has heard "saddy" for "thanks," or "thank you," in Tennessee, and what he thinks it comes from.

The chief interest of Miss Murfree's stories for me is in the fact that the author, without patronizing her characters or apologizing for them, truthfully portrays representatives of a population not yet influenced by the modern world. The instinctive virtues of courage, truth, and faithfulness survive in greater degree among the people of portions of Tennessee, North Carolina, Virginia, and West Virginia than in any other regions with which I am acquainted. (Some of these people are starving just now, I believe.) The first and last stories in Miss Murfree's book, for instance, seem to me to be truthful in this respect, and examples of good art, without distortion or excess, and so of great value in literature. I hope the dialect may be carefully revised for future editions.

J. B. Harrison.

New York, April 7, 1885.

"HOLDING A SALON."

To the Editor of The Nation:

Sir: I am sorry for those who (like your correspondent "H.") "cannot read the *Nation* without self-consciousness"; and I am equally sorry for those who (like "H.") "try to hold a salon." But it appears to me that the two causes of trouble are somewhat closely connected, and I would suggest to "H." that if she (the sex is, I believe, unmistakable) will never again attempt to hold a salon, she will be always able to read her *Nation* with quietness of soul.

To translate "tenir un salon" by "keeping a saloon" would not be more out of reason than to attempt to transplant the idea of the "salon" from Paris to New York, from France to America. A "salon" is possible (omitting all other considerations) only under certain conditions of leisure—both leisure of time and leisure of mind—pervading the society from which its habitués are to be drawn. It may be said that Americans are absolutely ignorant of the leisure of men who are or have been hard workers in intellectual fields, but whose tasks are for the most part set by themselves; or the leisure of women who have no occasion for "cares" about money or health. To create a salon there must be in its neighborhood, at least vaguely influencing it, disengaged savants, disengaged statesmen, army and navy officers, journalists, professional men, artists (including authors), bankers and brokers, and leisurely talkers, intermingled with women willing not only to give up "the world" for (in a more definite sense) "society," but to devote the best powers of their intelligence to making *other women* charming. By this last gentle paradox I mean that (outside the "specialized" salon—the salon of *intimates*—where the hostess is the only woman needed, and she chiefly as the bond of union among her guests, the string on which they are strung) the atmosphere of the most successful salons is created by a diffusion of entirely unpretending women, in sympathy among themselves about the pretty game of agreeableness they are playing.

A "salon" is simply impossible, as yet, in any city of this land; one might as well try to make a salad of grass and a little butter and salt, or an omelet without fire. It is more or less out of season now everywhere: but even where it is possible, each individual salon is a thing of slow growth—it does not spring up in a night. Its birth is as spontaneous and original as that of an organized being, and its cultivation as prolonged. One cannot hold a salon this winter or that, one "holds" it for life. And "H." must pardon me for saying that at the best it is not every woman who can be a proficient in this art.

If by "holding a salon" "H." merely means that she has been "at home" to her friends once a week during the winter, she would, by using the native and not the foreign phrase, do something to "clear her mind of cant," and might thus take a step toward the discovery that if her salooners are "ridiculously stiff and self-conscious," it is not the fault of the *Nation*. * *

OUR FOREIGN SERVICE—ITS DEFECTS AND THE REMEDIES THEREFOR.

To the Editor of The Nation:

Sir: In a former article I called attention to the great importance to our Government and people of our foreign service, and pointed out some of the grave defects at present existing in it, as a natural result of the "spoils" system. No branch of our public service, let me repeat, not even our army and navy, stands in greater need of special training, experience, and stability than does our foreign service; and in this opinion I am sure all will concur who are at all conversant with the important, varied, complex, and often delicate duties required of this service. Not unfrequently peace between nations depends upon the capacity, skill, and experience of their representatives abroad. An untrained and inexpert consul or minister may involve us in serious difficulties with our neighbors when there is no principle or right involved. A few years ago our Government was called upon to send two men-of-war to Tripoli to demand redress for imaginary insults offered to our consul, and they had actually to lower their guns and prepare to bombard the city before the stubborn Pasha would consent to apologize for an offence never offered. The commanders of both vessels have since told me how they regretted thus humiliating the authorities, well knowing that the difficulty grew entirely out of the incapacity—or worse—of our consular representative; and an official report of the case was made to this effect. Had such action been taken against a self-respecting country it would certainly have been resented, and we might have been involved in serious trouble.

Only two or three years ago a man-of-war was called all the way from Italy to an important Turkish port, at the instance of our consular agent—who is not an American—to demand the release of a man accused, and no doubt guilty, of brigandage, and, what is still worse, who had not a shadow of right to American protection. Yet he was liberated on the demand—in the form of a forty-eight-hour ultimatum—of the commander, who told me he acted with great regret, as he had no doubt, from what he could learn, that the man was guilty of the charge against him. But our commander did not then know that the man had no right to American protection. Our minister in Constantinople was afterward highly incensed at hearing of some one of the foreign ambassadors asking the Turkish minister why he did not have that American "tub" sunk instead of submitting to the indignity. Let us hope that our gifted and amiable new minister will understand how to maintain fully all our rights without submitting even the despised Turk to such gross injustice.

I mention these instances, and I could mention many others, to show how our friendly relations with other countries may be disturbed by the character of our foreign representatives. Individual rights may and often do suffer for the same reason. In a recent case an innocent American lady even was imprisoned for two months, owing entirely to the inexperience and want of energy of a new consul. Everywhere abroad one hears anecdotes not at all to the credit of our representatives. Where they are guilty of nothing worse, they often violate every rule of propriety and etiquette, and not infrequently are debarred entry into good society because of the character of the associates they select. The only final means of remedying the evil will be to so change the laws as to make the service fixed and permanent, and tenure in it dependent solely on merit. There is no more room for the exercise of the spoils system in our foreign service than in the army and navy. Special training and qualifications are, to say the least, just as necessary in the former as in either branch of the military service, and change except for cause just as unwise and unjust. This is the universal experience of all other countries, except Turkey, and to some extent Greece. Would we take either of these as our model? The pretence that a permanent civil service is "unrepublican" or "undemocratic" is too ridiculous for serious consideration. No country has a more permanent civil service than the model little republic of Switzerland; and yet nowhere do we find a truer republican or a more sincerely democratic spirit in all classes. France has not found it necessary to degrade her civil service by the introduction of our "spoils" system because she has become a republic. Experience and capacity are just as necessary in the government of a republic as in a monarchy, and the "spoils" system just as demoralizing and degrading, and perhaps even more dangerous.

Some years ago we introduced into our consular service the grade of consular clerk, which was made permanent by law, with admission to it on examination and established fitness, and removal for cause only. The intention of this law was to gradually train a consular corps, and the idea was excellent. But it never proceeded beyond this first step. The result has been that a consular clerk who desires to remain in the service declines promotion, well knowing that from a higher position he may be removed at any time, for no other reason than thats ome one else desires his position. What is necessary is to extend this system to at least our entire consular service, and I would say also to the subordinate grades of our diplomatic, with promotion according to experience and established character and capacity, just as in our army and navy, and just as all other civilized countries have found best. General Grant was reported some time since, in an interview with the so-called Central and South American Industrial Commission, as saying that our consular officers now had no incentive or encouragement to do their duty. Let us adopt a common-sense service, such as will secure tenure with promotion according to merit, and the incentive to an intelligent and energetic performance of duty will be furnished. Our consular officers will then seek to recommend themselves by their good conduct and efficiency, and will not be dependent, as now, on the favor of politicians. Then, too, there will be no occasion to send out such ridiculous and costly junketing commissions as the one above referred to, for doing work that our consuls should and could do very much better. But as long as the present system remains unchanged, we are dependent entirely on the Government for the more or less careful selection of our representatives. Fortunately, with such a President as Mr. Cleveland, and such a Secretary of State as Mr. Bayard, both pledged to introduce reform methods into every branch of the service, we have every reason to hope that the character and efficiency of our foreign as well as of our home service will be greatly improved. But the only lasting way to make it good and efficient is to enact a law to govern it, embodying the principles of civil-service reform.

While, however, I consider that our foreign service is at present very inefficient, and a considerable proportion of our representatives very incapable and unfit for their positions, I should consider sweeping changes, especially in the consular branch of the service, as a grave error. We have some very capable and excellent representatives, well trained in every way for their work, and such should remain undisturbed, both for the good of the service and out of justice to the individual who has carefully prepared himself for the proper performance of his duties. Changes enough, no doubt, can be made for good cause among the inexperienced and incompetent who have been recently foisted upon the service by the "spoils" system or from favoritism. But they should be made slowly, and where unfitness is made manifest; and the places vacated should be filled solely with a view to character and capacity, and without regard to political views or political influences. Our foreign officials, just as much as our army and navy officers, should regard themselves as the representatives of the entire country and not of a party; and partisan services should not only not be expected of them, but should not be tolerated. So-called "voluntary" contributions to Jay Hubbell "corruption" funds should be regarded a sufficient cause for removal rather than non-contribution.

It is, nevertheless, not the *personnel* alone of our foreign service that needs reforming. The service itself also stands in urgent need of careful revision and adaptation and classification according to present wants and requirements. The existing arrangement and classification (if such may be said to exist at all) is antiquated, made when positions were of very different relative importance from what they now are, and when the cost of living abroad in many instances was hardly half what it now is. Congress has from time to time added its patchwork to this antiquated system on account of political favor toward certain incumbents, and created new positions that have grown into importance. The result is that our existing service is generally most inadequately and unequally remunerated, and classified without any regard to the relative importance of positions. I believe that as a general rule the salaries of our consular officers are not over half those of any of the other great Powers, and they are sometimes less than a third and even a fourth. In one position held by the writer his salary was less than a fourth that of the French and Russian consuls; and in another about a third that of the English and French and half that of the other great Powers. In one case it was but a little over one-third that of even the Swedish consul. Yet in every position he has held, the official fees of his consulate have been considerably more than those of any other foreign consulate, and the labor greater than any except perhaps the English. Now is it just or wise or creditable to our country that its representatives should be so miserably paid compared with those of other countries—and that, too, while our consular service is made a considerable source of revenue to our Government over and above its entire expenditures? Unless our representatives have personal means of their own, they are frequently unable to live at all respectably or even comfortably if they have families, not to speak of living somewhat as their colleagues of other countries live. Yet no people expect so much of their representatives abroad as Americans, or are so ready to complain if what they imagine duty is not performed.

How is the necessary revision and classification of our foreign service to be brought about? Clearly not by any one individual in the State Department. That has been tried more than once, with ignominious failure before Congress. Besides, the field is too broad and the work too great for any one person, however well informed, to perform properly. Still less can it be fitly done by the ordinary appropriation committee of Congress, which usually has entirely too much on its hands, besides not being appointed with a view to capacity for doing such work. I shall always remember an interview I had with the amiable Chairman of the Sub-Committee on the Consular and Diplomatic Appropriation Bill a few years ago, and my astonishment at his utter ignorance of our service, its regulations and duties. The only way, in my opinion, that the work can be done properly is by a joint commission of Senate and House, specially selected for the purpose, and aided by at least three persons selected by the Secretary of State, one from the State Department and one each from the diplomatic and consular branch of the service—all three selected with a special view to their acquaintance with the wants of the service. Such a commission should have time to examine thoroughly into the condition and wants of the service in every part of the world. It should send a circular, with carefully prepared questions covering the ground on which it desired information, to be answered by every one of our foreign representatives; and sub-committees might perhaps visit some of the more important positions. It might also procure important information from the leading foreign governments as to the organization and remuneration of their diplomatic and consular services. Such a Parliamentary commission thoroughly reorganized the English consular service a few years ago, and a similar one was appointed in Italy a year or two ago, at the instance of the Government, to reorganize the Italian foreign service. This commission divided itself into two sub-commissions, one presided over by Signor Cairoli, ex-Minister of Foreign Affairs, and the other by Senator Cadorna, ex-Ambassador to London, both men thoroughly familiar with the requirements of the foreign service of their country.

The work done by such a commission would not only be more thoroughly discussed and considered than any scheme emanating from Congress itself, but would also have much more moral weight with Congress, and consequently be more likely to be adopted. When adopted, it should be fixed by law, and not left subject to

change at the whims, and freaks, and spites of every appropriation committee, as is now the case. As Mr. Schuyler has well pointed out in his lectures, and as he knows by experience, a minister or consul has no guarantee now of what his salary may be from year to year, or even that his position itself may not be abolished at the mere whim of some eccentric Congressman. Such instability and uncertainty is certainly most injurious and discreditable to our service, as well as cruelly unjust to individuals, and a remedy therefor ought to be found. B. O. D.

VARIED PHRASING.

To the Editor of The Nation:

Sir: Mr. John Morley, in his excellent critical analysis of George Eliot (*Macmillan's Magazine*), says that it "has been observed by a contemporary writer that men and women are more fairly judged, if judge them we must, by the way in which they bear the burden of an error than by the decision which laid that burden on their lives." Those readers who are familiar with Mr. Morley's volume on Rousseau will recognize that the "contemporary writer" is Mr. Morley himself, and, turning to the pages published in 1873, will find this passage (I. 111): "Men and women are often more fairly judged by the way in which they bear the burden of their own deeds [the fashion in which they carry themselves in their entanglements] than by the prime act which laid the burden on their lives [and made the entanglement fast knotted]. The deeper part of us shows in the manner of accepting consequences." In the later edition (1878, p. 77) the clauses I have put in brackets are (perhaps judiciously) omitted, and "their own deeds" is changed (with loss of emphasis, it seems to me) to "what they have done." And a note is added (dated 1877), saying, "The other day I came for the first time upon the following in the sayings of Madame de Lambert: "Ce ne sont pas toujours les fautes qui nous perdent; c'est la manière de se conduire après les avoir faites."

I think one cannot but be interested in the case of so thoughtful a writer as Mr. Morley by seeing the persistence in his mind of this judgment; and this very persistence strongly enforces the value of the truth he asserts—a truth somewhat unfamiliar to most minds. C.

VOODOOISM.

To the Editor of The Nation:

Sir: I am not aware that a derivation has ever been offered for the term Voodoo or Voudou—the designation in our Southern States of the sorcery practised by negroes—and I am tempted to suggest the following. In the fifteenth century, in France, the abhorrence inculcated for heresy and the foul doings attributed to heretics led to the Waldenses or Vaudois being confounded with witches, so that the popular name given to sorcerers was Vaudois, and witchcraft was called Vaudoisie—just as, at an earlier period, the wickedness ascribed to the "Bulgarian" or Albigensian heretics enriched the vernaculars of England, France, and Italy with an infamous word. That this is the origin of the word Voodoo is rendered probable by its occurrence in the Creole dialect of the French colonies of Haiti and Louisiana, while in the English West Indies the magic rites of the negroes are known by the name of "Obeah," which I presume is imported from Africa. If my conjecture be correct, it illustrates the necessity of combining folk-lore with philology in the elucidation of comparative mythology. Littré, I observe, gives "Vaudoux" as the Creole name for sorcerers, and this presumably is the correct form of the word.

Respectfully, L.

Philadelphia, April 11, 1885.

THE CAVES OF DAHIRA ATROCITY.

To the Editor of The Nation:

Sir: Justice to the memory of an "upright man" requires the corrective statement that it was not Marshal Bugeaud who smothered the Ouled Rida in the caves of Dahira (see last week's *Nation*, p. 293), but Colonel Pélissier, afterward Duc de Malakoff. M. H.

[True; but Marshal Bugeaud expressly sanctioned it as in accordance with his orders. —Ed. Nation.]

Notes.

Chas. Scribner's Sons have nearly ready 'The Russians at the Gates of Herat,' by Charles Marvin; 'Assyriology, its Use and Abuse,' by Prof. Francis Brown; and 'A Child's Garden of Verses,' by Robert Louis Stevenson.

Robert Clarke & Co., Cincinnati, have in press for the Historical and Philosophical Society of Ohio 'The Diary of David Zeisberger,' the famous Moravian missionary to the Indians of Ohio from 1781 to 1798. This has been translated from the German by Eugene F. Bliss, and will fill two volumes 8vo. A limited edition will be printed from the types, and a few copies will be for sale by the publishers, the rest being absorbed by the Society.

'The Oldest Church Manual' is the title of yet another work based on 'The Teaching of the Apostles,' which Funk & Wagnalls announce. It will contain facsimiles of the Bryennios manuscript.

Two more volumes extend the Riverside Aldine series (Houghton, Mifflin & Co.), namely, Bret Harte's 'Luck of Roaring Camp, and Other Stories,' and Lowell's 'Fireside Travels.' Preservation in this pretty collection is the very apotheosis of the magazine article. The same firm has assigned Massachusetts, in its "American Commonwealths" series, to Mr. Brooks Adams, son of Charles Francis Adams.

Mr. John Durand's translation (Henry Holt & Co.) of the third volume of Taine's 'French Revolution' follows not long after the appearance of the original, which we have already reviewed at length.

The geological work of the brothers Henry D. and William B. Rogers in Pennsylvania and Virginia respectively was among the most important contributions to the earlier geological knowledge of this country. But while, through the liberality of State appropriations, that of the former appeared in three large quarto volumes, and has contributed largely to the development of the great mineral resources of Pennsylvania, Virginia, though scarcely less rich in natural wealth, was less generous in the means she afforded to the other brother for carrying on his investigations, and only preliminary annual reports for the years 1835 to 1841 were printed. Even these have long been out of print, and Professor Rogers, though often requested to republish them, with characteristic modesty declined to do so, on account of what he considered their immaturity and imperfection. The financial condition of Virginia, however, is scarcely more prosperous to-day than it was forty years ago, and there seems to be little prospect that the reports in question will be soon superseded. It was, therefore, not only a fitting act of devotion to his memory, but a service to science, on the part of his wife, to collect together his various papers bearing upon the subject in one volume (D. Appleton & Co.). Although so long a time has elapsed since Professor Rogers's observations were made, and geological knowledge has meanwhile made such rapid strides, it is a striking proof of his great acumen and ability that his work still forms the basis of all that is known of Virginian geology.

A work for which the learned world has waited during a whole generation cannot be reviewed in haste. We note the reception from B. Westermann & Co. of the fifth volume of Mommsen's 'Römische Geschichte.' This portion relates to the Provinces from Cæsar to Diocletian, and the author's excuse for bringing it out before the fourth, or any succeeding volume, is, that the story of the Roman provinces under the Empire is nowhere else told connectedly. Dr. H. Kiepert has provided ten maps in illustration of the text, which fills thirteen chapters.

We have received two additional volumes of "Harper's New Classical Series," published under the general supervision of Professor Drisler, of Columbia College. One of these volumes contains books vi. and vii. of Herodotus, edited by Professor A. C. Merriam, of the same college, the other the Olympian and Pythian Odes of Pindar, edited by Prof. B. L. Gildersleeve, of Johns Hopkins University. All that Professor Merriam has aimed at is to make a useful text-book, and in this he seems to have succeeded. The text is that of the edition of Stein in Haupt and Sauppe's series. The notes are also based upon Stein's, but embody in a very condensed form the results of the labors of the best modern editors. The introduction contains a life of Herodotus, an epitome of all the books of his history, and a summary of the peculiarities of his dialect. The references in the notes to the grammars of Hadley, Goodwin, and Curtius are more than ordinarily full, as are also the cross-references to parallel passages in the work itself. Professor Gildersleeve's work is in many respects remarkable—a text-book and much more. We shall embrace the earliest opportunity that the pressure on our time and space affords, to give it further consideration.

The late Professor John Norton Pomeroy's able articles on the "Civil Code" in California have just been published as a handy weapon against the Field Code in New York by the Bar Association of this city. They were originally contributed to the *West Coast Reporter*.

Mr. Parker Pillsbury, Concord, N. H., continues his reprints of famous anti-slavery tracts by reproducing J. G. Birney's 'The American Churches the Bulwarks of American Slavery,' from the third American edition. In a brief introduction, Mr. Pillsbury relates Mr. Birney's conversion from slaveholding to abolitionism.

An effort which we hope may succeed is making to put the *Overland Monthly* on a stable financial footing. Amid so much that is transient in California, this periodical richly deserves to be maintained.

Portraits of William Phillips and of his nephew Samuel Phillips, both Lieutenant-Governors of Massachusetts, and the latter the founder of Phillips Andover Academy, are given in the April issue of the *New England Historical and Genealogical Register*. Mr. B. F. De Costa discusses with great learning the place of Sandy Hook in the old cartography. Mr. H. F. Waters's "Genealogical Gleanings in England" have this month largely to do with emigrants to Virginia, but also introduce important information about the Chauncys, celebrated in the annals of Harvard College, the Ushers, Whittinghams, Byfields, etc., etc.

A 'Genealogical Dictionary of Rhode Island,' comprising three generations of settlers who came before 1690, will be undertaken by J. O. Austin, P. O. box 81, Providence, R. I., if he receives sufficient support.

Science for April 10 gives a facsimile of a map drawn by General Gordon, to show his route in 1874 from Suakim to Berber and Khartum. Mr.

H. G. Prout, who has several similar autographs in his possession, vindicates General Gordon against the imputation of owing his success to his fanaticism, and not to his soldierly training and qualities.

The steadily growing edition of the *Century* has had the happy effect of retarding its date of publication beyond that of the other magazines, until it is fairly forced for its forthcoming May number to appear on the first day of May. The date upon the cover and that of actual appearance being thus made identical, the publishers announce that this harmony will be observed hereafter, the June number being issued on June 1, etc. The public will certainly approve this return to common sense, whether the *Century's* example be followed by the other magazines or not.

In the April number of *Longman's Magazine* Mr. Edward A. Freeman begins a series of papers "On Some Modern Abuses of Language," first considering the original and exact meaning of *decimate*, *triumph*, *ovation*, *Gothic*, *vandal*, *ritualist*, and *prolétariat*. In the same number there is an interesting essay on "Irish Popular Poetry" by Mr. James O'Donoghue, with abundant quotations, among which is included "Paddies Evermore," by the present Mr. Justice O'Hagan. Apropos of this the essayist tells us "that, within the last few years, a stipendiary magistrate sent a ballad-singer to gaol for singing a song which his worship had written in the dreamy days of his hot and inexperienced youth."

The *Portfolio* for April has a very interesting engraving of Constable's "Salisbury Cathedral" by Brandard, conveying as well, perhaps, as line-engraving could, the glitter and rainy-weather sparkle of the master, and showing, too, the careless and flimsy way in which he drew his details. It is a fine and impressive ensemble, and the composition, taken as a suggestion of accidental arrangement, is most happy dissembling of the kind of art whose perfection is in the concealing art. But how any one who knows what a tree is, could say of Constable's tree-drawing what Mr. Monkhouse does, is incomprehensible: "We doubt if any trees were ever drawn at once so carefully and so elegantly, and with such true variation of form and color." No *careful* student of nature could have allowed such bough drawing as Constable did to enter his portfolio. The results on canvas are large and poetic; and, in spite of a certain vulgarity of execution, indicating a coarseness of perception and feeling of form, they have the charm of genuineness and a grip on the secrets of nature. This is enough, without claiming for him refinements and perfections he would probably have considered finical if they had been presented to him, and have laughed at. The literary attraction of the number is, as last month, in the study of Watkiss Lloyd on the Drama of the Greeks in relation to the Arts.

Miss Amelia B. Edwards and Professor Sayce—the former in a communication to the *Academy*, and the latter in a correspondence from Siout to the same journal—both enthusiastically report the advance made by Professor Maspero in his excavations at Luxor. Sayce speaks of "wonders" accomplished. "The ancient temple of Luxor is slowly rising again to the light of day, as at the touch of a magician's wand, . . . a worthy rival of the finest temples that still exist in Egypt." The forest of columns of the great hall of Amenhotep III. is visible for two-thirds of their height, a magnificent landmark to travellers on the Nile. A small portico, dating from Rameses II., and several colossi, some prostrate and some yet erect, have also been brought to light; and some remains of a great quay, inscribed with the names and titles of Amenhotep, have been discovered. Professor Sayce also mentions the disinterment by Maspero at Thebes of the sarcophagus of Nitocris, the Queen of Psammetichus II. It is curious to notice that Miss Edwards consistently calls the famous French Egyptologist Maspéro, and Sayce alternately Maspero and Maspéro, while his real name, as shown by the quotations from his own writings in notes to his 'Histoire Ancienne des Peuples de l'Orient,' is unaccented, as it also is in the notice of him in Vapereau's 'Dictionnaire des Contemporains.'

There has recently been invented a process, partly mechanical, partly chemical, by which plane-surface maps are reproduced "with the curves and altitudes in relief so represented as to correspond absolutely with the elevations established by accurate observations." These maps cost no more than ordinary flat maps, are drawn on moderately thin paper, can be rolled, and are not injured by water. The Paris correspondent of the London *Times* says "that the relief is produced on them in such a manner that at a single glance one can take in the whole topography of a district, its defiles and heights, its watercourses, and all the lesser obstacles of the country in which military operations have to be carried on." The owner of the patent is M. de Mendonça, a Portuguese nobleman.

In January last a considerable majority of the Trustees of the British Museum (very few being present, it should be said) voted in favor of opening the Natural History Museum at South Kensington on Sunday afternoons. A resolution "to support" this decision was debated in the House of Lords on March 20th, and received a tie vote, 64 to 64. But "the numbers being equal, it was (according to ancient rule) resolved in the negative." Lord Cairns, the Duke of Argyll, and the Archbishop of Canterbury were the principal opponents of the measure, restating the old arguments. Lord Granville, on the other hand, spoke and voted in favor of it, saying, however, "that the Government had not thought it right to take any action in regard to a social question the merits of which very much depended on the public feeling and the public opinion which existed." The Prince of Wales and the Duke of Edinburgh, who favor the measure, were paired with two Bishops. None of the Bishops voted for the resolution, though many, including the Bishop of Peterborough, refrained from voting. The *Spectator* intimates that a similar measure will be introduced into and passed by the House of Commons.

The work of printing the catalogue of the British Museum is being diligently prosecuted by the officers of that institution. This collection of books now comprises 1,350,000 printed books and 50,000 manuscripts. There have been hitherto three issues of a catalogue of the Museum—in 1787, 1813, and 1819 respectively. The present catalogue, begun in 1875, at the close of last year comprised 64 volumes, containing 330,000 titles. Separate lists on special subjects have been constructed, such as America, Bacon, Bunyan, Byron, Æschylus, Æsopus, and Virgil. The article Academies, now in press, will fill six volumes. The Bible, which takes up twenty-one volumes of the manuscript catalogue, will require three or four in the printed form. The printed catalogues are sold by annual subscription.

Mr. Julian Hawthorne's novelette, 'Noble Blood,' has recently been published in London by Chatto & Windus as 'Miss Cadogna.' His 'Fortune's Fool' has just appeared in the Tauchnitz collection.

Mr. Charles Hutt is about to issue in London Mr. H. C. Bunner's volume of poems called 'Airs from Arcady.' Mr. Hutt takes the American book printed and bound—a tribute to the taste of the American publishers. It may be noted that the cover of this volume of poems by the editor of *Puck* was designed by the editor of *Life*, Mr. J. A. Mitchell.

Under the changed title of 'Monsieur at Home,' Messrs. Field & Tuer, the English publishers of M. "Max O'Rell's" overpraised books, issue an English edition of Mr. Albert Rhodes's little book on the 'French at Home,' published here by Dodd, Mead & Co., and made up of essays contributed chiefly to the *Galaxy*.

M. "Max O'Rell," it is now an open secret, is not an Englishman in disguise, and his name is not MacSorrel, as the preternaturally wise have surmised. He is M. Paul Blouët, French master at Westminster School, and editor of the Clarendon Press volumes on 'French Oratory.'

The Paris courts have just given the public the pleasure of seeing the engineer hoist with his own petard. Éd. Delpit announced a romance entitled 'Le Supplice d'une mère,' whereupon Edm. Lepelletier applied for whatever corresponds to an injunction in French law, on the ground that he published a novel last year with that title. The talk about this woke up Gondry du Jardinet, who three years ago had hit upon the same name, and now sues both Delpit and Lepelletier. Lepelletier is the worst off, because his book has been sold and he is responsible for "dommages-intérêts," while Delpit has slipped out of the case by simply changing his title before publication to 'Les Souffrances d'une mère.'

In December of last year the Science Building of the University of Wisconsin was totally destroyed by fire, with all its contents. The building had originally cost $80,000, and the collections and apparatus could hardly be exactly valued. The whole loss to the University was perhaps $120,000, on which there was $41,000 insurance. We lately mentioned the disposition of the State Senate, for political revenge, to cut down the appropriation to repair this loss which had been voted by the Assembly. We are glad to say that better counsels prevailed, and that provision has been made for the rebuilding of Science Hall ($150,000); for a new chemical laboratory ($20,000); for heating apparatus ($20,000); and for cabinets, etc. ($41,000)—in all, $231,000. Building will be commenced at once.

Wisconsin is not such a bad place to live in: the same Legislature has just declared that it will not be necessary to levy any State tax for the year 1885 nor for 1886. The receipts, with the present balance in the treasury, will meet all expenses and leave a handsome surplus besides.

The Providence Art Club has just closed an exhibition in which were shown more than one hundred miniatures procured from Rhode Island families. The first on the list was one of Washington presented to Colonel Lear, his private secretary.

A series of authors' readings, says the *Critic*, will be given at the Madison Square Theatre on the afternoons of April 28, 29, and 30, in aid of the international copyright movement.

—The Catalogue of the University of Pennsylvania for 1884-85, which has just appeared, shows an increase in the faculties of fifteen professors and instructors, making a total of 143 engaged in active work and 4 emeritus-professors. Two new departments have been added, viz.: of Physical Culture and of Biology. Why the former should be called a department is not quite clear, since its faculty embraces only one man, and it has no students peculiar to it. Its work is nothing more than that done elsewhere in the regular college gymnasia. The School of Biology may better lay claim to the title of department. It includes eight active members in its faculty under the direction of Doctor Leidy, and seems likely to become a centre of instruction and investigation for the line of work peculiar to it. Its new laboratory building is fully equipped

with everything necessary to the most advanced work in original investigation. The Veterinary School, though established two years ago, did not really begin work until last autumn, when it opened with thirty-three students in its entering class. Its course is three years in length, and is carefully graded after the model of the best European schools. The Medical and Dental Schools have held their own. The fourth year of the Medical Course does not seem to correspond to any great public want, since there are only three students enrolled in it. In the College Department, which includes the College of Liberal Arts, the Scientific School, and the Wharton School of Political Science, some very significant changes have taken place. A new course, called the Philosophical Course—comically enough, too, since there is almost no philosophy in it—has been opened to the students. It drops Greek, diminishes the amount of Latin in the Classical Course, and adds strong courses in French and German and Natural Science. All the courses are made interchangeably elective at the close of the Sophomore year. This is a radical, perhaps one might better say revolutionary, step. It means simply that this rather conservative institution has finally joined the ranks of the more progressive colleges of the country, and adds another to the rapidly-growing list of elective-course institutions. The student now has an opportunity to choose in his Junior and Senior years from a large number of studies, including, among others, Latin, Greek, Sanskrit, French, German, English, comparative philology, mathematics, history, political science, natural science, engineering, etc. The University now has more than 1,000 students, coming from every State in the Union and from twenty-one foreign States; Germany, France, Great Britain, Sweden, China, and Japan being represented by from one to ten students each. Most of the foreign students are in the Dental and Medical Schools.

—It is a long-established result of pure theory that if the axis of figure and the axis of rotation of the earth do not coincide, a periodic change in the latitudes of stations on the earth's surface will result. At any given station all the changes would take place within a period of about ten months; and these changes would perpetually repeat themselves. The first observations of high accuracy which were made with a view to test this were those of Dr. C. A. F. Peters, at Pulkowa in 1843. These were repeated by Professor Gyldén in 1866 and by Doctor Nyrén in 1872. Their results show that the *periodic* change of latitude, if, indeed, there is any, must be extremely small. In the course of their investigations on this point the absolute values of the latitude of Pulkowa were deduced as follows:

Peters, 1843;	Latitude is	59° 46′	18″.73
Gyldén, 1866;	" "	" "	18″.65
Nyrén, 1872;	" "	" "	18″.50

That is, a diminution of the latitude of 0″.08 apparently occurred from 1843 to 1866, and one of 0″.15 from 1866 to 1872. 0″.01 is about one English foot, and the diminutions were therefore about eight and fifteen feet respectively. Although these are extremely small quantities to be determined in this way, the precise measures on which they depend lent some basis to a belief that there might be a *secular* change of latitude at a given place. The latitude itself is nothing but the angle between a plumb-line at the station and another line drawn from the station to the highest point of the equator. Secular changes of latitude might be due to geological changes in the earth itself, such as might occur by the shifting of large masses in the interior of the earth, etc., thus changing the direction of the plumb-line. Since M. Nyrén's investigations various astronomers have considered the changes at other stations besides Pulkowa. The whole subject has been treated by Mr. Fergola, of Italy, who has collected old and modern determinations of the latitude at various observatories. It is noteworthy that at observatories in the northern hemisphere, as Washington, Paris, Rome, Milan, Naples, Koenigsberg, the modern latitudes appear to be consistently all smaller than the older ones. For example, at Washington in 1845 a very careful determination gave 38° 53′ 39″.25; in 1863 Professor Newcomb found 38° 53′ 38″.78. The differences are greater than should be expected from the precision of the observations. Under these circumstances, the International Geodetic Conference of 1883 proposed a scheme of simultaneous observations of the same stars at fixed observatories situated near the same parallel of latitude. This limitation does away with some of the chief difficulties in the nature of unknown refractions, etc. It is understood that the observatories of Lisbon and Washington are now engaged in a series of this sort. The result will be to determine the difference of latitude of the two points, as it is now. A repetition of the measures should show if there has been any change in this difference, within the limits of accuracy of the method. To determine any change as small as 8 or 10 feet the observations would have to be amazingly precise, and at any rate we shall have to wait many years for a satisfactory result.

—In the meantime, a most interesting contribution to this question has been made at our very doors—at the Engineer School of Application at Willet's Point, New York Harbor, under General Abbot, U. S. A. General Abbot is in charge of the professional studies of young Engineer officers, and has established a school of Practical Astronomy of the best kind. Among other things, his young officers determine the latitude of his station yearly. Although the observers are not perfectly skilled, the great number of observations taken must, in great measure, compensate for this. General Abbot finds for the latitude:

Before 1880		40° 47′	21″.70
During 1880		"	21″.59—326 observations.
"	1881	"	21″.47—591 "
"	1882	"	21″.37—235 "
"	1883	"	21″.15—497 "
"	1884	"	20″.75—523 "

That is, he finds a diminution of 95 feet from first to last, and of nearly 20 feet per year in the mean. It is certainly *possible* that the differences may be due to accumulated error; but it is highly unlikely. It would seem that this regular annual determination of the latitude has led to striking results. Certainly, it becomes the duty of fixed observatories to test this question; and if the U. S. Coast Survey could keep one of its skilled observers at work determining the latitude of one of its well-established stations for a few years, we should have a most interesting contribution to the subject. The time would not be lost.

—A new game has been evolved in Berlin by an ingenious adaptation to circumstances. The rooms under the arches of the Berlin City Railway have been used for a variety of purposes—restaurants, storehouses, shops, and hygienic establishments. Some one wanted to have a nine-pin alley there, but unfortunately the alleys ought to be seventy-five feet long, and the arches only give a length of thirty-five or forty. Hereupon it occurred to the engineer Kiebitz to let the alley run up one side of a room and down the other, in the form of a letter U. If the course had been made flat, as in the ordinary alley, it would have been very difficult, if not impossible, to direct the ball so as to hit any particular pin. This would have made the game one of chance alone, and deprived it of all interest. But this difficulty was overcome very ingeniously. The outer side of the course is raised considerably all round the curve, the highest rise being at the middle of the U, from which the boards sink gradually toward both ends to a level. The appearance is that of a curved-bottom trough, bent into horseshoe shape in such a way that at its middle one side is brought up into the air and forms an angle there of perhaps forty degrees with the floor. The result is, that according as the ball is sent with more or less force, it rises more or less on this hill as it whirls round the curve, and comes to the other end on one side or the other or in the middle, as may be desired. The nicest gradations of play are possible. It is by no means easy to catch the knack, but with sufficient practice the player can make his ten-strokes or pick off single balls as in the usual game. There is one slight advantage, that the balls come in within a few feet of the place whence they are despatched, so that no channel for return balls is needed. The horseshoe alley should be introduced into this country. Our practised players, to whom all the varieties of "twisters" are familiar, would find a new interest in the game.

—The advocates for the disposal of sewage by irrigation have by no means given up their case. Mr. J. Bailey Denton has just issued a second edition of his 'Ten Years' Experience of Intermittent Downward Filtration,' in which he relates really fourteen years' experience. The old filtration schemes overworked their land. The natural filter supplied by porous soil becomes clogged like any other. But if the sewage is cut off for a time, oxygen from the air quickly restores to the soil its purifying qualities. Doctor Frankland first suggested in England this method of cleansing the filter. Mr. Denton's plan is to divide the space at command into four equal plots, using each for six hours at a time and then giving it eighteen hours' rest. He finds that an area of suitable land underdrained from five to seven feet will suffice for the sewage of 2,000 people. At this rate London would require some six square miles. This, however, is supposing that all floating ingredients and what may be called trade sewage be extracted from the liquid by chemical precipitation or mechanical deposition. Undoubtedly the six square miles could be found in the neighborhood of London; but the space required is so enormous, and the result of irrigation on so large a scale is, after all, so disputable, that the fishes of the Thames and the North Sea need not fear the loss of their phosphates at present. For places where suitable land is not to be had, a system of purification by direct atmospheric oxygenation has been patented by Messrs. Shone, Donaldson, and Ault. The sewage is first clarified by settlement and upward filtration through coke or gravel, and this is oxidated by pressing it through perforated plates, which break it up into fine spray that falls in a cascade into a receptacle and then runs off through a conduit to the next plate, the passage being long enough to allow the impurities in the sewage to combine with the oxygen absorbed in the previous cascade.

—M. de la Blanchère, in 'Un épisode d'histoire coloniale,' has related the adventurous career of Le Vacher de la Case in Madagascar. It is like so much of the history of French colonization. There is plenty of daring, a temporary brilliant success, and no permanent result whatever. He landed in the island, where the French had a fort and some 200 soldiers, in 1656, and soon became the guest, the friend, and finally the son-in-law of the King of Amboula, to whose authority he succeeded. Naturally he used his position to increase the power of his countrymen in the island; and although his efforts were met, perhaps equally naturally, by jealousy and secret enmity by the authorities of Fort Dauphin, still

he succeeded in carrying out a series of remarkable expeditions. The accounts are no doubt true: they can be paralleled in the history of India; but they read more like the memoirs of the Baron von Münchhausen than like serious history. With ten, twenty, or fifty men expeditions were made through an island peopled by 3,000,000. A dozen men conquered a province. Thirteen men held their ground all day against 6,000 Malagasys, and forced them to retreat. The 300 at Thermopylæ were outdone. At another time La Case challenged the leader of a hostile army to single combat, and, with no other arms than a shield and sagai, met him between the two armies and killed him. But as alone he did it, his death in 1673 left the French powerless. They were soon driven out of the island, after a considerable portion had been massacred.

—Twenty-four letters of Heine to J. H. Detmold are printed for the first time in the March *Rundschau*. Detmold was for thirty years one of Heine's most devoted friends, and as he is but briefly alluded to in Strodtmann's biography, this batch of letters is all the more interesting, although they do not contain anything to modify Heine's literary portrait as previously known to the world. His felicitous diction, as well as his polemic habits and his Hellenism, are revealed in every line, and occasionally a short poem in prose creeps in, as in a letter dated at Ramsgate, in which he describes himself as sitting on a high balcony, and, while writing, "looking down on the beautiful wide ocean, whose waves climb up the rock and regale my heart with their musical roar." His habit of mocking at the things most dear to his heart crops out in a letter dated at Granville: "The theatre I am no longer obliged to visit, but in place of it I have to walk about in the spring weather. Green trees produce ennui quite as much as vaudevilles. Next to art, there is nothing more dreadful than nature." In literary warfare Heine believed that it was allowable to "meet perfidy with perfidy"; and in these letters he frequently instructs Detmold in regard to a subtle and effective method of attacking, in a leading newspaper, some one of his numerous enemies. Imploring Detmold's assistance in insuring the favorable reception of a new book, he betrays the confidence in his own genius which, according to Schopenhauer, is characteristic of all great minds: "Help me for the present," he writes to Detmold; "for the future of the book I myself have provided." He frequently alludes to his physical sufferings. In July, 1837, he writes that his left hand becomes daily more and more emaciated, and is visibly dying out; and in the September following he barely escaped losing his eyesight.

—Several of the letters are concerned with the great blow which finally broke down Heine's health, namely, the news that his wealthy uncle, Solomon, had left him but a slight sum in his testament, and made no mention of the annual pension which he had for years been paying Heine, who had reason to believe it would be enlarged and continued after his relative's death. His personal enemies had a hand in this matter, and the necessity he felt of coming to terms with them, if he wished his pension to be maintained by his uncle's heir, forced from him this cry of despair, addressed to Detmold: "I am willing to make any desired declaration, even to apologize, in order to soothe offended vanity; I have no objection to committing myself to paper, no objection to a printed pillory; a man who has much fame can afford to yield a slight *point d'honneur*. But my pension I must have, in full and irrevocable, and without any conditions. In accordance with this confession I want you to act. *Contemnere mundum, contemnere se ipsum, contemnere, se contemni*, was taugh by the old monks, and I arrive at this maxim through disgust, weariness of life, contempt of mankind and the press, through sickness, through Mathilde. It is a dreary marasmus, a weariness of feeling and thought, a yawning—the pen drops from my hand." Perhaps the most interesting feature of these letters is the details they contain concerning a literary project which Heine wished to carry out with Detmold, but which unfortunately came to naught. It was to make a collection of extracts from German authors since Goethe's birth, both prose and poetry, and culled not only from books but from periodicals as well. This anthology was to be superior to ordinary compilations, in so far as the selections were all to be made in such a way as to promote the modern Hellenic spirit with which Heine's name is identified, and through which he exercised so great an influence on the generation that followed him. To use his own words: "My opinion is, that the poetic selections should occupy only about one-eighth of the work, and should be poems of recent authors, pervaded by the joyous Hellenic spirit, with only a few that are tinged with Christian asceticism; in a word, promotive of cosmopolitan, liberal, Hellenic tendencies. The prose selections should be made in the same spirit."

GEORGE ELIOT.—II.

George Eliot's Life, as related in her Letters and Journals, arranged and edited by her husband, J. W. Cross. In three vols. Harper & Bros. 1885.

George Eliot is out and out the greatest among England's didactic novelists. Her biography, with all its defects, has one element of supreme interest: it tells us, indeed, less of George Eliot herself than may be gathered from her books, but it explains the nature and limits of her genius and the sources of her influence. This is what gives to the book such a charm, in the eyes of a critic like Lord Acton, as to lead him to the paradoxical opinion that Mr. Cross's lifeless portrait is the most interesting of George Eliot's works.

The 'Life' makes clear a point which George Eliot's writings, especially her earlier novels, left in doubt. The primary and predominant characteristic of her genius was the desire to learn and to teach the truth. Her impulse to portray character and to describe striking scenes —her imagination, in short, as a novelist—was subordinate to her moral enthusiasm. One might naturally have thought that the contrary was the case. With the didactic novelists who come nearest to George Eliot in power, and certainly with Richardson—the only writer of the class who can lay any claim to be her superior—the desire to spread the author's convictions was, whether the writer was aware of it or not, subordinate to the passion for literary portraiture. Richardson, we may suppose, believed that his object in telling the story of Pamela was to exhibit virtue triumphing over temptation, and that he made the world weep over the fate of Clarissa in order to make us sympathize with virtue in misfortune. But whatever Richardson said or thought, he told his tales because he loved telling them; and the very reason why he has entranced the world with the beauty of Clarissa and with the cleverness of Lovelace, almost the only villain (unless that unfeminine term be applied to Becky Sharp) whose wit is really made visible, is that Richardson delighted in painting Clarissa and Lovelace. It is very strange that it should not have been so with the author of 'Adam Bede,' of 'The Mill on the Floss,' or of 'Silas Marner.' But every circumstance of George Eliot's life proves that the didactic impulse was her ruling passion. Her early Evangelicalism, her admiration for Hannah More and Wilberforce, her enthusiasm for Young (the strength of which may be measured by the force of her exaggerated reaction of feeling against him), her elaborate condemnation of novel reading, and a hundred other notes of her tone in youth, stand at first sight in grotesque opposition to her attitude of feeling and belief from the day when she came under the influence of the Brays.

But life is not really made up of striking antitheses. In every remarkable nature the most noteworthy thing is the identity of character under changes of opinion. Assuredly this was so with George Eliot. Her views change, her nature remains throughout the same. The girl of nineteen who writes, "I have just begun the Life of Wilberforce. . . . There is a similarity, if I may compare myself with such a man, between his temptations, or rather *besetments*, and my own that makes his experience very interesting to me. Oh that I might be made as useful in my lowly and obscure station as he was in the exalted one assigned to him," is quite of a piece with the young woman who, four years later, writes: "To *fear* the examination of any proposition appears to me an intellectual and a moral palsy which will ever hinder the firm grasping of any substance whatever. For my part, I wish to be among the ranks of that glorious crusade which is seeking to set Truth's Holy Sepulchre free from an usurped domination. We then shall see her resurrection. . . . I hardly know whether I am ranting after the manner of one of the Primitive Methodist prophetesses with a cart for her rostrum, I am writing so fast. Good-bye, and blessings on you, as they will infallibly be on the children of peace and virtue." Though George Eliot never ranted, there was in her from first to last something of the Methodist prophetess. Every work she wrote had in her own eyes a moral design, and her estimate of her own productions depended rather on their supposed moral influence than on their artistic power. She looked on the 'Spanish Gipsy' and on 'Daniel Deronda' with a favor which cannot fairly be accounted for by a mother's notorious partiality for her least well-favored offspring. The charm lies in the supposed success of the poem and the novel in setting forth their author's convictions. "I am vexed," she writes in 1867, "by the non-success of the serial edition. It is not, Heaven knows, that I read my own books, or am puffed up about them; but I have been of late quite astonished by the strengthening testimonies that have happened to come to me, of people who care about every one of my books, and continue to read them, *especially young men, who are just the class I care most to influence*." The words we have underlined are the language of a preacher writing about the blessed influence of his sermons. No phrase like them will be found in the whole of Scott's correspondence; it would be a great surprise to find anything of a like tone in Thackeray's references to his own novels; and, to take a fairer example, we doubt whether the phrase we have cited could be paralleled from any letter of Miss Brontë. There is a description given, either in George Eliot's Life, or in one of the interesting notices which her biography has evoked, of a conversation held between her and Mr. Frederick Myers, on a summer's evening, in the gardens of Trinity College. The one impression conveyed in striking language by the auditor who reports the scene, is the fervor with which George Eliot dwelt on the sacredness of duty, and of its power when the hopes or fancies of religious belief had been discarded. Here, late in George Eliot's life, we have repeated the tones, though not the opinions, of the evangelical enthusiast of nineteen.

The extent to which the true set, so to speak

of George Eliot's nature lay rather toward the teaching of what seemed to her the truth than toward artistic creation, is exhibited in two traits of character which, at first sight, cause some perplexity to the readers of her life. The first of these traits is her moral and intellectual decisiveness. Modern biographies in abundance accustom us to the transition from orthodoxy to scepticism. But such a passage is, with earnest natures, as was George Eliot's, generally gradual; it is the work of many years or of a lifetime. In the case of George Eliot the change is astoundingly rapid. In 1839 she is the admirer of Hannah More and Wilberforce, who sends a feeble religious poem to the *Christian Observer*. In 1841 Hennell's 'Enquiry' converts her at once to an advanced Freethinker; in 1844 she is the translator of Strauss. Contrast the decisive rapidity of this change of faith with the slow and wavering alteration of view portrayed in Clough's biography, in Newman's 'Phases of Faith,' or in Miss Martineau's autobiographical memoir. The explanation is, that George Eliot had the capacity common to religious teachers for sudden and thorough conversion from one form to another of equally earnest, equally fervent, and equally dogmatic belief. This quality, whether it be a sign of strength or a sign of weakness, marks the missionary nature. Absolute conviction is the source of the wish and the cause of the power to convert others.

The second and more intellectual trait is George Eliot's natural turn, and, oddly enough, her comparative incapacity, for the labors of criticism. As a critic she produced her first serious work. Her last publication contains the reflections of Theophrastus Such. Yet, to judge by the specimens which the public have in their hands, her critical powers never reached a high level. Matthew Arnold or Swinburne could no more have sunk to the heavy humor and angry irony of George Eliot's criticism on Young than (as we may, without disrespect to either of these writers, assume) they could have written 'The Mill on the Floss' or 'Silas Marner.' We can now see why she first adopted and at last relapsed into a sort of literary labor not suited to her genius. She addressed the world as critic or essayist because this was the most obvious mode of teaching the truths which were in her, and because, strangely unlike most of the great novelists, she was not inspired with the passion for the telling of tales. She was thirty-seven before she attempted fiction; it was the sagacity of Lewes, not her own impulse, to which we owe the stories on which rests George Eliot's fame. To see all that this means, contrast George Eliot with Miss Brontë. The child born in a desolate parsonage, who had scarcely a character or event to study beyond the circle of her own family, shows, even before she came to womanhood, the passion and gift for impressive description. George Eliot's letters do not contain a graphic touch, and she had seen men and life for years before (under the impulse of another mind) she perceived the precious talent of which she was the possessor.

Appreciate George Eliot's nature, and you can understand in part the limits of her genius. Her imagination depended, so to speak, for producing its effects, on accumulation of knowledge and on meditation upon character. She thought out the conduct of her heroes and heroines much, apparently, as one might think out an intellectual problem. The capacity to do this with truth, and to picture forth the result of her thoughts with vividness, was her special and most extraordinary gift. Hence (as has been well remarked) the humor in her characters seems rather to arise from George Eliot's insight than from humor in herself. No doubt a good deal must be allowed for the obvious though unconscious tendency of Mr. Cross to suppress the lighter aspects of his wife's life and conversation; much allowance also must be made for the peculiarities of her position. One of her letters declares—no doubt with perfect truth—that she felt no repentance for her union with Lewes, but also implies the constant presence of a desire to redeem by great services to moral truth any evils which might result from the example of her life. The sentiment is natural and pathetic; but the morbid sense of moral responsibility is not favorable to the free play of fancy. Yet when all this is allowed for, the marked absence from George Eliot's letters of the humor which lights up even the most solemn of her novels, certainly suggests that she drew humorous characters because humor (in the instance, say, of Mrs. Poyser) corresponded with George Eliot's conception of the fitness of things, rather than because she had constantly before her, like Fielding, or Lamb, or Dickens, or Thackeray, the humorous or satirical aspects of existence. Pathos, tenderness, and a tendency to moral analysis seem to have been portions of her own mind; and from the perfection of the analysis arose the humorousness of the portrait which was its result. The author who in her own lifetime approved the publication of the 'Wise, Witty, and Tender Sayings of George Eliot,' must either have been deficient in that finest kind of irony which sheds light on the absurdities of a person's own position, or else (what is more probable) have been influenced by a sentiment which, under the strangest change of form, was at bottom the evangelical passion for "saving souls."

That George Eliot did, in a manner, save the souls of many who listened to her words, can hardly be doubted by any one who has ever felt the force of her influence. She brought home to thousands the moral aspect of scientific law, she kindled or intensified the passion for sympathy. On some other occasion we may weigh the worth of her moral teaching. We now only note its power. She, like all preachers, hardly appreciated the true source of her weight. Whitefield would have been surprised and displeased had any one told him that one-half of the effect produced by his sermons sprang from his talent as an actor; that he and Garrick achieved different results by similar means. In like manner, George Eliot would have been astonished and aggrieved had she been told that all her scientific metaphors and all her "wise, witty, and tender sayings," beautiful and impressive as many of them are, are not the parts of her writings which have told upon mankind. Men are more easily taught by pictures than by dogmas. The catastrophe which followed the indulgence of Arthur Donnithorne's passion; the pathos of the contrast between the infinity of Maggie's longings and the miserable limitation of outward surroundings; the terrible and subtle retribution which fell upon Lydgate, simply because, like most of us, he could not consistently live up to the highest dictates of his heart and intellect—have taught thousands who have already forgotten the too obtrusive reflections which oppress the reader of the 'Spanish Gipsy' or of 'Daniel Deronda.' The truth appears to be, that George Eliot's didactic efforts, and their immense influence, flowed from her bringing to the teaching of ethical notions which were strictly in harmony with the best thought of her day, a trained intellect of a force not often possessed by man or woman, and a power of literary painting which has hardly ever before fallen to the lot of any one whose main object was the preaching of moral doctrine. This is her strength, it is also her weakness. The didactic novelist does not belong to quite the highest class among writers of imagination. Sermons, however fine, are from the nature of things doomed to ultimate oblivion. The reason is not that sermons are dull or poor, but that didactic oratory, like every other form of oratory, obtains its success by exact adaptation to the wants of the generation who hear it. The question which can be solved only some century hence is, whether the vividness of George Eliot's pictures will keep alive the interest in her novels. Her "wise, witty, and tender sayings" are, with all their merits, full of menace to her lasting reputation.

AMONGST THE SHANS.

Amongst the Shans. By Archibald Ross Colquhoun. Scribner & Welford.

Were Cæsar now writing, as of old, he would declare that all Asia has been divided into three parts—Russian, British, and Chinese. The Gauls wish to add a fourth part for themselves, with as yet indifferent success. They seem bent upon the conquest of the peninsula below China, which ancient and modern writers call "The Golden." Meanwhile British capital is moving in the more healthy interior, and the commercial conquest of the peninsula seems reasonably probable. What a mechanic would call a "purchase" has already been secured in British Burmah, in which a thousand miles of railway in operation await connection with Canton. On the contrary, supposing the French to conquer Annam, they are beyond the Malay Peninsula, with its tremendous détour for ships from Europe, while high mountains wall them off from the rich interior. Were the proposed railroad from Canton to Rangoon built, British vessels laden for the East, once through the Suez Canal, would save, on an average, as compared with the French vessels, twenty degrees of latitude and the same of longitude. Perhaps some De Lesseps may cut through the Isthmus of Kraw and shorten sailing distance from Marseilles; yet it is evident the French have knocked at the wrong door, while the British already own the gateway and terminal facilities provided by nature to the Golden Peninsula, with its nearly level roadway to China.

The herald and pioneer of this promising enterprise is the railway engineer, Archibald Ross Colquhoun. The reason for this, his second publication within eighteen months, is not literary. The author writes not for fame, nor with an eye to the checks of publishers, nor has he the passion of the bookmaker; his object is purely commercial. Like his former volume, 'Across Chrysê,' 'Amongst the Shans' is a campaign document in favor of a stalwart policy of trade with all the Chinas. Yet our engineer builds his book well. It has a value apart from that of a narrative of exploration. It is tripartite in construction, and contains historical matter, from the pens of specialists, which is of sterling interest. Year by year the obscure corners of Asia are being examined, and new spoils gathered for the ethnologist and student of religion. In this eddy of humanity, around which the currents of migration have so often drifted, scholars have discovered rich deposits. Mr. Colquhoun has been very fortunate in obtaining the services of Prof. Terrien de Lacouperie, whose researches in archaic Chinese and Assyriology have been productive of brilliant results. This author is not only useful in demolishing the sham scholarship of Klaproth, but is steadily building up from accumulating evidence a demonstrable theory of the origin of the Chinese. He locates their ancestral seats in ancient Iran. He has especially studied aboriginal China, and his book entitled 'China Before the Chinese' will soon be published. His preliminary chapter on the "Cradle of the Shan Race," in Mr. Colquhoun's latest work, is dry reading, and to many will be unsatisfactory; but the reason for this is evident. To the eye a succession of Chinese sounds expressed by Roman letters is dreary and monotonous. With the varied and sugges-

tive Chinese character these verbal corpses leap to life, and are eloquent. Where one sound may represent one hundred distinct ideas and another hundred shades of expression, the difficulty of argument without the native character, which produces varied ideographic expression before the eye, is manifest. Nevertheless, without the aid of Chinese typography, Professor Lacouperie shows that the Shans, who now live between China and Siam, have migrated from the region of Shen-se, in northwestern China. Heretofore the American missionaries, basing their speculations upon native traditions, arrived at a similar belief. Professor Lacouperie's confirmation from Chinese sources is an interesting discovery.

Mr. Holt S. Hallet, who has made the study of the people of the Golden Peninsula his specialty, has, with the aid of the Siamese ambassador, the libraries of the India Office, and of the Royal Geographical Society, constructed an outline of Shan history which occupies fifty-two pages. He concludes the story of their vicissitudes with this striking paragraph:

"We have now followed the Shans as they gradually spread from the basin of the Yangtsi-kiang to the south of Indo-China; have seen how great empires have been broken up, and their inhabitants been forced to take refuge in the hill country; have watched the effect of the lust of conquest upon these countries, and seen the desolation it has brought about; have seen that a religion which makes it a sin to kill a fly is not strong enough to hold it from massacring millions of their fellow-creatures, and attempting to force the whole world to grovel at their feet as slaves. We have seen that the good old days for Eastern monarchs brought but cruelty, slavery, starvation, misery, and all the horrors of war upon a people who even now are the most hospitable, kindly, and charitable race of the East. Nowhere will you find greater geniality and a more courteous welcome than 'Amongst the Shans.'"

The Shans are a peaceable people, and ambitious for higher civilization. They are industrious and commercial, and will evidently welcome an iron road to new markets. To the labors of the American missionaries among them the author renders hearty praise. Indeed, the Shans and Laos people are better known in the United States than in England.

Mr. Colquhoun begins his narrative proper by an extended reference to the review in the *Nation* (July 12, 1883) of his former book 'Across Chrysê.' He shows that the term "Golden," applied by ancient and modern writers to the peninsula south of China, and so frequent in the titles of the increasing library concerning it, is "not a hackneyed term." He insists that this is "the veritable gold-field of Asia." The reefs of India, to which English capital of late years has been so largely attracted, are "merely an outcrop of the formation which extends on the surface for thousands of square miles in this Golden Peninsula." The sands of all the rivers, the barter of all the tribes, the ornaments of the temples and pagodas, and the testimony of all the explorers agree in proving the abundance of the precious metal as well as of gems. After California and Australia, Chrysê or the Indo-Chinese Peninsula, once traversed by the railroad, is to disturb the monetary equilibrium of the globe.

Professor Lacouperie overthrows the hitherto-received derivation of Siam, or Shan, from the Sanskrit Çyâma, "brown or dark," believing that the root-term of these cognate appellatives is much older. It is found in the nomenclature of many tribes in Central China. He thinks that the Shangs, or "Traders" (who in 1766 B. C. overthrew the Hia dynasty—2205-1818 B. C.), may have given their name to the Shan race. At any rate, the Shans of to-day retain their ancient characteristics as "traders." They gave a glad welcome to the exploring, or rather travelling, party who came among them to find the best route for railways. This party consisted of four Europeans, twenty police, thirty-two elephants, and a small army of Burmese followers. The Shan country, covering an area about the size of Minnesota, was traversed by them, and its people, crops, mines, forests, religion, manners and customs carefully observed. Debt-slavery and serfdom still exist, but the possible and actual wealth are beyond a peradventure. The middle part of the natural roadbed from Calcutta to Canton, which lies among the Shans, offers no serious engineering difficulties, and the enthusiasm of the writer seems to be justified. He devotes considerable space to the type of Buddhism prevalent, but has not a very high idea of either the cult or its priests. The native ladies receive his close attention, and the following extract descriptive of the courting customs of the Lawas, a tribe of iron workers whom he visited, illustrates this trait, as well as his literary style:

"It was amusing to find the dread in which the Lawas are held by both Burmese and Siamese. This is due to the fear of being bitten by them and dying of the bite. They are called by their Burmese neighbors the 'man-bears.' A singular custom obtains among these people, which may perhaps account partly for this superstition. On a certain night in the year, the youths and maidens meet together for the purpose of pairing. Unacceptable youths are said to be bitten severely if they make advances to the ladies; while, on the contrary, the more favored swains are received with blandishments and kisses, if the caresses of this part of the East can be called by such a name. Burmese travellers, hearing of this custom, are reported on one occasion to have attempted to take unfair advantage of it. The treatment which they received from the Lawa damsels is said to have taught them a lesson which has given good grounds on which to base the tradition."

Mr. Colquhoun's free, unstudied, but varied narrative occupies three hundred and fifty-one pages, and is easy reading. The thirteen pages of appendix, containing opinions on the proposed railway, are perhaps justified by the purpose of the book, though of no literary value. Print, binding, index are of excellent quality, and more than fifty full-page illustrations add to the value of this interesting volume.

The Poets of the Church. A Series of Biographical Sketches of Hymn Writers, with Notes on their Hymns. By Edwin P. Hatfield, D.D. A. D. F. Randolph & Co. 1884.

THE manuscript of this bulky volume of more than 700 pp. octavo "was left at his [Dr. Hatfield's] death nearly ready for the press." So writes the editor, who has made only "a few unimportant changes." But, for the credit of Dr. Hatfield, let us hope that it was his intention to make a number of important changes in his manuscript before printing it; that he would have added the biographies of several hymnists of greater importance than many here set down; and that he would have furnished us with an index, or at least a table of contents. The index of the principal hymns of the authors named is an editorial addition and a very useless one. If the hymns had been given under the authors' names, it would have been of some service. We must hope that this index is not generally so imperfect as in the instances where we have tested it. The Rev. Samuel Johnson's

"Father, in thy mysterious presence kneeling,"

one of the most beautiful hymns New England liberalism has produced, has been a favorite second to no other in the more radical Unitarian churches. But it is not mentioned in the sketch of Mr. Johnson, nor in the index of hymns. Neither is his

"Life of Ages, richly poured!"

There are many similar omissions.

Turning from the work of the editor to Dr. Hatfield's own, what most impresses us is the absolute dryness of it. The sketches are of the most mechanical description. They are not above the level of the hack-work in a second-rate Encyclopædia. We are astonished at the number of hymn-writers that the Church has had, and at the lack of interest attaching to them personally. We are reminded of the hard things that Mr. Matthew Arnold has said about hymns and the English love of them, proving to him quite satisfactorily that the love of poetry among his countrymen is small. Certainly there is very little poetry in a majority of the hymns that Dr. Hatfield mentions with conspicuous praise, though many of them are not so bad as Richard Baxter's which he wrote so as to be sung in either long or short metre, and made it easy for the singers thus:

"Conscience permits us not to think
That any [*of us*] faultless are;
Who then can rigorous justice bear
At God's most righteous [*dreadful*] bar?"

Still, there are hymns and hymns; and if Dr. Hatfield had quoted the best in every instance where he has quoted at all, the impression would not be so damaging to the hymnists as that which he has given.

His theological bias is amusing. No modern hymn has been a greater favorite than "Nearer, My God, to Thee!" and it is a happy coincidence that Dr. Hatfield's alphabetical arrangement of his sketches gives to its author, Sarah Flower Adams, the leading place. But he is evidently troubled by the fact that she was a follower of William J. Fox, and he assures us that "though classed with Unitarians, he [Fox] was neither a rationalist nor a sympathizer with Channing or Martineau"; the fact being that Fox's radicalism was much more pronounced than Channing's, and not less so than Martineau's. His criticism of Bowring's hymns as "cold" is another bit of *odium theologicum*, and another is his omission of any mention whatsoever of the Unitarianism of Bryant and Holmes. There are other omissions, to account for which it is difficult. That they are the result of carelessness is, perhaps, the more reasonable supposition, because they include such names as Sutton's in England, and Whittier's in the United States, to which the heterodox taint attaches in a much less degree than to some others that are given. Whittier has not written many hymns by first intention, but his poems are a quarry out of which not a few hymns, and these most admirable, have been constructed; and moreover, though the title of Dr. Hatfield's book is 'Poets of the Church,' his quotations are not always from the hymns of his biographical subjects. But it is the liberal sects of Christianity that his omissions affect most seriously. If no theological bias is accountable for this, it was certainly hap-hazard work that included Samuel Johnson and omitted his friend Samuel Longfellow, who has written many hymns of singular and impressive beauty; that also included such Unitarian hymnists as Peabody and Bulfinch, and omitted such as Furness, and Pierpont, and Hedge, and Dr. Frothingham, and Wasson, and Weiss, and Higginson, and Gannett, and Ames. There is less excuse for such omissions because Dr. Hatfield must have had easy access to Dr. A. P. Putnam's 'Songs and Singers of the Liberal Faith,' a piece of excellent work within a narrow range. No fault could have been found with Dr. Hatfield if he had deliberately confined himself to Evangelical writers; but such was not the case.

Egypt and Babylon, from Scripture and Profane Sources. By the Rev. George Rawlinson, M.A. London: Hodder & Stoughton; New York: Chas. Scribner's Sons.

THE arrangement of this work, taking up, as it does, the Biblical passages to be explained in the order of their occurrence in the different books

of the Bible, at once reminds us of Schrader's excellent book on 'Die Keilinschriften und das Alte Testament.' But this is all that the two books have in common. Canon Rawlinson has adopted the converse thesis: he does not illustrate Jewish history from the cuneiform and Egyptian monuments, but attempts to show the substantial agreement of Babylonian and Egyptian records with the accounts of these nations given us in the Bible. And there is another and even more striking dissimilarity between the English and the German writer. Professor Schrader gives everything concerning the monuments at first hand, while our author, equally consistent, gives nothing at first hand. The 'Records of the Past,' very good in its day, but now hopelessly antiquated, is in every instance appealed to, and better translations when they exist have been avoided with a persistence worthy of a better cause. This is, however, a very fair sample of English Assyriology at the present time. The name of George Smith, who was a real genius, is held in such veneration that an English student would think it little short of sacrilege to improve upon him.

In taking Babylon rather than Assyria, our author has given himself a much smaller task, yet one which is at the same time more difficult. The first question discussed (Gen. x, 8-10) is the genealogy of Nimrod and the ethnological relations of the Babylonians. This is treated *de novo*, and seemingly without a knowledge of the fact that the discovery of a Kossean syllabary last year has shed considerable light upon, if not materially altered the meaning of, this genealogical table. That Chedorlaomer (Assyrian *Kudur-Lagamara*) may mean "servant of Lagamer," is not impossible, but the evidence to that effect has not yet turned up. In treating of Merodach Baladan our author says doubtingly, "Bel iddina (?)." Such an etymology would make the union of Baladan and Merodach or Marduk impossible. But the cuneiform inscriptions always give the name as *abal-iddina*, 'Merodach has given a son,' a name comparable with Sennacherib, *Sin-ahî-irba*, 'Sin (the moon-god) has increased brothers.' The name of Evil Merodach is passed over without any explanation, though it is not any too well known that *evil* represents the later pronunciation of the Assyrian word *amelu*, 'man.' Our author's close and ingenious reasoning as to the identity of the Belshazzar of Daniel is one of the most acceptable portions of his work. In 1862, Sir Henry Rawlinson, in a letter to the London *Athenæum*, doubted the identification of *Kasdim* with Chaldeans because he knew of no phonetic law which would account for the change of *s* to *l*. Since then it has been proved beyond a doubt that such a change is quite regular, but Canon Rawlinson is not yet reconciled to it. Of Rab-Mag he says: "It has been translated Chief of the Magi." Mistranslated would have been a more appropriate term, *mag* being, in all probability, the Akkadian word "great," and the whole term being a compound like Rabshak.

In treating of Egypt our author has generally followed in the footsteps of Brugsch, a brilliant and at the same time safe guide. To Brugsch's derivation of the name Misraim, Canon Rawlinson properly demurs, and establishes his reputation for caution by informing us that it is "obscure." Interesting is his comparison of the story of Joseph with the Egyptian tale of the Twin Brothers. The Hittite fever seems to be epidemic in England, and this work has not entirely escaped it. To build on the theory that Hyksos means Shepherd Kings is to lay an unstable foundation.

These are only a few of the points on which the author has laid himself open to criticism. Compilations of this kind, if carefully made, from original sources, and with a knowledge of the results of the latest philological and archæological investigations, are of inestimable value to students of the Bible; but if they are designed and executed in the unscientific manner which the author of this work has employed, they only serve to mislead. The absence of an index proves the last straw.

Fine Arts.

THE NATIONAL ACADEMY EXHIBITION.

THE general impression of the exhibition of this year is that of a better tone of work, more earnest effort to do things thoroughly, and a most notable diminution of the struggle for *chic* which was so noticeable in late exhibitions. But at the same time it is necessary to say there is at first sight the appearance of less strength and more effort, which is to be expected from the change of aim from the shallow facility which used to be the ideal of the exhibition, to more thorough rendering of facts, since any such change must necessarily lead first to a weakness of transition. But it is a good symptom, and if the movement is sustained, must end in a higher grade of performance.

There is of course the usual work of the older men, whose ways are fixed and who will hardly be expected to adopt new lines. They have long ago taken their places, and the most we can hope for from them is that they shall maintain their excellence in the qualities that we know. Casilear's three landscapes are more interesting if not better examples of his somewhat conventional but not uninteresting way of making nature up, facile in execution, dreamy in sentiment, and individual; Bristol takes the same general direction, but with a keener sense of sunshine and vaporous summer sky and distance; Hubbard, in the view from Nyack, No. 388, has all that sentiment of leafage, its richness and summer vitality, even to the forest in the extreme distance, which twenty and more years ago was his distinguishing characteristic; the seas of De Haas slop and fling in his peculiar modification of the modern Dutch manner—sea-water tempting and decorous, never unruly or wind-driven; Cropsey's garish autumnal tints are a little cruder, and ask with more fervency a toning varnish or subduing time; Swain Gifford gains, as a younger man ought, more facile control of his low-toned harmonies of warm grays and greens, more simplicity and largeness of execution, of which No. 119 is a charming and felicitous example; and one who knew Mr. T. A. Richards's work twenty years ago will find the same qualities he found then.

Mr. Inness is a painter of distinct aim and of great mastery of artistic resource, and while his work is always recognizable, it is not always what we might anticipate. His insight into what by poetic license we call nature's moods is profound, and the way in which he brings out the power and individuality of the artistic moment is always masterly. But we cannot accept as in the admissible combinations of color the arsenical green of the foreground of his No. 415, matched with the glow of his sky. It strikes us as not a genuine motive, but something born in the studio and carried out in fantasy and experiment, in greens and sunset reds. The foreground, where it is open to the blaze of that glowing sky, must have caught the color of its illuminating power, which is the source of the highest light of the picture; but the whole expanse of the green meadow, whether open to the sky or shut off from it by the trees, is equally intense and equally lighted. This is simply impossible as fact and inartistic as treatment. In the larger picture, No. 120, Mr. Inness shows his great mastery of effect and breadth of treatment, as well as his power in color; but even here we feel that a less intense green in the leaves which so startle the eye in the quiet foreground, would have been better in keeping and more powerful as color, if somewhat more in sympathy with the general color of the picture.

Mr. McEntee almost alone of the elder generation of painters comes out with two pictures which take a new departure. They are winter scenes and naturally not to be compassed by mere study of nature in the realistic vein. The "Sunset" might be caught, and its simple sincerity gives it the air of a thing seen and studied. The tone of the snow-laden tree at the left, its snow in shadow coming dark against the sky, is a true note hardly to be guessed at, but to our feeling the flame of the sky is at its climax too positive; it leaves no space and no reserve in the palette. We doubt if the best sentiment can be expressed when there is no reserved power, and in a sky we cannot admit the exhaustion of the palette. The night scene is a far more difficult subject, and one of the truth of which no one but an earnest student of nature can judge, and of which no man who has not a profoundly poetic temperament would find the charm. It seems to us one of the most notable pictures of the exhibition. Charles H. Miller's solitary contribution seems a wreck or a beginning of a picture, not recognizable as by the same hand as pictures by him which we have lately seen. Mr. Wood's picture, "The Difficult Text," No. 402, is a piece of excellent painting, judged by its general effect. We do not believe in the kind of execution in which his background is painted—the accidental quality obtained by dragging in the color over a prepared ground—but the figures are admirably painted, and at the proper distance the solidity and keeping of the ensemble are all that we have a right to ask, so that we are not in a position to grumble as to methods. Whittredge and Sonntag, like the most of their contemporaries, hold their own, but give us no new opening to nature, and the President in neither of his portraits succeeds in recalling his early triumphs. The female portrait, in fact, is garish and flimsy to a degree.

Eastman Johnson's portrait of Mr. Evarts is a noble work and on the whole the largest of its class in the exhibition, dignified in tone, simple and broad in treatment, and such a record as one may be content to have of one of our most eminent men. Porter's "Boy and Dog" is a startling piece of effect, and at first sight impressed us as the work of the year; but a repeated study does not confirm the impression, in part owing to the fact that so much of the picture is flimsy and unsustained in execution, and partly owing to the want of harmony between the head and the rest of the subject. The head seems to have been painted in entirely different surroundings from those in which it is now placed. The shadows must have caught more of the reflected tone of the surroundings, and could not have been, in the midst of all this luminous gray, of so warm a tone. The management of the grays throughout is masterly, and the impression of the picture, with this exception, is of the first quality of power as power goes in our days. Hicks, another of our veterans, has a portrait of a lady, No. 165, which maintains his position and has the vigor of his earlier work; but portraiture is hardly the field in which to show a variant on modern conventional treatment. Perry is represented by several pictures and a portrait in which his Venetian study is evident. Of the Academicians we have only space here to notice Mr. Loop's characteristic "Repose," with its pleasant silvery tones and simple arrangement, if somewhat artificial and incomprehensible in conception. Wm. Hart has branched out into figure study as a novelty, and both in color and drawing is agreeably disappointing.

The chief attractions of the exhibition in the landscape department are the "Cliffs of Normandy," by Jas. D. Smillie, and the marine of Mr. Moran. Mr. Smillie's No. 130 and T. Moran's "Morning at Vera Cruz," No. 561, are subordinate only in size. The entire contribution of Mr. Moran shows his command of artistic resource as well as his knowledge of the facts of nature. His clouds are never vague scramblings of indeterminate quality. If mist, they are genuine mist, but when form is wanted or implied it is given—a rare qualification among our landscape painters, to whom a sky means generally a broken expanse of blue and various grays made anyhow and without perception of a definite form throughout. Yewell's "Cairo Interior" has some charming painting, and the opening into the sunlit court beyond the gates is admirably given, but the color of the nearer court is too positive—it should have been grayer in comparison with the sunlit portion.

Perry Moran's "Coming from Church, old New York," though in all probability no more like New Yorkers leaving church at any past time than like the parishioners of a French provincial town in the same function, has certain pictorial qualities and a studiousnes of make-up which are really remarkable, though marked by a glibness and ready execution which is of bad omen. Leon Moran's "Waylaid," on the other hand, a coach stopped by highwaymen, has all the marks of premature decline: facility run into the extreme of mannerism, without precision or subtlety, with tints flat, laid on without study or suggestiveness, and drawing of reckless, not masterly freedom. This is what Mr. Moran's art points to even when at its best, and this tendency must be guarded against, or this clever young painter will fall into the abyss of inanity where rest all whose execution runs away with their ideas.

Of the younger painters nothing is more faithful and sympathetic than W. B. Baker's "Solitude," which is painted with a breadth and simplicity altogether excellent. The management of the grays and gray-greens is nature's color in a pleasant key, showing a command of the material which promises great future powers. Mr. Platt's "Effect of Morning Sunlight," No. 40, is a capital piece of straightforward painting, of broad effect, true in tone and tint, with great subtlety of local color under morning light. Mr. H. F. Weller has a study of roses, No. 68, excellent in rose color, but painted with an affectation of dash and facility which has no value whatever, and shows a weak aim to display a mastery that does not exist. There may be cases in which a master can do with his palette-knife what cannot be done with a brush; but the latter is the true implement of a painter, and the use of the knife by a young and weak artist shows his ignorance and inability—it means that he hopes from chance what he does not feel confident of getting by direct labor.

Mr. H. P. Smith strikes a variation on his usual subjects in a study of old oaks, No. 95, which catches the quality of green in warm sunlight with great accuracy, though the commentary of the editor of the illustrated catalogue, that it is "painted in the manner of the best work of Rousseau," is so absurd that it justifies the suppression of this form of criticism. Lambdin's "Pink and Yellow Roses" is a fair example of the good vein of flower painting, pretty in arrangement and thoroughly honest in its execution. Miss Dodson's "Invocation of Moses" suggests an invocation on her part of some other muse than that which has heard her petition—it is a sad display of wasted talent. It is a picture which only shows that the painter, with undoubted ability and training, does not comprehend her own vocation. Ambition does not stand for inspiration, at least in art. Charles Warren Eaton's "Afterglow," No. 116, is a pleasant and poetic study, which, however, suggests only what the painter might do if he had strength enough to cut his way out of the groove of small subject and slight treatment. F.S. Church's "Peacocks in the Snow" is a strong study of color, painted in a much more simple and sincere vein than any other of his pictures we have lately seen. The birds are well drawn, and the gray modulated background sets off admirably the rich color of their plumage. J. T. Murphy's landscapes, 268 and 290, though scarcely more than indications of motive, are very noteworthy as motive and for simplicity of means of expression. They make one wonder what proper training and methodical study might have done for the artist. He suffers, perhaps, from the contagion of our prevalent insufficiency of study, and, being better than most of his fellows, is content. C. Y. Turner's portrait, No. 306, is an excellent piece of work as portraiture—one of the best in the exhibition; though why the subject's right hand should be made a subject for an orthopædic surgeon, we do not understand. A hand is as much matter of characteristic as a neck or a nose, and has a story to tell in great portraiture.

F. D. Millet's "Toilette" is not up to his usual level in this class of subject. His "Window Seat," No. 426, is much better, and as an example of management of gray tones is very successful. In this class of subject we are inclined to think that a painter who can paint detail as well as we know Mr. Millet can, might have gone further in that direction than here. Mr. Lippincott's "Head," No. 387, is charming in sentiment, but the paint is by far too obvious. In De Haas's contributions there is never much variation or degree of excellence. No. 410, a seventeenth-century marine, is the best perhaps only because the most picturesque. No. 427, "A Winter Evening," by George F. Shelton, shows decided poetic feeling; whether the painting power lies behind it, this subject is too slightly treated to enable us to judge. Shirlaw's No. 431 is, in spite of the whimsical name, a thoroughly felt and well-painted picture. Bridgman contributes a picture in his best vein, a scene from a Cairo café, and shows that he has really profited by a French education to the point at which a man may be individual and still keep the evidence of his training. Geo. H. Smillie's "Song of Summer," No. 646, is one of the noteworthy landscapes of the collection—suggestive, pleasant in color and effect. Richards's marine, with the huge misty cliffs and gently swinging sea, neither storm nor calm, is like those he has contributed for years, but one cannot complain of monotony when it gives so much excellence as this. Mr. Richards is always true to himself, and, as far as is consistent, to nature as well. Two good portraits are Nos. 516, R. G. Hardie, and 528, Mrs. Loop. In flower painting Mrs. Dillon is excellent in her crysanthemums and water-lilies, and William M. Brown has painted some very excellent peaches in No. 79.

Charles Müller's "Old Curiosity Shop" is a monstrosity of detail. There is nothing in it but detail, and that painted in a hard, lifeless manner; and where there is any chance for drawing in the heads, it is very bad. There is no excuse for an artist painting detail merely to show how small he can paint it; and in this species of still-life painting, which is in effect what the above picture amounts to, breadth and subordination of detail to the general effect are the *sine qua non* of excellence. Mr. Müller's detail stares and shrieks, every item of it, and the whole is a display of curious deficiency of feeling for the thing it attempts. Kirkpatrick's No. 284, a studio scene, is as incoherent a mass of bad study as it was ever our fortune to see. Nothing in it is in keeping with anything else, and the very straining for brilliancy of color throughout deprives the garish intensity of all value, for there is no subordination between the parts. It shrieks from one corner of the canvas to the opposite one, nor is there one object in it that is properly painted. It is the Bedlam of the palette.

JUST READY.

Vol. III. Taine's

French Revolution.

Completion of the work.

By H. A. Taine, D.C.L. Oxon. Translated by John Durand. Large 12mo, $2.50. The complete work, 3 vols., $7.50.

GEO. E. WARING, JR.'S

How to Drain a House.

Practical Information for Householders. By Geo. E. Waring, jr., M. Inst. C. E., etc. 16mo, Illus., $1.25.

HENRY HOLT & CO., N. Y.

European Travel.

OVER THE OCEAN; or, Sights and Scenes in Foreign Lands. By Curtis Guild. Price $2.50.

ABROAD AGAIN; or, A Fresh Foray in Foreign Lands. Same author. Price $2.50.

EUROPEAN BREEZES. By Margery Deane. Price $1.50.

AN AMERICAN GIRL ABROAD. By Adeline Trafton. Price $1.50.

BEATEN PATHS; or, a Woman's Vacation in Europe. By Ella W. Thompson. Price $1.50.

These volumes form a complete library of European travel and should not be neglected by all who intend making the tour abroad. Sold by all booksellers.

LEE & SHEPARD, Publishers, Boston.

A METHOD FOR THE

Idiomatic Study of German.

By Otto Kuphal, Ph.D. Part I.—Lessons, Exercises, and Vocabulary.

This Method is based on the principles of modern philosophy. Gradual progress and spontaneous development are its leading features. The sentence is the unit. Natural language precedes literary language. The example teaches the rule; language teaches grammar.

The work is printed entirely in the Roman character.

Large 12mo. 536 pages. Price $2.25.

Memoirs of Napoleon Bonaparte.

BY

LOUIS ANTOINE FAUVELET DE BOURRIENNE,

His Private Secretary.

Edited, with Preface and Notes, by Colonel R. W. PHIPPS,

Late Royal Artillery.

In 3 vols., demy 8vo, with Map and Illustrations on Steel, $15.00.

METTERNICH, who must have been a good judge, as no man was better acquainted with what he himself calls the "Age of Napoleon," says of these Memoirs: "If you want something to read both interesting and amusing, get the 'Memoires de Bourrienne.' These are the only authentic Memoirs of Napoleon which have yet appeared."

Memoirs of an Ex-Minister.

AN AUTOBIOGRAPHY.

By the Right Hon. the EARL OF MALMESBURY, G.C.B.

Crown 8vo, cloth, $3.

*** One of the most entertaining volumes of political reminiscence and social gossip which have appeared for many years.

A Journey Due South:

Travels in Search of Sunshine,

BY

GEORGE AUGUSTUS SALA.

Illustrated with 16 Page Engravings. 8vo, cloth, $5.00.

STUDIES IN RUSSIA. Illustrated. By AUGUSTUS J. C. HARE. 12mo, cloth.....$4 20

SOCIALISM OF TO-DAY. By EMILE DE LAVELEYE. Translated from the French by Goddard H. Orpen. Including "Socialism in England," by the Translator. Crown 8vo, cloth.....$2 40

THE ENGLISH CATALOGUE OF BOOKS for 1884. Containing a complete list of all the books published in Great Britain and Ireland in the year 1884, with their sizes, prices, and publishers' names; also of the principal books published in the United States of America, with the addition of an index to subjects. 8vo, paper cover.....$2 00

ON THE WORSHIP AND LOVE OF GOD. Treating of the Birth of the Earth, Paradise, and the Abode of Living Creatures; also of the Nativity, Infancy, and Love of the First-begotten, or Adam. Translated from the original Latin of Emanuel Swedenborg. New edition, 12mo, cloth.....$3 00

THE CHINESE PAINTED BY THEMSELVES. By Col. TCHENG-KI-TONG, Military Attaché of China at Paris. Translated from the French by JAMES MILLINGTON. 12mo, cloth.....$2 40

Bohn's Libraries.

A Series Standard Works of European Literature in the English Language. Full Catalogue sent, post-free, to all parts of the world on application.

RECENT ADDITIONS TO THE LIBRARIES.

BURNEY'S NOVELS. EVELINA. 1 vol., Cecilia, 2 vols. By Frances Burney (Mme. D'Arblay). With Introductions and Notes by A. R. Ellis, author of 'Sylvestra,' 'Marie,' etc. Price per volume, $1.40.

CENTENARY EDITION.

BOSWELL'S LIFE OF JOHNSON, with the Tour in the Hebrides and Johnsoniana. New Edition, with Notes and Appendices by the Rev. A. Napier, M.A., Trinity College, Cambridge. With Frontispiece to each vol. 6 vols., $8.40.

COLERIDGE'S AIDS TO REflection, Confessions of an Inquiring Spirit, and Essays on Faith and the Common Prayer Book. New Edition. $1.40.

COLERIDGE'S LECTURES and Notes on Shakespeare and other English Poets, including Mr. Collier's transcript of the Lectures of 1811, and the Bristol Lectures of 1813, now first collected. By T. Ashe, B.A. $1.40.

COLERIDGE'S TABLE-TALK and Omniana. Edited by T. Ashe, B.A. $1.40.

GOLDSMITH'S WORKS. A New Edition, containing pieces hitherto uncollected, a Life of the Author, and Notes from various sources. By J. W. M. Gibbs. In five volumes. Vol. III., containing The Citizen of the World, Polite Learning in Europe. *Now ready.* $1.40.

WALTON'S LIVES OF DONNE, Hooker, etc. New Edition. Revised by A. H. Bullen. With numerous illustrations. $2.

GILBART'S THE HISTORY, Principles and Practice of Banking. Revised to the Year 1881 by A. S. Michie, Deputy Manager of the Royal Bank of Scotland, London. With Portrait of Gilbart. 2 vols. $4.

SPINOZA'S CHIEF WORKS. Translated, with Introduction, by R. H. M. Elwes. 2 vols. Vol. I.—Tractatus Theologico-Politicus, Political Treatise. II.—Improvement of the Understanding, Ethics, Letters. $4.00.

DANTE.—IL PURGATORIO: a Literal Prose Translation. By W. E. Dugdale. With the Text of the Original and Explanatory Notes. $2.00.

DANTE.—THE INFERNO: a Literal Prose Translation, with the Text of the Original collated with the best editions, printed on the same page, and Explanatory Notes. By John A. Carlyle, M.D. $2.00.

VASARI'S LIVES OF THE Painters. (In 6 vols.) Vol. VI., just published, being a Commentary, containing Notes and Emendations from the Italian Edition of Milanesi and other sources. By J. P. Richter, Ph.D., author of 'The Literary Works of Leonardo da Vinci,' &c. $1.40.

PLUTARCH'S LIVES. Newly Translated, with Notes and a Life, by A. Stewart, M.A., late Fellow of Trinity College, Cambridge, and the late George Long, M.A. 4 vols. $5.60.

*PLUTARCH'S MORALS: Theo*sophical Essays. Translated by C. W. King, M.A., author of 'The Gnostics and their Remains.' $2.00.

GRIMM'S GERMAN TALES. With the Notes of the Original. A New Translation, by Mrs. A. Hunt. With Introduction by Andrew Lang, M.A. 2 vols. $2.80.

*GOETHE'S EARLY AND MIS*cellaneous Letters, including Letters to his Mother, with Notes and a Short Biography by Edw. Bell, editor of 'Wilhelm Meister's Travels,' &c. $1.40.

GOETHE'S MISCELLANEOUS Travels, including Letters from Switzerland, Campaign in France, Siege of Mainz, and Rhine Tour. Translated by L. Dora Schmitz and others. $1.40.

LESSING'S WORKS. Translated from the German. Vol. I.—Tragedies and 'Nathan the Wise.' Vol. II.—Comedies. Vol. III.—Laokoon, Hamburg Dramatic Notes, &c. 3 vols., $4.80. With portrait, &c.

KANT'S PROLEGOMENA AND Metaphysical Foundations of Natural Science. Translated, with Memoir and Introduction, by E. Belfort Bax, author of 'Jean Paul Marat.' With portrait of Kant. $2.00.

MOLIERE'S DRAMATIC Works. A new Translation in English Prose, by C. H. Wall. With a short Life and a Portrait. 3 vols. $4.20.

*** *The above books will be sent upon receipt of advertised price. Catalogues of our regular stock, also one devoted to Music and Musical Literature, will be mailed, if desired, to those interested. NEW CATALOGUE OF CHOICE, RARE, AND SECOND-HAND BOOKS READY.*

SCRIBNER & WELFORD, No. 745 Broadway, N. Y.

Charles Scribner's Sons'

NEW BOOKS.

The Russians at the Gates of Herat.

By CHARLES MARVIN, principal authority of the English press on the Central Asia dispute.

Illustrated with portraits and maps. Paper, 50 cents; cloth, $1.

CONTENTS:

How Alikhanoff First Went to Merv.
The Swoop upon Merv.
The Advance to the Gates of Herat.
The Question of the Boundaries.
How Herat is the Key to India.
Skobeleff's Plan for the Invasion of India.
The Russian Railway to Herat.
The Future of the Afghan Barrier.
The Defence of India.

The first edition (20,000 copies) of this striking book by the most eminent English authority upon the subject was exhausted in London before publication. The first American edition has also been exhausted by advance orders, and a second is now ready. The work is one which no one following the course of events in Afghanistan can afford to do without.

Prof. A. H. Keane says of the writer:

"Charles Marvin is unquestionably the leading authority of the day on all matters appertaining to the operations of Russia in Central Asia. He has no equal, and can hardly be said to have any rival."

The London *Academy* says:

"Charles Marvin has undertaken a mission. Let the plain fact be avowed at once—a mission which he regards in the light of a sacred duty, which he feels himself specially qualified to fulfil, and which in any case he has prosecuted with extraordinary zeal and vigor."

A NOVEL OF NORTH AND SOUTH.

Across the Chasm.

1 vol., 12mo, $1.00.

The author of 'Across the Chasm' has hit upon a new "situation" in American life, which need only be suggested to show its opportunities. The heroine is a young Southern girl, who spends a winter in Washington, and the contrasted traits of character—the ambitious and restless Northerner, and the less energetic but more romantic Southerner, as seen through the eyes of Margaret Trevennon—are depicted with great cleverness. But it is much more than a study of character: the love story is piquant, and the descriptions of social life in Washington extremely good.

A Child's Garden of Verses.

By Robert Louis Stevenson. 1 vol., 12mo, $1.00.

"Mr. Stevenson's book deserves to have plenty of readers, both young and old."—*The Saturday Review.*

"His 'Treasure Island' is the delight of all children, big and little, who love adventure in its simplest and vivid forms; and he has just proved, in his 'Child's Garden of Verses,' that he understands equally well the imaginative world of children still smaller than those for whose delight 'Treasure Island' was probably written. . . . Those of his poems which give the force of mature vision and emotion to childish feelings will be as popular with children as even his romance of piracy itself."—*The Spectator.*

Assyriology: Its Use and Abuse.

By Prof. Francis Brown. 1 vol., 12mo, $1.00.

The method and scope of Prof. Brown's book is new. It is designed to show, with illustrations, and in a familiar and popular style, what the chief advantages are which Old Testament students can derive from Assyrian discovery, and also some of the dangers to which they are exposed. A valuable list of the more important books on the subject is appended.

The Nation.

NEW YORK, THURSDAY, APRIL 23, 1885.

The Week.

THE decision of the Supreme Court in the Virginia tax-coupon cases marks another revolution in constitutional construction which will be regarded by some as a virtual change of the Constitution itself, and by others as an adaptation of conflicting parts to the broad requirements of justice. It is quite certain, on the one hand, that the Virginia law of 1882, known as the "Coupon-killer," was a violation of a solemn contract entered into in February, 1871, between the State and its creditors, and was therefore prohibited by the Constitution of the United States. It is equally certain that the eleventh amendment to the Constitution denies jurisdiction to the courts of the United States in cases where private citizens seek to enforce claims against a State There is much force in the argument of Justice Bradley, on the part of the minority of the court, that in cases of apparent conflict the latest enactment must govern. The majority of the court avoid this point by adopting the view advanced by the counsel of the bondholders, that the action was not against the State, but against the trespasser, to wit, the tax-collector, who had seized upon private property without lawful warrant. But since the State can act only through its agents, of whom the tax-collector is one, the point seems to be forced, and although in accord with principles of justice, yet practically a change of the Constitution, and one of exceeding gravity.

The decision of the Supreme Court in the Clawson case is a hard blow for Mormonism. Clawson is a polygamist, who was convicted of his crime in the District Court of Utah last April, and was sentenced to a fine of $800 and four years' imprisonment. He appealed from this judgment, first to the Supreme Court of the Territory, and then to the United States Supreme Court, on the ground that the grand and petit juries by which he was indicted and tried were illegally constituted, because all believers in polygamy had been challenged and excluded. The highest tribunal has now decided against his plea and sustained the sentence of the District Court, which will send Clawson to the penitentiary for four years. The moral effect of the decision must be great. There is comparatively little difficulty about securing the conviction of a polygamist in Utah when none of his fellow-believers is allowed upon the jury, and Clawson is likely soon to have company in prison. The spectacle of a few prominent Mormons behind the bars, under the judgments of Federal courts, can hardly fail to shake that confidence in the power of the Church which its many triumphs over the law of the land have fostered.

Our esteemed contemporary, the *Sun*, which continues to protect President Cleveland against the clamors of an evil-speaking world, comes to the defence of Mr. Keiley, our new Minister to Rome, who has been condemned by the *Tribune* as a most unfit representative of this country at the Italian court, because, once upon a time, he denounced in a public manner the occupation of the Eternal City by King Victor Emmanuel. It appears that Mr. Keiley is an extreme Catholic, and that in the year 1871 he saw fit to preside at a public meeting in Richmond at which sympathy was expressed for the Pope, in view of his loss of the temporal power, and some very intemperate expressions were used in reference to the acts of the Garibaldians and of the Italian Government. It has been suggested, since the proceedings of this meeting were resurrected, that King Humbert might refuse to receive Mr. Keiley as Minister, and that thus an international episode would result, and that it would therefore be wise for President Cleveland to transfer Mr. Keiley to some other court to which he is not personally obnoxious. It is here that the *Sun* comes up bristling and wanting to know who's afraid: let us show King Humbert that America does not choose her Ministers to please him, but to please herself, and that if he wants a row he can have it.

It is tolerably clear that Mr. Keiley's credentials would be more acceptable at the Vatican than at the Quirinal, and we presume that if the facts connected with the Richmond meeting had been remembered when he was under consideration, he would have been sent to some other country, as for instance Spain, where the views held by him regarding the temporal power of the Pope would meet with more sympathy than they will find in official quarters at Rome. King Humbert may or may not receive Mr. Keiley, but Mr. Keiley ought, in the way of self-respect, to decline to recognize King Humbert as the rightful sovereign of the Roman States. The usual course in cases where the representative of a foreign government is not *persona grata*, but where no other cause of disagreement exists with the government, is to make the Minister's position uncomfortable for him, to freeze him out, and to show his countrymen that somebody else would serve them better. It was in this way that we got rid of a certain Russian Minister in President Grant's term. It was in this way that Prince Bismarck elbowed Minister Sargent from Berlin. The purpose of having a minister at Rome or Berlin, we must remind the *Sun*, is not to show our spunk, but to promote American interests. Mr. Keiley, it is now certain, is not the man to promote our interests at Rome, although he might be just the man for Madrid, or Vienna, or Tokio. A man who holds that the Italian Government has no right to be where it is, is certainly out of place as a diplomatic representative at that court.

We understand that communications have already been received here by private persons from high quarters in Italy, implying that Mr. Keiley will not be received by the Italian Government in a diplomatic capacity, and that he could not be so received without producing a parliamentary commotion which no ministry could survive. The sensitiveness of the Government and people as to reflections upon their political doings by the officials of other countries had an illustration in the career of our late Minister, Mr. Marsh, who, while writing a despatch to Secretary Fish, after the withdrawal of the French troops from Rome, said in a casual way that the Italian Government lacked courage as yet to move forward and occupy that city. This despatch was published in the volume of diplomatic correspondence, but as it did not see the light until after Rome had been actually occupied, it was not noticed in the mass of papers communicated to Congress until two years after it was written. At the end of that time the attention of the Italian Minister of Foreign Affairs was drawn to it, and he forthwith addressed Count Corti, the Italian Minister, a note severely animadverting upon Mr. Marsh's supposed imputation on the courage of his Government, and directing the Minister to communicate it to the American Secretary of State. Count Corti was greatly embarrassed at finding himself made the medium of passing a censure upon so distinguished a friend of Italy as Mr. Marsh had always been, and he ventured to take advice on the subject of making the communication. He was advised to delay it until he could first make the suggestion to his superior that Mr. Marsh's error was either a slip of the pen, in which case it should not be noticed, or that it sprang from excess of zeal for Italian unity; that at all events a long time had passed without any resulting consequences, and that it might be as well to overlook the matter altogether. The suggestion was adopted by the Minister of Foreign Affairs, and it is believed that Mr. Marsh himself never knew that any such correspondence had taken place. It is certain that his relations with the Italian Government continued on the same cordial footing as before, up to the time of his death.

The appointment of Mr. James M. Morgan as Consul-General at Melbourne must not be ascribed to the influence of the Mugwumps, although the appointee was an active partisan of Mr. Blaine down to the day of the Presidential election. His admiration for Mr. Blaine's foreign policy was so great that he wrote and published, here in New York, a pamphlet of considerable bulk, advocating Blaine's election on the ground that it would be a guarantee of protection to American citizens abroad. Mr. Bayard ought to ask Mr. Morgan for a copy of that pamphlet before making out his commission, unless perchance the appointment was made upon grounds of special fitness for consular duties, overruling all party considerations.

The *Tribune* is rather straining its energies to make a case against Secretary Bayard because he has seen fit to call for the resignation of Mr. George W. Williams, a colored man, who was appointed Minister to Hayti just before the close of President Arthur's Administration.

The *Tribune* attributes this act on the part of the Secretary to his lofty scorn of the colored people. Other authorities, like the Washington correspondent of the *Evening Post*, intimate that there are charges against the character of Mr. Williams which fully justify Secretary Bayard in calling for his resignation, or for removing him in the event that it is not forthcoming. Probably Mr. Williams and the *Tribune* will be accommodated eventually, if they insist upon knowing what the charges are, but there is a larger question involved in the case than the personal deserts of the would-be Minister to Hayti, and that is the right of the President to remove officials of high grade who have been confirmed by the Senate. There are indications here and there that certain Senators are disposed to erect the Senate into a sort of court, under the law of 1869, to insist on specific charges against a removed officer when the President nominates a successor, and to try formally the charges, although the law of 1869 has repealed the requirement of the law of 1867, that specific accusations be sent to the Senate by the President. According to the law and practice down to 1867, the announcement to the Senate by the President that he had removed an officer closed inquiry about the "cause" of the removal, unless on an impeachment of the President therefor, and permitted the Senate only to consider whether or not it would advise and consent to the appointment of the successor. If "government by party" be wise and useful, that is obviously the best rule which puts on the Executive the full responsibility of administration.

There was considerable significance, in a double sense, in the interview had with President Cleveland on Thursday by a delegation of business men—Democrats—from Charleston, S. C., in regard to the Collectorship of that port. Charleston has for many years felt as severely as any city in the South the evils of carpet-bag rule, and when an opportunity to make a change arrives it would be supposed that the men who represent the interests of the State in Congress—white Democrats, be it remembered—would throw their whole influence in favor of securing as the new Federal officers men who would be certain to make the reform of past abuses and the general improvement of the interests under their care their first object. But here we find that these Congressmen recommend to the President a candidate for the office of Collector of the principal seaport of the State, who is so little removed from the class of working politicians, and so far removed from the class of practical business men, that leading citizens whose business interests are at stake, are impelled to protest in person to the President against his appointment, and to suggest a really capable man whom they ask him to name. We say there is significance in this, both as showing that not even the long abuses of carpet-bag rule suffice to make Congressmen ignore selfish political considerations in their recommendations to office, and as proving that even in South Carolina, where not much has been heard of civil-service reform, the business community has discernment enough and courage enough to demand that officers shall be selected with a view to the duties they are to perform. Does Mr. William Walter Phelps, in a case of this kind, really think that President Cleveland will "strengthen his Administration" more by listening to the South Carolina Congressmen than to the Charleston merchants?

The Republican managers in Pennsylvania, as well as in this State, are busy with schemes to capture the Irish Roman Catholic vote for their party. The only State officer to be chosen in the neighboring commonwealth this year is the Treasurer, but on this very account the action of the Convention may be the more important and significant. "Chris" Magee, who has long been one of the most influential Republican "bosses," strongly favors the nomination of one McDevitt, whose chief recommendation is his supposed influence with voters of his own race and religion. This is only part of a scheme which the Magees of the Republican party throughout the North are now seriously considering, "to make the Blaine Catholics solid with the party," as they put it, by nominating such men as Carr for Governor of New York and McDevitt for Treasurer of Pennsylvania. The managers are by no means agreed as to the wisdom of such a policy, which some of them declare will disgust both Catholics and Protestants, but its advocates are confident and determined. Whether they succeed or not, the development of their scheme for reconstructing the Republican party on a new basis will be watched with interest.

A most exasperating piece of news for the President's critics is sent from Washington by the correspondent of the *Times*. It is that the President does not read what they say about him, hears about it only in a fragmentary or scrappy way, and, when he is spoken to about it, manifests complete indifference. He is not only making a "good Administration for the country," but actually does not care a pin whether anybody thinks the same is "bad for the party" or not. The effect of this information upon the gifted editors and politicians who are so anxious to give the President the benefit of their larger wisdom, cannot fail to be irritating. Take, for example, the case of the late chief Butler organ. Here it has been pouring in upon the President for five weeks the most earnest assurances that unless he took the Butler party—3,499 strong—to his arms, and made them happy with some nice offices, the Democrats would lose this State next November by 50,000 majority; here he has been assuring the President that he was ready to forgive him, and be reconciled and harmonious and use all his power to consolidate the party; and all this time the President has heard little or nothing about it, and has been utterly indifferent to what he has heard. In the language of the *Sun's* impassioned polyonomous correspondent, whose effusions have so often commanded our admiration, "To your tents, O Israel!"

The reprimand which the President has formally administered to General Hazen, in accordance with the finding of the court-martial, would be a humiliation to an officer of sensitive spirit, but is likely to be hailed by General Hazen as a merciful deliverance from a removal from office. He has always been more of a politician than a soldier, and so long as he is allowed to retain his position at the head of the Signal Service he will not be troubled by official rebukes of any kind. The lightness of his sentence is due to the fact that the only charge upon which he was tried, was his extraordinary conduct in publicly criticising the acts of his superior officer, the Secretary of War. Had he been tried upon the much more serious charge, which has already been proved against him, of negligence and disobedience of orders in fitting out the Arctic relief expedition, he would hardly have escaped so easily.

The first important step of the new Commissioner of Internal Revenue is a good one. The business of this bureau has been very materially diminished of late years, through the narrowing of its scope of operations, while the force employed has not been correspondingly reduced. A few days ago the collector of one of the two districts in Massachusetts died, and within a week an order was issued for the consolidation of the districts, with a single head at Boston. Everybody familiar with the internal-revenue business of the State has long known that there was no excuse for maintaining two establishments, except the desire to provide for the two faithful Republican partisans who had for many years been their heads. Nor is Massachusetts any exception to the rule. It is safe to say that a reduction of fully a third in the number of districts and of officials can be made, not only without detriment to the service, but to its advantage, to say nothing of the question of economy. Indeed, so clear has been the propriety of such action that it was seriously considered by the last Administration, but finally nothing was done because of the party troubles involved in dismissing the collectors who could be spared. One great advantage of the change in executive control is the freedom which the new officials enjoy from such difficulties in instituting reforms.

The decision of Judge Brewer, of the United States Circuit Court, upon the application of the receivers of the Wabash Railway for permission to throw up the leases of the non-paying lines of road operated by them, appears to settle some of the vexed questions affecting that property in a manner unfavorable to the first-mortgage bondholders. He decides that all the lines must be kept in operation, whether they earn their expenses or not; that any deficiency of operating expenses may be made good by receivers' certificates; and that these certificates must take precedence even of the first-mortgage bonds of the North Missouri Road, which bonds were issued fifteen years before the consolidation of that road with the Wabash. It is not for the purpose of calling Judge Brewer's decision in question that we remark that such a rule invalidates every railway mortgage in the United States. If it is possible for railway managers to consolidate good properties with bad, to make leases, and to build new lines and hitch them on to old ones in such fashion as to produce bankruptcy, and then strap a prior lien upon the whole, there is no such thing as railway security. It is true that in the

pending case the amount of receivers' certificates is limited to $2,500,000, of which only $500,000 have been issued, and it is presumed that no issue of certificates will be permitted which may have the effect to stop the payment of interest on the first mortgages that antedate the consolidation; but the security of the mortgages is nevertheless impaired, and it is plain that the power to issue certificates might be exercised to the extent of rendering the security worthless.

The law of libel has received a fresh and reasonable interpretation in the suit of J. Appleton Wilson against the Chicago *Tribune*, wherein damages of $100,000 were claimed for the publication by the defendant of a statement that the plaintiff had been indicted for murder. A full retraction and apology were made on the following day. It was shown on the trial that the *Tribune* reporter had been deceived by an exhibition of a paper in the office of the State Attorney purporting to be an indictment of the plaintiff, and that the paper bore the signature of the State Attorney, but was not signed by the foreman of the Grand Jury. Of course, the reporter had no right to see the paper until it was returned into court. Even if the indictment had been found, the publication of it would have been premature and unjustifiable, although not unlawful. Express malice being disproved by the retraction, and there being no evidence to show that the plaintiff had suffered pecuniary injury, the questions for the jury to decide were, how much should be awarded to the plaintiff for injury to his feelings (no other injury having been proved), and whether the interests of society in general should be taken into the account by way of making an example of the defendant. Upon these points the Court instructed the jury that, in a civil suit for libel, exemplary and vindictive damages cannot be allowed unless express malice is proved, or unless the article was published in a reckless or unusual or unreasonable manner. The Court ruled further, that although the clerks in the State Attorney's office may have violated the statute in exhibiting papers to reporters, yet it was no violation of the statute for the newspaper to publish them, and that, therefore, the jury must not take into consideration the prowling of the reporter in places from which theoretically he ought to be excluded and debarred. Virtually the only question left for the jury was how much injury the plaintiff had suffered personally from a false statement voluntarily retracted on the following day. The jury awarded him $250, carrying costs against the defendant. The plaintiff moved for a new trial, which the Judge can hardly grant without running counter to his own instructions.

A striking illustration of the absurdity of leaving to a jury the final determination of litigated questions of fact is furnished by a case recently decided in this city. Suit was brought against an insurance company to recover insurance upon a cargo of merchandise which was said to have been lost at sea. The company claimed that the merchandise in question had never been put upon the vessel, and supported its claim with such conclusive evidence that when the jury retired and the counsel for the defence held an informal conversation with the counsel for the plaintiff, the latter frankly admitted that his client had lost his case. He said that up to the point where a certain unexpected witness had been produced by the defence, he firmly believed that his client had a good case, but after that point he had no doubt whatever that the cargo in question had never been shipped. Whereupon the counsel of the insurance company said in words something like the following: "Well, is not this an extraordinary situation? Here we are, the opposing counsel, fully agreed about the case, and prepared to settle it without further parley, yet we must sit here and wait for twelve men to make a guess upon it." After a delay of two hours the twelve men came into the court-room, and the outcome of their guess was a unanimous verdict against the insurance company. The facts were all against them, and the only apparent reason for their astonishing decision was the well-established maxim that "you can never get a jury to decide in favor of a corporation, especially if it be an insurance company."

The passage of the Niagara Park Reservation Bill is a notable event, and will go far to reconcile the public to the burden which the present Legislature has been upon its patience. As there is no doubt of the bill's receiving the Governor's signature, it may now be set down as an accomplished fact that Niagara is forever secured for the public enjoyment, free from the petty exactions of private greed, and safe from the danger of being given over to manufacturing interests. For a comparatively small outlay the State will become its owner, with the intention of making no other changes than those necessary to restore the surroundings of the falls to their original condition. Unsightly buildings will be removed, and the only attempt at park-making will be to put Nature herself once more in control.

James D. Fish, whose daily life in Ludlow Street Jail is carefully followed by several of the morning papers, has edified the public with a brief and flattering sketch of his career. There are in it many interesting moral reflections, and more or less definite threats of revelations concerning the complicity of other persons in the business transactions which have led to his present seclusion. He continues to hold up Ward as the "artful villain" who led him, an innocent and unsophisticated bank president, into complications which he did not suspect to be wrong until it was too late to escape from them. He alludes to Ward as "one of the greatest schemers the world ever produced," who "had been brought up under the influence of Sunday-school training, which always carries a certain weight until it is found out to be a sham and a fraud, as it was in Ward's case," and implies that it was through this Sunday-school demeanor that Ward won his way into his (Fish's) confidence, Fish himself being a profound believer in Sunday-school principles. "Having got his hand into the vaults of the Marine Bank," says good Mr. Fish, "he very soon worked in his whole body"; but Fish neglects to mention that Ward passed over to him as "dividends" or "profits" from 40 to 50 per cent. of every handful which he took from the vaults. "Ward," he says, "had the peculiar faculty of finding just the materials he could use, and then of using them to his own advantage. There was no generosity in the man; he was incapable of real friendship; he received favors with no intention of returning them." Yet in his testimony Mr. Fish admitted that his "profits" from Ward's "contracts" were in one year over $416,000, though he had never put a cent of cash into the business, and that his total "profits" during the firm's short career were nearly a million dollars. And he now says there was no generosity or friendship in the man. He even goes so far as to say that General Grant's error was in "shutting his eyes and not inquiring into the methods" by which such large profits were earned. Mr. Fish appears to be a very cheap scoundrel.

A recent despatch from Atlanta ought to be reassuring to our friend Mr. William Walter Phelps. In the course of his remarkable views on President Cleveland's Administration he was unhappy about the "millions of dollars in the East ready to be put into business enterprises in the South had Blaine been elected," but which "are now locked up in Wall Street." The State of Georgia has opened bids for a new thirty-year $3,500,000 loan, and found among them three offers from Wall Street for the entire issue, one of which was at a premium of 4 per cent. There were thirty-five bidders in all, and the highest offers were from citizens of Georgia, several of whom offered a premium of 7⅛ per cent. This does not look as if the South were suffering because of President Cleveland's election, either in domestic prosperity or in the estimation of outside capitalists.

Sir Peter Lumsden has put in his answer to General Komaroff's account of the recent fight at Puli-Khisti, which it traverses in ten important particulars. His version is that Komaroff was throughout the aggressor, and that his final attack on the Afghans was treacherous and wanton. It must be said, too, that it bears all the marks of truthfulness and accuracy. One little point almost fixes the character of Komaroff's report. He described "one company" of Russians who were out on a "reconnoissance" as having been menaced by three companies of Afghans—which on its face looks badly; but Sir Peter points out that one Russian company numbers 250 men, while three companies of Afghans only number 225, so that it must have been the one company which was threatening the three. Then, too, a reconnoissance is not a friendly movement. It is a movement to ascertain what an enemy is up to. The main importance of Sir Peter's despatch, however, does not lie in the fact that his account of the affair is probably more correct than the Russian one, but in the fact that it bars the British Ministry from treating Komaroff's escapade as an accident, and seems to make it necessary that they should insist on his being disavowed.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, April 15, to TUESDAY, April 21, 1885, inclusive.]

DOMESTIC.

THE Supreme Court of the United States rendered a decision on Monday in the Virginia coupon-tax cases, which was in favor of the bondholders and against the State on all material points.

Rudger Clawson, who was convicted of polygamy in Utah, appealed to the United States Supreme Court, on the ground that the grand and petit juries by which he was indicted and tried were illegally constituted through the exclusion of polygamists. The court on Monday decided against the plaintiff upon both the points raised.

President Cleveland on Friday issued a proclamation reversing President Arthur's executive order of February 27, which restored to the public domain the lands of the Old Winnebago and Crow Creek Indian Reservations of Dakota.

President Cleveland on Friday made public the sentence of General W. B. Hazen, Chief Signal Officer of the Army, for indulging in unwarranted and captious criticism of his superior officer, the Secretary of War. The President delivered a reprimand in accordance with the sentence.

President Cleveland made the following appointments on Saturday: To be Ministers Resident and Consuls-General—ex-Governor William D. Bloxham, of Florida, to Bolivia; Bayliss W. Hanna, of Indiana, to Persia; Walker Fearn, of Louisiana, to Rumania, Servia, and Greece. To be Consuls—James Murray, of New York, at St. John, New Brunswick; Boyd Winchester, of Kentucky, at Nice, France; Charles P. Kimball, of Illinois, at Stuttgart, Germany.

In reference to complaints of the President's slowness in filling offices, a member of his household says: "The President's programme has been to dispose of the appointments in the following order: First, the diplomatic service; second, the Territories; third, the District of Columbia; fourth, the post-offices; fifth, the marshalships; and sixth, the collectors of customs and of internal revenue. This programme is being rigidly adhered to, save in special cases where, on account of vacancies or of some public exigency, an immediate appointment is made necessary. This system is so arranged that when the appointments under one head have been fully considered they will be disposed of in a lump, and the President will then proceed to the next class. The result will show that the President will have accomplished more within the same time than any of his predecessors."

It is understood that the policy of the Administration with regard to appointments to places in the Southern States now held by colored Republicans will be not to substitute white men for colored men, but to replace incompetent or dishonest colored Republicans by colored Democrats who are worthy and capable.

Mr. Frederick Douglass, in an address to the colored men in Washington on Thursday night, attacked the Republican party, and stated that in the last campaign it had ceased to be the party of great moral ideas, and had sought victory on grounds far below its ordinary level. It had made national pelf more important than the national party. Mr. Douglass eulogized President Cleveland, and said that the words of his inaugural were as good as those in the inaugurals of Lincoln and Grant. Mr. Douglass holds a Federal office.

A delegation consisting of business men from Charleston, S. C., representing the commercial organizations of that city, called on the President on Thursday, and informed him that the Congressional delegation of South Carolina had endorsed Mr. A. H. Mowry for the position of Collector of the Port of Charleston. This they called to protest against. They said that the time had come when politics should be separated from important Federal positions of this character, and they wanted the work of reform inaugurated in South Carolina. They said the duties of the office required a man thoroughly informed in commercial rather than political matters. For the place they recommended Captain Legaré F. Walker, a business man.

Attorney-General Garland has given an opinion to the President sustaining the eligibility of General Lawton, of Georgia, for appointment as Minister to Russia, but the appointment has been declined.

George W. Williams, who was appointed United States Minister to Hayti on March 3 by President Arthur, will be superseded as soon as his successor can be determined upon.

The Secretary of the Treasury has called for the resignation of George W. Casilear, of New York, who for many years has been Superintendent of Engraving, and has appointed to that place John A. O'Neil, ex-Mayor of Hoboken, N. J. The reason assigned by Treasury officials for this change is that Secretary Manning is not satisfied with the artistic appearance of the United States notes. Mr. Casilear has been employed in the bureau for many years.

Secretary Manning on Friday appointed B. Frank Abbett, of New Jersey, a brother of Governor Abbett, chief of a division in the office of the Auditor of the Treasury for the Post-office Department, vice Mr. Widdicombe, of Maryland, resigned by request.

Secretary Manning, and others connected with the Administration, deny in the most positive manner that he (Manning) contemplates resigning the position of Secretary of the Treasury to become Collector of the Port of New York, or for any other purpose.

Admiral Jouett telegraphed from Colon on Wednesday that good order continued on the Isthmus.

President Zaldivar, of San Salvador, telegraphed to Washington on Wednesday: "Peace with Central America signed. A new triumph, doing great honor to Salvador." It is said that General Barrios was assassinated on the battle-field through an intrigue of Zaldivar's.

Authentic information has reached the city of Mexico that on Wednesday the officers of the Colombian Government selected 100 of the worst rebels imprisoned at Colon, and, placing them on board a steamer, carried them out into the bay, where the entire 100 were thrown overboard and drowned.

The Niagara Park Bill passed the Senate at Albany on Thursday by 26 to 4. It goes to the Governor in ample time to allow him to let it become a law without his signature, if he has any delicacy about signing it. If it does not become a law by April 30, the whole business falls through, and the project of making a State reservation at the Falls cannot be revived except by beginning where the present undertaking began. The Governor will not be likely to veto the bill. Nothing can be done with the lands, nor any regulations made, till a supplementary bill is passed providing for the care and custody of the grounds. In this bill the question so long discussed in the Senate, whether any privileges should be let to venders, will be settled. Such a bill has been prepared.

Among the appointments made by President Cleveland on Friday were the following: To be Consuls-General: James M. Morgan, of South Carolina, for the British Colonies in Australasia, at Melbourne, Jacob Mueller, of Ohio, at Frankfort-on-the-Main, Germany. To be Consuls: Charles W. Wagner, of Missouri, at Toronto; Thomas R. Welch, of Arkansas, at Hamilton, Canada; Francis H. Wigfall, of Maryland, at Leeds, England; Charles Jonas, of Wisconsin, at Prague, Austria-Hungary; Richard Stockton, of New Jersey, at Rotterdam; William Slade, of Ohio, at Brussels, Belgium.

The Rhode Island House, by a vote of 24 to 16, on Thursday indefinitely postponed a bill to render the divorce law of the State more stringent, by requiring petitioners to have lived in the State two years.

The Legislature of Connecticut having repealed the $2,000 annual appropriation to pay Yale College for furnishing the State standard time, Professor Leonard Waldo, of the Observatory, has written to Governor Harrison asking for his veto. The bill was passed three years ago by the unanimous vote of both houses, after a thorough discussion, and the College at once erected a new building and perfected arrangements to carry on a model service. The Professor denies the assertion that "the service will be performed by other parties to the satisfaction of the State."

Advices from all sections of the Kansas wheat belt show that winter wheat has been seriously damaged by the severe weather.

General Grant was very much better on Wednesday, and on Thursday the improvement was so marked that he was able to take luncheon down stairs with his family. The remarkable improvement continues, and his recovery is thought possible.

Mrs. George Vandenhoff, actress and elocutionist, died in this city on Monday at the age of fifty.

FOREIGN.

A despatch from Lahore, India, on Wednesday said: "Earl Dufferin, British Viceroy of India, has arrived here from Rawalpindi. He comes officially to confer with the Maharajah of Cashmere. The Viceroy was met by a great crowd and accorded a splendid reception. Earl Dufferin spoke officially of the Anglo-Russian situation in significant words. Among other things, he said: 'Coming from an important interview with the Amir of Afghanistan, whose dominions, so far as I have been able to ascertain, have been the scene of an unprovoked attack, it is a great satisfaction to find the princes and people of India ready, with one accord, to rally around the standard of Great Britain, even at a great distance from their own frontier. It is impossible to say now how the present crisis will end. If it end in war, that result will be in spite of the earnest and anxious endeavors of the British Government to avoid so dire a result, and in defiance of their most moderate and conciliatory conduct.'"

The London stock market showed an improvement on Wednesday, and there was a general feeling that war might be averted. The Shah of Persia, it was said, had offered England 50,000 troops in the event of war.

In St. Petersburg, on Thursday, a despatch from General Komaroff was published from Dashkepri, April 6, in which he said: "The remnant of the Afghan detachment defeated by the Russian forces at the engagement on the Kushk River fled to Herat after the battle. The losses of the Afghans were largely in excess of the first estimate. In addition to those who fell on the field of battle or died of their wounds, many perished during their forced retreat from cold and hunger. I am engaged in organizing a provisional administration of Panjdeh and the surrounding district, in order to prevent anarchy. The Russian detachment remains at Dashkepri." The despatch concluded that there was no necessity of an immediate forward movement on the part of the Russians.

Mr. Gladstone, in the House of Commons on Friday afternoon, said that the Government had received from Sir Peter Lumsden a reply to their request for an independent report upon the Panjdeh incident. In this it is stated that General Komaroff was aware at as early a date as the 28th of March of the understanding agreed upon on March 17 between Russia and England. According to the terms of this

understanding, England was to deter the Afghans, and the Czar was to deter his troops, from advancing beyond the positions they then respectively occupied, until some subsequent agreement about the demarcation of the Afghan frontier could be reached between the two governments. The battle on the Kushk was fought, therefore, several days after General Komaroff had been made aware of the agreement not to advance. Mr. Gladstone, being asked if the Government had protested against the recent occupation of Panjdeh by General Komaroff and his establishment of a Russian administration there, answered that the Government had not yet made either occurrence a subject of official communication with Russia. The Government was awaiting further information concerning these events.

Mr. Gladstone made the additional statement that a telegram from Sir Peter Lumsden, dated April 13, and containing a full account of the events of March 30 (the day of the Panjdeh attack) had been received in cipher and would be made public as soon as it could be translated. He added: "The fact that the Russian commander was aware of the agreement of March 17 before March 30, and the question as to whether or not he acted upon instructions or contrary to instructions concerning that agreement, will form the subject of future communications between the Government and Russia. In regard to the reported establishment by the Russians of an administration at Panjdeh, the Government knows nothing officially, and must await fuller information."

The London *Standard* on Saturday published despatches from Tirpul that on April 10 the Russians stopped their advance movement and began to retire to their former positions. General Komaroff had also left Panjdeh. The London *Times's* St. Petersburg correspondent on Saturday telegraphed: "I have the best authority for stating that General Komaroff advanced in accordance with express orders from the Governor of the Caucasus, and General Komaroff's telegram to St. Petersburg expressly stated this."

On Monday the Afghan dispute was more warlike, and the London stock market was depressed. Mr. Gladstone, in the House of Commons on Monday afternoon, made the following statement: "The Government on Friday received a despatch from Sir Peter Lumsden, but this telegram was not an answer to our inquiries and instructions despatched to him on the 10th instant. It will be necessary to await that answer before we can make any statement. The telegram received from Sir Peter Lumsden on Friday tended to confirm his previous statements, which certainly apparently conflicted with General Komaroff's statements."

The reply of M. de Giers to Earl Granville's demand for an explanation of General Komaroff's attack upon the Afghans, which was received at the British Foreign Office on Saturday, says that General Komaroff's despatches, copies of which have been forwarded to the British Government, sufficiently explain the Panjdeh incident, and that it is needless to supplement them. M. de Giers, in his turn, complains strongly of what he calls the excessive numbers of Gen. Sir Peter Lumsden's escort. He says that this display of a British armed force on Afghan territory, together with the military demonstrations at Rawalpindi and Earl Dufferin's defiant language, encouraged the Afghans to provoke the Russian attack by leading them to believe that they could rely upon British support. M. de Giers does not express the slightest regret for General Komaroff's action, and even suggests that General Komaroff would have neglected his duty if he had failed to attack the Afghans.

Mr. Gladstone, in the House of Commons on Tuesday afternoon, announced that the Government had received Sir Peter Lumsden's answer to the Government's inquiries of the 10th inst. "The message," said Mr. Gladstone, "shows how seriously Sir Peter Lumsden is at issue with General Komaroff. We cannot enter into details or state the effect of this difference in a few words. The whole matter will be laid on the table here early to-morrow." The Government asked for a credit of $55,000,000 for the army and navy account. Of the $55,000,000, the sum of $22,500,000 is for war purposes in the Sudan, and $32,500,000 for other naval and military preparations. Mr. Gladstone said: "The Government feel that it is necessary to hold all the resources of the empire, including the forces in the Sudan, available for instant use wherever required." He requested that the credit be debated on April 27. The House of Lords immediately passed the credit without debate. The full text of Sir Peter Lumsden's reply, which was made public on Tuesday night, contradicts General Komaroff's statement at every material point. Mr. Gladstone's statement is considered as indicating little hope of peace.

The Russian fleet at Cronstadt is ready to put to sea.

The Amir of Afghanistan having requested the recall of the English engineer officers conducting the work of strengthening the fortifications of Herat, orders have been issued that they shall at once cease operations.

France has demanded of the Egyptian Government an unconditional reopening of the printing-office of the *Bosphore Égyptien*, the French newspaper which the Khedive's Government forcibly suppressed at Cairo recently. Trouble is apprehended at Cairo and Alexandria. English officers have been sent to the latter place to report on the best way to put it in an immediate state of defence.

Nubar Pasha, Egyptian Minister for Foreign Affairs, sent France on Monday a curiously evasive note concerning her demand for the rehabilitation of the *Bosphore Égyptien*. He says that as the Porte, the suzerain of Egypt, was the authority which agreed to the terms of the capitulations under which France and other Powers have a lodgment in Egypt, he (Nubar Pasha) cannot answer France's demand until he has consulted the Porte regarding the proper interpretation of the terms of the capitulations as applicable to the case of the *Bosphore Égyptien*, and also as to the form to be given to the Egyptian Government's reply to France's demand.

France on Tuesday notified Nubar Pasha that his reply was unsatisfactory, and gave him until 4 o'clock that afternoon to furnish a satisfactory answer. Nubar Pasha at once replied that the Porte approved Egypt's action in suppressing the paper, and that he was communicating with England on the subject, and asked for a short extension of the time to be allowed him in which to furnish his answer.

In the House of Commons on Monday, Mr. Gladstone said that Egypt had not acted alone in the matter of seizing and suppressing the French newspaper, the *Bosphore gyptien*, at Cairo. He admitted that England was not in a position to disclaim all responsibility for the act.

The Porte has replied to England that, in the event of war between England and Russia, Turkey will remain neutral and will close the Dardanelles and Bosphorus to men-of-war of either nation. Notice of this decision has been sent by the Porte to the various foreign ambassadors at Constantinople.

On Thursday the British troops occupied Otao, eight miles west of Handub. They met with no opposition from Osman Digna's forces. It is said that the latter have gradually dispersed.

Osman Digna has written a letter to the Amir of Berber, advising him not to fight any more, because the English are building a railway to Berber, and his (Osman Digna's) army is dispersed.

A Blue-Book puts the effective strength of the British regular army at 188,000 men, that of the reserves at 47,000 men, that of the militia at 125,000 men, and that of the volunteers at 215,000 men.

The Prince and Princess of Wales did not repeat their Dublin triumph in Cork on Wednesday. Everything within the power of the Loyalists was done to make the reception of the royal visitors a success. When the Prince and Princess emerged from the railway station they were greeted with cheer after cheer. During their progress in the parade, workmen and boys ran alongside their carriage and kept up the cheering to drown the hisses of the Nationalists, who lined the entire route, and made continual hostile demonstrations. The conduct of the Leaguers aroused these Loyalists to a high pitch of enthusiasm, and they made the streets echo with shouts of welcome. Later in the day the Nationalists scattered throughout the city small bands, breaking windows, tearing down decorations, and doing other lawless acts. The police were attacked and beaten unmercifully. In many cases the police charged with fixed bayonets, but were repulsed by the mob. The officers then used their revolvers and a desperate hand-to-hand fight ensued. At midnight the streets were in possession of the mob, but by 4 o'clock on Thursday morning the rioting had been suppressed. A number of people were seriously injured. The royal party arrived safely at Killarney on Thursday afternoon, and, with the exception of some slight hissing, were cordially greeted.

Queen Victoria has, it is said, arranged to visit Ireland next autumn.

M. Clamageran, French Minister of Finance, has resigned, ostensibly on account of ill-health, but really because he could not agree with his colleagues on the question of a new loan.

M. Sadi-Carnot, the new French Minister of Finance, will, upon the reassembling of the Chamber of Deputies, present a bill for the issue of a new French loan to amount to 600,000,000 or 700,000,000 francs, in the form of perpetual 3 per cent. rentes.

The Governments of France, Holland, Portugal, and Turkey have declared quarantine against all vessels arriving from Spanish ports, on account of reported cholera epidemic on the southern and eastern coasts of Spain. Many inland towns in Spain now refuse to receive goods from Valencia.

The Hague Banking Company has failed under circumstances indicating a criminal misuse of its funds.

Walter von Goethe, the only remaining lineal descendant of the great poet, died at Leipsic on Thursday.

Constantine Rossetti, the Rumanian poet and statesman, is dead in his seventy-first year. He was a member of the Revolutionary Committee in 1846, and for a time edited a Revolutionary newspaper. In 1850 he went to Paris and established several newspapers and published patriotic works. In 1861, having returned to Rumania, he became Minister of Public Instruction and Worship, and in 1876 President of the Chamber. In conjunction with M. Bratiano, he proclaimed the independence of Rumania, and entered into an alliance with Russia in order to make war on Turkey. In 1878 he was appointed Minister of the Interior, which post he held till 1880.

Three of Riel's scouts have been captured who left his camp at Batoche's Crossing about one week ago. White Cap was there with all his lodges of Sioux refugees from Minnesota in 1862. Of half-breeds there were 250, poorly armed. Nine lodges of Teton Sioux are on the east side with Riel, and five lodges are on the west side. There are some Cree lodges and Indian allies, but they do not number more than 100. Riel has divided his men into fighting bands of ten each. General Middleton asked the oldest of the prisoners what he would do if allowed to return to Batoche's. He answered he would go at once to White Cap and tell him not to fight the whites. General Middleton told him to go and tell the Indians they should receive $500 reward for the rescue of any of the seven prisoners now in Riel's hands, and proportionately for the rescue of all.

"THE PRINCIPLES OF THE REPUBLICAN PARTY."

THE "principles of the Republican party" are so eagerly inquired for, and there is so much mystery about their exact nature and whereabouts, that the slightest sign of an intention to reveal them excites the liveliest interest all over the country. The appearance of two leaders of the party, Messrs. Evarts and Dawes, at the dinner of the Middlesex Club in Boston on Saturday last, to make speeches, was, therefore, hailed with much delighted expectation.

Mr. Evarts opened with some account of his boyhood in Boston, and then called attention to the fact that he was speaking on the anniversary of the fight at Lexington, and that while the English date American independence from the treaty of 1783, the State of New York dates it from April 19, 1775, and that thirty years ago the people of the Northern States were brought face to face with the question "whether force and right should combine against tyranny and oppression in Kansas." Coming down to the present, he intimated that "a rapacious combination" was now in possession of power, and that a certain "experiment," the nature of which he did not describe, was not likely to be repeated unless this combination "surrendered up every office to us." The exact meaning of this we have not, after much study, been able to get at, but we feel satisfied that it contains a "principle" of some kind.

Mr. Evarts further added that he was "resolute as to the duty and the purpose and the expectations of the Republicans of New York as to what they were going to do." He was also much interested in finding out what the Republicans of Massachusetts "were going to do about it," and felt no doubt that if "we do not mean to do it in New York, you (the Republicans of Massachusetts) mean to do it for us." On reading this we felt sure that the thing here described as "it," which the Republicans both of Massachusetts and New York were going to "do," was the principle or principles of the Republican party, of which we were in search. We accordingly followed Mr. Evarts through the rest of the passage, with every sense on the alert, in the hope of hearing what "it" was, but he refused or neglected to describe "it." The nearest he came to describing it was in affirming that "the country which prospered under the Republican party, would 'prevail,'" and that some "future exhibition, to the admiration of the world," would be "under the same auspices and the same array of banners and trumpets." If this points clearly to anything, it is to the reappearance of the London and Barnum show next year, under the same management, which we presume nobody seriously doubted.

Mr. Evarts next divided the Union into two "segments," one containing the region between the Hudson River on one side, Cape Cod and Long Island Sound on another, and Canada at the north; the other, the rest of the country, and observed that this first segment furnished three members of the Cabinet, while the West only furnished one—Colonel Vilas—and concluded that when Colonel Vilas under these circumstances "sits in the Cabinet, he must wonder where all the people come from." Why he should wonder, unless he is suffering from some cerebral malady, it is hard to see. Apparently, however, this proposition had some connection in Mr. Evarts's mind with another with which he closed this branch of his subject—"that for himself (Mr. Evarts), if he can look at this country, and what is now brooding in the minds and breeding in the hearts of the American people, they do not look with favor on the distribution of power by the Democratic party." But it is hard to tell how anybody feels about offices, and who has "brooding" going on in his mind and "breeding" going on in his heart at one and the same time. The presumption, of course, is that he feels badly, but the newspapers are filled with advertisements of remedies for such cases.

Mr. Evarts next gave an account of the meaning of his own election to the Senate. As well as we can make out, it meant that "instead of disorder in the ranks, perfect unanimity of feeling and harmony was to be the rule in the future." He evidently, however, contemplates the possibility of another defeat at the next State election, but he provides for that by promising "to show and prove that every Republican had done his duty," and that if an honest count showed that the Democrats had won, why, in that case they were to retain the State offices. One thing, he said, he could not understand, and that was that certain persons who "valued and loved the principles of the Republican party," could go and vote for the candidate of the other party because they did not like that of their own party. But here again he failed to mention what "the principles" were. He only knew that if such things could be, "things had come to a bad pass."

Mr. Dawes was no more instructive than Mr. Evarts. He mentioned "the principles of the Republican party," only to say that they were "laid in the foundation and built on the superstructure of the past," and there he left them. In the rest of his speech he devoted himself to asking what the Administration was "going to do about" "the great continental policy," and about the "emancipation of this continent from foreign control," and about a certain "tribute" which "our commerce with the Pacific States pays to the rule and capital of Europe," and what answer it was going to make to "the demand of the great army of the unemployed," and another "greater army of the discontented who are calling for a readjustment of the relations between capital and labor." We trust the Administration will not try to answer these questions. To answer some questions successfully one has to be as silly as the man who propounds them. We trust, therefore, that the President will let Mr. Dawes answer them himself. Nobody else is quite equal to it. But alas for the grand old party when it is thus that it speaks, or is spoken for, on parade days! Twenty years ago, who would have thought that it would live on after its brains were gone?

THE PRESIDENT AND THE JUDICIARY.

THE recent announcement that Justice Wylie, of the Supreme Court of the District of Columbia, desires to retire from the bench as soon as possible, suggests the importance of one duty of the Presidential office which is too seldom considered in the choice of a Chief Executive. The Constitution expressly vests the President with the appointment of judges of the Supreme Court; and the general clause giving him also the appointment of "all other officers of the United States whose appointments are not herein otherwise provided for, and which shall be established by law," places in his hands the naming of all other judges of Federal courts both in the States and the Territories. Through this prerogative a President may make an impression upon one of the three great departments of the Government which will endure through a number of succeeding administrations. Thus Andrew Jackson during his eight years in the White House almost entirely remade the Supreme Court; he gave it a new head, and six of the eight Associate Justices when he retired on the 4th of March, 1837, were of his selection. It was not until 1852 that the highest tribunal ceased to have a majority of its members with commissions signed by "Old Hickory," while of Chief-Justice Taney, who survived until 1864, the story used to be told that old Ben Wade said he had for many weary years earnestly prayed that the author of the Dred Scott decision might live until a Republican President could name his successor—and he began to fear that he had prayed too hard.

The President now has the appointment of judges of the Supreme Court of the United States, nine in number, nine circuit judges, fifty-six district judges, six judges of the Supreme Court of the District of Columbia, and five judges of the United States Court of Claims, all of whom are appointed for life, besides a chief justice and two or three associate justices of the Supreme Court for each of the Territories under the four years' term. Excluding these latter temporary appointments, here is a body of nearly a hundred men, who have been picked out with reference to mental strength rather than physical vigor, who had usually passed middle life when appointed, and who have since served on the average fully ten years. Young men have occasionally been elevated to the bench ever since George Washington appointed James Iredell a judge of the Supreme Court at the age of thirty-nine, and John Adams made Bushrod Washington when only thirty-six Iredell's colleague; but such cases have always been the exception. Indeed, the tendency has been toward raising the standard of age, as is shown by the interesting fact that the average for Supreme Court judges appointed during the first two decades after Washington's inauguration was below forty-seven years, while the average for the appointees since Chase was made Chief Justice in 1864 has been fifty-six years. Death, disability, and the opportunity for resignation on a pension after long service, make inevitable many changes in the course of four years, in a body thus constituted. To say nothing of the appointments for lower courts, three vacancies on the Supreme bench had to be filled between March 4, 1881, and March 4, 1885. With five out of the nine present judges past sixty-five, one of them in his seventy-third year, and at least one in delicate health, it would not be strange if more than a third of that bench should need to

be replaced before 1889. Moreover, the passage of some measure for the relief of this court—either through an increase of its members or the establishment of other appellate courts—which can hardly be postponed four years longer, will give the President a number of judicial appointments outside the filling of vacancies. Altogether it seems probable that Mr. Cleveland will be called upon to name a larger number of judges during the next four years than any of his predecessors in a similar period.

The Republican party's long lease of power has resulted in making the Federal judiciary almost entirely Republican in political faith. The last appointee of a Democratic President to the Supreme Court disappeared at Nathan Clifford's death in 1881, and had Judge Field continued with the party which he supported when Lincoln nominated him, our highest court would to-day be unanimously Republican. This is the case with the Court of Claims, the Supreme Court of the District of Columbia, and the judges of the Circuit Courts; while only half a dozen among the older District judges hold the commissions of Democratic Presidents. Though politics ought not to decide such a question—ought not, indeed, to enter into its consideration—the almost invariable rule has long been for a President to restrict to lawyers of his own party the range of possible choice for a vacant judgeship. Mr. Cleveland will be excusable in observing this rule, since if all the many appointments to the bench which he is likely to make are from the Democracy, a political equilibrium will even then hardly be established. There can be no question that the representation of both parties upon the bench conduces to the more cheerful acceptance of its decisions by the body of citizens, and the appointment of a number of Democratic judges will therefore be in the public interest. The system of an elective judiciary in New York relieved Governor Cleveland of this branch of a President's duties, but the character of his appointments to other offices indicates the standard which he may be expected to maintain in nominations for the bench. The vigorous contempt which he entertains for personal canvassing for office is assurance that the country will be spared a repetition of the disagreeable spectacle presented a few years ago, when a candidate for a vacancy in our highest tribunal won the prize after a struggle conducted with the aid of petitions, endorsements, and personal solicitation.

THE OCEAN CARRYING TRADE.

THE *Tribune* has discovered in the suggestion to convene an extra session of Congress—if there be an ocean war between Great Britain and Russia—a furtive purpose "to precipitate as soon as possible a struggle for the overthrow of protection, not only of American ship-building, but of other American industries." The only object of such a session that any one has yet avowed, is to modify for a longer or shorter period the law of 1792, which forbids the Secretary of the Treasury to issue an American register to a foreign-built vessel. And the end to be obtained by the modification is to enable Americans, if they choose, to buy vessels, built of metal, and over 2,000 tons in size, for immediate use on the ocean, and in carrying American mails, but not for use in our coastwise trade. But the *Tribune* says of those who suggest the modification: "They profess great zeal about American shipping. In reality, their great anxiety is to open wider markets to British manufacturers, though our own industries may thereby be prostrated."

The implication in this paragraph clearly is that our existing customs laws prevent the introduction of British materials for the building of vessels, unless a protective duty is paid thereon. But the fact is otherwise. The law of June 6, 1872, promoted by the energetic builder of the *Dolphin*, declares in effect that "all lumber, timber, hemp, manila, and iron and steel rods, bars, spikes, nuts and bolts, and copper and composition metal, which may be necessary for the construction and equipment of vessels built in the United States" for *foreign* trade, shall be free of duty. All British materials used by Mr. Roach, and entering into vessels built for such trade, are, therefore, already on the free list.

It may or it may not be true that the wages received by workingmen engaged in the building of vessels on the Clyde have a smaller purchasing power of food, raiment, shelter, and education than the wages paid by Mr. Roach. Without pausing now to discuss that vexed question, let it be conceded that the wages paid by Mr. Roach have a trifle larger purchasing power, and that to such extent the vessel built on the Clyde will be introduced here, if the law of 1792 be modified as proposed, without payment of any duty on the value of the labor expended in the construction of the vessel. Mr. Roach is free to introduce as many as he pleases of those Clyde laborers, and so in that form the labor as well as the material can come in duty free.

But, if that were not so, the real question is whether or not, if there be war between England and Russia, the United States would as a country be the gainer by the naturalization of foreign-built vessels of large tonnage to be used only in foreign trade. Under similar circumstances there was a large body of Republican opinion in 1870 that the law of 1792 should be modified. President Grant, and Secretary Fish, and the whole Administration so thought. John Sherman, in the Senate, advocated the measure "as one of those rare opportunities sometimes offered to a nation, as well as an individual, to largely improve its material interests without the sacrifice of any interest whatever." Senator Chandler, of Michigan, took a similar view. The resistance to the measure in the Senate came chiefly from those who deemed it unwise and unfair to allow a completed vessel to come in free of duty while such high rates were inflicted on the foreign materials of which the vessel was built; but since 1870 the laws levying those high rates have been repealed, and in 1872 such material became duty free.

In the House of Representatives General Schenck, of Ohio, Mr. Allison, of Iowa, General Logan, of Illinois, and General Butler, of Massachusetts—all of them then conspicuous Republicans and protectionists—strongly urged an adoption of the recommendation of President Grant, and a majority of the House seemed to be in favor of the measure, which was only defeated by talking it to death in both houses, in the last hour of the last day of the session. Mr. Kelley, of Pennsylvania, denounced the advice given by President Grant for loyal reasons, as being in the interest of the "Lairds and the builders of the *Alabama* and the *Shenandoah*, and other piratical vessels." Mr. James Brooks, a Democratic representative from New York, opposed the recommendation of President Grant upon the ground that such enormous taxes were then levied on American ship-building as to render it impossible for our own builders to compete successfully with foreign builders. But he offered to sustain the President's recommendations if all the materials necessary for ship-building, and all ship stores, to be used in foreign navigation, were admitted free of duty for six months. The materials were made free in 1872, and remain free to-day.

There may possibly be somebody somewhere to contend that it is of little consequence whether or not the vessels that do the carrying trade of the world are, in any part, navigated by Americans, and are under the American flag; that what America seeks is cheap freights, and if Englishmen, or Germans, or Italians, or Spaniards will carry our surplus products on the ocean cheaper than we can, under our existing laws, they should do it. But there are others who will insist that we need and should have a mercantile marine as a measure of preparation for self-defence, by way of training seamen and officers, and by the possession of powerful ocean steamers, which, as in the case of the *Oregon*, the *Alaska*, the *Umbria*, and the *Etruria*, can be quickly used as efficient armed cruisers. And there will be others who feel that the course of trade, and the creation of markets for our surplus products, can be largely influenced by the ownership of vessels to carry the products and search out markets in our own interest. What is needed is a beginning in the American ownership of ocean steamers under circumstances promising exceptional advantages. When ownership begins, the necessity of American ship-yards for repairs will begin, and then will follow a capacity for building new vessels cheaply according to our ascertained needs. It would be to the renown of President Cleveland's Administration to have begun such a patriotic work.

OUR OFFICE-SEEKERS.

THE United States Civil-Service Commission has had to issue a notice warning people that no unusual number of vacancies exists, or is likely to exist, in the offices covered by the Civil-Service Act. This has been rendered necessary by the very large number of candidates who have been presenting themselves for examination all over the country, evidently in the expectation of something in the nature of a "clean sweep." But there is not the slightest probability of anything of the kind in the offices which are filled by competitive examination. There will, doubtless, be many removals in these offices, but they will be removals for cause, and the cause will be ascertained by careful inquiry or observation. The chiefs of departments can have no other motive for making removals from these

places than the good of the service, because they cannot under the law fill the vacancies with persons of their own choice. The list of "eligibles," that is, of persons who have already successfully passed their examinations, and have, therefore, the first claim on any vacancies which may be made, is already very large, far larger than any very probable or even possible demand of the departments during the next six months is likely to call for.

This great rush of applicants is, we see, by some journals ascribed to a peculiarly American passion for Government offices. But there is really nothing peculiarly American about it. The passion for Government offices is strong in all countries, because the number of people who shrink from a life of competition, such as one has to lead in most callings, is in all countries very large. The number of those who for some reason or other dislike the struggle for existence in the ordinary trades and callings, and are willing to resign themselves to a salaried life, without much expectation of bettering their condition as the years roll on, is everywhere very great. They are eager applicants for all kinds of routine work which will give them a fixed income without anxiety. But they are really not nearly as numerous in this country in proportion to population as they are in France and Italy, where the commercial and adventurous spirit is not strong, and where aristocratic traditions make Government employment peculiarly "genteel."

In truth, there is much reason for believing that the office-seekers in this country would always have remained a small body, in view of the generally self-reliant spirit of the population, and the numerous openings offered by the country to enterprise and energy, if the public service had not been converted by the spoils system into a kind of lottery. Ever since Jackson's day, it has been the custom once in four years at least to offer a large number of the places to the winners in a kind of game of chance, in which any one could take a hand, even if he had neither money nor character to stake. All that was needed was "influence," and there was nobody too stupid, or too dishonest, or too ignorant to acquire influence in some way. The result has been to diffuse through the public mind a fixed impression that everybody at all times, if worst comes to worst, could fall back on the public for a support. It is really extraordinary to what an extent the public service has come to be considered a charity, a refuge for misfortune or distress, not unnaturally in consequence of the habit, which also came in with the spoils system, of regarding Government business as somehow not business in the ordinary sense of the term.

It will take a good while to break up this habit—that is, to get people all over the country out of the way of considering Government offices as last resorts for those who have failed in other walks of life, or find difficulty in establishing themselves in regular occupations. If President Cleveland adheres to the policy he is now pursuing, a great deal will be done toward it even in four years. No matter which party succeeds at the next election, it will not venture to undo what he has been doing. No President, for instance, will probably venture, after what has happened in the Pearson case, to say that he wants the New York Post-office for party purposes. In other words, the public mind is getting used to the business view of the Government service, and when once this has been accomplished, it will never go back to the spoils view.

The friends of Mr. Blaine are trying, in the half-comic way in which much of their political work is now done, to hinder the change by stimulating the discontent of the old-fashioned Democrats, who have always looked on elections as simply a mode of deciding who should have the patronage. In aid of this, some Republican office-holders in Washington have been induced to throw up their places without being threatened with removal, with a flourish of trumpets, as if they knew how to play the game fairly, even if the President did not. And then we are hearing a good many jeremiads from Blaine politicians, like Mr. Phelps, over the irreparable wrong which the President is doing to his party—from those, that is to say, who were so sure during the canvass that, no matter how good his intentions were, the party would inevitably get the better of him, and bring his good intentions to nought.

SEPARATE CITY ELECTIONS.

THE failure of the Spring Elections Bill has brought into prominence the Constitutional amendment now pending in the Assembly, providing for separate city elections. The differences between the two are important. The Spring Elections Bill simply provided for a municipal election in the spring, giving us two independent campaigns in the same year. The objections urged against it were, first, the expense of this two-fold machinery, second, the doubt whether the voters could be got to take a sufficient interest in an additional election, separated by only a few months from the regular voting time, and, third, the fear that the scheme was a "Democratic device." The latter argument seems to have been most powerful at Albany, where the bill was defeated by a party vote, one of the leading Republican Senators going so far as to urge that it should be killed because it would make "deals" more difficult; deals with Republicans, he contended, being necessary to good government. The party opposition was, however, much strengthened by the sincere belief of many that the other two objections were valid, and also that separate municipal elections would be better secured by other means. In fact, spring elections were defeated by a union of Republican politicians with constitutional reformers, and this, of course, makes it incumbent upon the latter to do all in their power to press their alternative scheme, and to give the honest Republicans at Albany an opportunity of showing that they are unwilling to commit their party to the position of simply defeating a measure aimed at "deals" and then going home.

This is the view taken of their responsibility by the advocates of the Constitutional amendment, who are now pressing it actively. By doing so they place the Republican majority in an awkward position. This majority has defeated one measure for separate elections; if they defeat another, and that other a better one, the result will simply inure to the advantage of their opponents, who will be able to add next fall a new count to their already tolerably long indictment for misgovernment of the city at Albany, and thus increase their prospects of getting judgment at the polls. Under such circumstances Senator Lansing's speech on "deals" and their necessity will be worth a good many hundred votes to the Democrats in this city.

The only real question as to the pending Constitutional amendment is, therefore, Is it a good measure? Does it meet the valid objections urged against the Spring Elections Bill, and secure something that is really worth securing? The amendment, as originally introduced, provided for biennial sessions of the Legislature. This clause has, however, been struck out, and, as it now stands, it is wholly free from embarrassment arising from that source. It now provides simply for a separation of the city from the State and national elections, in the case of all cities holding their elections in November, by having the former take place in odd years, beginning with 1887, the latter taking place in even years, beginning with 1888. To accomplish this the Senatorial term is made four years instead of two, the term of Assemblymen two years instead of one, and the term of the Governor and other State officers four years. The term of municipal officers is also made two years.

It is obvious that this amendment completely meets the chief objection to the Spring Elections Bill. Under it city elections would be separated not by a few months but by a whole year from State or national elections, and if there is any popular interest in municipal affairs in the chief cities of the State—and we believe there is a great deal—no system could be better adapted to bring it out. The interval between the election of Mayor and that of Governor or President will be so great that it will be almost out of the question for the party managers to persuade the public to vote for or against a candidate for Mayor solely on grounds which have nothing to do with city government. At the last municipal election in this city, leading newspapers, because they were afraid of bringing in the Democrats—or Republicans, as the case happened to be—at Washington, and thus jeopardizing the cause of civil-service reform, or "protection to American industry," or "the negro," declined to take sides as to the fitness of Mr. Grace to select men competent to pave, police, light, and drain this city. Such a state of affairs is only intelligible in the very storm and stress of a national campaign; with elections a year apart it would be nearly impossible.

The only objection urged against this method of securing separate elections is that it lengthens the terms of office, and it is maintained that the people of the State would never vote to do this; that there is something "undemocratic" in it. In reply, the advocates of the amendment say with great force that there is no precise term fixed by the principles of democratic government for office. We have in this country, and have had ever since the Government began, terms of office varying from one year to a lifetime. The President holds office for four years, Senators for six, Representatives for two, United States Judges for life; the Mayor of

New York for two, most of the heads of departments for four, the Governor and Lieutenant-Governor for three, the Secretary of State, Comptroller, Treasurer, and Attorney-General for two, the Superintendent of Prisons for five. In some fifteen States the Governor's term is now four years. If it be said there is danger in lengthening the legislative term, the answer is that one great source of trouble at Albany is the obscurity and irresponsibility of members, and that this would be considerably lessened by giving them a substantial term. Again, if there is anything in this objection, it is met to a very considerable degree by the very lengthening of the term of the Governor. Owing to his active exercise of the veto power, the public of this State have come to rely upon the Governor as their most effective defender against any wrongs attempted by the Legislature; and anything that increases the power, responsibility, and dignity of the Governor of New York is a gain to the people of the whole State.

Weighing these arguments fairly, it must be said that the advocates of the amendment make out a substantial case. Undoubtedly if the people of the State are alarmed at it, they will vote it down at the polls; but as it is the only means now offering of getting a separate, distinct, and intelligent vote on municipal affairs in the two largest cities in the country, the Legislature certainly ought to give the people an opportunity of deciding it. To the inhabitants of New York and Brooklyn it is hardly necessary to commend it. What they most need, and know they most need, is the right and practice of self-government, untrammelled and uninterfered with either at Albany or Washington. Officers selected by themselves, a permanent charter of their own, separate and *free* elections—in a word, self-government—is the modest sum of their demands, which sooner or later in all its parts they are determined to obtain.

HISTORY VIEWED THROUGH MME. DE SÉVIGNÉ.

PARIS, April 10, 1885.

THE Correspondence of Mme. de Sévigné may be considered in many senses as an historical document. It brings before us many important historical characters, shows us many heroes *en déshabillé*. It gives us what dry history cannot give, it takes us into the daily life of the men and women of the seventeenth century. We learn to see as they saw, to feel as they felt; we enter into their prejudices, their passions, their ideal of life. It is, however, somewhat singular to find a work entitled 'Madame de Sévigné, historien.' The author of this work, which has just appeared, is M. Combes, Professor of History in the Faculty of Letters at Bordeaux. M. Combes has already published a volume on the 'Princesse des Ursins.' His object in this new volume is to paint the court and the age of Louis XIV. from Mme. de Sévigné, and solely with her help.

The division of the book is rather singular: M. Combes takes one by one the historical personages mentioned in Mme. de Sévigné's correspondence, beginning with the Cardinal de Retz. M. Régnier has given us, in the great edition of Hachette, the first letter of the Cardinal to Mme. de Sévigné, after the Fronde, in 1654. The Cardinal had escaped from the castle of Nantes, where he was a prisoner. He had broken his leg and his shoulder, but he had succeeded in reaching the Pyrenees, and he was free in Spain. He owed much to the Chevalier de Sévigné, who was living near Nantes, and called him his liberator. For ten years Retz wandered in Spain, in Italy. Seeing that all was over with the Frondeurs in France, he got permission to return, and remained quiet, sometimes in Paris, sometimes at Retz in Britanny, sometimes at Commercy in Lorraine. He was unhappy, hopeless. "Fate, fate," he writes to Mme. de Sévigné, "what is fate? It is very ungrateful, and does not justify the faith we place in it." Mme. de Sévigné tried to console and to amuse him. The Cardinal had other friends left: Corneille and Molière read their plays to him, Boileau read him his 'Lutrin' and the 'Art Poétique.' "Nous tâchons de l'amuser," says Mme. de Sévigné to her daughter. "Your letters amuse him also; and, mind, never constrain yourself. If any folly comes to the end of your pen, he is charmed with it as well as with what is serious. Religion does not yet forbid these little *chamarrures*." The Cardinal spent his last years in paying the enormous debt which he had incurred during the Fronde. "At Commercy, at Saint-Mihiel, he composed his 'Memoirs,' as I begged him to do," writes the Marquise to Bussy; "he took care of his beasts, he gave bread to his trout, he gave much time to the Church, and had still too much leisure." "Pity me," she writes to the same Bussy. "I have lost the Cardinal de Retz, who was so amiable, so worthy of esteem. I was his friend of thirty years' standing, and I have always received tender marks of his friendship. He was the most affable person in the world."

The friendship of Mme. de Sévigné for Fouquet has been a surprise to many. She saw in him only the protector of La Fontaine and of Pélisson; she knew nothing of his scandalous extravagance. Was he not a friend of the puritanic Arnauld of Port Royal and of the Marquis de Pomponne? Fouquet had been made Superintendent of Finances at the age of thirty, under Mazarin. When he was arrested, in 1661, he was only forty-five years old. He had paid court to the young widow. He was a great seducer, and an extraordinary correspondence was found in his papers when he was arrested. Many ladies of the court were uneasy. Mme. de Sévigné was virtuous, and her correspondence with Fouquet was filled only with family details. She openly expressed her interest in the prisoner: "I think only of this unfortunate man, and I have no longer any peace. Ask our solitary, our great Arnauld to pray God for our dear friend." Some ladies asked her to go to a house opposite the Arsenal when the trial of Fouquet took place, to see him come out.

"I was masked," she says, "and I saw him coming from a great distance. The Captain of the Guards, M. d'Artagnan, was with him; five Mousquetaires were thirty or forty paces behind. I seemed dreamy. . . . When I saw him, my knees trembled and my heart began to beat so violently that I was beside myself. When he approached us, M. d'Artagnan nudged him, and made him remark that we were there. I bowed and assumed the cheerful face which you know. I don't think he knew me again, but I assure you that I was strangely moved."

Mme. de Sévigné did all she could: she used her influence, or the influence of her friends, with the members of the court. Fouquet's life was spared, but he was sent as a prisoner of state to the fortress of Pignerol, in Italy, which then belonged to France. He there became the companion of the Iron Mask, and afterward of Lauzun. Mme. de Sévigné never forgave Colbert, who had been the instigator of the pursuit of Fouquet; she pursued not only him, but all his family, with a life-long animosity. Colbert had a brother, Colbert de Croissy, and Mme. de Sévigné ridicules him constantly under the name of Figuriborum. This Figuriborum, at whom she laughs so much, whom she thinks incapable of anything, was nevertheless one of the signatories of the treaty of Nimeguen: "We are led to hope for the departure of M. de Croissy for a congress. I don't say that he will make peace, for you would not believe that a treaty of peace could be signed by him." There was an aristocratic vein in Mme. de Sévigné; she instinctively did not like new people, the people who owed everything to the royal favor. She felt a little like the noblemen and the noblewomen who made the Fronde, and who wanted some sort of independence. These ideas were not systematic: you cannot find them expressed formally in her correspondence; but she has always something to say against the Colberts, the Louvois, the *gens du Roi*. She felt a little as did Saint-Simon.

It has often been said that Mme. de Sévigné approved the revocation of the Edict of Nantes; but, with her, you must often read between the lines. Her letters were read by many people, and she had to be careful. It is true that she writes to Bussy: "You have probably read the edict by which the King revokes the Edict of Nantes: nothing can be finer than what it contains, and no King ever did anything which will be more memorable." But she writes also: "At Montpellier and in the cities of the South, many people have become converted without knowing why. Father Bourdaloue will explain it to them and will make them good Catholics." Speaking of the dragoons sent to the Cévennes, she says: "The dragoons so far have been very good missionaries." There is a touch of irony which is not far from criticism.

Louvois and Le Tellier were, like Colbert, *bêtes-noires* of Mme. Sévigné. When Louvois died, how eloquent she becomes: "So he is dead, this great minister, this great man, who filled such a place, whose *moi*, as Nicole says, was so extended, and was the centre of so many things." She depicts him on the point of expiring, and imagines a dialogue between him and God: "'O my God! give me a little time. I should so much like to check the Duke of Savoy, to checkmate the Prince of Orange.' 'No, you shall not have a moment.'" She did not dislike the Louvois, however, as much as she did Colbert; they had not been so hard on Fouquet. It was Le Tellier who had shown to Louis XIV. the letters of Mme. de Sévigné found in Fouquet's silver box, and Le Tellier wrote to Bussy on this subject, as Bussy wished to know all about his cousin: "These letters are those of a friend who has much *esprit*. They have pleased the King more than the stale *douceurs* of the others, and it is a pity that the Superintendent mixed friendship and love." The Coulanges were, besides, related to Mme. de Louvois, and M. de Coulanges was an intimate friend of Mme. de Sévigné. After the death of Louvois, he spent much time with his widow; he spent months in her magnificent domains, as large as the Duchies of Parma and Modena, so that when he drove, he asked: "This forest belongs to Madame? and this village? Also to Madame; always to Madame." This makes Mme. de Sévigné a little impatient; she confesses that "all these estates of M. de Louvois are kingdoms, and it is inconceivable that their proprietors should have sold them. Are we not too happy to have found a minister rich enough to buy this sort of kingdoms, which you place with reason above Parma and Modena!"

The chapters on Condé and Turenne are composed of extracts from Mme. de Sévigné's letters, which have become classical. It is hardly worth while to repeat what she says about the visit of Louis XIV. to Chantilly, and the death of poor Vatel, or about the death of Turenne; these pages are found in the text-books of the common schools. The readers of Mme. de Sévigné will, of course, find nothing new in a work which consists entirely of extracts from her correspondence,

Still, it was possible, with a certain amount of concentration, if the word is allowable, to make amusing portraits of some forgotten or half-forgotten characters. This is what M. Combes attempts to do with what he calls the ridiculous women of the *grand siècle*. Mme. de Sévigné had a keen sense of humor; she was naturally of a very gay disposition, and she painted ridiculous characters with a master hand. Her gallery of odd people is very curious—Mme. de Coetquen, the friend of Turenne and of the Chevalier de Lorraine, the great ladies of Brittany, but above all, Mlle. du Plessis, the perpetual butt of Mme. de Sévigné. Speaking of these provincial ladies to Mme. de Grignan, Mme. de Sévigné suddenly becomes serious: "You laugh, my daughter," says she, "but all the virtues and all the vices, all the qualities and all the follies are mixed together in these provinces. I find here souls of peasants as right as a straight line, loving truth and virtue as naturally as horses trot. The hand which throws all this into its universe knows well what it does, and makes its glory of everything." These little outbursts are frequent in the letters of a person who delighted in reading the Jansenists, who studied Nicole, who liked to "aller en Bourdaloue," as she said. She liked to preach to her daughter who was a Cartesian, a sort of *esprit fort*, too "advanced" for her own taste.

After the ridiculous ladies, M. Combes comes to the criminal Mme. de Brinvilliers, to La Voisin and her accomplices. The trials of these women shed a strange light on the society of the seventeenth century. When the Duchesse de Bouillon appeared before La Reynie, and was examined by him, "Did you," said he to her, "see the devil at La Voisin's—for you went there to see him [this Voisin was a sort of sorceress as well as a vender of poisons]?" "Sir," answered the haughty little Duchess, "I see him now, disguised as a judge, very ugly and very wicked." M. Combes's book is full of such anecdotes. This last one comes from Voltaire; but as almost everything comes from Mme. de Sévigné, I confess that I had rather spend my time with her than with the Bordeaux professor. I cannot help asking myself, after having gone through this volume, why it ever was written.

Correspondence.

SHALL AND WILL.

To the Editor of The Nation:

Sir: Permit me to state in a few words a practical guide to the distinction between *shall* and *will* which I have found of great use:

Shall is distinctly prophetic. It may be regarded as the normal form of the future. But to prophesy what another man shall do, or what natural phenomena shall occur, involves discourtesy or at least presumption. Accordingly, *will*, which implies volition on the part of the subject of the verb, is substituted for *shall*, as a matter of implied courtesy.

My rule, then, which, I need not say, I draw from Sir E. Head, is this: Use *shall* except when it might be rude or presumptuous. B. W.

Harvard College, April 11, 1885.

To the Editor of The Nation:

Sir: With thanks for your timely "Shall and Will" article of the 9th inst., let me contribute two mnemonics which I have found useful.

1. This Hibernicism—an "awful example" of what to avoid:

Pat, in the water, *loq.*, "I will be drownded and nobody shall save me."

2. These lines of George Wither—a brilliant example to be followed:

"For I will for no man's pleasure
Change a syllable or measure;
Pedants shall not tie my strains
To our antique poet's veins;
Being born as free as these,
I will sing as I shall please."

I call your article timely because such articles are always timely for any English-speaking people not English, and conspicuously so for the Americans of to-day, among whom, I submit, this "verbal sin" is at least as prevalent as among either Irish or Scotch. Hibernicus.

April 4, 1885.

"SADDY."

To the Editor of The Nation:

Sir: It may assist in determining the origin of the word "saddy" for "thanks" or "thank you" to know that in Cumberland and Perry Counties, Pa., where the settlers were chiefly Scotch-Irish, the word had also another meaning, viz.: "courte'sy." Thus it was common to say to a girl on entering a room, or on meeting a superior, "Make a saddy" for "Make a courte'sy."

Warren Holden.

Girard College, Philadelphia, April 18, 1885.

MASPERO.

To the Editor of The Nation:

Sir: I have before me an autograph letter written by M. Maspero, the distinguished Egyptologist, and the signature confirms your observation in the last number of the *Nation* respecting the proper spelling of his name. The "e" is without accent. It is a little singular, however, that on a former occasion I referred to the signature to decide the same question, and after a hasty glance wrote it with the accent. I now see that the pen slipped between the top and bottom of the "p," leaving no mark in the middle, and that the top was so perfect an accent as to deceive my eye. Possibly Professor Sayce and Miss Edwards may have been misled in a similar manner. W. F. W.

Boston, April 18.

THE STUDY OF ENGLISH AT THE SOUTH.

To the Editor of The Nation:

Sir: The study of English in the schools and colleges of the South has of late excited a degree of interest that augurs hopefully for the progress of the language in the near future. Previous to the civil war the historical or philological study of English was utterly unknown in Southern institutions, if we except the University of Virginia. The far-reaching wisdom of Mr. Jefferson was never more conspicuously displayed than in his foundation of the chair of Anglo-Saxon, upon the creation of the University in 1825. None of our American statesmen seem to have possessed the strong philological instinct of Jefferson, and his speculations upon the English dialects, the relations of modern English to its earliest forms, as well as his Anglo-Saxon grammar, which was published by the Trustees of the University of Virginia in 1851, will amply repay the diligent study of the antiquary, the historian, or the philologist (see *American Journal of Philology*, vol. iii, No. 10, "Thomas Jefferson as a Philologist"). About the year 1856 or 1857 a chair of English, in connection with the study of history, was instituted, and entitled the Department of History and English Literature. Within the last four years the department has been divided, so that the University has now a special professorship of English, including the historical study of the language and its literature.

I was a member of the class in history and English literature during the session of 1860-'61. In those days text-books were imperfect and limited in number; nothing superior to Spalding, Latham's Handbook, Harrison, and Shaw was then at the disposal of the student of English. The school of English philologists was far in the future, and the same is true of Mätzner, Koch, and Ten Brink, into whose labors our English investigators have so largely entered. The classics still maintained their almost undisputed supremacy, and the chair of English was perhaps tolerated, rather than adequately appreciated or actively encouraged. Yet the mere recognition of the language as a proper subject of critical study was a marked advance in our educational development. The instruction received was fully abreast with the knowledge of the decade just preceding the civil war, 1850-'60, and was stimulating and inspiring in character. With this illustrious exception, the philological study of English in Southern institutions, before the year 1861, was almost as unknown as the study of Sanskrit in the year 1885. The so-called Department of English was a varied, miscellaneous combination, consisting of logic, rhetoric, elocution; in fact, almost every topic that was not provided for in some specific way, was embraced under the vague and unmeaning designation of "English." No faint or shadowy conception of the historic study of any language had dawned upon the intelligence of our scholars, except in the University of Virginia, where the school of Harrison had advanced far beyond nearly all the leading institutions, North and South, in applying to the elucidation of Latin and Greek the results attained by comparative philology.

Since 1870 there has been a perceptible improvement, especially in such colleges as Randolph Macon, and Washington and Lee University. If we study the situation in the States south of Virginia, we shall find few colleges—or universities, falsely so called—which have made adequate provision for instruction in English. It is not a sufficient reply to the allegation of neglect to say that English is taught, when it constitutes merely an annex to some more favored department, as in the University of North Carolina, or when one professor gives instruction in *three* languages—English, French, and German—as in the South Carolina College at Columbia. The Legislature of North Carolina has recently made provision for the establishment of a distinct chair of English in the University at Chapel Hill, but at this time *one* gentleman is professor of logic, rhetoric, mental and moral philosophy, English literature and history. Let us be grateful that so deplorable a condition of affairs in one of the oldest and most influential colleges of the South will forever pass away with the present session. In the College of Charleston there is a specific chair of English, and the instruction is continuous during the four years of the collegiate course. This is a marked exception to the prevailing rule in Carolina colleges.

Much of the existing neglect of English may be attributed, I think, to an impression which obtains largely among Southern scholars and educators. I refer to the superstitious veneration with which the study of Latin and Greek is regarded by an influential and enlightened section of our population in the Carolinas. It is the conviction of most teachers of the classics that a mere acquaintance, often imperfect, with the structure of the ancient tongues is of itself sufficient to invest the pupil with a mastery of his own language; or, as they tersely phrase it, "English is best learned through the study of Latin and Greek." Differences of idiom, or characteristics of idiom, through which the inmost life of a speech is reflected, are all ignored in their pedagogic philosophy. I am far from sym-

pathizing in any measure with the modern crusade against the study of the classic tongues; and the active hallucination against which my protest is entered is unfavorable to the purest interests of either English or the ancient languages.—Very respectfully,

H. E. Shepherd.

College of Charleston, S. C.,
March 21, 1885.

Notes.

We have frequently called attention to the genealogical researches now being systematically carried on by Mr. Henry F. Waters, of Salem, Mass., in England. It appears that he has recently obtained important clues as to the derivation of John Harvard, for whom the college is named, but concerning whom surprisingly little is known. To meet the expenses of a thorough search the New England Historic-Genealogical Society (which has enabled Mr. Waters to prosecute his regular work in London) appeals to Harvard graduates in particular for aid. Contributions may be sent to Mr. John Ward Dean, at the Society's rooms, No. 18 Somerset Street, Boston. If received speedily, the sum can be announced to the alumni at the next Commencement.

Mr. Henry Cabot Lodge desires any one having or knowing of editions of the 'Federalist' other than those mentioned by Mr. Henry B. Dawson in his edition of 1863, to send him copies of the title-pages. Autograph letters of Hamilton, also, he would be glad to be permitted to have copied. His address is care of his publishers, G. P. Putnam's Sons, New York.

Cupples, Upham & Co., Boston, have in press for immediate publication a story of New England life by Mrs. Frances B. Greenough, a well-known Cambridge lady. It will bear the name of 'The Story of an Old New England Town,' viz., Brattleboro', Vermont. The same firm will publish in May 'Thackeray's London,' a volume by William H. Rideing, descriptive of the novelist's haunts and the scenes of his books. It will be prefaced by a new portrait of Thackeray etched by Edmund H. Garrett.

Mr. Edward Walford's antiquarianism is of a kind that calls rather for thanks than for literary criticism, and it is well exhibited in the second volume of his 'Greater London' (Cassell & Co.). An indefinite amount of English history, biography, and institutions is introduced in connection with descriptions of Woolwich and the adjoining suburbs south of the Thames round to Richmond. Thus Downe furnishes a pretext for discourse about Darwin and Lubbock, as Merton about Nelson and Lady Hamilton, and Chislehurst about Camden House and its French Imperial refugees. Mortlake and the University boat-race; Wimbledon and the Volunteers: Epsom and the Races; Kew and its Gardens, will also suggest the sort of entertainment which this volume and its predecessor afford. Woodcuts are plentiful, poorly printed without exception, and the engraving is mostly old-fashioned; but, save in the case of contemporary portraits, we are inclined to think this more in keeping with the author's scheme than something better would have been. There is a general index to the now completed work, and a fine map of the metropolis and its environs. Tourists might well take hints from Mr. Walford before committing themselves to the ordinary guide-book.

The fourteenth edition of the 'Satchel Guide for the Vacation Tourist in Europe,' published annually by Houghton, Mifflin & Co., is before us. The work stands approved by long experience. The latest revision is at fault in not mentioning the Germania monument on the Niederwald, which may be called one of the attractions (some would say the only attraction) of Bingen, which it faces. In Lucerne, the curious Glacier Garden adjoining the Lion monument deserves a line of mention. Unless we greatly err, the great highway from Coventry to Kenilworth is lined, not with "venerable elms and sycamores," but with elms and oaks.

Since Mr. Walter Herries Pollock began to be the editor of the *Saturday Review*, some eighteen months ago, there has appeared in its pages at irregular intervals a series of papers describing sports and games. These papers were evidently by different hands, and were of varying value; and yet as a whole they gave a succinct statement of the present condition and past history of the leading popular amusements. They—or at least a selection of the chief of them—have now been gathered into a single volume, 'A New Book of Sports' (London: Bentley; New York: Scribner & Welford). Of the forty or more papers, perhaps the most elaborate and exact are those devoted to baseball, ice-yachting, and American athletics. A new subject—yet truly old—is treated freshly in Deck Pastimes. There is a learned and lively paper on the games of savages. The sketch of the duel with rapier and dagger is of interest to Shaksperians.

The worship of Victor Hugo is pushed to extreme lengths in France just now, where he is the subject of more books and pamphlets than Mr. Henry Irving evokes in both Great Britain and the United States together. The latest of these is a beautifully-printed volume, 'Victor Hugo Intime,' by M. Alfred Asseline, who is the first cousin of Mme. Victor Hugo, and a close friend of Victor Hugo's sons. The sole value of the book lies in the private letters of various members of the Hugo family here given at length. Three bits of the poet's verse are also preserved here. All are metrical expressions of disgust at the vileness of certain inns, and only this characteristic and Coleridgean quatrain deserves to be quoted:

"Au diable, auberge immonde! Hôtel de la Punaise!
Où la peau, le matin, se couvre de rougeurs,
Où la cuisine pue, où l'on dort mal à l'aise,
Où l'on entend chanter les commis-voyageurs!"

The great number of maps of cities is the distinguishing feature of Parts 140-145 of 'Brockhaus' Conversations-Lexikon' (New York: L. W. Schmidt), the text being wholly in the letter K. Coblentz, Cologne, Copenhagen, Königsberg, the battle-field of Königgrätz, etc., are thus illustrated, while Constantinople has a full-page beautifully colored map to itself. Similarly fine are a map of Egypt showing Cairo and the Pyramids, and one of the Cape Colony, with a side map of Angra Pequena. Apropos of this budding German colony, the article on Colonies sketches the rise of the recent colonial mania in Germany—or is it more enduring, and should it be called a policy? Under Krakatoa, the most interesting phenomenon in connection with its great eruption of 1883—namely, the dispersion of its ashes throughout the atmosphere of the globe—is not alluded to.

Two parts of the condensed Brockhaus, or 'Kleines Conversations-Lexikon' (4th ed.), are before us. "Small" does not refer to its shape, which agrees with that of the foregoing. The articles are briefer, and the print decidedly smaller. The illustrations and maps are quite up to the level of those in the parent work. Apparently there will be none in the text. Each of the contemplated sixty parts sells for the low price of twenty-five pfennigs, or six cents.

The Brazilian exhibit at the New Orleans Exposition consists exclusively of coffee, in accordance with a policy of pushing the sale of this product by letting it be seen under its own name, and not under another, as commonly. Moreover, three-fourths of the coffee consumed in this country is drunk in the valley of the Mississippi; hence a strong reason for stimulating distribution by way of New Orleans, which has never since the war recovered its standing as a port of entry for this article. All this and much more of interest pertaining to the subject is to be found in the official quarto pamphlet, 'The Empire of Brazil at the World's Industrial and Cotton Centennial Exposition.' An interesting bird's-eye view of the Mississippi from New Orleans to St. Louis accompanies the tables, essays, etc., which form the contents of this pamphlet.

The *Magazine of Art* for May has for frontispiece a reproduction of a drawing by Sir Thomas Lawrence by one of the photographic processes known as the "Ink-photo"—an effective process, apparently admirably qualified to reproduce chalk work. The woodcuts are no advance on the usual rather flimsy type of the *Magazine of Art* illustration; and the "poetry page," "April Once More," is weaker than usual—from a hopeless drawing, we should judge. Of the literary matter, Professor Colvin's "East Suffolk Memories" will attract most attention. "The Art of Periclean Athens" is by far too hazardous in its interpretations and unappreciative in its criticism to contribute anything to the archæology of the epoch of Phidias.

The Holbein Society has lately issued the most considerable publication to which it has given its attention. The work in question is a reproduction of the "Tewrdannch," an allegorical poem in old German recounting the deeds of Maximilian I. The reproduction is in 591 pages folio, with 118 wood engravings. Goedeke, than whom there is no better authority, gives, in the preface to his edition of the poem which forms the tenth volume of the 'Deutsche Dichter des 16ten Jahrhunderts,' some details regarding the authorship not furnished in the introduction to the Holbein Society's publication. He states that some manuscripts, formerly in the castle of Ambras, now in the Hofbibliothek at Vienna, furnish evidence that the poem was planned, and in a large part written, by Maximilian himself, while Melchior Pfinzing, the reputed author, can only be credited with retouching, modifying, and in some cases expanding it, and with having written some sections. Further, it is shown that Pfinzing was not the sole editor, but Marz Freizsauerwein von Ehrentreiz, who arranged the "Weisskunig," a poem relating to the Emperor Frederick, also edited a considerable portion of "Tewrdannch." The editors of the English edition omit to say anything about this writer in connection with the authorship, and speak conjecturally regarding Maximilian's share, saying that in all probability he wrote portions in conjunction with Pfinzing. The wood engravings illustrating the work were probably by Albert Dürer and his scholars, but only Hans Schäufelin can be fixed upon with certainty as one of the engravers. The emblem of Jost de Negker is found on one cut in the original edition, but this does not appear in the later editions. The Augsburg 1519 edition is the one selected by the Holbein Society for reproduction. The first edition was published in 1517. A copy of this last, richly bound, is in the Grenville collection of the British Museum. This institution also possesses additional copies in their general library.

The Geographical Societies of Vienna and Berlin are each about to send out expeditions to explore the country lying between the head waters of the Nile and the Congo. The former starts from the west coast and is headed by Dr. Oskar Lenz, the expense being chiefly borne by the King of the Belgians and the Archduke Rudolph, of Austria, the heir to the throne. The latter, under the lead of Dr. Fischer, enters the interior from Zanzibar. A principal object of both expeditions is to endeavor to find traces of four

Europeans, who are supposed, if living, to be in that region. The best known of these are Dr. Junker, the Russian traveller, and Mr. Frank Lupton. The latter, better known possibly as Lupton Bey, was one of Gordon's lieutenants in the Sudan in 1879, and since 1881 the Governor of the Sudanese province Bahr-el-Ghazal. The last letter from him, if we are not mistaken, was dated November 5, 1883, when, in sending some geographical notes to the London society, he expressed the hope of being able to defend himself against the tribes who had joined the Mahdi.

The *Illustrirte Zeitung*, of April 4, publishes a series of interesting maps showing the colonial possessions of the various European Powers. There is one large general map of the world, and twelve smaller ones of the places of greatest interest at the present time—as the Cameroons, the Congo, the Cape, and New Guinea. Russia seems to be the only great Power which has no colony. In the Lesser Antilles five nations—Denmark, Spain, Netherlands, France, and Great Britain—have possessions; in the Straits of Bab-el-Mandeb three—Italy, France, and Great Britain. Germany, in addition to her new territory in New Guinea and the adjacent islands, is represented as owning a large tract of Central Africa, just west of Zanzibar. The maps are admirably executed, and so colored as to show at a glance the various nationalities. While intended especially to illustrate the German interests in the various parts of the world, they will be exceedingly useful for reference in colonial questions. On the large map the German steamship lines are designated, together with the times occupied in making the trips.

The last speech of the late Lord Cairns was in the House of Lords on the resolution to open the South Kensington Museum on Sundays. He took the place of Lord Shaftesbury, who was ill, in leading the opposition.

Dr. Theodore von Oppolzer, of Vienna, announces the early publication of a very extended list of the dates of solar and lunar eclipses which has been prepared under his direction. There will be eight thousand of the former and more than five thousand of the latter class of phenomena, and all included between the years 1207 B. C. and 2161 A. D. In publishing the hours of the day at which the eclipses will occur, Dr. Oppolzer will adopt the new reckoning of astronomical time recommended by the International Prime Meridian Conference at Washington last autumn, thus making this publication the first astronomical work of importance in which this method of counting the hours of the day is adopted.

— Concerning the smothering of Arabs in an Algerian cave, a correspondent writes us:

"I have been told by Englishmen that it was of no uncommon occurrence for General Pélissier to put both his hands to his ears all of a sudden (sometimes even at dinner parties) as if to shut his ears against the howls of the smothering Arabs in that cave. It came to him so unexpectedly that this action of his (putting the hands up to his ears) was quite involuntary to him."

— Mr. Charles Wellington Stone writes to us from Boston:

"As I was looking over some old papers, I came across your appreciative review of General Walcott's 'History of the Twenty-first Massachusetts,' the regiment of the armless Sergeant Plunkett, of national fame, who has just died. You remark that on the march to Petersburg Company A was reduced to three privates. It happened at the end of that march that a single solid shot struck down those very three; so that the gallant company, which had marched from Templeton a hundred strong, was for the time being completely extinguished—a dramatic climax to a wonderful three years' work."

—Dr. D. A. Sargent's 'In Case of Accident' (Boston: D. Lothrop & Co.) is not what we should expect either in matter or arrangement. It is a fair popular essay on physical emergencies that will bear rewriting. American babies closely resemble British babies, and both run the gauntlet of numerous ills with which ignorant mothers and officious nurses beset them. Dr. Sophia Jex-Blake, of Edinburgh, has prepared 'The Care of Infants' (Macmillan & Co.) as a warning manual of infantile hygiene. It may be treated with great respect by the guardians of those unfortunates in whatever longitude. The later issues of school physiologies possibly represent greater care, certainly have greater value. Dr. Albert F. Blaisdell's 'Our Bodies, or How We Live' (Boston: Lee & Shepard) is an excellent, well-illustrated primary book on physiology, although going a little above its presumed readers in the most of chapter thirteen, on the care of the sick, the use of disinfectants, etc. It discusses the poisons of dissipation in a manly way. Professor Martin, of Johns Hopkins University, writing on anatomy and physiology, could hardly write otherwise than well. His 'Human Body' (Henry Holt & Co.) is not only an admirable elementary text-book on those subjects and on personal hygiene, but it is peculiarly suited to comprehension by children. This feature is specially credited by Doctor Martin to the skill of his wife, whose name also appears on the title-page. With one exception (fig. 2) the illustrations are good. This work presents the action of alcohol plainly and vigorously, and the indictment charges the vicious beverage with all its sins, but is so drawn that the judicial mind can take no exception to it, and the total abstainer should ask for nothing more forcible than these clear truths. Passing from the presentation by the physiologies of the theoretical man, whose beautifully adapted organs seem adequate to support indefinitely a balanced existence, to the new edition of Dr. Weir Mitchell's 'Nervous Diseases' (Philadelphia: Lea Bros. & Co.), we find conditions, as the author expresses it, "as bewildering as charades." To unravel the network of symptoms and states which he exposes, requires the most expert clinician as well as physiologist; and the ordinary reader, wondering how these complications ever occur in such a well-designed economy, wonders more and is still more grateful that it should be possible even partially to disentangle the skeins. Doctor Mitchell's great experience and graphic style make the book interesting to all, and to physicians most useful.

—The views of English and of Russian travellers, diplomatists, and geographers as to the boundary line between northwestern Afghanistan and what is now, by right of late annexation, Russian Turkomanland, are becoming irreconcilably antagonistic, and the future drawing of the line is likely to be decided at the cannon's mouth. Meanwhile, it is interesting to see which way the question concerning the lands of the Saryks and Salors, Badghiz and Panjdeh, was viewed by cartographers as yet uninfluenced by pro-British or pro-Russian leanings at the opening of a great conflict. A few glances convince us that, had the diplomatists of London and St. Petersburg consented to submit the matter in dispute to the arbitrament of unbiassed geographical experts, the decision elicited would be far from unanimous. The frontier line from Khoja Saleh, on the Oxus, to the Heri-Rud, south of Sarakhs, on the Persian border, is differently drawn on every map. As regards Panjdeh, the point now most hotly contested, and already made famous by one of those providential lessons in geography on which Britishers proverbially rely for their knowledge of foreign lands, the majority of maps give support to the Russian claim. An "Übersichtskarte von West-Turkestan," by Stülpnagel and Berghaus, published in *Petermann's Mittheilungen* of 1873, draws the line further south from the confluence of the Murghab and Kushk than where General Komaroff routed the Afghans on March 30. A map of Afghanistan and Beloochistan in the same *Mittheilungen* (1878) places "Panschedeh" more distinctly on the Russian side. Handtke's war map of Turkestan, Afghanistan, and Beloochistan (1879?) places Aktepe, Komaroff's starting-point, on the very border. A map of Afghanistan in the 'Jahres-Supplement 1880-1881,' to Meyer's 'Konversations-Lexikon,' adopts the Russian view almost completely. Brockhaus's new 'Conversations-Lexikon,' in the proper section of the map of Asia (1882), draws an almost straight line from Khoja Saleh to the vicinity of Sarakhs, giving to Afghanistan even more than is demanded by England. The map of modern Persia (and adjoining parts) in vol. xviii of the 'Encyclopædia Britannica' (1885) places the confluence of the Murghab and Kushk, without naming Panjdeh or Aktepe, too far north of the frontier to suit the British claims—through inadvertence, we may charitably suppose.

—The German Sick Insurance Act of 1883, which was described in the *Nation* for February 26, has led to interesting investigations of the average rate of wages in Germany. This remarkable piece of legislation, it will be remembered, provided that sick workmen were entitled to be paid, by the local government bodies, one-half the average daily wages of ordinary laborers current in the district. To carry the act into force it has become necessary to determine officially what the average daily wages are. This has now been done, and the results published for Prussia and the free cities of Bremen, Hamburg, and Lübeck. As given in the last number of the *Jahrbücher für National-Oekonomie*, they show that the average daily wage in the whole of Prussia (inclusive of the free cities) is for adult men 1.46 marks, or 45 cents; for adult women .95 marks, or 23 cents. The rate varies, however, very much in different localities. It is higher, as one would expect, in the large cities than in the small ones, and higher in the cities than in the country. The average for adult men is:

In towns of more than	100,000	inhabitants....	2.16	marks.	
" " "	50,000	to 100,000	"	2.06	"
" " "	20,000	to 50,000	"	1.77	"
" " "	less than	20,000	"	1.44	"

The highest single figure for any large district is in the free cities of Bremen and Hamburg, each of which shows an average for adult men of 2½ marks, or 60 cents. Berlin has an average of 2.4 marks, or 58 cents. The lowest rate (1.02 marks, or 25 cents) is in the province of Silesia. Our protectionist friends may think to find some ammunition in the fact that the agricultural provinces of Posen and East Prussia have low rates —1.09 and 1.17 marks respectively—while the manufacturing Rhine province has an average of 1.77. But, on the other hand, Sleswick-Holstein, which is chiefly agricultural, shows up with the handsome figure of 2.00 marks, and the trading cities of Bremen and Hamburg show the highest rate of all. In fact, if protection were the thing that regulated wages, it would be difficult to account for the great divergence between the rates in different parts of the same country, all of which are under the same tariff system. The widely-varying range of wages shown by these tables is still of great economic interest, as an illustration of the extent to which competition works, or perhaps fails to work, in causing wages in different parts of the same country to approach the same level. It is evident that ignorance, poverty, bad means of communication, and other causes of economic "friction," are among the causes of this failure.

—In view of the much-heralded excavations of Mr. Petrie, under the auspices of the Egypt Ex-

ploration Fund, at San el-Hagar (the site of the Tanis of the classical writers, with which the Zoan of the Bible is universally identified), and of M. Naville's much attacked and much defended identifications of Pithom and Succoth—prominent names in the history of the Exodus from "the field of Zoan"—Mr. F. C. Whitehouse's dissertation "On the thesis, Zoan is Tanis magna, a suburb of Memphis, and not San el-Hagar or Tanis parva in the Delta" (in the last Proceedings of the American Oriental Society), has a particular interest. Considering that "all the scholars who have given any attention to the subject are agreed that San el-Hagar is the Zoan of the Old Testament," as well as the Tanis of Herodotus, Diodorus, Strabo, etc., the American critic's thesis is certainly a bold one; but it is sufficiently well supported by critical argument and traditional authority—as preserved by Josephus, Benjamin of Tudela, and Antoninus Martyr—to deserve attentive consideration. But whether found weighty or wanting by independent criticism in the fields of Egyptology and Biblical research, it has the best chances of achieving great popularity among Bible students of the theologico-conservative class. For Petrie's excavations, from which extraordinary results were expected for the vindication of the Scriptural narrative concerning the stay of the Israelites in the land of the Pharaohs, are to all appearances destined to end in a grand disappointment in that regard, however fruitful they may prove in unearthing the remains of later periods; and it will, therefore, be very convenient to have in the neighborhood of Cairo another Zoan-Tanis—one undreamed of even by Jablonski, who ventured to place Goshen south of Cairo—to fall back upon for new corroborative search and study.

—A notable article by M. Charles Diehl appears in the January number of the *Bulletin de Correspondance Hellenique* of this year, in which he describes and comments upon a discovery recently made by M. Paris while conducting some excavations for the French School of Athens on the site of the ancient Elatea, in Phocis. The original object of the work was to unearth a temple of Athena, but excavations were also conducted amid the ruins of a church of the Holy Virgin, where a slab of gray marble veined with white was found, above seven feet long, two feet wide, and one foot thick. The upper face was carefully polished, as also two contiguous lateral faces, the remainder being rough. Upon the longest smoothed lateral face was a Greek inscription, not disposed longitudinally as usual, but in short lines across the face. The letters are deeply cut, and belong to a late period. As is customary with Christian inscriptions, this begins and ends with the sign of the cross, and reads as follows: "This stone is from Cana of Galilee, where our Lord Jesus Christ turned the water into wine." M. Diehl shows from the Itineraries of the Middle Ages that several memorials of the marriage of Cana were preserved and exhibited there in later times, among them two of the hydriæ ("water-pots of stone") in which the miracle was performed, and which the martyr Antoninus of Placentia, in the sixth century, declares renewed the miracle for him when he poured water into them. In the eighth century Saint Willibald found there a large church, in which one of the hydriæ was still preserved. Besides these hydriæ, Antoninus mentions another memorial, saying, "We went to Cana, where our Lord was present at the marriage feast, and we reclined on the very couch; and there, unworthy as I was, I wrote the names of my parents" ('Itinera Latina,' i, 93). These words indicate that he believed the couch on which the Saviour reclined at the feast was still there. Can it have been the stone just discovered? M. Diehl thinks the faces of the stone which are smoothed show that it was affixed to a wall in the corner, and believes that if the inscription of Antoninus appeared upon it, this must be the stone. Strangely enough, upon the upper surface, near what would naturally be the head, he finds letters scratched which he reads, supplying the beginning, "[Remember, O Lord, the father] and the mother of (me) Antoninus."

—Hereupon, M. Diehl seeks to explain how so sacred a relic as he believes this to be found its way to an obscure town in Greece. At the time of Antoninus, already four of the six "water-pots of stone" had disappeared from Cana, and between the sixth and eighth centuries—that is, at the time when the Arabian invasion spread over Palestine—another had gone, and in the thirteenth century only traces remained. Two were preserved in Jerusalem, and two at least in Constantinople. No mention of the couch occurs after that of Antoninus, and M. Diehl thinks that it was probably removed by some Byzantine emperor to Constantinople, pending the Saracen invasion, as the character of the inscription would indicate, both epigraphically and from the fact that it proclaims a change of abode. In Constantinople it probably remained till the capture of that city by the Latin princes in 1204, when it may have fallen into the hands of Otho, Duke of Athens, or Guy Pallavicini, Marquis of Bodonitza, by whom it was conveyed to Greece, and at Elatea a church was built expressly for its reception, as shown by the position which it occupied in the building. The argument is ingenious.

THOMPSON'S PSYCHOLOGY.

A System of Psychology. By Daniel Greenleaf Thompson. London: Longmans, Green & Co. 1884. 8vo. Vol. i, pp. xiv, 613; vol. ii, pp. viii, 589.

An author is supposed to appeal to other people to judge of the real value of his work. These other people, called reviewers, usually come to their task a little proudly, feeling that their opinion is desired, and therefore must be worth having. Imagine, then, the chagrin of such a reviewer when, at the end of these two vast and laborious volumes, he finds a strong hint that the author neither needs nor encourages very independent critical efforts on the part of his readers, save, perhaps, such efforts as may express themselves in private communication of "imperfections" (presumably small ones), for the convenience of the author in making a second edition. As for the other natural business of a critic, namely, a public and free discussion of the merits and demerits of the book, the author forestalls and discourages all that by these remarkable words: "If any critic of this work desires a complete and searching review made of its faults, I can assure him that he will do well to apply to me, for I am certain of more shortcomings than any one who has not made the subject an especial study can possibly observe." "Complete and searching"—well do these words illustrate the vanity of modesty. What has the reviewer left to do for himself; and why did not the author publish the complete and searching confession of his sins (if he has committed any sins) along with his book? Nay, what wisdom can a man hope to attain after æons of blessed immortality more than would be implied in a complete and searching knowledge of all the errors that he had committed? And if Mr. Thompson has already got so far, what need of us?

But we must not yield to our sense of disappointment. Mr. Thompson, as it seems, needs no help of importance; but psychology, which is an active, progressive, and much studied science, needs all the help that any student finds time to give to it. And to psychology, if not to Mr. Thompson, is due the very slight service that we can here render in helping any fellow-student who may chance to read these lines to determine how much time he needs to devote to these two volumes.

First, then, as to the author and his equipment. Mr. Thompson is evidently a very conscientious and industrious man, devoted to his work, thoughtful, naturally keen in analysis, undaunted by the magnitude of his task, an excellent collector of facts, a good critic of such theories as are known to him. On the other hand, he knows very few theories, he shows hardly a sign of acquaintance with modern Continental psychology, his scientific horizon is limited to the older English writers—to the two Mills, to Bain, to Spencer, and to Lewes; while of the modern developments of general philosophy, apart from the few names just mentioned, he is almost totally ignorant. Kant he cites once in a while in a puzzled way from Meiklejohn's translation, just as they used to do in days long past. Other Continental thinkers he cites in an amusingly hap-hazard fashion from Hamilton or Blakey, never distinguishing the obscure from the great, and showing an entire ignorance of what those strange fellows were about. One man comes by accident to get the full force of his sternest criticisms, and seems to represent for him all that is revolting in German speculation. It is the long since quietly reposing Jacobi, whose place in the history of German thought was as fixed, we had supposed, as the place of his quaintly printed old volumes on the shelves of our libraries—as fixed and as often remembered. If Jacobi thus needs Mr. Thompson's severe criticism, the post-Kantian idealists are, oddly enough, on the whole forgotten. That there is any very recent German thought at all, our author seems not to have had occasion to hear—presumably, because Sir William Hamilton and his commonplace books furnish no information about the matter. To be sure, there is *Mind*, and the author reads *Mind*. But all the very interesting work which that journal is doing to bring together into close and living intercourse the various schools and undertakings of modern philosophical thought seems as good as lost upon our author. He sees only the philosophical problems that Hamilton and Mill and Spencer see. He seems to suppose that he has exhaustively treated the most important questions at issue in philosophy when he has elaborately refuted Hickock and Whewell and President McCosh. And thus he writes as English thinkers, in their old-fashioned insular ignorance of the world's thought, were accustomed to write a quarter of a century ago. But in these days, after all the earnest and generous study of manifold philosophical opinions that has characterized the last decade, after all the efforts that European thinkers have everywhere been making to lay aside their narrowness and to understand one another, Mr. Thompson's equipment for his task seems to us disastrously and intolerably provincial.

In the next place, as to our author's actual contributions to his chosen science, we must admit a great deal of really valuable work, although he has not helped us to find it, but has embedded it in a mass of useless material. He explains at great length why he does not treat certain topics more fully, fills pages with his reasons for not mentioning further the things therein mentioned, and vexes the reader with atrociously long quotations and condensations from authors whose thoughts are vastly more accessible in their own well-known books than in Mr. Thompson's. But when at last he really gives us his own contributions, these are not only ingenious and thoughtful, but they are often suggestions that promise to become more useful as we digest them more, and

that future students of psychology ought not to neglect. These contributions are for the most part contained, so far as we have been able to learn, in Parts 6 and 8. They concern especially descriptive psychology, in which Mr. Thompson's talent is obviously the most free of movement. If the rest of the book had been reduced to very much smaller proportions, we should have little but thanks to offer. The discussion of intuition and inference, in Part 6, is probably the best piece of work in the book. When one reads it one can only regret that such ability and earnestness as are there shown should have been wasted, in many other instances, for lack of wider reading. In the section on "Necessary Truth," in Part 7, the great fault seems to us, not that the author is far wrong in what he asserts, but that he has failed to see even the shape of the real philosophic problems involved, so that the discussions, excellent very often as psychological descriptions, fail to have any philosophical significance whatever.

Utterly intolerable is, finally, the whole of what the author has to say about "Force" and the "Persistence of Force." It is a fine example of the persistence of error. After centuries of debate, modern physical science has reached certain relatively clear notions about "force" and "energy" and the "conservation of energy." These notions such men as Maxwell, together with most of the writers of the highest order of elementary treatises on physics, have been trying to make clear to the general public. Meanwhile, however, Spencer, in his 'First Principles,' stated an utterly obscure and antiquated doctrine about the nature of what he called "Force," and supposed himself to be in the front ranks of physical science when he said that this "force" "persists." Now the modern doctrine of the "conservation of energy" is in no wise identical with this vague Spencerian "persistence of force." But Spencer and his followers have remained in their hopeless obscurity of ideas, and so form a serious obstacle to the growth of clear notions about these matters. When the disciples are appealed to concerning the master's vagueness they sometimes say that his 'First Principles,' having been written a good while ago, cannot be quite abreast of the latest science, while the many occupations of the master prevent the thorough revision that he would like to give to his work. This may excuse Mr. Spencer if it can; but meanwhile it cannot excuse those who come freshly into the field, as Mr. Thompson does, and who elaborately and systematically develop this confusing notion about the nature of force. When Clerk Maxwell was troubled by people who maintained the doctrine that matter is only a conglomeration of "centres of force," he advised them to turn a grindstone, or to try to stop a fast-turning one, and so to see whether all the properties of matter were to be explained on Boscovitch's theory. Even so one might advise Mr. Thompson, when he talks of "forces in motion," and "forces at rest," and when he tells us that the "same force with reference to other forces may be dynamic, while with reference to its own parts it is static," to study the elementary facts and notions of mechanics, as Clerk Maxwell gives them in the book on 'Matter and Motion,' or as Professor Tait gives them in his lecture on "Force," or, better still, as Professor Mach has recently stated them in his beautiful little book, 'Die Mechanik in ihren Grundprincipien historisch-kritisch dargestellt.' Let Mr. Thompson then see how much remains of sense in this curious half-Spencerian jargon in which he indulges.

We have been plain-spoken, and perhaps we have not sufficiently recorded our appreciation of the really beautiful and self-sacrificing devotion that Mr. Thompson, in the midst of other cares—those, namely, of an exhausting profession—and in the midst of a world that does not exactly shower benefits on the heads of philosophic students, has still given to his chosen philosophic work. We honor that devotion very deeply.

ANCIENT SKULLS.

Ueber alte Schädel von Assos und Cypern. Von Rud. Virchow. Mit 5 Tafeln. Berlin. 1884.

THE wide scope of Doctor Virchow's work, taken in connection with its high scientific character, is a striking instance of breadth of interest, in these days of intellectual centralization. While, in the Reichstag, he has become one of the most popular and influential politicians of Germany, he has still maintained a position in the first rank of living physiologists. And of late years he has been publishing a series of minute researches concerning anthropological and archæological matters, which now oblige us to regard him as a chief authority in these fields as well. In a volume which appeared in 1882 he presented an exhaustive inquiry into all the human remains from Troy and the Trojan plain, brought to light during the digging of Schliemann at Hissarlik and of Calvert at Hanaï-Tepeh. The accuracy of method followed in this investigation, and the suggestiveness of the results thereby obtained, led to the author's receiving, soon afterward, the three most perfect ancient skulls discovered in the Street of Tombs at Assos by the excavations of the Archæological Institute of America, as well as two from Cyprus, which, at the instance of Mr. Georg von Bunsen, were sent to Berlin by the trustees of the Metropolitan Museum of New York.

The greater part of the publication now before us is devoted to Assos and to the skulls from its Necropolis. Doctor Virchow himself visited that site in 1879, two years before the American exploration was begun, and, to a scholarly review of the accounts, ancient and modern, of this important citadel, he is thus enabled to add a charming page of personal impression. He describes the wonderful view obtained on crossing one of the spurs of Ida, at the north of Assos—the Gulf of Adramyttion and the mountains of Lesbos as a background, the scarped volcanic crater forming the Acropolis, and the fertile valley of the river, the "fair-flowing Satnioeis" of Homer, which winds through green meadows beneath the forbidding walls of the city. The famous flesh-devouring Assos-stone is discussed at some length, and, having thus approached his special subject, the author classifies the various manners of interment which the remains found in the Street of Tombs prove to have been chiefly employed. It is particularly fortunate that the three skulls from Assos, which alone had not returned unto dust, are representative of the chief modes of inhuming the unburned body practised in the Troad, namely, in enormous jars of baked earth, in monolithic sarcophagi, and in stone chests built of slabs.

It would be impossible to give here any abstract of the technical results obtained by the exceedingly accurate measurements made of these skulls, important as are the tables of dimensions for craniological comparison. The specialist will here find a method employed which, in itself an advance upon the system of Weisbach, has provided us with the first definite and trustworthy anthropological data concerning the races inhabiting the shores of the Ægean two thousand years and more ago. Virchow calls attention to the important bearing of such materials upon the question of tribal derivation, but he does not express any decided opinion in regard to the ethnographical character of the primitive Trojans. This is disappointing, but it is certainly quite reasonable in view of the few skulls as yet available for comparison. About early Thracian craniology, for instance, almost nothing is known. Nevertheless, the gradually accumulating evidence inclines one to believe that the Mysians were immigrants from Europe, rather than representatives of a short-headed and distinctly Asiatic race, like the Armenians. The discoveries of human remains at Troy and at Assos, thus scientifically considered, throw the first true light upon these historical problems. If it be still somewhat dim, it is certainly far less delusive than the will-of-the-wisp of literary tradition.

Concerning the skulls themselves, it must now suffice to refer to the attractive human interest attaching to these venerable relics. The first two given by the author may serve as examples. The man whose cranium is now designated as No. 1 lived toward the close of the sixth century B. C. As his head had received many and severe wounds from a sword, some of which had healed during life, he was in all probability a warrior. The last blow proves that he died as he had fought—facing the enemy. He might have felt a pardonable pride could he have foreseen this striking vindication of Assian honor, some two thousand five hundred years after his demise. His body was buried with some distinction in a huge earthenware pot, six feet and a half long and three feet in diameter; the mouth of this vessel was closed with a flat stone, and the whole covered with earth. So he lay before the principal gate of the city fortifications, undisturbed beneath the tramplings of many conquerors. The Persians, against whom this Æolian Greek must often have taken arms, were driven out. Aristotle sat upon the stone bench erected in later times near the tomb. The Roman Empire itself was outlived. Byzantine ecclesiasticism was overthrown by the Turks. Yet when, in April, 1882, the lid of the jar was removed by excavators from an undreamt-of land, the sense of human presence in these archaic bones was still so great that the Romaïc workmen felt themselves to be disturbers of a recent sepulchre; and as they gazed upon the drawn-up knees, the jaw dropped forward upon the breast, and the folded arms of the ancient warrior, they solemnly muttered a *kyrie eleison*—words of his language still unchanged, but of a meaning which the twentieth generation of his descendants would have lived too early to comprehend.

The second skull is 400 years more recent. By silver coins of Athens, Ephesus, and of the native city, as well as by various fragments of pottery, its age could be very accurately determined. It was taken from a private lot in the ancient cemetery, where had been buried numerous members of an influential family of Assos, among whom the name Larichos (that of the brother of Sappho) was particularly common. The elderly individual to whom these bones last belonged was evidently of high rank, but his broad face and low forehead do not bespeak notable ability. He outlived his attractions; senile degeneration is everywhere apparent. His few remaining teeth are literally worn to the roots, and a fracture of the nasal bones, although healed, must have been keenly felt as an unworthy disfigurement.

The sixth sense of the antiquarian—that powerful second-sight which recognizes magnificent edifices and crowded streets where lie but disjointed blocks and heaps of débris—sees the aristocrat living amid surroundings entirely different from those familiar to the soldier who is now so closely cheek by jowl with him upon the shelf of a scientific museum. Not half a dozen fragments of the city as it was in the sixth century B. C. can be recognized among the overthrown ruins; the fortifications of a still earlier age alone remain of all the monuments which made Assos the chief place of the Troad at the close of

the Lydian occupation. The comfortable life of the member of the Larichos family is, however, more easily pictured. He saw the streets of Assos much as they have now become known. Almost all the chief buildings of the town were standing in his time. The honored citizen may well have been upon the Agora, now more familiar than any other Greek market-place, when King Eumenes, of Pergamon, visited his loyal subjects, and paid the extraordinary price of 4,000 drachmas apiece for the prize pigs of antiquity which contributed to Assian celebrity. He may even have admired with Ptolemy Physcon, of Egypt, that majestic porker of Assos which the royal glutton has described as "two cubits and a half in height, the whole of his body corresponding in length, and of a color white as snow." Virchow's studies among the refuse heaps of primitive kitchens show that the rearing of pigs was common in Troy divine and at Thymbra; but we are informed by the hungry explorers that there is to-day not one domestic swine in all the southern Troad, thanks to the religious prejudices of the Turks.

The third skull from Assos is that of a young girl; both those from Cyprus are of elderly men. We notice with regret that the objects designated by General Cesnola as having been found in the tombs together with these Cyprian skulls, and sent with them to Berlin, are regarded by German archæologists consulted concerning them as being of different age and entirely unrelated. Indeed, Doctor Furtwaengler directly questions the possibility of their having been taken from the same graves.

RECENT EDUCATIONAL BOOKS.

Education in its Relations to Manual Industry. By Arthur MacArthur. Appletons. 1884. Pp. 390.

Second Report of the Royal Commissioners of Technical Instruction. Vols. i. and ii. London. 1884. Pp. 357-386 and appendix.

The Quincy Method. By L. E. Partridge. E. L. Kellogg. 1885. Pp. 660.

The Civil Service of the United States. By John M. Comstock. Henry Holt & Co. 1885. Pp. 602.

JUDGE MACARTHUR'S book is the most comprehensive treatise on its topic that has yet appeared in English. A rough sketch is given of the industrial history of France, Russia, England, and Germany, and such institutions as the École municipale d'Apprentis and Chaix & Co.'s École professionnelle at Paris, the weaving schools at Mulhouse and Épinal, the school at Vilette, and corresponding schools in the other European countries are briefly characterized. By many who read this book the information it contains will be found to be its most important ingredient. The author is a strong but not unreasonable advocate of industrial education. On the other hand, the book is far from satisfactory. It is utterly without method, and seems to be made up of jottings. It would be difficult to give the chapters any headings, and the reader is helped but very little by the index. The study does not appear to be at first hand, and the information is very scrappy. Still, the work has no rival in this country.

The report of the English Commissioners, on the contrary, is, like most of the English blue-books on education, a model of system and method. Those who have occasion to consult it will naturally turn first of all to Mr. William Mather's report on technical education in the United States. Mr. Mather is a Manchester engineer, and during his six months' stay in this country he travelled upward of 10,000 miles, and made special inquiries in twenty-two cities, going as far West as San Francisco. He assumes that the best test of public schools is seen in the fruits of labor, and that schools are the best gauge of the wealth and the public spirit of states. Even scientific education, he believes, is apt to be too abstract and to drift too far from industrialism. The problems of settling this country, he says, have been and are likely to be more mechanical than political, and the great thing we should strive for is to get out of mere intellectual and literary habits of culture into those that are more practical. Thus our agricultural colleges, with literary aspirations, are very far astray. If industrial education is adopted throughout the country, Mr. Mather believes that the true sources of wealth—viz., the resources of nature—will be drawn upon to supply all the comforts of life at reduced rates, so that the purchasing power of wages will be increased, and the capital and labor of the future will find profitable employment without protection in the vast regions now opened up by the railroads in all directions. "When," he concludes, "America abandons the shadow for the substance, her natural wealth and prosperity must be augmented, while her industries will develop upon the solid foundation of freedom in trade as in political institutions. It is to meet her upon such conditions in friendly rivalry and competition that we must prepare ourselves." The first volume of these reports is taken up with a report of technical education on the Continent, and is extremely detailed and valuable in regard to the schools for special industries. Over three hundred pages are taken up by reports on agricultural education by Commissioner Jenkins.

'The Quincy Method' is a much needed book. So heated and confusing have been the discussions in some quarters during the last few years that the primary teacher hardly knows where to turn for guidance. A detailed exposition, therefore, with many illustrations, of the daily work of the four years of a model public school, such as is given in Colonel Parker's book, is admirably calculated to rouse routine teachers out of their mechanical slumbers and to really interest them in their work. The secret of the author's power in matters of primary education (for he is the real author of the system here described) is his love of and his sympathy with children, and his persistent refusal to be entangled in any system, even his own, while devoting himself mainly to the study of method. Many are drawn to him chiefly because of the enemies he makes, who resemble the enemies of his great predecessor, Horace Mann. This book, to our minds, is the best justification of the unexpected sagacity of the directors of the Normal Park Normal School in calling and sustaining Colonel Parker, in the face of the Scribes and Pharisees of the old educational dispensation. The volume is by no means without defects of mannerism and even arrogance; but it has the saving merit of beginning in the right place and in the right way. The list of "points from which your notice might be prepared," which the publisher prints and addresses to editors, may perhaps be a good idea; but the phrases "latest," "best," "successful," "well told," "vast army" of readers, "wonderful change," "really a revolution," "all beautifully told," "beautifully bound in cloth," which are kindly suggested as applicable to the book, are certainly not very discriminating.

The fourth book on our list, which contains many examination papers, fairly raises the question whether they are of the proper kind. This seems to the writer at the outset a vital question, by the settlement of which the whole principle of the utility of competitive tests in our civil service will be ultimately judged. The examiners have vast difficulties to contend with. The curriculum of no class of our schools is adapted to fit men for undergoing the proper tests; but now that the principle seems established for large classes of offices, the educational question of the best method of acquiring the best mental qualification should be early met; for the greatest ultimate danger which is likely to assail the system is lest the tests shall not be effective. So far, they have been extremely elementary; but all that is needed to improve them and to raise the standard is clearer conception of what is needed, and better books and other aids in fitting for them.

The Russians at the Gates of Herat. By Charles Marvin. Charles Scribner's Sons. 1885.

WITHIN the last five years Mr. Marvin has written no less than six large books and four pamphlets, in addition to numberless contributions to the daily and periodical press, on the progress of Anglo-Russian affairs in Central Asia. He has travelled on the Caspian, and has visited Russia in order to converse with prominent soldiers and statesmen. During his youth he lived in Russia, and during the war of 1877-78 he followed the Russian armies as a correspondent, and was afterward for a long time in Constantinople. Therefore, although neither his position nor his talents entitle him to be considered such an authority on Eastern affairs as Rawlinson, it cannot be denied that he is thoroughly familiar with his subject, and that he is one of the few men really competent to convey to the public just such information as every one desires to obtain at this moment concerning the controversy over the Afghan frontier. With these qualifications he has written and published in the short space of eight days a little book of 185 pages, which summarizes briefly the facts and opinions of his previous books, and adds so much as is necessary to bring the subject up to the date of March 23, 1885. While it bears the marks of hasty composition, yet, on the whole, it is an admirable summary, and as an introduction and key to the telegraphic news in the daily papers it is invaluable.

It is certain that no one else has so clearly explained in English the motive and purpose of the Russian advance in Central Asia. This dates from the Crimean war, and was a natural outcome of the extreme hostility which England had then manifested toward Russia. Realizing that this hostility was likely to be permanent, Russia cast about for England's most vulnerable point of attack, and found it to be in India. Hence began the advance from Orenburg through Turkestan, which was continued until the Russian outposts were practically at the foot of the Hindu-Kush. The difficulty of crossing these lofty mountains led to the search for an easier route, and the advance eastward from the Caspian through the Turkoman country was begun. A footing had been gained on the eastern shore of the Caspian in 1869, but no advance was made until after the war of 1877. But once undertaken, the forward movement on this line has been even more rapid than that through Turkestan. In less than six years Russia has advanced to within three or four days' march of Herat, has built a railroad close behind her, and is now firmly established in the most fertile corner of Afghanistan, with no mountains or other physical barriers to impede her march against India, whenever political considerations render it expedient or necessary. After a generation of patient toil, an enormous expenditure of money, and no small loss of life, Russia has now gained her object; she is in a position to strike a severe if not a deadly blow at England, and Englishmen have suddenly discovered that what was denounced by the Duke of Argyll only four years ago as "one of the wildest dreams ever enter-

tained"—viz., the danger of "a military basis to be formed by Russia on the Caspian"—is an accomplished fact. The advantages of this position to Russia are incalculable. How she will use them and what will be the outcome of it, are matters of conjecture upon which discussion can take the widest range. The present boundary dispute is in itself a trivial matter, but underlying it is the whole question of the relations of England and Russia. If this dispute is settled without war, another may shortly arise, and so long as the two nations hold antagonistic views about Constantinople, a permanent peace is impossible.

The principal value of Mr. Marvin's book is the information it gives concerning the advantages with which Russia would begin the struggle. Few people have realized that Russia has steam communication to within a few hundred miles of Herat, that she has steamers and barges with a united capacity of nearly 3,000,000 tons on the Volga, a fleet of nearly 100 steamers on the Caspian, and a line of railway running parallel to the Volga all the way from St. Petersburg to the shores of the Caspian. As the author clearly points out, the difficulties which Russia had to surmount in 1877, in concentrating her army at Kishineff by a single line of railroad, are infinitely greater than would be the difficulties of concentrating an equal force at Kizil Arvat, the present terminus of the Trans-Caspian Railway. The distance in the latter case is but little greater, the facilities of communication are much more ample, and the whole route lies within Russian territory, screened by the Caucasus from any powerful foe. Once arrived at Kizil Arvat, the distance to Herat is less than was the distance from Kishineff to Constantinople. Nor is Kizil Arvat really the terminus of the railway; it stopped there at the last authentic accounts several months ago, but since then work has continued upon it, although it is not certainly known how far it has gone forward. In all probability it will reach Askabad during the present summer, and this point is only 388 miles from Herat, while the terminus of the English railroad south of Quetta is 600 miles from the same point. Mr. Marvin argues that the analogy of recent events leads inevitably to the conclusion that it will be but a few years hence when this gap between Askabad and Quetta will be filled up, giving a direct rail communication via Herat from London to Calcutta with only two water breaks—viz., across the English Channel and across the Caspian—and that the journey will be accomplished in nine days. This "will revolutionize the Russo-Indian region and efface the southern portion of the Afghan barrier."

Concerning this Afghan barrier Mr. Marvin entertains no illusions: "Do what we can, we can never prevent the inevitable junction of the Russian and English frontiers in Asia. It would be difficult to do so even with Russia's help. It is impossible without it." And on the other hand, he summarizes the Russian policy in these words: "The conviction has been deepening in Russia for years that . . . the solution of the Eastern question is only attainable by taking up such a position on the Indian confines as shall compel England to acquiesce in the Russian occupation of Armenia and Constantinople." This conviction was Skobeleff's legacy to his countrymen. More than any one else he had pondered over it, and his writings on the subject, which have only been published since his death, have now "permeated the army and exercised an extraordinary effect in preparing Russia for fresh sacrifices." As Mr. Marvin justly says, these writings "possess fuller significance . . . than anything ever published in the Russian language, including the stale but often-quoted will of Peter the Great."

History of Art in Phœnicia and its Dependencies. By Georges Perrot and Charles Chipiez. Translated by Walter Armstrong, B.A., Oxon. London: Chapman & Hall; New York: A. C. Armstrong & Son. 2 vols. 1885.

RECENT researches have thrown but little new light on the origin of the Phœnicians: the story of Herodotus still stands as the highest authority. The study on the tribal affinities of the Phœnicians in the first chapter of this History errs, we believe, in common with much of the French speculation, in overestimating the weight of the testimony of language as against that of religious belief (p. 12 *et seq.*). But the résumé of the history of Phœnicia comprises all the chief data needed to connect that enterprising race with the early European civilization, and substantially all that can be definitely stated. If it is in some respects incomplete, it is because modern research has not found all that we should like to know; and, brief as it is, the history of the rise and struggles of Carthage, that greater daughter of the Syrian mother city, is of romantic interest. In the chapter on religion, the illogical theory of the identity of Hercules and Melkart is referred to as no longer tenable; while in the second volume Melkart is spoken of as "the deity who became finally confounded with the Greek Heracles." But in view of the real importance of this typical question, the conclusion of our author might well have been more distinctly stated, as the confusion is one of those which continually arose when the ancient religions came in contact. The argument held by those who maintain that Heracles was a Phœnician god imported into Greece, is to a great extent based on the curious correspondence between the names of Heracles and Melkart, which, when written in early Greek characters, are found to correspond by reversal, *i. e.*, Melkart, read backward, is made by slight modification to be Heracles. But this, it seems to us, accidental coincidence cannot have taken place before the date at which the letters of that form were used, viz., 600 to 700 B. C., while Heracles, as a Peloponnesian demi-god born at Tiryns, with a distinctly Pelasgic pedigree, is known to Greek tradition of centuries before, and his name is inextricably mixed with the Pelasgic colonization of that country, probably long anterior to any intercourse between the Greek and the Phœnician.

But the peculiar interest of the work of MM. Perrot and Chipiez lies in the study of the arts of Phœnicia, by which it is shown conclusively that while in the technical processes of art Greece, from early times, unquestionably borrowed much from the Phœnician, the higher type of art had no existence with the latter race, and of its technical achievements so little that remains can by any hypothesis be attributed to an early date, that we still know almost nothing of an art certainly Phœnician prior to the earlier phases of the great Greek art. In fact, what remains are found in Phœnicia give us information very trivial in comparison with what we draw from the colonies. Some day Carthage will be completely excavated, and then we shall know more of the Phœnicians than we are ever likely to learn from all other sources together, for Carthage was the greater Phœnicia. At present we are most largely indebted to Cyprus, the nearest of the colonies; but the remains thus far in hand are probably only a portion of what we may hope for from systematic and intelligent excavation. Col. di Cesnola, to whom we owe more of the material of Cypriote excavations than to any one else, had no knowledge of archæology or appreciation of the importance of exact memoranda of discovery, and Perrot, although an extreme apologist for him, is obliged to say: "We may, however, be allowed to express our regret that to his other services Cesnola has not added that of giving us plans, sections, and elevations of the tombs and other civil or religious edifices he was the first to explore. The few figures of this class which are sprinkled at rare intervals over his pages look too much as if they had been compiled from memory"—a remark which, considering that in another place he notices that two plans published by Cesnola, in separate communications concerning the same monument, do not agree in any particular, is a genial way of stating the delinquency.

M. Perrot recognizes the entire disaccord between the plan of the alleged temple at Golgos furnished by Col. di Cesnola to the Academy of Turin, and that in 'Cyprus,' admitting that they agree in no point, and settles the matter in this way: "To which of all these documents is our confidence due? We prefer that given in our Fig. 204 [that of 'Cyprus'], because it best corresponds to the double description given by Cesnola and Ceccaldi." But Ceccaldi distinctly stated that he had not been able to see a trace of this temple, and only knew of it what Cesnola saw fit to tell him, so that his description adds nothing to that of Cesnola. In another case, where Cesnola has not contradicted himself—that of the Panaghia Phaneromene—he gives an illustration differing widely from that of Di Cesnola, and yet makes no explanation of the inconsistency; that which he gives being credited to Max Ohnefalsch Richter. Again, in reference to the stone step alleged to have been found close to a throne said to have been discovered in the temple of Golgos (no part of which has been made known), the account given in the journal of the Turin Academy shows that the step could not have been found where 'Cyprus' states it to have been found, as its discovery was prior to that of the temple of Golgos. In regard to the great discovery of Cesnola—that of the treasure of Curium—M. Perrot adopts the whole story without noticing the singular anachronism in the discoverer's own account, and in spite of all the doubts thrown on the existence of the treasury, and the fact that no trace of it has ever been found since Cesnola's excavation. He accepts approximately the date assigned to this treasure—the middle of the fifth century—when the slightest acquaintance with antique jewelry would have shown him that many of these objects are not earlier than the second century, and some even later.

In reference to a statue now in the Metropolitan Museum M. Perrot has a note in his original edition as follows:

"Cette figure est une de celles dont la restauration a été le plus vivement contestée. Il a été démontré d'une manière générale, par un long et public débat où toutes les allégations ont pu se reproduire librement, combien étaient injustes les violentes attaques qui ont été dirigées pendant plusieurs années contre M. di Cesnola et contre sa collection; nous ferons d'ailleurs remarquer pour ce qui concerne particulièrement cette figure, qu'elle a été vue à Cypre même peu de temps après sa découverte chez son propriétaire par G. Colonna Ceccaldi. Trouvée en Mars, 1870, elle était décrite et représentée par Ceccaldi telle que le Musée de New York la possède aujourd'hui, dans un mémoire qui est daté du 22 Novembre, 1871, et Ceccaldi l'avait admirée et étudiée dès le mois de Mai, 1870 ('Monuments Antiques de Cypre,' pp. 35, 39)."

In the English edition this note runs:

"This statue bears two Cypriote letters on its left shoulder. It is one of those as to the restoration of which there have been very bitter disputes. It has been proved in a general way, by a long and public discussion in which everything that could be said on both sides was brought forward, that the violent attacks directed through a series of years at General di Cesnola and his collection were quite unjust. We may here remark, however, that this particular figure was seen only two months after its discovery by G. Colonna Ceccaldi, who described and figured it in November, 1871, twenty months after it was found ('Mon. Ant. de Cypre,' pp. 35, 39, 40). It was then in the state in which it now is."

Now the facts are these. This statue was seen by Ceccaldi in *May*, 1870, and the height was then noted by him as 3 metres. It was seen and photographed by Doell three months later, in *August*, 1870, and is given in his report as he saw it, with *the feet*, *the base*, and *the bird* missing; and Doell was too experienced an archæologist to be deluded. It then measured 1.98 metres. In 'Cyprus' it is given as 8 ft. 2 in. (in the French edition, 2.48 m.), and in Perrot and Chipiez as 9 ft. 3 in. Perrot quotes Doell on other points: we may presume that he read the reports of the libel suit, since he quotes it; and in face of all the testimony there offered him, he declares the statue free from restoration—"found as it now stands in the Museum."

Again, in the reference to the limestone statue of the Egyptian warrior, No. 213, in our Museum, Perrot says:

"Here the head-dress is of a peculiar form, showing more clearly perhaps than anywhere else the desire to imitate the *pschent;* but the ornament on the front of the *schenti* is still more interesting. This consists of an eye—the eye of Osiris; . . . but the central motive of the whole, the Medusa's head, is Greek. It is quite necessary that one should dwell to some extent on the motives employed by the Cypriote sculptor for the decoration of this vertical band or apron (*schenti*); it shows better than anything else how much and in what spirit he borrowed from Egypt."

Now, it is perfectly well known, and was admitted at the trial Perrot alludes to, that this statue was in three pieces: that the *pschent* of the head-dress was on one fragment, and the *schenti*, below the hips, was another; and the woodcut in this volume conceals the evident mismatch of the pieces, clear enough in the original. So that the simplest solution of this archæological wonder was to suppose that somebody made a mistake in matching the *schenti* with the *pschent*, when in all probability, as shown by the incongruity Perrot attempts to reconcile, they originally belonged to different statues. In his fig. 107, a terracotta statuette, which is represented as a bearded Venus, and accepted by him as such, there is not the slightest indication of the femineity of the statuette, which is bearded and draped.

The material for a comprehensive idea of Phœnician architecture is not given us in the present work; and in the direction in which the prior researches of M. Chipiez gave most ground for hope—viz., as to the technical methods employed—no particulars are furnished us. We may infer, from general descriptions, that the costliest monuments now remaining were executed with cutting tools, and this will bring them down to a time subsequent to the neolithic period, whenever that was reached in Phœnicia. As this is one of the most important indications in the investigation of prehistoric civilization, it is to be regretted that the authors have not collected definite data concerning it.

Monnaies et Médailles. Par Fr. Lenormant, de l'Institut. [Bibliothèque de l'Enseignement des Beaux-Arts.] Paris: A. Quantin.

THE brilliant and versatile archæologist whose loss science has been so lately called on to deplore, has left his mark on too many branches of archæology to be considered as a special authority, perhaps, in any—if, indeed, his mental constitution was not one of those which decline alike the limitations and the concentration of a specialty. His authority as an epigraphist was gravely weakened by the exposure, by one of his more exact and thorough German colleagues, of some fictitious inscriptions to which he gave publicity; and so exacting in respect to veracity is science that, on account of this lapsus, which his friends have wished to explain as a hoax without any intention of really imposing on the scientific world, his observations will probably always remain under impeachment, and a question will always be placed after his discoveries. But in the book on coins and medals which Lenormant furnished for the above-named series, he only went into the general statement of known facts in regard to numismatics, and these he gave in so concise and orderly a manner that there can be no hesitation in recommending the volume to all beginners in numismatics, as a first book in that science. It is, indeed, so terse and so complete in its scope that nothing more than a cursory view of any part of the field was possible, and if Lenormant had any views of especial profundity, there was not room to display them.

Numismatics is the branch of archæology which, more than any other, may be considered the portico of archæology, both artistic and historical, and at the same time in itself the most complete and satisfactory as a specialty. It is the lamp of classical history and the guide-book of ancient art, and in itself holds so many of the profoundest problems of archæology that its importance can hardly be exaggerated in relation to classical study. How many sovereigns, states, and events are there that we know chiefly or solely by the coins which commemorate them; how much of the most exquisite ancient art should we have lost but for the coins of the many Greek cities whose mints were art-schools; and how many curious problems of ancient political economy and commercial relations are told by the coinage of the greater states!

The principal of those problems thus far solved are mentioned by Lenormant; but in a volume which comprises a more or less complete account of the coinage of Europe from Pheidon, of Argos, to the third French Republic, only an introduction could be given. In this kind of résumé the author is at his best, yet adds nothing to the elucidation of obscure points. He accepts the common interpretation of the well-known denarius of T. Carisius which is so open to question, without any suspicion of its unsoundness. This denarius contains on the reverse an anvil, a crowned helmet, the tongs and hammer of Vulcan. How the most perverse ingenuity could ever have made of this anvil and helmet the dies with which the coins were struck, it is difficult to conceive. The only thing that gave any color to it was the fact that Carisius was mint master. The use of the tongs is a purely gratuitous hypothesis, as, we are persuaded, is that of the striking of coins hot, which is supposed in explanation of the use of the tongs. There is no reason to believe that coins were struck hot, though they were probably annealed between the blows, if more than one was needed, as must have been the case with the larger coins in high relief; but bronze, which is the hardest metal employed in ancient coinage, is not so malleable when heated, but becomes brittle; and in fact the striking of a hot *flan* (as the blanks were called) of bronze is quite out of the question, while the pure silver which was employed for the coins of that metal is much softer and more malleable than the bronze, and requires even less the action of heat, being, as well as bronze, more amenable cold than hot to the operations of the mint. Mr. C. W. King, of Cambridge, England, has, in a communication to the Cambridge Antiquarian Society, shown the erroneous interpretation put on the Carisius denarius, but the whole subject does not seem to have been approached with practical knowledge of the working of metals by the writers who have accepted the hot theory of coinage. Another proof that the hot coinage was not practical may be found in the incused denarii, with identical obverse and reverse, which occur occasionally in the Roman coinages. These were caused by the coiner not noticing, in the hurry of his work, that the coin last struck was held by the upper die, and when a new flan was laid on the lower one to be struck, its reverse was struck, not by the die but by the coin in the die. Now, as these dies were generally of bronze, the rapid striking of hot flans would soon have heated the dies to brittleness if used in such haste as the common occurrence of incused denarii indicates. The ancient method of coining was to cast the flans of the proper weight, or nearly so, and then, the lower die being fixed in a block of wood or other solid substance, the flan was laid on it, and the upper die, held in the hand, was struck by a hammer; the piece being necessarily annealed in the fire between the stages of the operation.

Counterfeiting is an old trade, and took on forms we do not know in its modern practice. Little cities struck counterfeits of the coins of wealthier cities, to give their coins greater currency. The private counterfeiter made cast coins, and poor and dishonest potentates made bronze coins plated with silver; and in the Renaissance and subsequently the counterfeiting of antique coins was carried to such a perfection that the products have long circulated, or been preserved in museums, unsuspected. The late quickening in the study of numismatics has so raised the price of ancient coins that already counterfeits of our own epoch are in circulation, so admirably done that none but the most expert numismatists can distinguish them from the genuine; and possibly, if the truth were known, some have escaped even the experts of the great museums. When a counterfeit is detected, of course its career is over; but if it is not detected, who is the wiser? And, in fact, there are counterfeits of gold coins which have only been discovered to be such by finding that a number of precisely the same type were in the market, which never occurs among the coinages earlier than that of imperial Rome. It is very rare to find two ancient Greek coins from the same dies, and this is the only practical check to counterfeiting of them, as the skill requisite to make the dies is to-day too rare and well-paid to be employed in this way, the number of coins of any type which can be put on the market being so restricted as to make it an unprofitable business except for the very costliest coins. The reproduction and multiplication of the British Museum and other collections by electrotype has put the best types in the hands of the counterfeiters, but at the same time makes the detector as accessible to all, and the student of numismatics can scarcely do better than to have recourse to this facility for making the acquaintance of the rarer and more beautiful ancient coinages.

The chapters in 'Coins and Medals' on the mediæval and Renaissance coinage and medallions are more complete, and perhaps more satisfactory, than those on the antique. The chapter on modern French coinage and the processes of the day are interesting, and explain the reasons for the inevitable inferiority of modern money to the antique, but show how the former may be made less offensively deficient in beauty. Being a Frenchman, the author is born to good taste and speaks *ex cathedra*.

Fly-Rods and Fly-Tackle: Suggestions as to their Manufacture and Use. By Henry P. Wells. Harper & Bros. 1885.

THERE is no more fitting season of the year for a book on angling to make its appearance than now, when the first faint forebodings of the dilatory spring rouse the angler to thoughts of crystal streams, the break of the feeding trout, and the gallant leap of the fresh-run salmon. The sweet reflections on these subjects which the season brings, turn the mind to the practical preparations for their realization later, in the way of looking over and patching up, where it

can be done, the rods, reels, lines, flies, etc., which bear all the scars received in the campaign of last season. As a delightful and instructive aid in this preparation, as well as in other graver matters pertaining to the art, we can unreservedly recommend Mr. Wells's book, in spite of its modest introduction, which disclaims the idea of its being written for any save beginners.

Mr. Wells commences with fishhooks, and the chapter about them is excellent and scientific, and not a mere rehash of Mr. Pennell's admirable treatise on the subject, which has furnished so many original articles. In respect to the gut leaders (which are not, as vulgarly supposed, made from the entrails of a domestic animal, but from the silk fluid secreted by the Chinese variety of the silkworm) the book tells us of a valuable discovery made recently of one of the native American silkworms furnishing a gut equal in quality to the best foreign product, large enough in volume to be drawn out to a length of eight or nine feet, and strong enough to hold a salmon. This remarkable length—the foreign gut not averaging much, if any, over a foot—would be of the greatest advantage to the angler, and we trust Mr. Wells may be philanthropic enough to put his fellows in the way of utilizing the find. His views on reels are very sound, and his preferences for all-metal ones well grounded. Why is it that a strong, substantial, and durable reel cannot be had at a reasonable price? And even at the unreasonable prices such articles cost, we have known more than one instance of their giving way at a most critical moment.

The body and meat of the book is the section on rods and rod-making; and in regard to the latter we can give but guarded praise, as a good rod is so intricate and delicate a machine that telling how it is made conveys to the layman but a very faint idea of what the finished implement will do. It has always seemed to us that a man might as well try to make his own watches and clothes from treatises on horology or sartorial subjects. Still, the information may, if correctly followed, produce excellent results; and certainly that about the different woods used, and the method of repairing tackle, is useful and practical. The illustrated chapter on fly-casting, part of which appeared in *Harper's* for April, is very good. We judge from the plates that Mr. Wells fishes with the reel so placed on the rod that it must be under it when playing a fish, thus bringing the strain of the line directly on the rings instead of the rod; but this practice is nearly obsolete. The concluding chapters on "Fly Fishing" and "Miscellaneous Suggestions" contain many ingenious and pleasing theories and experiments of the author, as well as sound and tested views on the practice and paraphernalia of angling. There are interspersed irregularly through the book short narratives of angling exploits, none the less entertaining for being in one or two cases somewhat legendary in their character. The volume, as a whole, is so much above the average of the American work on angling, that we make bold to suggest to its maker that in the subsequent editions through which it deserves to pass he should leave out such superfluities as this on page 11: "Angler! the term is to me a title of nobility, an order of knighthood open to personal merit alone," etc., etc.

A Sketch of the Life and Times of the Rev. Sydney Smith. Based on Family Documents and the Recollections of Personal Friends. By Stuart J. Reid. Illustrated. Harper & Brothers. 1885.

This book is intended, its author explains, "to supplement, not to rival, the biography which is already before the world." It is well worth reading, if only for the hitherto unpublished correspondence and anecdotes it contains. It also gives a connected account of the beginning of the *Edinburgh Review*—a subject always full of literary interest—and of the men who took part in establishing it. Its aim is chiefly to show that Sydney Smith was one of the enlightened reformers of his day, his wit springing from a hatred of oppression, love of justice and right, and sound common sense. But his wit is, after all, in itself his chief claim to immortality, and it is a very individual kind of wit. Few other masters of ridicule, as Macaulay called him, ever made so many jokes and so many friends at the same time. There was beneath his humor a flow of animal spirits and good nature, and a desire to please, which saved him altogether from indulgence in malice. He attacked people and made fun of them all his life, but his motives were so transparent that it was impossible to mistake them. His philosophy of life was that of an honorable man of the world, and his interests were mainly of the world. He has been a good deal criticised by his less witty clerical brethren for lack of "spirituality," but we might almost as well complain of Aristophanes or Voltaire for the same fault. He was born a wit, and was not a born clergyman. Accident put him in the church; but he remained a wit in spite of the fact. A spiritual wit seems to us like a contradiction in terms. Sydney Smith was an eminently religious man, but his religion had chiefly the effect of making him generous, charitable, benevolent, an aggressive combatant in the great struggle for modern freedom.

In the present volume we find one or two entertaining scraps of his conversation, not hitherto published, and very characteristic: "Ah! you talk very lightly of common sense, but you forget, as I said in my lectures, that 2,000 years ago common sense was not invented, and that philosophers would be considered as inspired by the gods, and would have altars raised to them for the advice which a grandmother now gives to a child six years old." "Every political eminence is a Tarpeian rock." "I will do human nature the justice to say that we are all prone to make other people do their duty." Finally: "I wish I could write poetry like you, Rogers. I would write an 'Inferno,' and I would put Macaulay amongst a number of disputants, and gag him!"

From the Tone-World. Essays by Louis Ehlert. Translated from the German by Helen D. Tretbar. C. F. Tretbar. Pp. 288.

In making fifteen of the late Louis Ehlert's essays on music and musicians accessible to English readers Mrs. Tretbar has done a useful work; for collections of musical essays in the English language are not abundant, and Ehlert is one of the few German critics whose criticisms are worth translating. Mrs. Tretbar's version is always correct, although occasionally somewhat obscure and inelegant. Ehlert was much addicted to figurative language, which sounds odd in a literal translation. His style is often picturesque and again sentimental, as the two following quotations will show:

"He who has not heard it can form no idea of the intoxication which permeates the orchestra after *Wotan's* departure (in 'Siegfried,' act iii). In the same degree in which *Siegfried* approaches the rocky wilderness, and *Brünnhilde* sinks into her sleep (?), the blazing flames rise up higher and higher in the orchestra. Warmer and warmer becomes the glow, until each instrument burns with a crackling blaze" (p. 198).

"Perhaps the most touching of all that Chopin has written is the tale in the F major Ballade. I have witnessed children lay aside their games to listen thereto. It appears like some fairy tale that has become music. The four-voiced part has such a clearness withal, it seems as if warm spring breezes were waving the lithe leaves of the palm tree. How soft and sweet a breath steals over the senses and the heart" (p. 280).

The essays on Chopin and Schumann are the best in the collection. The works of these composers are gaining in popularity every year, while those of Mendelssohn, which in their lifetime appeared much more brilliant, have for the most part proved to be deceptive meteors, as Ehlert shows in a special article on Mendelssohn. Our author consoles himself with the reflection that "there are things, like the dew and flowers, that we regard as all the more beautiful on account of their perishableness." The pathological sides of music and of criticism are treated in essays on Offenbach and Gervinus.

No fewer than six of the essays are devoted to Wagner—including a readable account of the Bayreuth festival, in which praise and censure are mingled in those proportions which always insure an author the reputation of impartiality, although he *may* be quite at sea in every statement he makes. "Tristan and Isolde," of which Ehlert was an ardent admirer (with certain reservations), is discussed in two articles, and there is a fanciful and weak "parallel" between Wagner, Makart, and Hamerling. In "Gounod contra Wagner," Ehlert exposes the amusing impudence of Gounod's protests against Wagner's alterations in the scoring of Beethoven's ninth symphony. These alterations were of such a nature that there can be no doubt whatever that Beethoven himself would have made them had not the instruments then in use been too limited in their power of execution. Gounod's remonstrances, as Ehlert suggests, had their foundation rather in a general disaffection toward Wagner than in critical grounds of disapproval. The essay on Carl Tausig also deserves mention as a characteristic sketch of one of the most gifted and eccentric musicians of the century.

"*Gombo Zhèbes*": Little Dictionary of Creole Proverbs Selected from Six Creole Dialects. By Lafcadio Hearn. New York: W. H. Coleman.

In No. 453 of the *Nation* we called attention to the interesting 'Kreolische Studien' of Dr. H. Schuchardt, and noted the increasing interest shown in this peculiar class of studies—that of the hybridization of languages. Doctor Schuchardt had devoted his attention more especially to the linguistic side of the phenomena of "creolization," studying in this way the "lingoes" of remote island-groups in the South Sea and the Indian Ocean, and bringing to bear on them the skill of the practised philologist. Closely following on these researches comes Mr. Lafcadio Hearn with his quaint little volume, 'Gombo Zhèbes,' which may be called a comparative study of proverbs in six Creole dialects—the dialects of Mauritius, French Guiana, Martinique, Trinidad, Hayti, and Louisiana, all but one products of our western hemisphere. It would appear, therefore, that Mr. Hearn's collection has rather a psychological than a linguistic or philological interest. A glance, indeed, at the 352 proverbs which he has selected, translated into French and English, and annotated, will give a folk-lorist a surprising insight into the habits of thought, the "spiritual temperature," the naïve mental attitude, of our western aboriginal or imported populations in their contact and commerce with an alien tongue. It will also show the universality of certain proverbs which, as citizens of the globe, acquire their letters of naturalization everywhere.

Not the least interesting portion of the collection is that part of it which immediately concerns us—the brief and often witty product of the genius of the Louisiana colored Creole. Mr. Hearn declares that the genuine patois is rapidly

dying out, and that soon both lingo and locutions will be irrecoverably lost. We are accordingly thankful to him and to his friend Prof. Henry for rescuing from destruction so much that is striking and characteristic in the New Orleans dialect. These proverbs, like the sayings of children, have occasionally an unconscious indecency which is even a part of their charm, while their piquancy is often delightful. The title of the book is a very apposite one, being a corruption of *gombo aux herbes*, a soup salmagundi composed of all sorts of vegetable scraps, peculiar, with the numerous other gomboes, to the Creole cuisine of New Orleans. Mr. Hearn has done good service in adding his suggestive notes and illustrations, and in throwing in the odds and ends of patois songs which he has gathered from the lips and memories of the ancient *mamans* of the French Market and the New Orleans street corners. It seems that there is not only a Creole patois, there is also another which Younger Ethiopia, forgetting its manners, contemptuously calls *nèg* (negro). So, while the older generation of Creole kitchen-folk speak their dialect in its primitive purity without a single *r*, and say *zhèbes*, the regenerated scamp who has been attending school restores the missing link and insists upon saying *zhairbes*. Thus the dialect is changing, and another picturesque landmark of ancient Louisiana bids fair to disappear.

Elements of the Differential and Integral Calculus. By Prof. James M. Taylor, of Madison University, Hamilton, N. Y. Boston: Ginn, Heath & Co.

FROM the number of text-books treating of the calculus which have appeared within the last four or five years, several of which have been noticed in the *Nation*, we infer that the number of students of that branch of mathematics is rapidly increasing. In most, if not all, our colleges the calculus is an elective study. Few students would choose it because they considered it an accomplishment, or because they supposed it would be easier than some alternative. The large majority of those who study the calculus do so because they wish to prepare themselves to become teachers of mathematics, or because they expect to make practical application of it in some other science or in some scientific calling like engineering. Hence the increase in the number of students of the calculus, shown by the demand for text-books, seems to indicate an increasing attention to scientific pursuits in general.

Professor Taylor's work has two marked characteristics. In the first place it is evidently a most carefully written book. There is nothing vague or slipshod in it. The last chapter has been "filed" as much as the first. Nearly every sentence, certainly every theorem, seems to have been constructed with a strenuous effort to give it clearness and precision. This constant attention to the form of expression has enabled the author to be concise without becoming obscure. We are acquainted with no text-book of the calculus which compresses so much matter into so few pages, and at the same time leaves the impression that all that is necessary has been said. In the second place, the number of carefully selected examples, both of those worked out in full in illustration of the text, and of those left for the student to work out for himself, is extraordinary. From this point of view those teachers and pupils who are accustomed to or prefer a different text-book, would still do well to provide themselves with this, regarding it merely as a collection of examples and without any reference to the text.

We do not wish it to be inferred that we regard everything in this book as treated in the best way possible. There are many points which we should prefer to see handled in a different manner; but it is a work constructed on a well-considered, self-consistent plan, with ample material to enable the student to become thoroughly acquainted with the machinery of a branch of mathematics which most students regard with profound respect, for the results which it accomplishes with a seemingly magical facility, while at the same time they recoil from its supposed enormous difficulties.

BOOKS OF THE WEEK.

Across the Chasm. Charles Scribner's Sons. $1.
Adams, W. R. Look Within for Five Thousand Facts that Everybody Wants to Know. Chicago: A. H. Andrews & Co.
Beers, H. A. Nathaniel Parker Willis. Boston: Houghton, Mifflin & Co. $1.75.

Fine Arts.

"THE ROSE OF SHARON."

ON Thursday evening the New York Chorus Society brought its fourth season to a successful close by giving the first performance in America of "The Rose of Sharon," a dramatic oratorio by Mr. A. C. Mackenzie. Mr. Thomas had evidently devoted much care to the preparations for this concert, and the result was an excellent performance in almost every detail. The solo parts were in the hands of Misses Emma Juch and Emily Winant, Messrs. W. J. Winch, I. Morawski, and Max Heinrich, and were satisfactorily rendered. The New York Chorus Society has the best female chorus in the country, a fact which was again demonstrated during the evening; and the orchestra, being that of the Philharmonic Society, with some reinforcements in the brass, was of course perfection. Many of the numbers were applauded, but it cannot be said that as a whole the English oratorio made as favorable an impression as had been anticipated. When the "Rose of Sharon" was produced for the first time in England last October, it was heralded by the critics as a work of genius and as one of the most important choral compositions of the epoch. The composer, who conducted personally, was, after the performance, pelted with roses by the ladies of the chorus and the audience; and one critic declared he had not witnessed such an ovation in an experience of twenty-five years.

These facts are suggestive in two respects. The English have been dubbed an unmusical nation so often that they have become sensitive on this point, and endeavor to hide their nervousness by whistling—*i. e.*, by making a tremendous noise on the slightest provocation. This accounts for much of the success in England of the "Rose of Sharon," a success which will not be witnessed in this country. Then, again, the popularity of this work shows that the oratorio is still the most popular form of music in England. First-class operas or orchestral concerts are seldom given there without a loss, whereas the most commonplace oratorio draws an audience of thousands. In Germany and France a hundred operatic performances are given to one of oratorio; and in this respect American taste fortunately goes with the Continent rather than with England. Religion is the mainspring of the English love of oratorio; for if the music itself were admired, there is no reason why good operas and concerts should not be better patronized. Now Americans may be quite as religious as the English, but they do not care to confound art with devotion. Hence in America the oratorio is the most unpopular form of music—so unpopular, indeed, that sometimes it is deemed advisable to suppress the word oratorio in advertising the performance of a choral work. And in this aversion to oratorio the American people are guided by a correct instinct, for it is at best an illogical, unæsthetic, hybrid form of art. There is some sort of a plot, a scenic background is imagined, the singers impersonate distinct characters; but there is no scenery, no action, no costumes — nothing but evening dress and gloves. The oratorio might be defined as a major and minor premise, of which the logical conclusion is the music drama. An undeveloped sense of æsthetic structure in former times, and a desire to avoid bringing sacred subjects into the theatre, are largely responsible for the growth of oratorio. Some of the greatest works of this class by old masters will always retain their interest for musicians; but success at the present day cannot be achieved on these lines, because the oratorio is an antiquated form of musical architecture. What adds to the unattractiveness of oratorios is the inordinate length to which they are always spun out. A four-hour opera is not so long as a two-hour oratorio, because the opera affords such a great variety of entertainment for the ears and eyes of the spectators. The "Rose of Sharon," as produced in England under the composer's bâton, took more than three hours. Mr. Thomas curtailed it somewhat, but if he had omitted fully one-third of the music, the result would have been more gratifying.

The libretto, whose unskilful construction

is the cause of the musical redundancy, is based on the Song of Solomon, but the compiler has introduced all sorts of extraneous matter. The four parts of the oratorio are entitled Separation, Temptation, Victory, and Reunion; and the story can be told in a dozen lines. Solomon passing through Sulam beholds the "dark but comely" Sulamite, becomes enamored, and, despite her attempt to flee with her Beloved, has her taken to his palace. There she is tempted with all the royal splendor to accept Solomon's devotion, but in vain. Finally the King allows her to depart, and she returns to Sulam and her Beloved.

This outline contains material for some fine dramatic effects, which, however, neither librettist nor composer has succeeded in attaining. If Mr. Mackenzie is in sympathy with modern musical tendencies, as his friends claim, there is little in this oratorio to indicate it. Although there are a few modern touches, the general character of the work bears the stamp of Handel and Mendelssohn—the old English idols, who have done so much to retard progress in that country. Mr. Mackenzie introduces a few leading motives to indicate references to Solomon, the Beloved, Love, the Village, and the Vineyard. But they are not sufficiently plastic to impress themselves on the memory, and therefore miss their effect. The power to characterize—that is, the dramatic gift—is, indeed, weak in Mr. Mackenzie's work. His melody, although seldom original, is always flowing and pleasing; but in the two elements of music which give the most definite expression to dramatic feeling—namely, modulation and rhythm—he is weak; and this harmonic and rhythmic monotony becomes oppressive as the work proceeds. Again, the lines are often repeated, and there is seldom a connection in detail between the words and the music, such as we find in the works of Liszt, Franz, Wagner, and Schumann. That there are many interesting pages in the "Rose of Sharon" we readily concede; but they are neutralized by their commonplace surroundings. Thus the effect of the slumber music accompanying the Sulamite's dream is marred by the fact that so much of the preceding music is soporific. Mr. Mackenzie, in a word, lacks individuality and inventive power. There are in Germany a hundred Kapellmeisters who could write as good an oratorio.

Vol. III. Taine's

French Revolution.

Completion of the work.

The Nation.

NEW YORK, THURSDAY, APRIL 30, 1885.

The Week.

PRESIDENT CLEVELAND has an opportunity to do a great work for the army and navy, and we are glad to see signs that he means to do it. What is needed is that, whenever he has a vacancy to fill, he shall give the place to the man who has best earned promotion, and that, when a vacancy is ordered by a court-martial, or when a milder punishment is imposed by the same authority, he shall sustain the cause of justice by withstanding the inevitable appeals that he will set aside the verdict. He maintained the former principle in the first test case the other day, when he filled a vacancy in the Quartermaster's Department of the army by promoting a deserving officer who had been for twenty years in the service, solely on account of his worth and military services, instead of giving the desirable place to one of the rich and influential civilian applicants who zealously sought it. He has now enforced the other rule by approving the findings of the court-martial in the case of Lieutenant Jouett, of the army, who had been convicted of illegally using Government funds. What lends importance to this action is the fact that all sorts of army and political influence were invoked to secure a reversal of the sentence, after the too common custom. The offender's father is a rear-admiral in the navy and an old Kentucky Democrat, who was able to interest many people of importance in his behalf; but Mr. Cleveland paid no attention to such arguments and entreaties, and, after thoroughly examining into the matter, approved the sentence of dismissal. These actions, which there is every reason to believe are significant of Mr. Cleveland's settled policy, not only illustrate his capacity for resisting "influence," but they also show the great advantage which a President possesses who goes to Washington, as he did, free from the complications which beset every public man who has long been prominent in national politics.

The scandalous abuses which have for so many years characterized the management of our navy-yards are ended if Secretary Whitney follows the line of policy which he has laid down in his letter to the commandant of the Mare Island Navy-yard. Mr. Whitney has been looking into the conduct of the foremen of this yard in elections, particularly as developed in a contested election case from the San Francisco district growing out of the Congressional fight of 1882, and he finds the evidence clear that the vote of the employees was practically coerced and controlled by the foremen, who openly forced their subordinates to deposit folded ballots which they were not even allowed to read. The Secretary learns that the same foremen are still employed, and he notifies the commandant that they "should be cleared out of the yard in the interest of decent government." Nor does Mr. Whitney stop with any such half-way measure of reform. He gives notice that "if any similar proceeding, or anything like it, or any attempt to coerce the vote of the employees of the yard by foremen or superior officers should take place hereafter, whether in the interest of the dominant party or otherwise, I will apply a similar remedy." There is evidently one member of the Cabinet who agrees with Mr. Cleveland, not only that "offensive partisans" should be dismissed, but that "their successors" as well should be taught that efficiency, fitness, and devotion to public duty are the conditions of continuance in a well-organized public service.

Nobody ever expected that the new Administration would make no mistakes. Some mistakes were inevitable. The Higgins appointment was the first, but it was in some degree excused by the fact that the entire Maryland delegation, Representatives and Senators, approved of it after it was done. At all events, there has been until now a strong disposition among the friends of the Administration to assume that it was an isolated case, and had no real significance as regards the general policy of the Administration. Some of the more recent appointments by the Treasury Department have been such, however, as to do a great deal toward weakening this friendly assumption. The selection of three such Internal Revenue Collectors, all in one week, as Pillsbury, Chase, and Troup, and the appointment of Secretary Manning's brother-in-law to be Superintendent of Repairs, are likely to be very unfortunate in their effects on the public mind. Worse selections than Pillsbury and Chase could hardly be made without going among the technically criminal class. They are hardened and worthless politicians of the very type over which, in the Republican party, Mr. Cleveland's election was supposed to be a great victory. Troup is one of the most prominent of those precious humbugs of our day, "the labor reformers," and is unfit for a place of trust with regular duties.

It ought to be said, in explanation or extenuation of the mistake made in Mr. Keiley's case, that any person possessing enough intellectual or social standing to be a candidate for a first-class mission, ought himself to know whether there is anything in his antecedents to disqualify him for the position offered to him, and, if there is, ought to tell the Secretary of State of it. A candidate for a place of this kind ought not to allow things to his prejudice as a candidate to be found out about him. Mr. Keiley ought to have been the first to tell the State Department that his views about the temporal power of the Pope were, or had been, such as to make him unfit to represent the American Government at the Italian court. If he is fit to represent the American Government at any court, he ought to have seen this himself at a glance. But we go further than this: we hold that any mature man who was of opinion, so late as 1870, that a priests' government, upheld by French bayonets, was good enough government for any civilized people, is not fit to represent the American people at any capital. Such a man is what Wendell Phillips called "a recreant American." His political ideas are not American. He has, however, a perfect right to them as a private individual. He is at perfect liberty to believe, for his own private satisfaction, that the Pope's temporal power, upheld by a French brigade, was a good thing for the Romans; but he is not fit to go abroad as the exponent of American opinion about civil government. Every minister is or ought to be in some sort an apostle touching the things which his nation believes to be of prime importance in human society. No man, therefore, ought to go anywhere as an American representative who thinks well of a form of government which nearly every one of his countrymen, not a priest, would die sooner than live under.

The selection of Mr. Conrad N. Jordan as Treasurer of the United States in place of Mr. Wyman, resigned, will be generally approved by the business community of New York. Mr. Jordan's services in recent examinations, and his changes of the Treasury book-keeping, have demonstrated his capacity and fitness for the special duties to which he is now permanently assigned. There appears to be a disposition in some quarters to look upon Mr. Jordan's appointment as having a significant bearing upon the policy of the Administration on the silver question. Any such assumption would be groundless, for the reason that the Treasurer of the United States has nothing to do with the silver question except in the way of providing storage room for the silver dollars as they come into his hands. He is not expected to make recommendations respecting the general policy of the Government, although some liberty of complaint is allowed to him if the silver burden becomes inconveniently large. The policy of the Administration on the silver question was stated with such amplitude and force by President Cleveland in his letter to Congressman Warner that side inferences, drawn from the selection of subordinate officers, are unnecessary and superfluous.

It is a queer comment on the state of public opinion regarding the civil-service law, that immediately upon the announcement of Mr. Jordan's appointment, alarm and perspiration broke out among the whole force of employees in the Treasurer's office, which was only assuaged by the personal assurances of the new Treasurer that he intended to observe the requirements of the act in letter and spirit. The terrors of the spoils system have penetrated the public service to such a degree that nearly everybody expects that the law will be overridden or circumvented in some way, no matter how carefully it may be worded, or how severe may be the penalties for its violation. As the Postmaster at Cleveland said in his report to the Civil-Service Commission, it was at first impossible "to make applicants understand that there was no underground railway to the offices." Everybody wanting office believed that the act was a bit of humbug like a party platform, and everybody in office apprehended that this was the correct view. A true test of the *bona fides* of the

law, and of its efficacy to accomplish its declared purpose, was possible only under an Administration opposed in politics to the party whose appointees held the bulk of the clerkships and other subordinate places. There has not been, and we venture to say that there will not be, a single departure from the spirit of the law during the whole of President Cleveland's Administration. If it shall be shown in a term of four years that there is absolutely no underground railway to the offices embraced in the civil-service act, the beneficial results to the morale of the service and to society itself will be immense and incalculable.

Postmaster-General Vilas has just had an amusing illustration of the deep-seated aversion to publicity which always animates the worser sort of place-hunters. Applying the principles of civil-service reform to the filling of vacancies in the ranks of post-office inspectors, which are not covered by the letter of the law, Mr. Vilas has prepared a list of questions for every applicant to answer. One of these inquiries is whether the applicant has ever been indicted or tried for a criminal offence, and, in case he has been, he is required to explain all the circumstances under oath. This feature of the examination, we are told and can readily believe, has provoked great indignation and a vast amount of hard swearing, and one spokesman for a large class has given amusing expression to their indignation at such treatment, in the awe-inspiring declaration that "he'll see Vilas in —— before he'll answer such impertinent questions," and that he doesn't want an office on such terms.

Secretary Bayard has, in his correspondence with Señor Becerra, the Colombian Minister at Washington, reaffirmed in the most explicit manner the doctrine that not only can there be no paper blockade of an enemy's port, but that no Government can close its own ports in the hands of an enemy, or of insurgents, except by effective blockade. This is the position taken by the British Government in 1861, touching the Southern ports, which our Government acquiesced in as regards ports held by insurgents, having always previously vigorously maintained it as regards enemy's ports. Mr. Bayard also refuses to treat as pirates the war vessels of the Colombian insurgents. They are, as long as they have ports to issue from, de-facto belligerent cruisers, and entitled to neutral recognition as such.

An explanatory statement, semi-official in character, has been put forth in reply to a paragraph of ours on the political action of Mr. James M. Morgan in the Presidential campaign. It is affirmed that Mr. Morgan "has always been a Democrat, and was a supporter of Cleveland." Our reply is, that Mr. Morgan spent most of the campaign period in New York city, and that he was while here openly and notoriously a Blaine partisan, and an earnest believer in the success of the Republican ticket. It is stated further that Mr. Morgan's pamphlet was published "with a view to promoting friendly relations" with Mexico, that it was "for private distribution," was "in no sense partisan," and that it was published "in ignorance of the fact that Blaine was to be a candidate for the Presidency." It is further asserted that "the pamphlet was designed for circulation in Mexico." Our reply to this is, that the pamphlet itself is the best evidence on all these points, and as it is peculiarly the duty of Mr. Morgan to produce it, he cannot object to secondary evidence of its contents until he furnishes the document itself. Our own impression is, that so far from being intended to promote friendly relations with Mexico, it was a bitter attack upon that country, her people, and her institutions. It may have been intended for "private circulation," but if it was, Mr. Morgan kept that fact to himself. It certainly would need to be circulated very privately indeed, in Mexico, if Mr. Morgan's account of the ordinary treatment of American citizens in that country is correct. If the pamphlet was not intended to be an argument in favor of Blaine's election, it affords a striking instance of "unconscious cerebration," for it was precisely the same argument which was used all through the campaign by the admirers of Mr. Blaine's "vigorous foreign policy." Our conclusion upon the whole matter is, that Mr. James M. Morgan is a soldier of fortune, of Democratic prepossessions, but without fixed principles; that he became convinced that Mr. Blaine would be elected, and hastened to put himself on that side of the fence; that after Mr. Cleveland's election was ascertained, he had recourse to a large family connection in the South, who were glad to coöperate in any plan for billeting him on the Government, and who naturally chose the uttermost parts of the earth for his official domicile.

Our esteemed contemporary, the *Sun*, has an article headed, "What Was He Thinking About?" making the following remarks on Mr. E. J. Phelps's recent speech at the dinner of the Reform Club in Boston:

> "What was Minister Phelps thinking about when he chose for the occasion of his last public appearance before sailing for Europe a dinner designed as an ovation to the Schurz of the Fraud of 1876?
>
> "What was Mr. Phelps thinking about when he told the Schurz of the Fraud of 1876 across the table that his faith in the perpetuity of American institutions rested chiefly on the interest which certain young gentlemen around that same table professed in a system of written examinations for department and Custom-house clerkships?
>
> "Bah! If the Minister to England thought about it at all, he ought to have gone back to his hotel from the Schurz dinner profoundly ashamed of himself."

What Mr. Phelps was thinking about, esteemed contemporary, nobody but him can tell. But what *you* were thinking about when you passed the summer recommending the young men of the country to vote for Ben Butler for the Presidency you can easily tell, and a great many people want to know. Why do you not do it? You had often described Butler as a cheat, liar, coward, and jobber. What were you thinking about when you produced him as a man fit for the Presidency of the United States? What were you thinking about, too, when you told your readers he would get 153,158 votes in this city? What do you call this whole transaction of yours? How does it differ from "the Fraud of 1876," except in having failed miserably? Bah, and faugh!

Poor Lord Tennyson is furnishing another sad example of that dreadful consequence of failing powers, inability to perceive that one's powers have failed. It is of very common occurrence among old men, but it is only among men of intellectual pursuits, properly so called, that it is conspicuous or painful. In the world of business, when a man's mind begins to decay, he has associates or a family who take prompt measures, if he does not see it himself, to secure his retirement from active work, and the rest of the world knows and cares nothing about the matter. Scholars and scientific men, too, generally become silent or restful as age creeps on. It is generally poets and orators who lag superfluous on the stage, and let the world into the solemn secret of their infirmity. There is no sadder spectacle, and the old man who has no trusted friend or relative to tell him that he has reached "the wayside inn," or who is too headstrong to mind what he says, is indeed unfortunate. There is truly nothing which a man who has ever been great, should watch against more carefully than letting people see him stripped of the powers which once delighted or fired them. It is undignified almost to the point of indecency. The verses on "The Fleet," from Lord Tennyson's pen, which were published on Thursday, are indeed sad reading, coming from the author of "The Charge of the Light Brigade" and the ode on the Duke of Wellington. It would almost seem as if somebody ought to be punished for letting them see the light.

The confusion into which the foreign complications are plunging the political casuists of the Liberal party in England, would be amusing if the crisis were less grave. First of all there is the question whether it was "right" to go to Egypt at all; then whether it was right to prevent Egypt from trying to conquer the Sudan; then whether it was right to let the garrisons perish; and if not, whether it was right to send Gordon to rescue them, and whether, when he could not rescue them, the moral law required *him* to be rescued against his will, or furnished with the means of smashing the Mahdi. After these—all knotty points—comes the question whether a man of peace, like Gladstone, can properly go to war with Russia; and then there is the interesting sub-inquiry, how a man of peace, like Gladstone, must feel with such a lot of miscellaneous wars on his hands. The case of the *Bosphore Égyptien*, too, is furnishing materials for a volume of casuistry. The *Bosphore* is a scurrilous French paper, published at Cairo, which makes a living by attacking the British and predicting their ruin. This excites, say the British, sedition among the natives. Whereupon, on the application of the British, the Egyptian Government, which has no force of its own, suppresses it. Then the French call the Egyptians to account, well knowing it is the British who are really to blame, and the Egyptians, well knowing the same thing, take time to consult the Porte, whose say in the matter is absolutely worthless, and the Porte says it is all right, whereupon the French say the Porte must mind its own business, and that the *Bosphore* must be righted. They are then furnished with "fifty precedents" for its suppression.

If war eventually breaks out on the Afghan frontier, it will be, more largely than wars usually are, an affair of money. The distance to be traversed by the contending armies and their supply trains will tax the financial resources of both countries to a degree wholly unknown in European conflicts, and here England will find her principal advantage. The measure of a nation's prowess in war is the amount of force which it can withdraw from the ordinary vocations of life and employ in the arts of destruction. One nation may have the advantage of another at the outset in better preparedness for war, more numerous and better trained armies and navies, better guns, better means of transportation, better positions, superior valor, superior generalship; but where these are equal, or nearly so, the measure of strength is staying power, and this is nothing else than producing power. How many able-bodied men can be spared from the tasks which procure the nation's subsistence, to be employed in fighting, in making arms, ammunition, and accoutrements, and transporting the same, and in caring for the sick and wounded, without impairing the national resources and lowering the standard of comfort to an unendurable degree? Whatever may be the convenience of Government loans in time of war, it is an economic axiom that a nation must earn the whole of the war expense during the war period, plus its own living. Government loans in time of war, or in anticipation of it, are rarely obtained from foreigners. They are procurable only from the subjects of the belligerent Power. The nation has a certain amount of circulating capital in money and goods which the Government can lay its hands on by loan, either voluntary or forced. It makes no difference, except on principles of justice, whether the loan be voluntary or forced. In either case the things borrowed or taken must be immediately reproduced by the national labor combined with its fixed capital. Otherwise, its means of subsistence are impaired, and may be impaired to the point of famine, as was the case in Germany in the Thirty Years' War. Earning power is therefore the test of a nation's strength in war; the conditions of valor, preparedness, and leadership being equal or nearly so.

If it be true, as is announced, and is likely, that General Graham's forces are to evacuate the Sudan and go to India, it will be a somewhat bitter lesson to the British Jingoes. It was they who forced the Government into going into the Sudan at all, and, in doing so, there is hardly a doubt that they brought on the complication in Central Asia. Russia, it is pretty plain, was only waiting to get England well involved in the absurd expedition to Khartum in order to kick over the Boundary Commission and get up a quarrel at the gates of Herat. What must add to the bitterness of Jingo reflections is the fact that although Graham's force may be withdrawn, there are from 7,000 to 8,000 fine troops shut up at Dongola, with nothing to do and sweltering in the sun, who cannot be extricated till the Nile rises in July, long before which time their presence might turn the tide of victory in an action on the Heri-Rud or the Murghab. They are really as useless for the moment as if the Mahdi held them as prisoners of war. What a light is thrown on the value of the popular notion about the way of getting or keeping "prestige," by the fact that the "gates of India" may be burst open at Herat for want of the men who are trying to capture a loathsome ruined town in Central Africa! In the Indian conflict every soldier from the British isles will count for twice his value in other warfare, because he has not only to stand his own ground, but give steadiness to the native troops. It has long been a saying in India that he is the steel point to the lance of which the sepoy is the shaft, and it is strictly true. In hard-fought fields in India, such as occurred in the Sikh campaigns in 1846-7, the presence of a considerable white force has always been necessary to raise the native morale, and make the Hindoos stand up under heavy pounding. For there soon comes, in all hard fights, the terrible "psychological moment" when the slightest mishap may send Asiatic troops flying in wild confusion, if they have not under their eye the spectacle of European *sang froid*, of the dauntless courage which crowned the heights at Albuera, and rooted Wellington's squares in the soil at Waterloo. Seven or eight thousand men might therefore give invaluable stubbornness, on some desperate day within the next two months, to twenty or thirty thousand Bombay or Madras infantry.

The question what constitutes an effective blockade is likely again to become important during the coming summer by the outbreak of hostilities between England and Russia, but not greatly important after all. Russia has very few ports, and these are all in narrow seas, and would be of little use to her after the outlets were in the enemy's hands. Sweden and Denmark will not be disposed to impede the entrance to the Baltic now any more than in 1854, nor is it likely that the British fleet, once inside, will do any more damage to Russia than it did in that year. It will find the approaches to St. Petersburg and Riga hermetically sealed with torpedoes and shore batteries, and these are all the ports of consequence there are in that quarter. Nor is it likely that the Sultan will make any attempt to close the Dardanelles, first because he probably could not do so if he wished, and secondly, because he probably will not be sorry to have the Russians stirred up in the Black Sea. Odessa will be tightly shut up, Sebastopol again shelled into ruins, and Batum will probably be more or less mauled. But there will be no questions of neutral rights raised by any operations in that quarter. There will be better employment for neutral ships than trying to run the blockade of Russian ports, as they will have a grand chance to compete with Great Britain for the carrying trade of neutral countries. It seems like the irony of fate that the outbreak of the war should catch us with a law on our statute book which will make it impossible for Americans to get any share of the carrying business which Great Britain will perforce have to lose.

The French have brought the Chinese war to a lamentable close as far as prestige is concerned. After all their fighting they keep Tonquin, which they had before, and get nothing. They give up all they asked for before beginning, including the huge indemnity and the island of Formosa. The only thing which helps in the least to save their pride is the fact that the offer to negotiate came from China; but the Chinese could well afford to make it after their victory of Langson. The French, however, have probably got much moral profit from the affair. It has doubtless greatly abated the colonial fever. When the Tonquin army gets home it will finish it.

A reform of some magnitude, though perhaps more striking than important, is being accomplished in the constitutional organism of Hungary. The Hungarian Upper House consists of a very large number of born legislators, and a much smaller number of members owing their legislative right to a position in the higher ranks of the Church or the civil administration. Every son of a magnate or lord—that is, of a nobleman of the rank of baron and upwards—becomes a magnate with full rights on attaining his majority. The present number embraces many hundreds. Habitually, however, the House of Magnates is frequented only by nobles whose wealth and standing allow them to appear with dignity. The poorer and less cultivated stay away, from the necessities of their various occupations or from a feeling of inferiority. The abler among these seek a field of political activity in the House of Representatives. The House of Magnates, in fact, but very seldom rises to the height of a coördinate branch of the National Legislature. The barrenness of its deliberations and the weakness of its opposition to the will of the popular branch, when clearly expressed by a large majority, have been specially remarkable since the restoration and reform of the Constitution in 1867. Its composition has long been considered an anomaly in theory, though one little felt in practice. Its reform, though generally desired, has been delayed, partly from apathy and partly from the apparent difficulty of achieving it against the majority of the magnates themselves.

Last year, however, when the more conservative and aristocratic portion of the magnates succeeded in defeating M. Tisza's, the Premier's, favorite bill, legalizing mixed marriages between Jews and Christians, with the aid of a large contingent of magnates who rarely appear in their places, the Government firmly resolved on carrying out a vital reform. A bill for the purpose was introduced in the House of Representatives, considerably modified in the House of Magnates, subjected to a compromise committee, and finally carried through in the latter house, and is now, as altered, to go back to the Representatives, where it is sure of a large majority. The main feature of the reform is the exclusion from the ranks of born legislators of all magnates paying less than 3,000 florins in yearly taxes. A number, however, will be elected members for life by their happier fellow-nobles, and a further number may get readmittance by Government appointment. That the bill triumphed is owing, in part, to the self-interest of the wealthier magnates and the skilful manœuvres of M. Tisza, but chiefly to the indifference of the majority, and the liberalism of many of the victims of the change. The renovated legislative branch is now expected to become, in the true sense of the word, a House of Lords, more conservative and independent, and conscious of its rights and standing.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, April 22, to TUESDAY, April 28, 1885, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND has refused to interfere with the sentence of General Swaim, Judge-Advocate-General of the army.

The President on Saturday appointed James Q. Chenoweth, of Texas, to be First Auditor of the Treasury vice R. M. Reynolds, of Alabama, resigned by request. The new appointee has been a resident of Bonham, Texas, for many years. He was an officer in the Confederate army, and has served several terms in the State Legislature of Texas. He is a lawyer by profession and a stanch Democrat.

General Henry J. Hunt, retired, was on Saturday appointed Governor of the Soldiers' Home at Washington vice Colonel Samuel D. Sturgis, Seventh Cavalry; and Captain Robert Catlin, retired, was appointed Deputy-Governor, vice Captain W. Lyman, Fifth Infantry. The changes go into effect May 15, when the officers relieved will join their respective regiments. Army officers express themselves as pleased with the action of the President in placing retired officers in charge of the Home. General Hunt was graduated from West Point in 1839, and saw his first service during the Canada border disturbance in that year. He participated in some of the most important battles of the Mexican war, and won two promotions for his gallantry. In the War of the Rebellion he took an active part, and was made a Brevet Major-General of Volunteers in 1864 for gallantry at Gettysburg and services from Rapidan to Petersburg, and a Brevet Brigadier-General United States Army in 1865 for gallant services on the Peninsula.

The President has signed the commissions of all the Collectors of Internal Revenue appointed since the adjournment of the Senate, including that of Eben F. Pillsbury as Collector for the Third District of Massachusetts.

The appointments of Messrs. Pillsbury, Troup, and Chase have caused a great deal of dissatisfaction in New England. The men represent the spoils faction of their party.

The President has signified his intention to select a Minister to China from California. Both factions of the Democratic party in that State have approved Frank McCoppin, ex-State Senator and ex-Mayor of San Francisco, for the position. Mr. McCoppin has, it is said, steadily opposed the ultra views of the extremists in California on the Chinese question.

The President and the Postmaster-General have decided in the case of General William Ward, Postmaster at Newark, N. J., that there is not enough in the charges made against him of having used his office for political purposes to warrant his removal, and he will therefore be permitted to remain until his term expires.

A. U. Wyman, Treasurer of the United States, has tendered his resignation, to take effect May 1. Mr. Wyman tendered his resignation through the Secretary of the Treasury on the 3d of April, but announcement of the fact was withheld at the request of Secretary Manning, who accepted it the same day on behalf of the President. The Secretary expresses his confidence in Treasurer Wyman and regrets his retirement, which is entirely voluntary. Mr. Wyman was in March last elected Vice-President of the Omaha National Bank at Omaha, Nebraska, and also is to have charge of an important trust company recently established in that city. Mr. C. N. Jordan, formerly cashier of the Third National Bank, New York, and treasurer of the New York, Ontario and Western Railroad Company, was on Wednesday appointed Treasurer in the place of Mr. Wyman. Mr. Jordan has informed the chiefs of divisions that he will not remove any of them for political reasons.

The First Comptroller of the Treasury has recommended to the Secretary that the divisions in his office be reduced from nine to five, and that the force be reduced correspondingly.

Secretary Whitney has written a letter to Commodore John H. Russell, Commandant of the Mare Island (Cal.) Navy-yard, relative to the coercion of the vote of that yard by the foremen at past elections, in which he says: "I find that the same foremen who conducted these proceedings are still in the yard at the various departments. Great complaint is made to me of similar proceedings in other years; but I have already read sufficient of this sworn testimony to satisfy me that the men who were engaged in that proceeding as foremen, directing and controlling it, should be cleared out of the yard in the interest of decent government; and if any similar proceeding, or anything like it, or any attempt to coerce the vote of the employees of the yard by foremen or superior officers should take place hereafter, whether in the interest of the dominant party or otherwise, I will apply a similar remedy. Appointments in place of the persons discharged will be made temporarily and upon trial until efficient men shall have been obtained."

Five hundred United States troops entered Panama on Friday, took charge of all American property, arrested Aizpuru, the rebel leader, and three of his staff, and cleared the Plaza with a Gatling gun. One rebel was killed and three wounded. This summary action was taken because 700 Colombian troops were on the way from Buenaventura to attack the rebels at Panama, and a conflict would probably have resulted in the burning of the place. Rebel barricades were already erected in the streets. The French Consul issued a violent protest against the action of the Americans. On Saturday night, under an agreement with Aizpuru and the French Consul, the United States troops withdrew from Panama to the railway station. Aizpuru has guaranteed to preserve order, but the insurgents immediately began the work of erecting barricades. On Sunday an extraordinary assembly met in Panama, and Aizpuru was confirmed in his position as President, which he will hold until the arrival of General Vila and the troops from Buenaventura, when a peace commission will be despatched on board the gunboat *Boyaca* for the purpose of negotiating for an amicable arrangement of the troubles. The withdrawal of the United States troops is severely criticised by the native population, who consider it an act of cowardice. Serious trouble is apprehended.

Secretary Whitney on Saturday sent a telegram to Admiral Jouett at Panama, saying: "While deprecating any unnecessary interference, you will exercise your best judgment from time to time after consultation with American consuls and others. The general scope of your duty has been heretofore sufficiently defined, and to what extent military interference is necessary from time to time to carry out former instructions you must necessarily be the judge, always keeping in mind that the necessity is regretted here."

The Colombian National troops arrived at Panama on Tuesday, and demanded that Aizpuru should evacuate the city within forty-eight hours. He expresses his intention of fighting. It is feared that the Colon disaster will be repeated if the two forces come in collision. Hopes are entertained that the United States troops may avert the disaster. The French Consul at Panama denies that he has protested to his home Government against the action of the United States forces at Panama.

A correspondence between Secretary Bayard and Señor Becerra, the Colombian Minister at Washington, with reference to a decree of the Colombian Government closing certain of its ports to foreign commerce, and virtually declaring the vessels of the insurgents now engaged in hostile operations against Cartagena to be beyond the pale of international law, is published. Secretary Bayard refuses to recognize a "paper blockade," and on the other point says: "The Government of the United States cannot regard as piratical vessels manned by parties in arms against the Government of the United States of Colombia, when such vessels are passing to and from ports held by such insurgents, or even when attacking ports in the possession of the national Government. In the late civil war the United States, at an early period of the struggle, surrendered their position that those manning the Confederate cruisers were pirates under international law. The United States of Colombia cannot, sooner or later, do otherwise than accept the same view."

Many prominent Democrats on Thursday evening attended the reception given by the Manhattan Club of this city in honor of those members of the organization who have been called to high places by President Cleveland. None of the Cabinet members were able to attend, but Ministers Phelps, Pendleton, and Cox were present.

The Massachusetts Reform Club tendered a complimentary dinner to Carl Schurz on Friday evening at the Parker House, Boston. John S. Farlow presided, and among the guests present were Minister Phelps, Leopold Morse, William G. Russell, the Rev. James Freeman Clarke, Charles Theodore Russell, Professor Charles E. Norton, and John M. Forbes.

Judge Charles Daniels has granted a mandamus against the Common Council of Buffalo to compel them to appropriate $1,250 for the city's Civil-Service Commission.

In the Assembly at Albany, on Wednesday, the bill to exempt soldiers and sailors from the provisions of the Civil-Service Law was ordered to a third reading by a vote of 82 to 16, the affirmative votes being equally divided between Republicans and Democrats. The Comptroller's bill legalizing the State's title to its forestry lands was also passed. The Senate passed a resolution for final adjournment on May 15. On Thursday evening it ordered the Field Civil Code to a third reading by a vote of 13 to 9.

The Assembly passed the Skating-Rink Bill on Monday, and the bill giving the District Attorney of this city a fifth assistant with a salary of $7,500. On Tuesday the Gas Bill was ordered to a third reading in the Assembly. The Palmer Prison-Labor Bill was defeated. The Theatrical License Bill was passed by the Senate on Tuesday.

General Grant continues to improve. His sixty-third birthday anniversary was celebrated at many places on Monday.

Isaac W. England, publisher of the *Sun*, died on Saturday evening at his home in Ridgewood, N. J. Mr. England was born in Twerton, a suburb of Bath, England, on February 16, 1832. After working as a bookbinder's apprentice, he came to this country in his seventeenth year. Becoming a reporter for the *Tribune*, he was promoted to the city editorship. Then he became an associate editor of the Chicago *Republican*, and next the editor of the Jersey City *Times*. About seventeen years ago he joined with Charles A. Dana and others in the purchase of the *Sun*, with which he afterward remained connected. As receiver of the business of the late Frank Leslie, he managed an important trust with excellent results.

The Rev. Leonard Withington, D.D., the oldest Congregational minister in the United States, died on Wednesday, at his residence in Newbury, Mass., at the age of ninety-six years. He was graduated from Yale College in 1814.

FOREIGN.

The Russian reply to the communication sent to M. de Giers, after the receipt of Sir Peter Lumsden's supplementary report on the battle of March 30, was reported on Wednesday to have been received in London. M. de Giers replied curtly that Russia declined to enter upon any further discussion of the Panjdeh incident.

In the House of Commons on Thursday Mr. Gladstone, in replying to an inquiry made by Sir Stafford Northcote, said that there was no intention of laying further papers touching the Afghan situation upon the table before asking for a vote upon the war credits already submitted to the House. The Government, Mr. Gladstone continued, were engaged in a correspondence of extreme gravity with Russia. It was impossible to make now a complete statement of the nature of that correspondence, while no partial statement could be given without the greatest risk of creating misapprehension. The Government estimate requires that 35,000 men shall be added to the present force of the army. Mr. Gladstone on Friday afternoon refused to answer questions in regard to the Afghan affair, because every such answer would be an announcement to the Russian Government.

Notwithstanding the protest of Mr. Gladstone, the House of Commons on Friday night adopted by 72 to 56 an amendment to the bill for the registration of voters in Ireland, by which the charges for the registration are to be provided for by the General Government, and not by local rates. This will cost £130,000 yearly. It is believed that the Government will endeavor to reverse the vote in a fuller House.

It was reported in London on Monday that Russia had consented to the appointment of a special mixed commission to examine into the facts relating to the reports of General Komaroff and Sir Peter Lumsden, and to decide which is correct. If England refuses to accept these proposals, the Russian Ambassador will be withdrawn and negotiations will cease.

A sensation was caused in London political circles on Monday by the publication of a St. Petersburg despatch to Reuter's Telegram Company as follows: "War between Russia and England is now regarded as inevitable. The Czar leaves to-day for Moscow, and from that historic city he will issue his manifesto or declaration of war if such an extreme measure should become necessary." The report of the Czar's departure for Moscow has not been confirmed.

Mr. Gladstone, in the House of Commons on Monday afternoon, read a telegram dated April 25, from Sir Peter Lumsden, stating that Mr. Stephen, a member of the Commission, had started for London, bearing with him maps of the disputed zone, also a detailed statement of all the circumstances leading up to and attending the Panjdeh affair. The telegram also stated that Sir Peter Lumsden would himself forward to Earl Granville, the Minister of Foreign Affairs, a statement showing the actual position of affairs as they now stand. The Government members in the House of Commons received this news of the departure of Mr. Stephen for London with evident satisfaction. Mr. Ritchie, Conservative, asked if the Government proposed to suspend the negotiations now in progress with Russia until after the arrival of Mr. Stephen. Mr. Gladstone answered with a firm and dignified "No."

In the House of Commons on Monday night Mr. Gladstone spoke for one hour on moving the vote of credit. He was listened to with deep attention, and his words created a profound sensation. The speech is acknowledged to be one of his greatest efforts, and it has created the general opinion that war is inevitable. So complete was the effect of Mr. Gladstone's words that the House voted the entire credit of $55,000,000 without a single reply by the Opposition. Among the significant points of his speech were the following: He urged that the House vote the Government the entire $55,000,000 *en bloc*. A time had come when it was necessary to have the resources of the empire well in hand. In regard to the Sudan, El Mahdi was only a shadow of his former self in power or influence, and operations in that region had lost much of their significance. England's possession of Khartum would not put a stop to the slave trade, and, therefore, it would be useless to shed blood and treasure in the Sudan. In regard to the Afghan dispute, he said the Government submitted its case upon facts with which the whole world is acquainted. There exists abundant cause for the war preparations which are being carried on. The starting point was the obligation to the Amir, which should be fulfilled in no stinted manner. The cause of the collision was perhaps doubtful, but it was certain that the Russians were the attacking party, and that the Afghans suffered in life, spirit, and repute. "Knowing that a blow has been struck at the credit and authority of our ally," he said, "we are unable to close the book and to say we will not look into it any more. We must do our best to have right done in the matter. Therefore there is a cause for war preparations."

From two trustworthy sources reports were received in London on Tuesday morning of another battle on the Afghan frontier between Afghans and Russians. One thousand seven hundred of the latter were engaged, and nearly all are reported to have been killed. Mr. Gladstone said in Parliament, on Tuesday afternoon, that no official confirmation of the rumor had been received. He was asked whether Russia had withdrawn from her agreement not to occupy Herat, and replied "No."

The London *Standard* received advices late on Tuesday, from its correspondent with Sir Peter Lumsden, that the Russians have occupied Merutchak, twenty miles south of Panjdeh, on the Murghab River. The Amir, while careless about Panjdeh, attached great importance to Merutchak.

It is understood that the immediate withdrawal of the British troops from Suakim has been decided upon.

British transports at Woolwich have been ordered to load in the future until otherwise instructed all their war stores for India instead of Suakim. The Government has ordered the immediate construction of forty gunboats. These new gunboats are to be, according to the Admiralty specifications, of a new type of naval architecture. They will carry light shell guns for the purpose of destroying torpedo boats, and will have a coal-storage capacity which will render them capable of steaming 1,000 miles without recoaling.

Great excitement was caused in the Admiralty Office, Whitehall, London, about 11 o'clock on Thursday morning, by an explosion in a room in the basement of the building. The firemen and police were summoned. A special guard was at once posted, and no person was allowed to enter or depart from the premises until a thorough examination could be made. It was at first supposed that the explosion was caused by the premature discharge of a projectile which had been sent to the Admiralty for examination, but investigation led to the belief that it was caused by an infernal machine. Mr. Edwin N. Swainson, assistant secretary and principal clerk, suffered a severe scalp wound and a slight concussion of the brain. The room and adjacent corridors were badly damaged. The face of a small American clock, blackened by the explosion, together with some pieces of clockwork attached, was found among the débris soon after the explosion. Two suspicious-looking men had been seen in the neighborhood. The later theory of the explosion is that it was the result of private malice against Mr. Swainson.

The French Cabinet at its session on Thursday took up the *Bosphore Égyptien* case, and after a full discussion adopted a line of action to be pursued. France considered Egypt's reply to the French demand for the rehabilitation of the *Bosphore Égyptien* evasive and unsatisfactory, and resolved to despatch another note to Egypt about the matter. The note threatened that unless Egypt gave satisfaction France would adopt active measures to secure it. Excitement was created in Egypt and France on Friday when it became known that M. Barrère, the Consul-General of France to Egypt, had been instructed by his Government to suspend all official relations with Egypt, and to make the declaration to the Egyptian Government that France declined to sanction the Egyptian financial convention, and reserved to herself complete liberty of action. He delayed his departure later in the day on offers of a compromise by Egypt. The news created a sensation in France. It was considered to be unmistakable evidence that there is an understanding between France and Russia.

Earl Granville on Friday telegraphed instructions to the British Minister to Egypt to support Nubar Pasha to the utmost extremity in his refusal to make reparation for the suppression of the *Bosphore Égyptien*.

In the House of Commons on Monday afternoon Lord Edmund Fitzmaurice, Under Secretary of State for Foreign Affairs, said that he was happy to state that the Government was on the point of arriving at a satisfactory arrangement of the misunderstanding with France growing out of the suppression of the *Bosphore Égyptien*. This arrangement has since been confirmed.

It was reported in Alexandria on Friday that El Mahdi's men had attacked and defeated the Italian forces near Massowah. Later reports do not confirm this. It is asserted that El Mahdi's troops at Umderman are wavering in their loyalty to the prophet.

Cholera has reappeared at Cairo. Seven deaths have occurred.

The Prince and Princess of Wales were enthusiastically welcomed at Belfast on Thursday and Friday. They were received with equal enthusiasm at Omagh on Monday. It is said that the Government will buy a permanent residence in Ireland for Prince Victor, eldest son of the Prince of Wales.

The Prince and Princess of Wales arrived in London from Ireland on Tuesday.

François Joseph Régnier, the distinguished French actor, is dead at the age of seventy-eight. He was a member of the Comédie-Française company from 1831 to 1872, when he retired from the stage. In 1854 he was appointed Professor at the Conservatory, and some of the most noted French actors have been his pupils. He was equally celebrated in comedy and pathos.

The Lower House of the Prussian Landtag on Wednesday rejected, by a vote of 182 to 128, the proposal of Dr. Windthorst, the Ultramontane leader, to repeal the law stopping the temporalities of the Catholic clergy.

A terrible volcanic eruption has occurred in a province at the east end of the Island of Java. A number of plantations have been devastated, and it is feared that fully a hundred persons have been killed.

Five mounted policemen arrived at Battleford on Wednesday from Fort Pitt. They reported that in the attack by Indians one policeman was killed and one wounded. All the other occupants of the post took refuge in the camp of friendly Indians near the post. A slight skirmish occurred on Wednesday between General Middleton's scouts and a few half-breeds. Nobody was injured.

General Middleton's forces on Friday had an engagement with Riel's rebels fifteen miles south of Batoche. The insurgents had taken ground on the edge of a deep ravine, from which they poured a deadly fire into the advancing column. Three houses of the enemy were shelled and many rebels were driven from them to refuge in the ravine. The Indian allies of Riel fought vigorously. The whole number in the ravine was estimated at 300. General Middleton's hat was shot through, but he escaped uninjured

General Middleton's skirmish with the half-breeds on Friday near Batoche's Crossing turns out to be little less than a serious defeat for him. He lost nineteen killed and fifty wounded. He was reported on Tuesday to be pursuing the enemy with only 120 mounted men, leaving the rest of his force behind. It is feared he will meet the fate of Custer.

THE LAWYERS AND THE FIELD CODE.

WHATEVER be the fate of the attempt to force a civil code upon the people of this State, it has had at least one effect that is highly gratifying. It has disclosed among lawyers an amount of public spirit much greater than they have been generally supposed to possess; greater, perhaps, than they would have been disposed to credit to themselves. There is an analogy between the profession of the law and that of arms: both exist from the necessity of fighting, and yet their value is the highest when their existence averts fighting. As most soldiers look to war as the principal means of their advancement, so, it is thought, most lawyers view litigation with complacency; and whenever members of either profession have exerted themselves to lessen the occasions of controversy, their course has been recognized as patriotic and self-sacrificing. Since it is unquestionably the general opinion among lawyers that the adoption of the Field Code will, for a time at least, greatly increase litigation, the spirited resistance offered by the leaders of the profession to this measure cannot be explained by a reference to selfish motives.

There is, however, a further and very peculiar significance in this attitude of so large and influential a portion of the bar. A familiarity with that wonderful growth called the common law creates a certain unconscious tendency or habit of mind that has had much to do with the maintenance of our political institutions. No doubt many lawyers have a kind of legal conscience. To them an irregularity is a sin, and extensive innovations are sacrilegious. But beyond this blind conservatism there is a wholesome and, if we may so speak, a rational instinct — not improbably strengthened by heredity — the instinct for legal continuity. According to the common law there is nothing new under the sun, in the way of principles. It is of its very essence that every case as it arises shall be decided according to precedent. No matter how novel the circumstances, English courts will always discover a sufficient likeness to those of decided cases to enable them to apply established maxims. At first, when precedents were few and reports were not printed, decisions were necessarily somewhat arbitrary, and hence the common law is said to be judge-made law. But as reports have multiplied it has become quite rare for a case to arise (except under a statute) for which there is no parallel, and the office of a court is now to examine the cases brought to its attention by counsel, and to adopt in general the results of their researches. Hence in modern times our law has been made not by the judges alone, but by the bar. Nothing in our legal history is more significant than the sensitiveness of courts to the opinion of the profession. Hardly any court would venture to declare that to be law which the leaders of the bar held not to be law, and decisions are not unfrequently reconsidered when found to be generally unsatisfactory.

Although this might seem to support the theory of certain logicians, that all reasoning is from particulars to particulars, yet in process of time a very considerable body of general principles has been developed, and these principles are constantly applied to the settlement of cases. Here, then, say the believers in codification, is the field for reform. These scattered rules should be collected, classified, and clearly expressed, so that laymen as well as lawyers may be able to get at them easily. But, it is to be remembered, at present these rules are really condensed cases. Looked at independently of their origin, they seem absurd, unintelligible, and repulsive, but viewed historically they are on the whole necessary and consistent. It is the dread of interrupting this historical continuity that renders lawyers so conservative. They know now that a judge cannot knock them over with some sweeping general principle, because they are well acquainted with the qualifications, limitations, and exceptions attached by the common law to such principles. They are familiar, too, with the established meaning of a great many words and forms of words, and have learned to anticipate most of the ordinary contingencies in the affairs of men under the present system of rights; so that when a lawyer draws a legal instrument he feels that he has made himself intelligible to the profession, and that his work will be supported by those who may have occasion to examine it. He feels this because he knows that he has built upon the solid foundation of well-defined and careful usage; he has done nothing that has not been done and approved before.

Now, if the common law were codified with the understanding that the law was in no case changed but only stated, and that the code was to be interpreted by the common law, and if only established phraseology were used, the apprehensions of lawyers might be allayed. But as it is, they see clearly that a period of most trying uncertainty threatens them. Every lawyer hates a statute until it has been interpreted by the courts and thus made a part of the common law, and no part of the work of courts is more laborious or repulsive than that of determining the true intent of legislatures. There is no system or continuity about statutes. The decision of one court is a guide to the decision of other courts, but the act of one legislature may have no relation whatever to the acts of its predecessors or successors. Hence there results a mass of legislation that is inconsistent with itself and often irreconcilable with existing law, and lawyers have no means of settling their perplexities. It is an old saying that he must be a poor lawyer who cannot answer a question about the common law, or who will answer a question about statute law without going to his books. The reason is that the statute is not a development of the law derived from cases, not the result of induction, but the work of some few men, perhaps of a single man, and there is nothing but its own language to indicate its meaning.

It is obvious that the proposed code is obnoxious to these well-founded objections to the ordinary legislative method. It is really an addition of several thousand statutes to the law, and the criticism it has received from the profession shows clearly that the greater part of it will have to receive judicial interpretation. It is the product neither of the judges nor of the profession, and the profession will therefore refuse to take the responsibility of giving it a meaning until it has passed through the process of assimilation which they require. No code, we may safely predict, will be successfully applied unless it first secures the general approbation of the bar.

It does not seem possible to attain this result if the whole law is codified at once. The work should be done piecemeal, in order that each section may receive thorough examination. If this course is followed, much of the evil of uncertainty will be avoided, for difficulties of interpretation will be pointed out in advance and can be removed. Otherwise these difficulties will nullify all the expected advantages. As Chancellor Kent remarked: "The intelligence of the great body of the legislature, in any country, cannot well be brought to bear upon a dense mass of general propositions, in all their ties, relations, and dependencies, or be made to comprehend them; and the legislation by codes becomes essentially the legislation of a single individual."

It would undoubtedly be a matter of gratification to such a "single individual" to have his name go down to posterity as that of the framer of the laws of a great state, rather than to have it associated with a certain deplorable period of professional and judicial dishonor; but considerations of such a nature are hardly germane to the subject. It is of more importance to consider that no one but the author of the code now before the Legislature can know precisely the meaning that he attached to his propositions, and that our rules of interpretation do not allow him to be questioned. The inevitable result of the adoption of such a code would be that the courts must construe it by a comparison of all the preëxisting law. Instead of the desired certainty and simplicity, therefore, we may reasonably anticipate greater confusion and complexity than that under which we now labor. The people of this State, having had their legal house swept and garnished, will find that with new tenants their last state is worse than their first.

MAHONE'S WORK AS A REPUDIATOR.

IT is said by Mahone's friends in Virginia that the Supreme Court decision in favor of receiving bond coupons in payment of taxes undoes all his work, and puts the debt question back where it was when he took hold of it in 1873. This being so, a review of the successive steps by which Mahone demoralized public sentiment in Virginia, and finally made the State believe that it was neither dishonorable nor unwise to repudiate its obligations, becomes a matter of interest.

When Mahone appeared as a leader in 1873, there was no formidable repudiation sentiment in the State. A few people were in favor of getting rid of some of the burdens of taxation by the easy remedy of refusing to pay the State's debts, but the great majority of the voters were against such a course. The repudiation mania, which had made such havoc in many other Southern States, had not spread in Virginia. At that time the debt of the State, under the Funding Act of 1871, was in round numbers about $30,000,000. It is constantly asserted by Mahone's defenders that one-third of this amount belonged to West Virginia, but this is not true. The debt of the old State, as it existed at the time of the separation of West Virginia, was in round numbers $45,000,-

000, of which $5,000,000 was accrued and unpaid interest. In March, 1871, the Legislature of Virginia, after making several unsuccessful efforts to have West Virginia agree upon a division of the debt by arbitration, passed an act providing for the funding and payment of the debt by the surrender of the old bonds and the issue of new bonds of Virginia for two-thirds of the principal and interest, certificates being issued for the remaining one-third, reciting that the one-third would be paid whenever West Virginia provided for her share of the debt. It was about the payment or recognition of this refunded debt of $30,000,000 that Mahone began his agitation in 1873. He at once demanded a repudiation of $13,000,000 more, on the ground that the State was not able to bear the burden. The falsity of the claim is easily shown. Under the Federal census of 1870 the true value of the taxable property of Virginia is put down as $409,000,000, and the actual assessed valuation as $365,000,000. The annual interest on the debt as refunded was $1,800,000, or a tax of less than five mills on a dollar on the assessed valuation of the property of the State. The ordinary State expenses of Virginia have averaged about $700,000 for the past ten years. In order, therefore, to pay the interest on its debt and raise the money necessary for administering its government, Virginia property need be assessed only seven mills on the dollar of actually assessed valuation, or only six mills on the dollar of true valuation. It is absurd to say that the State was unable to pay this.

Mahone's first bill, repudiating outright $13,000,000 of the debt, was vetoed by Governor Holliday in 1880, but so thoroughly had Mahone aroused the cupidity of the people that the control of the State passed into the hands of his party, who called themselves "Readjusters" In 1879, the creditors, having become thoroughly alarmed, accepted what is known as the McCullough Act, by which the bonds of 1871 were surrendered and new ones accepted in their stead. The effect of this readjustment was really a repudiation of one-half the interest promised in 1871.

The success of this scheme had the natural effect of encouraging further measures of the same sort, and in February, 1882, what is known as the Riddleberger bill was passed, and is now the law of Virginia. This put aside all former settlements, repudiated the entire interest for nine years from 1861, and directed a new issue of bonds. What it really accomplished was a reduction in interest from 6 to 3 per cent., and a reduction of the debt at one stroke from $30,000,000 to $19,000,000. This act provided that coupons of the bonds issued under the act of 1871 should not be receivable for taxes, and the decision of the Supreme Court that they are so receivable reverses the whole of Mahone's work. Briefly summed up, his work was to take the State debt, after one-third of it had been assigned to West Virginia and never accepted by her, induce the people first to repudiate one half the interest on the remaining two-thirds, and then repudiate one-third of this remaining two-thirds, and half the interest on it.

It should not be forgotten that in this infamous work Mahone had the sympathy and support of a Republican national Administration without which it is fairly doubtful if he could have succeeded. That his success has greatly weakened the sense of public honor in Virginia there is no doubt. All parties there are in favor of repudiation now, because no party can take the opposite course and stand a ghost of a chance of success. There is no State in the South which presents a more pitiable spectacle. and none in which the future of politics is more dark. Whether Mahone runs for Governor this year, or some one of the men who have been his disciples, will make little difference. His "principles" are sure to triumph at the polls, no matter which party wins. A large part of the burden for this disgrace lies at the door of Republican leaders like Mr. Blaine, who made an elaborate defence of Mahone in his remarkable 'History,' and like Mr. William Walter Phelps, who introduced Mahone at the first Blaine ratification meeting in Washington, in July last, as the "Little Napoleon of Readjustment." With the exception of the dubbing of Ferdinand Ward as the "Napoleon of Finance," there has not been in recent times a tribute of admiration so astounding as that.

THE GREAT RUSSIAN BANK SWINDLE.

It is a rather curious coincidence that at about the same time that the swindling operations of President Fish, of the Marine National Bank of this city, in connection with his fellow-conspirator Ward, were exposed in this country, even more extraordinary frauds by the manager of a bank were disclosed in Russia, and the trials of the two defaulting officials occurred within a few weeks of each other in Moscow and in New York. The developments in the Russian case were so startling, both in themselves and as throwing light upon the condition of things in that country, that they challenge world-wide attention.

The Bank of Skopin was established in the town of that name, in the Government of Riazan, in the year 1863, at a time when there was considerable industrial activity and a prospect of success for a well-managed enterprise of that sort. It was a communal, and not a strictly Government, institution, but still was under the control of the Ministries of the Interior and Finance, to the latter of which it was required by law to render periodical reports in detail of its operations and condition. The managership of the bank was given to one Rykov, despite the fact that he had notoriously been guilty, while previously holding a position of trust, of gross corruption, the few protests of the Skopin people being overruled by the authorities. There is every reason to believe that for a while Rykov administered his place honestly, but as early as 1868, it was ultimately discovered, he had entered upon the remarkable career of fraud which has made him unique even among Russian swindlers.

In that year there was a deficit of 54,000 rubles (about $42,000) in the bank's funds, and when the periodical report to the Minister of Finance had to be made, Rykov simply drew up a false balance sheet, which not only concealed the deficiency, but represented the condition of the bank as so exceptionally satisfactory that it immediately began to draw deposits from all parts of the country. From this time on, Rykov's methods were an ingenious combination of the sharpest tricks played by James D. Fish, Ferdinand Ward, and Mrs. Howe, of the Woman's Bank in Boston, which made such a sensation when it went to pieces a few years ago. Although he was really doing no legitimate business whatever, he began to offer 7½ per cent. interest on deposits at a time when the best institutions in Russia were paying only 5 per cent., and he was straightway overwhelmed with the money of a host of dupes. To make a pretence of showing how his exceptional profits were earned, he regularly made entries in the bank's books of mythical financial operations, and any curious inquirer might see the record of discounts, loans, purchases, and sales, which were all of the most gratifying nature, but were also all of them purely fictitious. An illustration of Rykov's ways is the fact that every December an old man in the pay of the bank, who was so illiterate that he could hardly write his own name, used to sign a contract for the purchase of several millions' worth of imaginary securities, and this transaction, with the imaginary profit upon it, always appeared on the bogus balance-sheet sent to the authorities and published in the official journal. Paper was made on an extensive scale, and with little attempt at disguise. One man of straw would draw on another man of straw for fifty or a hundred thousand rubles, discount the bill and get the money, and then the operation would be reversed. Porters and messengers of the bank figured in the books as debtors for tens of thousands of rubles taken by their masters.

For fifteen long years, incredible as it may seem, this gigantic swindle went on unchecked, Rykov meanwhile living on a lavish scale, winning the favor of the clergy by subsidizing churches, and acquiring the reputation of a philanthropist by his large gifts to charitable and educational institutions. All these benefactions were stolen from the bank, and were entered on the books as payments to dummy customers. Skopin is a small provincial town where everybody knows about everybody else's affairs, and of course such wholesale and open frauds could not go on year after year without people finding them out. The local public did know the state of affairs—knew it so well that, when the crash finally came, there was not one customer of the bank in Skopin, and only nineteen of the six thousand victims were found in the entire Government of Riazan. With the corruption so notorious that everybody in the region knew the bank to be a fraud, how was it possible for the swindle to go on year after year without attracting the attention of the authorities?

The answer to this question throws a flood of light upon the state of Russian society and the character of the government. Rykov escaped so long simply because he had made himself an autocrat, and had corrupted everybody through whom his misdeeds might be exposed. The mayor, the town clerk, the chief of police, in short, every local officer, was constantly in his pay. The monthly audit required by law from officers of the municipality was a farce; the books were never looked at, the cash was never counted, and the balance-sheet was signed without being examined. A veritable reign of terror prevailed. So absolute was Rykov's power

that he did not hesitate, through the complaisant police, to exile people who chanced to offend him, on no better pretext than that they were "evil-intentioned" men, and even in one case because the objectionable young man had whistled while passing the manager in the public garden! So all-pervading was his power that honest citizens were absolutely cut off for a long while from communication with the outside world, when at last, in despair of securing redress from the authorities, they sought to reach the press. The Postmaster received a monthly allowance from Rykov, in consideration of which he intercepted and handed to his employer every letter addressed to a newspaper or to any other objectionable quarter, while the telegraph operator rendered similar service whenever recourse was had to the wires. In this way Rykov thwarted the efforts of a few public-spirited citizens to expose his misdeeds for the space of two years. It was at last only through the enterprise and courage of one of the very few liberal journals which still survive that the facts were brought out, the official press refusing to publish anything about the matter.

When the crash came, it was complete and terrible. The balance-sheet showed twelve million rubles on hand, but the strong-room was empty and the bill-cases were filled with bogus paper. Rykov earnestly protested on his trial against being called "a monster," and pronounced the charge that he had stolen millions "a gross calumny," protesting, with an indignant gesture, that "I stole but one million—one million only." It appears to be true that he did take only one million for his own personal use, but this was simply because he had to spend the other millions as hush money. There was no limit to the scope of his operations in this direction. All the facts were not brought out on the trial, but enough was shown to indicate plainly that the highest officials of the empire must long have been privy to the fraud. It was proved that the Governor, the Vice-Governor, and all the members of the Provincial Government were bribed to silence; and the utter indifference of the Ministers of State who were appealed to at various times, is, doubtless, attributable to the same potent motive. Indeed, the whole episode is but an epitome of the Russian Government.

A UNIVERSAL DAY.

THE International Meridian Conference of last summer was called for two purposes. The first was to settle on some first meridian from which terrestrial longitudes should be counted; the second to adopt or to recommend for adoption a Universal Day. There was no important opposition to the adoption of the meridian of Greenwich as the prime meridian from which longitudes are in future to be counted, to the east, 180°, and to the west, 180°. The final vote on this proposition was 22 in the affirmative, 1 (San Domingo) in the negative, 2 (Brazil, France) not voting. The resolution in regard to the Universal Day provided that such day should be the *civil* day of Greenwich. This was adopted by the following vote: ayes 15; nays 2; not voting, 7.

The Conference was merely a consultative body, and no real effect could be given to its recommendations until the scientific men of each country had practically accepted its conclusions, and until the proper authority within each state had at least legalized the new prime meridian and the Universal Day. It was tolerably obvious from the first that France was not likely to fall in with the new arrangement. The friends of this said, however, that no country could afford to remain outside of a truly international agreement, and expected that in a little time the whole world would be reaping the advantages of their action, and that even the small amount of confusion now existing on account of differences of local time would soon disappear.

It is interesting to trace what the real effect of the Conference has been, and to compare it with these hopes. With regard to the adoption of Greenwich as the prime meridian for longitudes, the effect of the Conference has been to give some impetus to a movement which was already strong. A vast majority of the nautical charts in use by the ships of all nations are made by the British Admiralty; and the charts of several other nations have the Greenwich longitudes given, as well as the longitudes from the national meridian. The oceans may already be said to be divided by Greenwich meridians. Very many of the standard maps already have Greenwich longitudes given in at least one margin. The effect of the Conference will doubtless be to increase the number of maps with a double enumeration.

It is with regard to the Universal Day that the Conference has undoubtedly done far more harm than good; and it is worth while to sketch briefly the action of each country. It must be remembered that no official or international action has yet been taken by *any* country. We have only the declarations of recognized scientific authorities by which to judge. England was the first to move. The Astronomer Royal (Mr. Christie) announced that he intended to use the universal time in the *internal* affairs of the Greenwich Observatory from January 1, 1885. Under ordinary circumstances, January 1 (astronomical date) would have commenced with the transit of the sun over the Greenwich meridian. January 1 (civil date, which is the universal date) commenced at the preceding midnight. The clocks were then twelve hours too slow. This change was made not only in the observatory clocks, but in the public clock in Greenwich Park. *Nature* publishes weekly an almanac in the new time; the *Nautical Almanac* is already printed in the old reckoning up to 1887, and the director (Doctor Hind) has made no statement of his intentions.

The official action of the United States is recited in Executive Document No. 78 of the last Congress. On December 4, 1884, the Superintendent of the Naval Observatory (Admiral Franklin) issued an order prescribing the use of the Universal Day in the Observatory, and he officially informed the superintendent of the *American Ephemeris* (Professor Newcomb) of the fact. Professor Newcomb replied in a letter (December 6), giving his reasons why the Universal Day should *not* be adopted. Admiral Franklin then addressed a circular to American astronomers, asking for their opinions on the question of whether the new time should be introduced at all, and, if introduced, as to what date would be the most suitable. Replies were received from eleven astronomers, only two of whom decidedly opposed the change. They both set 1890 as the earliest date for the introduction of the new time. The order prescribing the use of the universal time in the Naval Observatory was thereupon rescinded by the superintendent, who had apparently been convinced that he was making a mistake. It is more than probable that several of the replies favorable to the change were written hastily, under the impression that it was a foregone conclusion; and that the mature conviction of the writers is at present opposed to any change. The reckoning of time will not be changed in our *Ephemeris*, and it is safe to say that the United States will not adopt the Universal Day in any form at present.

Germany was the next to speak. Professor Foerster, the Director of the Berlin Observatory, Professor Auwers, the President of the German Astronomical Society (which prints the *Astronomische Nachrichten*), and Professor Tietjen, the Director of the *Berliner Jahrbuch*, have officially declared that they will have nothing to do with the new day, in any form.

Affairs were now sufficiently confused, but if they had stopped here all would have been well. The Astronomer Royal would have retreated from his position, and the example of England, France, Germany, and the United States would have been followed by all the other nations. The Universal Day would have died a natural death, and the net result of the Conference would have been the authoritative endorsement of Greenwich as a first meridian for longitude. But the confusion which was to have been obviated now begins. Professor Oppolzer, of Vienna, who is the first astronomer of Austria and the Director of its Geodetic Survey, announces his adherence to the new day, and its adoption in a very important publication of his own, a list of all the solar and lunar eclipses between 1200 B. C. and 2100 A. D. His example will undoubtedly carry many South German astronomers with him. Furthermore, the news comes from Russia that Director von Struve, of the Pulkowa Observatory, intends also to adopt the new day in the internal affairs of his observatory. If this is done, it is more than probable that all other Russian observatories will follow. It should be plainly said that the confusion is now a matter for the astronomers alone. The Universal Day had no chance of introduction into the world's business affairs from the moment when two or three of the leading nations pronounced against it. Our Australian telegrams, as heretofore, will be dated in Melbourne time, and we shall apply the difference of longitude as always. The astronomers—to whom it makes the least possible difference what kind of time is used, provided only that they know exactly what it is—have so far done their very best to make this vital point doubtful to their successors. If the plain man in A. D. 2100 finds Professor Oppolzer's predicted eclipse to be exactly right, as he will when the proper allowances have been made, he may say that the second proposal of the Washington Conference has not done so much harm after all. Meanwhile, the earth will rotate on its axis, and local times will vary in the future as they have in the past.

THE RUSSIAN MENACE AND THE DEFENCE OF INDIA.

LONDON, April 14.

THE battle on the Murghab between the Russians and the Afghans has diminished almost to nothing the hope of preserving peace between Great Britain and Russia. The war, if war there be, will in one respect be a most singular one, for we shall be fighting against Russia for the possession of a city—Herat—distant 900 miles from the Indus, the natural frontier of India, but which, nevertheless, we have chosen to regard as "the key of India." There are, it seems to me, two questions suggested by this fact which must greatly perplex a distant spectator. The first is, how an empire such as British India should need to be defended at such a vast distance from its proper boundary. The second, why, if Herat was a position of such unapproachable importance, it was not long ago occupied by a British force, and its connection with India thoroughly secured and protected. To indicate the answer to these questions is the object of the present letter.

"The Russian menace" is a danger which has occupied the minds of Indian administrators for more than half a century—from a time, that is, anterior to the Russians' earliest and disastrous attempt to penetrate to Khiva. It was seen by them that, sooner or later, Russian power must extend over Central Asia until it reached the confines of Afghanistan, just as English power had extended over India until it reached the barriers of the Himalaya. And of necessity this anticipation led on to the question of how we were to meet an invasion of India, supposing that the Russians in Central Asia should attempt it. Upon this question officials in India have been sharply divided into two parties—those who would await a Russian attack upon the Indus, the natural frontier of Hindustan, and those who were of opinion that Russia must be met and defeated at Herat if we wished to hold India in peace and security. The best-known upholders of the former view were, among civilians, Lord Dalhousie and Sir John Lawrence; and among military men, Sir Charles Napier and Sir James Outram.

Their reasoning, briefly stated, was as follows: For an invasion of British India from Central Asia, there is only one practicable line of attack. This line, starting from Herat as its base, passes through Kandahar, Quetta, the Bolan Pass, and the Sinde Desert, until it strikes the Indus at Sukkur. India has other gates, it is true, but this one represents the line of least resistance, and would therefore be the one chosen by an invading army. It is about nine hundred miles in length, across a country most scantily supplied with water, and producing food altogether insufficient to supply the wants of an army strong enough to attempt the invasion of India. Such an army would be obliged to make its long and laborious march encumbered by an immense baggage train, and, upon arriving at the Indus, would be obliged to fight, with the waterless Sinde Desert at its back, an English army in a carefully selected and entrenched position. Success under such circumstances would be impossible, while defeat would mean annihilation. This, however, does not exhaust the difficulties of the attempt. During the long march from Herat to Quetta, the flank of the invading army would be exposed to the attacks of the Afghans, insomuch that if these mountaineers could be induced to act vigorously upon its communications, an advance would become impossible. Now the surest, indeed the only, way to preserve the confidence of the Afghans and secure their coöperation when the need for it arose, was studiously to abstain from even seeming to menace the savage independence which they prized above all things. From all these facts, the "masterly inactivity" school (as it was nicknamed) argued that the soundest and most economical policy was not to anticipate a Russian invasion by an advance across Afghanistan, but to await its advent within our proper frontier.

Looking back at the incidents of the past fifty years in India, no one can deny that it would have been far better for England had this policy been steadily adhered to. We should have been spared the infamy of two unprovoked and unsuccessful invasions of Afghanistan. The sixty or seventy millions of money that were flung away in these abortive enterprises might have been applied to the reduction of taxation in India, or to the completion of our railway lines of communication. And if Russia had at last threatened the independence of Afghanistan, the Afghans would have accepted our assistance, and hailed the entry of our troops among their hills as that of friends whose kindly feelings toward them had been tried and tested during half a century. Unhappily the constitution of the British Government in India is such that a steady adherence to a quiet and unambitious policy is practically impossible. The military element in it is too conspicuous and powerful a factor to admit of such a thing. A soldier like Sir Charles Napier, who has won his spurs elsewhere, can weigh such a question as the defence of India in the scales of unbiassed reason, but not so younger men, who have gone into long exile in India for the sake of the chances of adventure and distinction which an Indian career has to offer. It is mainly of such men that the "forward" school—in opposition to the "masterly inactivity" men—has been composed. This party urged that Herat was "the key of India" because it was as a "gate" which gave an invader a passage through the mountain barrier of the Hindu Kush, and that therefore it was imperative to meet and beat back an invader at that point.

It was plain, however, that Herat could not be safely held by a British garrison unless the intervening country between that city and the Indus was also in our hands, and this was impossible until Afghanistan had been subjugated and pacified. The "forward" school, to do them justice, would not have shrunk from such an enterprise if the financial difficulty had not stood in their way. Where was the money to come from? It was impossible to get it from the Indian taxpayer, and it was quite certain that John Bull would utterly refuse to advance it from his pocket. A middle course had, therefore, to be adopted—that, namely, of contracting alliances with the Amirs of Kabul—a policy against which Lord Lawrence never ceased to protest and warn the nation, and to which this war with Russia, if war there should be, is directly due. The policy has, in point of fact, always endeavored to work out an impossibilty. Its object was to establish at Kabul an Amir that should combine the contradictory attributes of being a puppet in the hands of the English rulers of India, and of being strong in the support and confidence of his own subjects. For unless he was the first he would not admit British garrisons into Herat and Kandahar, and unless he possessed the second, English soldiers would not be able to enter his country without causing a general insurrection against him and us.

In 1838 Lord Auckland was the Governor-General of India, and the official clique which surrounded him was composed exclusively of men of the "forward" school. At this time Dost Mohammed Khan was the Amir of Kabul. He was a man of great capacity, feared and respected by the Afghans, and sincerely desirous to be upon terms of friendship with the English in India. But clearly he was no puppet of our creating. He had won the position he occupied by dint of his own talents, and, therefore, Lord Auckland and his advisers rejected his proposals and actually invaded his country in order to set up a creature of their own. The result of this wise and honorable attempt is well known. Our puppet was murdered by his own (so-called) subjects; British troops and camp followers, to the number of 12,000, were cut to pieces in the Khoord Kabul Pass by the infuriated Afghans; and in the end we restored Dost Mohammed to the position of Amir, and abandoned the country. This was the first attempt of the "forward" school to translate their theories into practice, and it led to their effacement in Indian politics for the space of forty years. But during that period the men who had passed through the experience of the first war in Afghanistan—the Lawrence brothers, Sir James Outram, and others—were either dead or had long left India; and when Lord Lytton arrived in India to give effect to Lord Beaconsfield's "spirited foreign policy," he had no difficulty in surrounding himself with just such a clique as that which led Lord Auckland to his fate—young, enterprising, and ambitious military men, eager for distinction and the honors and more material rewards which accompany it.

Afghanistan had greatly profited by the long repose from British intervention which had resulted from the last disastrous war. Shir Ali, the son of Dost Mohammed Khan, had exhibited a capacity for government not inferior to that of his father; and Afghanistan was precisely as, in our official language, we always professed that we wished to see it—it was "strong, friendly, and independent." But, like his father Dost Mohammed, it could not be said of Shir Ali that he was a puppet of English manufacture; and by Lord Lytton and the officials who surrounded him, the strength and independence of Shir Ali were considered as valid reasons for his overthrow. What if he should use his strength and independence to ally himself with the Russians and against us? Accordingly, Afghanistan was a second time invaded. The civilizing labors of forty years were destroyed in as many days. The hatred kindled by the first invasion of Afghanistan was revived among its people in increased intensity by this second attack upon their lives, their homes, and their independence. But, as in 1838, we found in 1878 that though we could ravage and lay waste the country, we could neither subdue nor hold it except at a cost in men and money that was utterly ruinous. We finally withdrew, leaving behind us, as a memorial of our presence, an Amir of the puppet description. That Abd-al-Rahman Khan is a man of some strength of character, cannot be denied; and had he won his present position in any fair and honorable way, he might have done well enough. As it is, he has succeeded in getting along thus far by means of an English subsidy, and a series of atrocious murders, the victims of which have been the chief ministers of Shir Ali and the men who organized the persistent resistance to the last English invasion. In this way he has incurred the bitter hatred of the great body of his subjects; and while he is not in a position to resist a demand for the entrance of British troops to Herat, Kandahar, or anywhere else, it is all but certain that his authority would not survive their admission. And thus an English army confronting a Russian advance at Herat would have its communications menaced by an insurgent Afghanistan populace behind it.

This is not all. An alliance with the Amir of Kabul would have been of no service to us, unless the Amir had also been the ruler of Herat. In order to effect this, English politicians of the "forward" school have been obliged to give an arbitrary extension to the (so-called) kingdom of Afghanistan, so as to include within it the valley of the Heri-Rud, in which Herat stands, and all the country known as Balkh and Badakshan, which lies between the Oxus and the Hindu Kush. Now, no Afghans live in this tract of country. The Herat valley is peopled by Persians, and the remaining parts by Turcomans and Usbeks. All alike hate the Afghan domination, as rapacious and oppressive; and the population of the Herat valley, being in the main Sheeyas, are divided from their rulers in religion as well as race and language. The consequence is that all along the frontier at present in dispute the advance of the Russians is awaited by the population with eagerness, as insuring their emancipation from a tyranny which they detest. So much is admitted by even such partial witnesses as the newspaper correspondents with Sir Peter Lumsden's mission; and the probability is that if a Russian army appeared at the gates of Herat before our troops could arrive, the population would rise in their favor, and the Afghan garrison be obliged to fly or to surrender.

Thus it will be seen that the policy of the

"forward" school has failed at every point. It has availed nothing toward arresting the progress of Russia in Central Asia. It has kindled in the minds of the Afghans a bitter, just, and enduring hatred of ourselves. And, instead of an alliance with the people, it has substituted an alliance with a puppet Amir whom we have forced at the sword's point upon them. The officials in India and the newspapers in London who are responsible for these suicidal performances are also the great generators of those irrational paroxysms of Russophobia which periodically assail the people of these islands. The terror is quite genuine, and springs from a true though unavowed conviction that we have been playing into the hands of Russia by the treacherous and violent policy that we have been carrying out in Afghanistan. With the acts of Russia in Central Asia we had no more right to interfere than had the Russians with our acts in India. But so keenly sensitive have we been to the dangers of the situation that we had created for ourselves in Afghanistan, that it was impossible for the Russian Government to do anything in Central Asia without being assailed by our Foreign Office with a volley of impertinent queries, remonstrances, and demands for explanation. All such inquiries on the part of the Foreign Office were accompanied by a vociferous chorus from the London press, consisting of nothing but denunciations of Russian greed, perfidy, and aggressiveness. And thus an enduring sense of exasperation has been established between two great nations. It was not to be expected that Russians, when thus perpetually assailed, should not look about for an opportunity of retaliation. The shrieks of the Jingo press and the copious writings of Indian Russophobists showed them the weak point in our harness. Had we been content to await an invasion upon the banks of the Indus, our success would have been indubitable, if Russia had been insane enough to make the attempt. But at Herat we are weak and Russia is (comparatively speaking) strong.

War is, at present, not declared, but he must be a more sanguine man than the present writer who thinks that a declaration can be long postponed. But though peace is to be earnestly desired, it would be no more than a temporary postponement of the war. It has now been finally decided that India is to be defended, not on the Indus, but upon the further frontier of Afghanistan. There is no retreat from that decision, and it entails the holding of this new frontier with British troops. This cannot be done without the reduction of Afghanistan to a British province, and this will not be effected without a bloody and costly war, in which, if Russia does not formally engage as an ally of the Afghans, Russian officers will fight in the ranks of the enemy.

R. D. Osborn, Lieut.-Colonel.

ENGLISH SENTIMENT IN THE RUSSO-AFGHAN CRISIS.

London, April 18, 1885.

Nearly thirty years have elapsed since England has been at war with a great European Power; and on no occasion since then has she come so near war as during the last few weeks. In the spring and early summer of 1878 there were for some time apprehensions of a breach with Russia, but the most skilful observers were then of opinion that the English Ministry did not really expect or intend to fight, but were holding high language only to alarm their adversaries. Now, however, there can be no doubt that the present Cabinet have repeatedly been, and are perhaps still at this moment (although the horizon looks somewhat brighter during the last two or three days), seriously anxious. The preparations they have made and are making, especially the purchase of so many swift passenger steamers for the purpose of turning them into war cruisers, sufficiently prove the reality of the danger; and the fluctuations of our stock markets have had a suddenness and violence which testifies to the gravity of the position. As events may have taken a decisive turn before this letter reaches you, there is no use in filling it with speculations as to the issue. It is more profitable to endeavor to describe the state of the public mind as we have latterly seen it, and to inquire what are the causes which have made it on the one hand so composed, and on the other hand so much less apparently pacific than might have been predicted.

Composed it has certainly been. Despite the extreme sensitiveness not only of the stock market, but of all those markets which a war could in any way affect, the attitude and temper of the people generally has been quiet and dignified. Considering how hot the newspapers usually become at a crisis, the newspapers have been cool—decidedly cooler than in 1878. Yet their temperature stands some degrees higher than that of the mass of private persons, even in the middle and upper classes. There is, of course, great curiosity to get the latest news, and constant discussion of the ever-changing aspects of the question. But when one remembers the enormous magnitude of the issues involved, and the way in which they touch every class in the community, the amount of passion and vehemence which one observes in the minds of individual men is less than might have been looked for—less (I think) than was shown in 1878, or during the French and German war of 1870-71, when we were mere spectators.

To what is this phenomenon to be ascribed? Partly to the distance of the scene of action and the darkness which surrounds it. Very few people had any notion, till two months ago, of where Herat, much less Panjdeh and Zulfikar, lay. Even now men's ideas about them are, of course, extremely vague. Communication is slow and difficult. It is extremely hard to get at the real facts, and to know which of the facts are material. Not only, therefore, is the imagination less excited, but the consciousness of ignorance keeps more sober minds in a state of suspended judgment, and disposes them rather to rely on the Executive than to pronounce for themselves upon the significance of events or the course to be adopted. Ignorance, no doubt, exposes men to be misled, but what I remark in the present case is the consciousness of ignorance, which our people have fortunately the good sense to feel; and although some vague declamation against Russia is indulged in, although there is doubtless a measure of prejudice against her, this sentiment has by no means overpowered the disposition to seek for more light.

Much must also be ascribed to the general unity and homogeneity of opinion which prevails. In 1870 the partisans of France and Germany respectively formed strong and bitterly hostile sections, as they did also during your war from 1861 to 1865. All Tories were arrayed on the one side, and most Liberals on the other, so that the ordinary bitterness of domestic parties increased the bitterness with which the questions were debated. At present there is no party division regarding the issues between ourselves and Russia. The Tory party, or rather the aristocratic and military party, is more pronouncedly anti-Russian than the Liberals are, because it holds by the traditions of Lord Beaconsfield's days. But the Liberals generally are scarcely less suspicious of the recent behavior of Russia, and no less willing to draw the sword, should the Government propose to do so. The obvious reason is, that a Liberal Government is in power, whose drafts on the loyalty of its followers will be met in this instance, as they have been in so many others heretofore. However, there is more than mere party loyalty in this disposition to trust the Executive. The present Government is not only credited with strongly pacific tendencies, but has until now been supposed to be specially well affected to Russia. From 1876 till 1880, Mr. Gladstone was constantly attacked for his supposed subserviency to Russia, and one person prominent in the social if not in the political world, the Duke of Sutherland (although professedly a Whig), went so far as to call him "a Russian agent," at a public meeting held in London at that time. Hence the belief that if this Cabinet declares war it will do so because it cannot help it, because nothing less than the strongest and clearest case exists, because Russia has forced it on us either by palpable bad faith or by a resolution to persist in aggressive measures. I do not say that such conclusions are necessarily right, for it is possible that the Ministry may be mistaken; that they may have misunderstood the facts or misinterpreted the facts, and may be unintentionally doing Russia injustice. Still, it is to the popular mind a most material fact that the Prime Minister is not only conspicuously pacific, conspicuously zealous for economy and a reduction of the public burdens, but has also been hitherto conspicuously free from such anti-Russian prejudices as were charged against the Cabinet of Lord Beaconsfield in 1878.

The same reasons serve to explain that other phenomenon to which I have referred, the absence of popular demonstrations in favor of peace. Strong as the fighting instinct in Englishmen is, the masses of our people are as a whole markedly pacific because they are an industrial and religious people. The working classes have long had a notion that wars are sought by the aristocratic class for its own purposes. They have a strong sense of what the French call the "solidarity of the industrial classes" in all countries, and hate the idea of being taxed to give the rich and the officers the amusement of war. The Nonconformists, who exercise much influence over the middle and a section of the humbler class, are averse to war on religious grounds, and were stimulated in their hostility to it by the struggle against Lord Beaconsfield's aggressive policy. If a Tory Ministry were now in power, we should probably see strong demonstrations against any war they might make, because the working classes, the Nonconformists, and the leaders of the Liberal local organizations over the country would believe (rightly or wrongly) that a war would be due to the generally bellicose tendencies of the Tories. Now that a Liberal Ministry is in power, their mouths are closed. They feel bound to believe that it is as anxious to keep the peace as they are themselves, and throw all the blame on the ambition or perfidy of the hostile Power. Hence we have had practically no agitation against the movements made toward war—none from the Tories, because they have always declared that the advance of Russia must be resisted by arms; none from the Liberals, because they rely on the good intentions of their leaders. Two or three small efforts have been made to obtain expressions of opinion in favor of referring the dispute to arbitration; but these have been faintly supported, not so much from any want of faith in that excellent principle as from a fear of embarrassing the Government, and from the notion that they might be misconstrued by Russia as indicating some want of resolution or union on the part of England.

No such want exists. Whatever strength a people can draw for the prosecution of war from the harmony of its citizens, England would apparently draw in this case. Radical members of Parliament who have been addressing mass meet-

ings of their constituents during the Easter recess, express themselves as somewhat surprised by the heartiness with which declarations of an energetic nature were received. It is plain that the sentiment of national greatness and the sensitiveness to national honor are, even in the working class, not less strong than the attachment to peace, and are fully prepared to support the Ministry should they be driven into war. There might be some revulsion if it should turn out, when all the documents are laid before Parliament, that the causes for war were, after all, not quite adequate; but, on the other hand, the sense of being committed to a fight, and the sort of thrill which effort gives, would be strong enough to counterbalance such a revulsion and to enlist the general and hearty sympathies of the people.

Should peace, on the other hand, be preserved (which many of our shrewdest heads have all along predicted), the judgment on the conduct of the Government will depend on the extent to which they can be shown to have given way to Russia. After this prolonged tension, there will be some sensitiveness on that point. If they have yielded any really substantial advantage to her—anything which can be said to endanger Herat, and with it the western frontier of India—they will incur serious censure and suffer at the general election. If they have merely receded from some claims which they had better have never put forward, having demanded for the Afghans territory which was not really Afghan, the reputation of their diplomacy, already discredited by their dealings with Bismarck, will be further tarnished, but the country, which has begun to think that diplomacy is not the forte of England, will before long forgive them. But while the scales of peace and war still oscillate, it is needless to pursue these ulterior questions. Y.

Correspondence.

BIENNIAL SESSIONS.

To the Editor of The Nation:

Sir: Your remarks on biennial legislative sessions, apropos of Mr. Roosevelt's article, suggest a few words about the results of the system here. Although I am still inclined, on the whole, to favor the plan, I am convinced that it is not an unmixed good.

The conditions of the problem in California are very simple. Given, first, enormous interests controlled by men whose ideas of public policy are indicated in the Huntington letters; second, a Legislature of which, not Mr. Roosevelt's one-third, but probably a clear majority, are open to corrupt influences; and, third, a session of sixty days once in two years, and what will be the result?

The result, as might easily have been predicted, is that the Legislature has just enough time comfortably to pass all the corrupt and mischievous bills that are brought before it, and no time at all for those measures of merely public utility which Mr. Roosevelt's Irishman aptly termed "local bills." With the appropriations and other routine work of two years on hand, there are only a few days of each session available for general legislation. A few well-paid obstructionists can easily stave off any matter on which public and private interests are opposed, while a bill to pay unconstitutional claims or to relieve railroads from taxation slides easily through under suspension of the rules. For the last four years some legislation on the subject of irrigation has been absolutely essential to the peace of the State, but a few individuals, interested in maintaining the present condition of anarchy, have succeeded in preventing any action. The bills would be allowed to pass the Assembly about the middle of the session; then they would be elaborately discussed in the Senate until the last day, when there would be just time to vote extra compensation to the clerks and pages, present "testimonials" to the presiding officer, appoint a few junketing committees, and go home with the troublesome question laid for two years. No vote need be taken, no individual responsibility assumed, and by the next election the short popular memory would be occupied with something else. It is a beautiful plan for statesmen who desire to avoid "making a record."

To sum up, the California Legislature is in as complete a state of paralysis, so far as useful measures are concerned, as the British Parliament. And while it is the fashion to cry against over-legislation, and to say that it would be good policy to pay law-makers to stay at home, our experience is that a growing community needs new laws, and sometimes needs them very badly.

S. E. Moffett.

Kingsburg, Fresno Co., Cal., April 14, 1885.

STATUES AND MEDALS.

To the Editor of The Nation:

Sir: Permit me to present to you a few remarks in relation to the criticisms on Perrot's 'History of Art' and Lenormant's 'Monnaies et Médailles' that appeared in the *Nation* of April 23, 1885.

You are practically correct when you say, in the review of Perrot's book, that it is not possible for the stone steps with sculptured bas-reliefs to have been found inside the temple of Golgoi, as they are said by Cesnola to have been found ('Cyprus,' p. 159). But you are inaccurate in saying that they were found *prior* to the discovery of the temple. In comparing the two versions published by Mr. Di Cesnola about these sculptured objects you will find that, according to 'Cyprus,' p. 159, they were found in 1870 at a specially-indicated spot within the enclosure of the so-called temple, and are called then "footstools of stone"; while Mr. Di Cesnola's report, published in the journal of the Turin Academy (Atti, etc., vol. xi, pp. 493 et seq., Pl. iv.) positively says that these same objects were found *after* 1873 and *outside* the temple of Golgoi, in the necropolis, and this report calls them "funerary bas-reliefs."

In the same review you omitted to mention the important point that when Ceccaldi saw the statue of the "Priest holding a dove" in May, 1870, he found it "*intacte*," while when Doell, a real archæologist, admires it *three months later*, he finds it, as you say, without feet, base, and bird, and with the head and forearms separated from the statue; thus showing that Ceccaldi's eye had been deceived as to the real state of the statue.

As to the various measurements published by the Museum at different dates, relating to the height of this same statue, the public ought to be made aware that the climatic influences peculiar to the spot of mother earth where the Museum is built, may have great bearing on the accuracy of the rule used for measurement at the Museum. We know officially that the disintegration of the calcareous stone goes on more rapidly there than in other parts of the city or even of the world. Also, the geological formation on which the Museum is built is subject to great transformations. For instance, I read in the *Evening Post* of June 1, 1882, Di Cesnola's declaration (which I should not dare to question) that the foundations of the Museum are built "upon loose soil"; while in the *Evening Post* of the day after I read a letter of Mr. Cesnola's, written in December, 1872, in which he declares that the Museum is built on rock. Therefore one ought to be lenient in judging of the accuracy of measurements.

The review is inaccurate in speaking of No. 107 as "a terracotta statuette, which is represented as a bearded Venus, and accepted by him (Perrot) as such . . ." The truth is, that the godfather of the little monster is Di Cesnola himself, for Perrot, like yourself, denies its bisexual pretensions.

I must respectfully enter a protest against the conclusions contained in the review of Lenormant's book, when you say, "There is no reason to believe that coins (antique coins) were struck hot." I believe that an examination of antique gold and silver coins of perfect preservation, and which still bear on their surface what is called "radiation," would prove conclusively that these coins were struck while they were very hot, and that the surfaces of the metal touched by the dies suddenly became colder by this contact than the inside of the ingot. I believe, also, that what you say of the "incused denarii," in support of this theory of yours, tends to prove the reverse of what you ingeniously propose, and that the impression produced on the second *flan* shows that it must have been of softer material (probably hot metal), while the *flan* just struck before had already had time to harden (probably by cooling).—Respectfully yours,

Gaston L. Feuardent.

New York, April 25, 1885.

A YOUTHFUL JUDGE OF THE SUPREME COURT.

To the Editor of The Nation:

Sir: In your article in No. 1034 on "The President and the Judiciary," mentioning the young men who have occasionally been elevated to the Supreme Bench, you have omitted one who, we believe, was the youngest ever appointed—Judge William Johnson, of South Carolina. Judge Johnson was Speaker of our House of Representatives before he was twenty-seven, and a judge on the State Bench at twenty-eight, and was appointed by Mr. Jefferson to the United States Supreme Court on the 6th of March, 1804, when only *thirty-two* years of age. Judge Johnson sat in the court for thirty years, dying August 16, 1834. Charleston.

April 25, 1885.

THE STUDY OF ENGLISH AT THE SOUTH.

To the Editor of The Nation:

Sir: In his communication in the *Nation* on the "Study of English at the South," Prof. H. E. Shepherd says: "In the College of Charleston there is a specific chair of English, and the instruction is continuous during the four years of the collegiate course. This is a marked exception to the prevailing rule in Carolina colleges."

Lest the expression "marked exception" should give the impression that the course of English instruction in the Charleston College is so exceptional as to find no parallel in this State, I wish to say that at Wofford College, Spartanburg, S. C., there is also "a specific chair of English, and the instruction is continuous during the four years of the collegiate course."

F. C. Woodward.

Wofford College, April 24, 1885.

RAILROAD PASSES.

To the Editor of The Nation:

Sir: In your issue of April 16 you mention the fact that the legislator of Connecticut finds in small pay ($300) and in insufficient mileage a reason for accepting railroad passes. The legislator of Wisconsin, with $500 pay and a large

mileage, still finds reason to accept railroad passes for himself and all his friends. The way in which passes are here used by officers of the State and distinguished citizens falls very little short of wholesale corruption. J.

WISCONSIN, April 24, 1885.

TO MAGAZINE EDITORS.

TO THE EDITOR OF THE NATION:

SIR: I beg leave to offer a suggestion on the printing of reviews and magazines, that, if carried out, would be of a very great service to their readers. The speedy accumulation of the current numbers soon forces one either to have them bound, thrown away, or sold. Many adopt the expedient of cutting out such articles as have interested them, binding these, and throwing the remainder away. It is for this constantly increasing class that I offer this suggestion to the publishers: Let us always have an important article commenced on the top of the right-hand page, and nowhere else. If an interval of empty space should thus be made necessary, let it be so; or devote such to poems or short notices. By having all the significant articles so arranged, it would be possible to cut them out to the prejudice of no other significant article, which is seldom the case at present, and at the same time to avoid introducing them by truncated and acephalous morsels put in that bad eminence solely by the pressure of necessity. The reader and subscriber has rights that even publishers are bound to respect.

Yours sincerely,

JOHN TUNIS.

QUINCY, ILL.

["But who shall decide what are the 'significant articles'?" the editor will probably ask. And if invidious distinctions are to be thus made by him, will it not speedily be asserted that authors' feelings have as much right to be considered as the scrap-book convenience of readers and subscribers?—ED. NATION.]

TEWRDANNCKH.

TO THE EDITOR OF THE NATION:

SIR: In your Notes of April 23, concerning the Holbein Society's reproduction of the old German poem 'Tewrdannckh,' I read the following:

"The wood-engravings illustrating the work were probably by Albert Dürer and his scholars, but only Hans Schaufelin can be fixed upon with certainty as one of the engravers."

I hardly understand what can be meant by "Dürer and his scholars"; but there is no doubt of the 'Tewrdannckh' designs being the work of Schaufelin, who certainly was not an engraver. The engravings are by Jost de Negher.

W. J. LINTON.

NEW HAVEN, CONN., April 27.

Notes.

CASSELL & Co. publish early next month the 'Life and Reminiscences of Gustave Doré,' compiled by Blanche Roosevelt.

G. P. Putnam's Sons will publish immediately a new volume by the Rev. R. Heber Newton, entitled 'Philistinism,' plain words concerning certain forms of unbelief, in twelve discourses.

Under the title of 'England and Russia in Asia' (Osgood) Mr. George M. Towle has compiled the initial volume of a vest-pocket series on "Timely Topics." He appears to have drawn his information from the nearest encyclopædias, and not always with care, as any of them would have saved him from the ridiculous blunder of constantly speaking of Timour Tamerlane. It will also confuse the geographical student to be told that Askabad is situated on the Caspian, when all the maps show it to be at least 250 miles in a direct line from the nearest point of that sea. Again, we are told that Merv was taken by the Russians passing from Turkestan to the left bank of the Oxus, whereas, in fact, it was captured by an expedition from the side of Askabad, and was the last step of the trans-Caspian movement on the part of the Russians. Of this movement Mr. Towle makes no mention, although it has occupied six years, has included three important campaigns, and has brought about the present difficulty, to enlighten the public about which is the avowed object of the book. These are not all the errors in it, but they are enough to admonish publishers to secure timely writers as well as timely topics.

Harper & Bros. have added Charles Marvin's 'Russians at the Gates of Herat' to their Franklin Square Library.

The painful circumstances of the past few weeks have directed public attention anew to the career of General Grant. The publishers (D. Appleton & Co.) of General Badeau's 'Military History of Ulysses S. Grant' have accordingly brought out a new edition of that eminently readable and authoritative work in three volumes.

Charles Scribner's Sons have published the opening lecture of the year delivered before the Union Theological Seminary by Prof. Francis Brown. The subject, "Assyriology, its use and abuse in Old Testament study," is opportune, and has drawn from Professor Brown some interesting illustrations of his thesis. His warnings are directed principally to the students of the Old Testament who are not familiar with Assyrian. He cautions them against its use in apologetics, and admonishes them to distrust popular and cursory statements of surprising discoveries—a warning by no means unnecessary, since in this, as in many other departments of learning, the writer who is able to catch the public ear is not, as a rule, of the best informed or most accurate class. Of the use of Assyriology in filling out the background and giving the details of some of the meagre historical accounts in the Bible, Professor Brown furnishes Cyrus, and Ahab, and Benhadad as instances. A good bibliography accompanies the book.

For summer reading, Roberts Bros. have put into attractive paper covers some old favorites—E. E. Hale's 'Man without a Country,' Silvio Pellico's 'My Prisons,' Mistral's 'Mirèio,' Molloy's 'Our Autumn Holiday on French Rivers,' and Robert Louis Stevenson's 'Treasure Island.'

A pleasing portrait of Miss Murfree ("Charles Egbert Craddock") is given in Houghton, Mifflin & Co.'s *Literary Bulletin* for May.

In the heat of the late Presidential canvass the citizens of Buffalo paused to take part in one of the most curious sentimental actions of the present age. The bones of Red Jacket and of eight other chiefs of the Six Nations were reinterred with ceremony in the Forest Lawn Cemetery, and a monument is to be erected above their graves. A granddaughter of Brant, chief of the Mohawks, was one of the many persons of mixed blood who attended the exercises. Less than twenty full-blood Senecas are thought to be now living. The Buffalo Historical Society has published a pamphlet account of the obsequies of October 9, 1884. It contains numerous illustrations.

The series of papers on the "Battles and Leaders of the Civil War" will probably always be regarded as the greatest distinction of vol. vii of the *Century*, now lying bound before us. Mr. Cable's "Freedman's Case in Equity," however, has, above any other single article, caused the loudest echo and stimulated the most salutary reflection. Mr. Edward Eggleston's agreeable and valuable series on colonial life and manners furnishes another chapter to this volume. Professor Langley's papers on "The New Astronomy" also deserve to be signalized. Among the portraits, those of Doctor Holmes and of Webster occupy the first place in our regard. Mr. Vedder's Omar Khayyám illustrations mark the pictorial event of our American year.

The annual report of the State Geologist of New Jersey for 1884 possesses several features of general, not to say popular, interest. Professor Cook states that another year is likely to see completed the necessary geodetic points for the basis of the entire State map now in progress. The topographical survey has less than two-fifths of the State's area to finish, and that the most level and easy of accomplishment. A buried forest, sunk since the advent of white settlers—say within 280 years—and lately discovered in the clay-pits near South Amboy, is made the subject of discussion and illustration, as is also the fine columnar trap quarry on Orange Mountain, which has been likened to the Giant's Causeway. The Green-Pond Mountain rocks are discussed anew, and assigned to a higher horizon than hitherto. The multiplication of artesian wells along the south coast has developed a certain and abundant supply of pure water, and thrown fresh light on the tertiary and cretaceous formations in their relation to the ocean bottom. The iron and zinc-mining industries receive their usual attention.

Mr. Rider's bright and independent *Book Notes* begins a third volume with the issue of April 25. He has been criticised for his effective comments on the tariff, and replies that "there is not to-day, nor has there been in half a century, a public print in Providence in which a word could be inserted in criticism of the policy of protection." This period coincides with the political and journalistic predominance of the late Senator Anthony.

Messrs. Appleton Morgan, R. S. Guernsey, Albert E. Frey, Brander Matthews, A. Chalmers Hinton, and James E. Reynolds have been incorporated "The Shakespeare Society of New York."

France owes to the memory of Cobden the popularization of his biography, and Mr. John Morley's Life has furnished the opportunity. Guillaumin et Cie., Paris, send us a translation executed by Sophie Raffalovich, which in the main follows the abridged popular edition of Mr. Morley's work published by the Cobden Club in 1882. Passages, however, of special interest to the French public have been restored by the translator, and others too exclusively English suppressed, so that this volume has an individuality of its own, apart from the language in which it is written. The translator has furthermore prefixed a eulogistic sketch of Mr. Morley's literary career and political doctrine, using (as others have done before her) this author's estimate of other people, particularly of J. S. Mill, to illustrate his own temper and genius. Her fitness for her larger task is superficially shown by the absolute accuracy in the printing of English proper names, so far as we have been able to observe.

Here we may fitly mention a German tribute to Cobden and to Germany's need of his doctrines—'Richard Cobden's volkswirthschaftliche und politische Ansichten, auf Grund älterer und neuerer Quellen systematisch dargestellt von Dr. Karl Walcker' (Hamburg: F. H. Nestler & Melle). It is a small pamphlet of ninety-one pages octavo, containing in its appendix a useful bibliography. The mention, in its place, of Morley's 'Life' points out certain defects as they appear to Dr. Walcker. One is the use of expressions unfavorable to Prussia's wars of 1866 and 1870-'71.

Mr. Christern sends us the illustrated catalogue of the Paris International Black-and-White Exhibition. Some of the reproductions manifest the steady improvement in these useful memoranda, which may one day become so cheap that a complete record of each exhibition can be afforded. The text is disgustingly fulsome. "On doit saluer M. E. Beaumetz comme un jeune maître" (p. 63). "Maîtres merveilleux de la Renaissance italienne, . . . dites-moi si vous n'avez pas un admirable successeur dans M. Boulanger" (p. 64). "Monsieur Hennequin, votre délicieux fusain me laisse une impression charmante, et je vous remercie du plaisir qu'il m'a procuré."

In the April number of *Le Moliériste*, the first of the sixth year of that admirable monthly, the editor, M. Georges Monval, publishes documents, recently discovered in the archives of the Comédie-Française, which show the chain of circumstances by which the precious Register of Lagrange, the most valuable of all the documents concerning Molière, came into the possession of the Comédie-Française.

The French critic, M. Gustave Masson, in an appreciative notice of Mr. Parkman's 'Montcalm and Wolfe,' in the April number of the *Revue des Questions Historiques*, takes his countrymen to task for neglecting the works of a writer with whom few "contemporary English historians can be compared for learning, perseverance, and literary ability." He even goes so far as to say, overlooking certain traitorous translations, that "the literature of the United States is so little known among us, that probably nobody in France has ever heard of Mr. Parkman." Though many French writers, he continues, have told the story of the strife of England and France for the posssession of Canada, none have done it so fully or with such perfect knowledge of the facts as the American historian.

This year being the 200th anniversary of the Revocation of the Edict of Nantes, interest has naturally been awakened in this remarkable episode in French history. In France itself the interest has been shown by the recent appearance of several works treating of different phases of the subject, as 'Les Huguenots dans le Béarn et la Navarre,' M. de la Garde's 'Le Duc de Rohan et les protestants sous Louis XIII.,' and M. Bourchenin's 'Étude sur les académies protestantes.' In England it is proposed to form a Huguenot society whose object shall be, "to form a bond of fellowship among those who inherit or admire the characteristic Huguenot virtues—namely, the holding of a pure faith with true courage, and the habitual aim at a high standard in every work undertaken." A more practical aim will be the collection and publication of historical and genealogical material relating to the Huguenots who settled in Great Britain. We already have a *pur sang* New York Huguenot Society.

A new feature of *La Nouvelle Revue*, beginning with the number for April 15, will be a series of articles on contemporaneous literature by the well-known dramatic critic, M. Francisque Sarcey.

French antiquaries are protesting against the destruction of inscriptions and monuments in the African colonies. The ruins of Seriana, about eight miles from Constantine, have been used as a quarry, and many inscriptions not yet copied have disappeared. North African history and ethnology are yet so extremely incomplete that this is very regrettable. Let the inscriptions once be authentically in print, and historical science might give up the stones for building purposes, though she would do it grudgingly.

When Dumas borrowed from biological science his famous comparison of the vibrio, all Paris was in a tremor. Sig. Papa has found an even more disagreeable comparison, which he has used in a sort of triangular duel that came about in this wise. Sig. Bartoli is writing a many-volumed history of Italian literature. In the fifth volume, which treats of Dante, he forgot to mention Sig. Imbriani as a distinguished Dante scholar. Imbriani's disciple, Sig. Amalfi, attacked Bartoli fiercely, and Papa in turn attacks Amalfi, calls him a literary Rabagas, and declares that "Amalfi would afford Dr. Koch a fine case of infection by the comma bacillus." It is a pity that the revival of learning in Italy has led, exactly as it did in the sixteenth century in Germany and Holland, to these literary ferocities, that give the lie to Colonel Newcome's favorite quotation from Horace.

More detailed accounts of Mr. Im Thurn's ascent of Mt. Roraima describe the summit as a plateau covered with piles of rocks of most extraordinary shapes, between which "were a few stretches of low vegetation entirely filled with plants of a character distinct from those seen elsewhere in Guiana." Many, indeed, "are of species hitherto unknown." "The only animal life on the top was a few small butterflies of a common type." It should be remembered, however, that Mr. Im Thurn remained but a few hours on the summit, making no extended exploration.

—In a recent issue of the Boston *Watchman*, it was asked who wrote certain lines beginning "With noiseless tread Death comes on man." The Rev. Dr. S. F. Smith volunteered the answer that the author was Charles Follen, of Harvard University, who perished at the burning of the steamer *Lexington*, in 1840. Follen, indeed, quoted the lines in a New York lecture, on the last day of his life, but he took them from Schiller. As the chant of the Brothers of Mercy, in "William Tell" (Act iv, scene 3), they are familiar to every tyro in German. They are usually quoted as translated by Carlyle in his 'Life of Schiller,' in 1825. As if to raise his blunder to a second or still higher power, Doctor Smith adds that "the words are a translation from an Ode of Horace." The truth is, that both the words and sentiment are as far removed from everything Horatian as was the hymnology of the mediæval Catholic Church.

—The similarity of the French character to the American in certain points has been often spoken of; a leading trait of likeness is the frequent practice of making liberal bequests and gifts for objects of public instruction. The numerous prizes dispensed by the French Institute, which are all the product of private bequests, the numerous *fonds*, both of books and of engravings, which have come into the Bibliothèque Nationale in the same way, as have also many paintings to the Louvre—are indications of a generous public spirit of which examples are not wanting, indeed, in England, but are, we think, less frequent, especially of late. Mr. Jones, to be sure, gave his £300,000 worth of pictures and furniture to South Kensington, and there have been other gifts of note, such as Lady Schreiber's china; but, on the other hand, the Duke of Marlborough's "Raphael," bought, one might almost say, with public funds, is sold to the nation for £70,000, and his library is dispersed to the ends of the earth. Part of the Earl of Ashburnham's MSS. cost the British Museum dear; the rest went to countries which have more liberal treasuries. It is the people who have their reputations to make who give; those whose names are already illustrious sell. There are some reasons in the condition of France for greater generosity toward public institutions of art and literature. The French law divides inheritance equally among the heirs. Collections are sure to be sent to auction on the death of the man who has spent his life in getting them together; even if they are divided among the heirs they have no longer size or unity, and generally the heirs prefer bank bills to canvases, books, and bibelots. The Rothschild library is one illustrious exception. Now no biblio- or pinako- or curio-maniac likes to think of the dispersion of the treasures that have cost him so much time, pains, and money to assemble; and if he is not obliged to provide sustenance for his children by selling them, he is tempted to seek glory for himself by giving them away. There is a fleeting fame, it may be, in a great sale, but in France there is glory with a promise of immortality in presenting one's art treasures to the Louvre and having them accepted. The body of *conservateurs* of that Museum are of universally recognized competency, and they do not accord a place on their walls or in their cabinets to the first comer. To have one's collections exhibited at the Louvre is like receiving the cross of the Legion of Honor; in some cases it is as good as being elected to the Academy. No wonder that every year there is a long list of donations, some of them, like the His de la Salle or the Coutan collection, of considerable extent and value.

—M. de Liesville, who died last February, is the latest example of a patriotic collector. He was less than fifty years old, but he had got together a most remarkable museum of arms, furniture, utensils, books, and engravings illustrating the Revolutionary period, which it is said it would be impossible to duplicate at any price. Inheriting an easy fortune, he came to Paris immediately after his graduation at the College of Pont-Levoy, and at once began the hunting of curios, which he kept up for more than twenty years in Paris and throughout the provinces. When he was satisfied that his collection was reasonably complete, he offered it to the state as a gift; but, after some negotiations, it was decided that the city of Paris should become its possessor and provide quarters for it in the Hôtel Carnavalet, where he became officially its *conservateur* and actually its augmenter. He was a very large man, of very mild manners, and his friends called him "the Gentle Giant." His writings, which were chiefly pamphlets, treated not only of art and archæology, but of agriculture and natural history. They are not what will keep his name alive, as he doubtless knew.

—A new rival of the *Rundschau* has made its appearance in Germany in the shape of a monthly review called *Berliner Monatshefte für Litteratur, Kritik und Theater*, which is, however, published at Minden, Westphalia (New York: Westermann). The editor is Heinrich Hart, who, with reference to Hieronymus Lorm's statement that "Germany has no literary public," expresses his determination to create such a public. The place of honor in the first number is, of course, assigned to the obbligato novelette, as usual in German magazines. No fewer than twelve pages are devoted to verse, including a Heinesque poem, "Die Begegnung," by Hamerling, characterized by an almost pictorial vividness of suggestion. The editor announces in the prospectus that much attention is to be given to the theatre, and there are accordingly special dramatic reports from the leading German cities, besides an article by the former intendant of the Stuttgart Royal Theatre, deploring the great deference still paid in Germany to Parisian plays when the country has an abundance of modern dramatists of her own, including Paul Heyse, Bauernfeld, Wilbrandt, Lindner, Paul Lindau, Wichert, Moser, Schönthan, L'Arronge, Anzengruber, Wildenbruch, etc. Eduard von Hartmann contributes an article on the attempts to equalize the sexes, with which he does not sympathize, as he considers the realization of such aims both undesirable and impossible. On account of the great influence which women exert over men by their

natural charms and passive coyness, he thinks it is absolutely necessary that men should enjoy certain prerogatives over women; otherwise a period of pure feminine rule would be inaugurated such as not history but only legend has heretofore known: "Instead of one vote, every woman would have two, unless the husband were willing to sacrifice domestic peace to his political convictions." "In all Catholic countries the victory of the clerical party would be assured permanently, ending in the gradual triumph of Jesuitic Popery over the whole globe." Hartmann even seems to doubt the advisability of employing women as teachers, owing to their lack of physical endurance, the lower wages paid them being neutralized by the necessity of pensioning them sooner. In this, even if his facts are correct, he leaves out of account the influence which habit, aided by hereditary transmission, may accomplish in strengthening the feminine nerves and brain. In an anonymous article Bismarck is soundly berated for his want of interest in German literature. The writer thinks this indifference is neatly illustrated in a letter Bismarck once wrote to his wife, bidding her send him a novel to read, without specifying the author or even the kind of novel. The humorous department seems to appeal most to his sympathies, and even here, we are told, Bismarck's taste does not rise above the *Kladderadatsch Kalender* and the *Fliegende Blätter*. The writer indignantly asks why it is that the Government spends 200,000 marks on an alleged Rubens, one and a-half millions on some old miniatures and drawings, several millions on excavations at Olympia and Tiryns, but not a mark on contemporary literature. The author should have waited another month before writing his article, for an item is at present going the rounds of the press which shows to what atrocious extremes this Governmental indifference to contemporary genius goes. A poet sent a long poem to a newspaper, but owing to some mishap the package was lost. The poet demanded indemnity at the rate per column he would have been paid by the newspaper he wrote for; but the Post-office Department insisted on paying for the lost manuscript by the kilogramme!

—For the fifth time M. Jules Claretie has gathered into an annual volume the chief of his weekly *chroniques* in the *Temps*, 'La Vie à Paris—1884' (Paris: Victor-Havard; New York: F. W. Christern). It is not inferior to its predecessors. It abounds in amusing anecdotes, like the saying of the young music-maniac who regretted that he had never heard Alboni: "But fortunately Rossini has just died, and she has promised to sing at his funeral" (p. 457). Those who remember the absurd offer of the *World* Employment Bureau to provide amusing guests for dull entertainments, and who recall the clever story suggested by it, "Passages from the Diary of a Social Wreck," contributed to *Harper's Magazine* and reprinted in Scribner's 'Stories by American Authors,' will be pleased to see that the same scheme has been suggested in Paris, and that M. Claretie foresees the same social complications which the author of the story set before us most humorously. He also solves an enigma which has puzzled many readers on this side of the Atlantic, by declaring authoritatively that the proper pronunciation of his name is Clarety and not Clarsy. To still another American idea we owe some further personal revelations by M. Claretie in the March number of *Le Livre*. He takes as his pretext for describing his library and his books ("Confidences à propos de ma bibliothèque") the circular addressed to him by an American physician, asking how long he worked daily, whether early or late, whether smoking or not, and using stimulants or not, etc. If our memory serves, a book was the result of these inquiries. So M. Claretie tells us how his copy for the *Temps* is written on green paper, of letter-sheet size, whereas his tales and dramas demand quarto sheets—green for the former, white for the latter. He has three *cabinets de travail* for his different kinds of literary composition. He generally works three hours a day, seldom four, and on rising in the morning—never at night. This takes no account of reading. M. Claretie's amiable if not very forcible countenance is among the illustrations which accompany this article.

—In the same number of *Le Livre* we find some interesting details, borrowed from the *Journal de Genève* of February 13, concerning Rousseau's sojourn in Venice (1743-44). He was then secretary of the French ambassador, M. de Montaigu, to whom he supplied literary style if not ideas. The Swiss Consul at Venice has lately had the curiosity to trace this connection from the archives, and has discovered the palace where Rousseau lodged, now occupied as a storehouse by Messrs. Juliani, master builders in wood. The young secretary reached Venice at the end of August, 1743, and left the city on August 22, 1744. A single autograph signature remains, attached to a passport for provisions intended for the Ambassador's household; but, among a crowd of documents written in his own hand, the whole of the memorandum to the Senate concerning a sailors' riot ("affaire Olivet"), as reported in the 'Confessions,' remains to justify Rousseau's truthfulness in this particular. In other respects the part he played in the embassy is thought to have been magnified, and the story of Véronèse and his two daughters the *danseuses* is pronounced apocryphal so far as Rousseau is concerned in it. Curiously enough, however, a parallel case with other names is found in the records. This seems to the investigator proof of falsification, but we are all familiar with freaks of memory that lead us to identify ourselves with past occurrences with which we were familiar if only by hearsay.

—That what is now the ambitious dream of Russian commanders—a descent upon India, in order to break the main prop, as they deem, of perfidious Albion's power—was also a scheme of Bonaparte's in the prime of his military career, is well known. It is, however, surprising to find how long he cherished the idea of rivalling the greatest adventure of Alexander the Great. A recently published letter to his librarian, M. Barbier, dictated by Napoleon at Bayonne, in July, 1808, and containing instructions for the composition of a travelling library, makes this occupation of his mind, amid enterprises in quarters most remote from the shores of the Indus, almost indubitably clear. The library was to include translations of the Bible, the best works of the Fathers, the Koran, mythology, ecclesiastical history; Homer, Lucan, Tasso, 'Télémaque,' the 'Henriade,' Corneille, Racine, and other poetry; select works of Voltaire, Rousseau, Fielding, Richardson, Le Sage, and other novelists; the principal writings of Machiavelli and Montesquieu, and a considerable number of special historical memoirs. The letter then goes on to say (we quote from an English translation): "The Emperor would also wish M. Barbier to prepare, in conjunction with one of the most eminent geographers of the day, a memoir upon all the campaigns which took place upon the Euphrates and against the Parthians, beginning with that of Crassus, down to the eighth century, including those of Antony, Trajan, Julian, etc., tracing upon maps of a suitable scale the route taken by each army, with the ancient and modern names of the countries and principal towns, geographical remarks about the territory, and an historical narrative of each expedition, taken from the original writers." The meditated campaign was thus to begin from a base conceded by Turkey, and proceed, like Alexander's onward march, through the northern provinces of Persia.

—The site of Gortyna, one of the most important cities of Crete in ancient days, has been long known and frequently visited. In 1857 M. Thenon found there a stone built into the walls of a mill, and succeeded in purchasing it for the Louvre. It was inscribed with archaic letters running alternately from right to left and left to right, as the ploughman goes, exhibiting the intermediate stage between the original Phœnician mode of writing and the later Greek. It contained some regulations touching the rights and property of adopted children. A larger fragment was found by Haussoullier in 1879, in the walls of a house near by, where it still remains. This was concerned with the disposal of the hand of a maiden heiress on the decease of the father. Both fragments came from the bed of a sluice that flowed from the mill. In July last the place was visited by Doctor Halbherr in the interests of the German Archæological Institute of Athens, who, on being informed that other inscriptions lay in the bed of the sluice, where it had been carried through and over an ancient wall, had the water turned off for two days, dug out the inscribed side of the wall, and copied four columns which were evidently the continuation and completion of the fragments known before. The inscribed wall extended still further to the right, but into a field whose owner would not give him permission to dig. Returning to Candia, he communicated his discovery to Dr. Ernst Fabricius, his collaborator, whose report last year upon the tunnel of Polycrates in Samos has made him well known to archæologists. He repaired to the spot and succeeded in prevailing upon the owner to allow a trench to be run as far as the inscription extended. It was found that it had been engraved on the inside of a heavy wall of grayish limestone, formed of squared blocks accurately fitted in archaic fashion without cement. The wall had been that of an apparently circular structure, connected with other substructions without. Eight columns of inscription, in addition to the four copied by Halbherr, came to light, in so remarkable a state of preservation that but a few of the letters, here and there, are missing. Each column consists of 53, 54, or 55 lines, covering four layers of stone in height (about five feet), and engraved without regard to the joints of the stone. The tops of the ninth, tenth, and twelfth columns are missing, but the inscription is otherwise complete, both the beginning and end being certainly found. As the letters in the first line of each column begin at the right and run toward the left, so the tablets read from the right in succession to the left. This is the inscription whose discovery was announced in No. 1019 of the *Nation*, where it was said to contain no less than 17,000 letters—which is not far from the fact. For length alone it is conspicuous among the memorials of antiquity, and in this particular among archaic Greek inscriptions there is nothing to compare with it.

—It probably belongs to the sixth century B. C., and the twelve tables may be compared with the famous twelve at Rome, except that the Cretan are wholly concerned with matters of private law—how cases are to be conducted; when and what fines are to be paid; regulations in case of divorce; what property the wife may take with her; marriage of a widow, and the status of her children and their property; disposition of her property if she die childless; action in relation to exposing a child; reciprocal rights of parents and children in the matter of property, sons receiving twice as much as daughters; mi-

nute directions as to the laws of succession to property, and most elaborate regulations for heiresses and their disposal in marriage, so that the estate shall remain in the family, as at Sparta. With the provisions relating to free persons are usually coupled something similar for slaves, of which there appear to be two classes—one householders, the other house-slaves—for whom the fines are usually smaller than those for freemen, but sometimes greater, according to the nature of the crime. Much has been written in ancient and modern days about the laws of Crete, from which those of the Peloponnesian Dorians have been supposed to originate, but nothing has come down to us so minute and specific, and so comprehensive, as this inscription. Its value to the historian and the student of ancient law is very great, while it leads the philologist into a field of clover such as he has not had in many a day. The language is of the harshest Cretan Doric, where, if euphony is laziness, laziness was not a habit. Words strange to our lexicons, and forms unseen in our grammars, are thickly strewn. Fortunately, the most of them become intelligible by derivation or analogy, and the completeness and length of the inscription tend to elucidate the remainder. In order to place it as soon as possible before scholars for their study, it has been published in the *Mittheilungen des deutschen archäologischen Institutes*, ix, fourth part, without comment. Comment, however, it needs, and it will be a fruitful source of monographs from various quarters.

PASTEUR.

Louis Pasteur. His Life and Labors. By his Son-in-law. Translated from the French by Lady Claud Hamilton. D. Appleton & Co. 1885.

THIS volume, in the original French, has for subtitle, "Histoire d'un Savant par un Ignorant," but it is not written for ignorant people. It presupposes, if not a knowledge of the interesting discoveries which it details, some familiarity with kindred subjects; and those who would seek simple entertainment will scarcely find it in these pages. But they are only technical, not abstruse; and through the barriers which these technicalities impose on the unscientific reader, glimpses may be obtained of wide regions important in their character—for it can scarcely be questioned that it is of importance to all of us to know the principal physical facts of our world. And however little we are adepts in science, it is almost impossible in reading such a book not to share in some degree the emotion with which one of Pasteur's scientific predecessors—an old man—exclaimed, on seeing the completely successful result of one of Pasteur's first entirely original experiments and discoveries: "My dear boy, I have loved science so well all my life that this makes my heart beat."

We are far removed from the days, fifty years ago, of which Mr. Mark Pattison writes in his 'Memoirs,' when "the great discoveries of the last half century in chemistry, physiology, etc., were not even known by report to any of us." The vast domain of physical science is now overrun by every newspaper and magazine, "journal," and "record" in the land, and we are in some danger of that mental disease spoken of by Kant (in a passage quoted by Mr. Pattison) which "arises from the growth in the nation of a class which has not thorough science, and yet is not totally ignorant; which has caught up notions on [out of ?] current literature, which make it think itself on the same level of knowledge with those who have laboriously studied the sciences." But this self-delusion does not necessarily follow the attempt to *apprehend*—even if one cannot *appreciate*—the large final results reached by those who "laboriously study the sciences"; and it is not an idle interest one may take in the volume before us, since M. Pasteur ranks very high among those who in our day have thrown such a light on a great number of physical facts as converts them from isolated phenomena into illustrations of law.

While his researches have been in wholly different directions from Mr. Darwin's, they are by no means wholly dissimilar in quality to those of his great confrère, and the chapter in this volume on Fermentations curiously reminds one of Mr. Darwin's volume on Earthworms, if only in proving the enormous part played by agencies of which we habitually take little note. One of these chapters shows us the steps by which Pasteur reached his great and now well-known discovery—a discovery of the most amazing expansiveness—that fermentations are due to the presence and action of microscopic organized living beings. Different fermentations are produced by different kinds of organisms. One of the fermentations (that of butyric acid) exhibits an entirely undreamed of peculiarity, in the extraordinary fact that the vibrios which produce it live and multiply without air. So that, as the famous chemist M. Dumas said one day to M. Pasteur, before the Academy of Sciences: "In these infinitely small organisms [*petits de la vie*] you have discovered a third kingdom—the kingdom to which those beings belong which, with all the prerogatives of animal life, do not require air for their existence, and find the heat necessary for them in the chemical decompositions which they set up around them."

Another of these little organisms, that which produces acetic fermentation, has such prodigious activity of life and multiplication that M. Pasteur gave expression in this manner to its powers—at the Academy of Sciences again: "I would undertake in a period of twenty-four hours to cover over with mycoderma aceti a surface of vinous liquid as extensive as the hall in which we are here assembled. I should only have to sow it the day before in almost invisibly small spots with newly-formed mycoderma aceti." We will here observe, in passing, that the English translation renders this last sentence inaccurately: "sow in it . . . almost invisible particles of," etc.; it is the smallness and variety of the *spots* ("petites *places* à peine visibles") which makes the wonder.

Of the magnitude of the operations of fermentation we are scarcely conscious except when we definitely bring to our minds that it is the cause of "the disappearance of the dead body and of the fallen plant, of the foaming of the must in the vintage cask, of the rising of dough, of the curdling of milk, of the putrefaction of blood, of the transformation of the heap of straw into manure, of the creation of soil out of dead leaves and plants."

The investigation of the cause of fermentations leads directly to the question of spontaneous generation. "M. L'Ignorant's" entertaining, superficial account of the history of this theory we must pass over. Suffice it to say, that down to 1858 learned believers in this theory and able defenders of it were not lacking; and when in that year M. Pasteur proposed to enter on the study of the problem, his principal scientific friends vainly endeavored to dissuade him from so foolish a task. But in 1860 the Academy of Sciences offered a prize for careful experiments which would throw new light on the question, and this prize Pasteur won by experiments already completed which drew from the permanent Secretary of the Academy of Sciences, M. Flourens, this assertion: "The experiments are decisive. . . . Those who still doubt have failed to grasp the question."

We must hasten on without entertaining our readers with the interesting accounts of the objects of M. Pasteur's travels, and the purposes of his feasts, his drinking-bouts, and the reports of his various triumphs before native and foreign "Commissions," and in International Congresses. His investigations differ from Darwin's in the immediately *practical* nature of many of them. He has frequently—notably in his studies of the "maladies" of wine and of silk-worms, and of the virulent diseases of horses, cows, and sheep—turned his attention to these points from other motives than those of strictly personal scientific interest; and the sacrifice of life which he made by such overlabors as brought on a paralysis in 1868, must have been amply rewarded by the widespread recognition of his patriotic services. The permanent results of these services—the fact, indeed, whether they are "services," is still under discussion among men of science. While some of them believe that he has conferred incalculable public benefits by placing large industries and departments of agriculture on the secure basis of scientific knowledge, others maintain that his processes open one door to dangers in shutting another, and would listen without enthusiasm to Huxley's assertion that "Pasteur's discoveries would suffice of themselves to cover the war indemnity of five milliards of francs paid to Germany by France." And there is equal difference of judgment with regard to his discoveries concerning human diseases, fevers—those of a contagious nature—cholera, hydrophobia, and other. It is maintained by many that it is by no means impossible that he has taken the first steps toward their complete extinction. But perhaps no stronger assertion is safe than that made by Tyndall in 1876, when he wrote to him, "For the first time in the history of science we are able to entertain the sure and certain hope that in relation to epidemic diseases, medicine will soon be delivered from empiricism and placed upon a real scientific basis. When this great day shall come, humanity will recognize that it is to you the greatest part of its gratitude is due."

Pasteur's experiments show not only that the cause of virulent diseases, as of fermentations, is a microscopic parasite, but that this living organism can be "cultivated" in the laboratory of the physicist, and can be used, under certain conditions brought about at the will of the cultivator, as a (more or less) complete protection from the malady which under other conditions it creates. The question raised on the part of the adversaries of Pasteur is not only whether the subsequent immunity from danger is complete, but whether it is not purchased by the loss of vital strength. Pasteur's discovery of these new "vaccinations" (as he has called them in honor of Jenner) amounts to this: if cowpox were to vanish from the world, our present preventive against smallpox would be lost; but under the great law Pasteur has revealed, disease henceforth may be fought with weapons from its own arsenal. It is to be regretted that the author of this volume has not dwelt more effectively on the necessity of using vivisection in obtaining this all-important knowledge. It is a curious indication of the interlocking of one investigation with another, that it was at the close of his 'Studies on *Beer*' that M. Pasteur wrote: "The etiology of contagious diseases is perhaps on the eve of having unexpected light thrown upon it"—words which are a striking confirmation of the judgment reached two hundred years earlier by the genius of Robert Boyle: "These phenomena [divers phenomena of diseases, as well fevers as others] will perhaps be never well understood without a thorough knowledge of the theory of fermentations."

We have already referred to Mr. Darwin's studies of earthworms. In Pasteur's investigations

concerning the etiology of the disease known as *charbon*, he, too, was brought face to face with these obscure workers, and he saw their work from a less welcome point of view than that of the great naturalist, discovering a part of it which Mr. Darwin seems to have overlooked. Pasteur became convinced that some portion of the spread of contagious diseases is due to the earthworm bringing to the surface the germs contained in buried bodies, which, in the form of dust on leaves and herbage, carries contagion to browsing animals. And, in this connection, M. Pasteur lately pointed out in the Academy of Medicine the possible malign influence of the soil on human maladies, and the possible danger from cemeteries. Is the earthworm to be our final and convincing argument for cremation?

It may be wished that this volume had not appeared during the life-time of M. Pasteur, and with his evident coöperation. But such a wish is too alien to the literary habits of our day for any vehement expression of it to be indulged in. French sentiment, even what may be called French folly, plays a certain part, but an insignificant one, in these pages; and those who are in the habit of reading the last page first, if they be fastidious, will receive an undue impression of tastelessness from the melodramatic scene-painting there. But fortunately the book, as a whole, is much more a sketch of the man's work than of the man himself; and the work is great work. The translation is fairly easy and agreeable (as good in style as the original deserves), and Mr. Tyndall's imprimatur should be sufficient assurance of its scientific accuracy.

CLARK'S SIGN LANGUAGE.

The Indian Sign Language, with brief explanatory notes of the gestures taught deaf-mutes in our institutions for their instruction, and a description of some of the peculiar laws, customs, myths, superstitions, ways of living, code of peace and war signals of our aborigines. By W. P. Clark, U. S. A. Philadelphia: L. R. Hamersly & Co. 1885. 8vo, pp. 443.

THE most noticeable point in Captain Clark's volume is that he makes no mention of the large amount of literature that has gathered around the subject of sign language in general, and more particularly that he acknowledges none of the work accomplished during the present century upon the sign language of the North American Indians. The most recent of that work, which comprehends and republishes all of the earlier, has been done by the Bureau of Ethnology of the Smithsonian Institution, and is the special production of Colonel Garrick Mallery, assisted by many collaborators. In 1880 Colonel Mallery published an 'Introduction to the Study of Indian Languages,' which was followed in the same year by a 'Collection of Gesture Signs and Signals of the North American Indians, with some Comparisons,' 329 pages quarto. This volume contained more than two thousand signs in alphabetic order, representing several hundred different ideas, the material being furnished by about forty special correspondents. A third paper by the same author, of 290 pages royal octavo, with 286 illustrations, entitled "Sign Language among the North American Indians Compared with that among Other Peoples and Deaf Mutes," appeared in the First Annual Report of the Bureau of Ethnology, issued in 1881. These works have been widely discussed with reference to their value in connection with theories of the origin of oral language, and, by another line of evolution, with ideographs, pictographs, and consequently with written language.

That Captain Clark has made no allusion to these publications, especially to the second or 'Collection,' is the more remarkable from the fact that the arrangement of his work, including minute details, is apparently copied from it. But no charge of plagiarism in the description of the individual signs rests upon him, as his mode of considering sign language—indeed, his fundamental conception of it—differs radically from that presented by the Bureau of Ethnology. He has substantially taken the ground that there was but one sign language among the North American Indians, and, furthermore, that there was, as a rule, but one sign, or combination of signs, to represent one object or conception. On the other hand, Colonel Mallery, in his several publications, has stated and shown by many examples that while there is one system of gesture speech among Indians, it is not to be regarded as one formal or absolute language; several groups, with their centres of origin, being indicated for signs that had become conventional, and indefinite variety and flexibility being postulated for true ideographic or self-interpreting signs.

The same difference of view between the two writers prevails with regard to the gesture signs of deaf-mutes, which are introduced by both of them in connection with the Indian signs. Captain Clark simply gives one deaf-mute sign: Colonel Mallery recognizes the fact that many of the particular signs of deaf-mutes in America not only differ from those used with the same signification in some countries of Europe, but also differ among the several institutions for deaf-mute instruction in the United States; and also that there is an entirely distinct class of signs, which may be called "natural deaf-mute signs," produced by the separate invention of mutes before instruction. These several classes of signs, and not one indefinite example, which might belong to any one of them, are given by him in comparison.

The third difference in the mode of treatment of the subject is, that the Bureau of Ethnology has presented copious comparisons of the gesture signs of antiquity, so far as preserved in literature and art, and of their modern use and signification in many remote parts of the world, including Italy, Turkey, Sicily, the Hawaiian, Fiji, and Gilbert Islands, Madagascar, Japan, and Australia. The gesture signs of all speaking men, and of deafmutes, are in this manner regarded as one system possessing great interest and importance; but by no means can any collection of them, whether comprehensive or limited, be usefully treated as a separate language. When the diverse signs are purely ideographic, they have been found to be intelligible to persons familiar with the principles of sign expression; but when, as is very common, they have become conventional, they cannot be understood without the aid of the context or without knowledge of the particular convention. The instances of diversity among Indian signs are so numerous that a vocabulary would be insufficient and misleading that should be confined to the presentation of a single sign for each of the several objects or ideas to be expressed, without adding variants giving the designations of the several groups using them. There being no single absolute language, each of the several forms of expression has an equal right to consideration, without which a vocabulary must either be limited to a single dialect or become a glossary of a jargon.

The present work is liable to this charge. There is no means of ascertaining whether the greater part of the signs printed are those of any distinct body or bodies of Indians, or indeed whether they have not all or most of them been subjected to Captain Clark's catalytic discretion. He frankly declared, in the number of the *United Service* for July, 1880, that the description of signs should be made according to a mean or average, which average of course is made by himself; and there is internal evidence that this course has been pursued in the volume. The signs, as described, have become his own signs, not the genuine signs of any Indians. According to the principles of sign-formation, he could and undoubtedly did use his signs to advantage, for he became distinguished as an expert sign-talker. But with this practical skill he has been unable to explain the principles of the system, just as many a fluent talker of English is unable to spell or parse, far less qualified to write a grammar and dictionary. His vocabulary, therefore, will not contribute to science until it has been analyzed by scholars experienced in this branch of study. Nor will it be of much value to travellers or other persons desirous to learn sign language for their personal use. Mere memorizing of his signs will not suffice when there are so many variants both in conception and execution which are left unmentioned. It is also doubtful if many students can memorize the signs as described, especially without the aid of illustrations.

Captain Clark gives in all honesty the signs which he has met, understood, and approved during an experience of six years. His work, as compared with that of the Bureau of Ethnology, illustrates the difference between the individual work of any one man, unprepared by special education for its undertaking, and the combined labor of many observers and students trained in the same methods, and directed to a common object. In all of the publications of the Bureau of Ethnology mentioned, in immediate connection with the description of a sign appears the tribe or tribes in which it is noticed, and the authority therefor, whether collaborator or pub lished work. Many of the collaborators have been directly engaged in the work for a longer time than claimed by Captain Clark for himself, and some of them have contributed the observations of a lifetime, made in regions in which Captain Clark had, according to his own account, spent but a few weeks or days, or which he had never visited.

Although in his vocabulary Captain Clark does not often recognize the diversities in Indian signs, which, as above explained, constitute a fundamental and interesting part of the system, he inconsistently acknowledges in his Introduction that some tribes have "had determined centres, if not of origin, certainly of perfection and propagation of gesture speech," and divides them into five groups as follows: I. Cheyenne, Arapaho. II. Mandan, Gros Ventre, Arikara. III. Crows. IV. Blackfeet. V. Kaiowa, Apache. These divisions, according to the views held at the Bureau of Ethnology, are not true groups, but the tribes mentioned are arranged into two. The first embraces the Arikara, Dakota, Mandan, Gros Ventre or Hidatsa, Blackfeet, Crows, and other tribes in Montana and Idaho. The second consists of the Arapaho, Cheyenne, Pani, Kaiowa, Caddo, Wichita, Apache of Indian Territory, and other tribes in the southwest as far as New Mexico, and possibly portions of Arizona. The other tribes not mentioned by Captain Clark are to be grouped as follows: Third, Pima, Yuma, Papago, Maricapa, Hualpai (Yuman), and the tribes of southern California. Fourth, Shoshoni, Banak, Pai-Uta of Pyramid Lake, and the tribes of northern Idaho and lower British Columbia, eastern Washington and Oregon. Fifth, Alaska: embracing the southern Innuit, Kenai (Athabaskan), and the Iakutat and Tshilkaat tribes of the Thlinkit or Koloshan stock. The gestures of Alaskan tribes present a marked difference from those of any of the southern tribes. Gestures are still understood by the Indians of British Columbia and northern parts of Vancouver's Island, where they prevailed extensively at one time. This region is

somewhat beyond the area in which the Chinook jargon is spoken, and in which it supplants the use of signs as a necessity for communication.

The parts of the volume which will be most interesting to the general reader are the accounts of laws, customs, myths, and superstitions, injected into various parts of it in connection with the signs mentioned. Few of these are new, and some of them are contradicted by writers and explorers in the field who have had more experience than the author. They will not now be criticised. The only one of them which it seems important to note is in direct connection with the sign language, where the author declares, under the head of "Woman," that even among the tribes that are thoroughly conversant with gesture speech, the women only possess a limited knowledge of it. This is distinctly denied by many observers, and a particularly interesting account was communicated by Disappearing Mist (a leading chief of the Iroquois now remaining in Canada), to the effect that in his younger days the women used the sign language among one another in the presence of the warriors of the tribe, in order not to disturb them by the noise of spoken words.

It is proper to end this notice with an expression of sorrow for the untimely death of Captain Clark, which suddenly occurred as his manuscript had been placed in the hands of the publisher. He was an accomplished, amiable, and industrious young officer, whose interest in contributing to the literature concerning the North American Indians was most commendable. The reasons for the imperfections of his work have been sufficiently indicated.

BOOKS ABOUT THE STAGE.

Macready as I Knew Him. By Lady Pollock. London: Remington & Co.; New York: Scribner & Welford. 8vo, pp. 141.

Henry Irving. By William Winter. George J. Coombes. 8vo, pp. 123.

William E. Burton, Actor, Author, and Manager. A Sketch of his Career, with Recollections of his Performances. By William L. Keese. G. P. Putnam's Sons. 8vo, pp. 230.

An Actor's Tour, or Seventy Thousand Miles with Shakespeare. By Daniel E. Bandmann. Edited by Bernard Gisby. Boston: Cupples, Upham & Co. 12mo, pp. 305.

L'Art de la Mise-en-Scène. Essai d'esthétique théâtrale. Par Becq de Fouquières. Paris: Charpentier; New York: F. W. Christern. 8vo, pp. xi,-285.

THE little book about Macready, in which Lady Pollock has gracefully recorded her recollections of him, is an admirable supplement to Macready's journals which Sir Frederick Pollock presented to the public about ten years ago. Lady Pollock did not make the actor's acquaintance until just as he was about to retire from the stage, and her reminiscences relate for the most part to his sayings and doings in private life. Thus, she records his opinions on his art as expressed from time to time in his table-talk. We are told (p. 30) that Macready thought little of Junius Brutus Booth—whom, however, he could have seen only at the beginning of his career, when Booth was crushed by the competition of Edmund Kean. Macready attended Coleridge's lectures on Shakspere, and they delighted him, although they were discursive. "He recalled a striking expression of Coleridge's in condemning passages of revolting horror as alien from true art; he said it was '*a descent from the heart to the stomach*'" (p. 23); and Macready then cited certain modern French plays as examples of this fault—Hugo's "Le Roi s'amuse" being one. He was wont to assert the great difficulty of reading plays aloud, and he doubted whether dramatic reading could ever be altogether satisfactory as an art. "No change of voice should ever be attempted: it misdirects the attention; only a change of tone, as a softer tone for the woman" (p. 26). Macready's example as a reader may, perhaps, be placed against his precept. Lady Pollock gives an excellent description of the way in which he read "Hamlet," and she praises especially "the supernatural character with which the ghost was invested. He neither growled nor droned nor dragged the time, but his tones seemed to come from another world. They were audible, quite audible; but they were without resonance" (p. 40). This unpretending monograph is full of bits of criticism as interesting as this and as stimulating to the student of the stage. To be noted also is the hitherto unprinted letter written to Macready by Alfred de Vigny, after the author of "Cinq-Mars" had been to see the English actor as *Richelieu.*

Mr. Winter's 'Henry Irving' is the last and the best of a long line of works on the same subject. It is handy in form and beautifully printed. The preface correctly declares it to be "a record of Henry Irving's professional career upon the New York stage and a study of his acting." The record is well-nigh perfect. It is full in its statements of fact, precise and accurate; abounding in dates, casts of plays, composition of companies, etc., and lacking only an index. The study of the acting—that is to say, the purely critical part of the work—is also excellent, though Mr. Winter's opinion of Mr. Irving's acting, of his histrionic faculty, of his artistic limitations, is not always our opinion. He has the good habit of giving a concrete example for his abstract dictum. In a volume so scrupulously prepared as this, it is not hypercriticism to point out two trifling mistakes: On p. 11, Mr. Winter tells us that the French original of "The Bells," the "Juif Polonais" of MM. Erckmann-Chatrian, was not intended for representation. We believe him to be misinformed on this point; at all events, the play certainly was acted at the Cluny Theatre not long before the English adaptation was produced at the Lyceum Theatre. The other error is a misprint only: On p. 43, the name of one of the French authors of the "Lyons Mail" is spelled "Sevaudin." It should be Siraudin.

Mr. Keese has written a pleasant and readable account of Burton's career as an actor and as a manager. As an actor, Burton was perhaps the last of the British low comedians who have been succeeded by the present finer, drier, more American actors of comic character. Burton was broad to the verge of vulgarity—and sometimes beyond it; and the more decorous theatre of our times would not tolerate the means of raising a loud laugh to which Burton descended not infrequently. But he was an actor of abundant and unctuous humor, and he had no need to lower himself to the level of the clown. It is as a manager that he had most influence on the American theatre. The house which he managed raised the level of the American stage, continued the best traditions of the old Park Theatre, and made the way straight for the elder Wallack, when his time came to found the famous theatre we now see in its decadence. Mr. Keese has performed his task with simplicity and taste. He has not omitted the list of parts performed by the actor—an indispensable appendage of all dramatic biographies; nor has he omitted a full and trustworthy index. He has had the aid of the surviving members of Burton's family; and we could have spared the reprinted description of the actor's library in favor of more anecdotes, or of more letters like the characteristic epistle written not long before the actor died, and given in full on pages 104-110. We had hoped, also, that Mr. Keese might be able to find among Mr. Burton's papers some further account of the relations between the comedian, when he was publishing the *Gentleman's Magazine* in Philadelphia, and Poe, when the latter was its editor. Mr. Woodberry has treated the quarrel at length in his new life of Poe (pp. 128-142), but we should have been glad of any other letters, if such there be, in the possession of Burton's family.

'An Actor's Tour' is one of the most needless and worthless books it has ever been our misfortune to read. "I celebrate myself," might be its motto; for it is an exhibition of complacent and ignorant egotism, disfigured by a most offensive snobbishness (see the references to Lord Lytton and Charles Reade, p. 182; to Mr. "Mowbry" [*sic*] Morris, p. 102; and to Mr. "Willy" [*sic*] Winter, p. 226). The sub-title, "Seventy Thousand Miles with Shakespeare," is an impertinence.

By *mise-en-scène* the French mean the stage-management of a play, the setting of it on the stage in all its details of "readings," "business," scenery, costumes, music, etc. It is on this important subject that M. Becq de Fouquières has written a treatise of indisputable value. He confesses in his preface his great indebtedness to M. Sarcey's weekly criticisms in the *Temps,* and the regular reader of that paper will find little here that is absolutely new. But the matter is perfectly assimilated and set forth in logical sequence from beginning to end. His argument is too compact to be summarized in the space at our command. We can do no more than to recommend the book most cordially to all who are interested in the stage, and desire some insight into the principles which should govern acting, costumes, and scenery. Incidentally, M. de Fouquières is led to join issue with the new naturalistic school which wishes to substitute the exact imitation of nature for the artistic suggestion of nature—the sole desirable or possible thing. M. de Fouquières, of course, is a Frenchman of the straitest sect, and his examples are chosen almost entirely from the French drama.

The Native Religions of Mexico and Peru. By Albert Réville, D.D., Professor of the Science of Religions at the Collège de France. [Hibbert Lectures, 1884.] English translation by Philip H. Wicksteed, M.A. Charles Scribner's Sons.

MR. WICKSTEED has made an admirable translation of these six lectures, which were originally delivered in French, and the author himself has said some excellent things, which are very true. Thus, on page 41, when he qualifies the Mexican worship-mound as being "essentially a gigantic altar, of pyramidal form, built in several stages, contracting as they approached the summit," he has given perhaps the very best definition of it ever published. Again, touching upon the delicate questions of relationship between the "religions and civilization" of aboriginal America and those of the Old World, he very truly remarks (p. 200): "The fact is, that all these attempts rest on the arbitrary selection of some few traits of resemblance, on which exclusive stress is laid, to the neglect of still more characteristic differences." On p. 205, he announces the great truth that "there is not the smallest trace of an earlier monotheism preceding the polytheism of either the one or the other nation [Mexico and Peru]." We have not space to dwell on M. Réville's summary of the characteristics of this polytheism. Suffice it to say that it is excellent, and that he has unconsciously stated the "true inwardness" of Indian religion in general.

It is almost singular that he should have succeeded so well, for the bulk of his work is far from deserving the praise which we are happy to bestow upon the foregoing points. M. Réville has, in the main, not only followed the

inflated and exaggerated views held of aboriginal American culture by many authors like Prescott and Bancroft—he even improves upon the latter. This leads him, in his descriptions of that culture, to errors so numerous that we refrain from specifying more than one, which will serve amply to explain the rest. We allude to the first lecture (p. 17):

"To begin with, we treat these two districts [Central America and Mexico] as a single whole, because the Europeans found them inhabited by a race which was divided, it is true, into several varieties, but was distinguished clearly from the red-skins in the north, and still more from the Eskimos, and alone of the native races of North America had proved itself capable of rising by its own strength to a veritable civilization."

The disadvantage under which M. Réville labors is one which is common to the majority of writers on American aboriginal topics. He does not know the American aboriginal from personal observation and experience, and therefore makes of him an imaginary being. He is not conscious of the fact that, at the time of the conquest (as since—with very few modern exceptions in the United States, and excepting also the Indians trained and educated by the Spaniards and the Catholic Church), no Indian was permanently sedentary, none absolutely erratic. The permanency of residence is due not so much to a higher development as to natural causes. M. Réville also forgets that the "Age of Stone" prevailed equally over the whole continent, in Mexico as well as among the tribes of Brazil; that the so-called bronze is an accidental compound; that the "savages" of New York used copper as well as his "civilized natives" of Peru, whereas the sedentary house-builders of New Mexico had none—in short, that there is only a gradual difference, and no fundamental distinction. So-called "wild tribes" are even, in certain arts, further advanced than the ancient Mexicans and Peruvians.

Where there is such a lack of ethnological knowledge and experience on the subject, it can hardly be expected that the use made of the literary material accumulated since the Columbian period would be more than the usual copying and quoting. M. Réville has used a fair array of authorities, but he has done so without applying to them the judicious criticism required of an historian. His book, in short, is one of the many which have contributed to discredit American aboriginal history and archæology before the modern public, through the constant clash and jar of their views with actual facts. It is much to be regretted that such should be the case. As we have before stated, some of the statements and assertions, rather than conclusions, of M. Réville are surprisingly true, but they are not in harmony with the main picture as presented by him. This has prevented him from reaching a just appreciation of causes, and therefore from making his book a valuable addition to history as well as to the "Science of Religions" itself.

The Flemish School of Painting. By Prof. A. G. Wauters. Translated by Mrs. Henry Rossel. [South Kensington Series.] Cassell & Co.

THE growth of the art of Flanders is too closely involved with that of Holland, whether considered in reference to its inner springs or its school characteristics, to permit the two to be separated in any philosophical study. Considered in reference to the great developments of the art of painting throughout Europe, the Dutch and Flemish schools must count as one, like the Umbrian and Florentine, in view of the fact that they obey the same general law and spring from the same inspiration. The distinguishing trait which decides the position of the school of the Low Countries, taken as a whole, is its realism, both in form and color. While the Italian school slowly evolved from the Byzantine, based on the antique tradition of the ideal, the Dutch, alien in history as in temperament to this poetic descent, took root and grew vigorously and rapidly from the beginning in direct inspiration of nature; and from this spring the art of Rembrandt and that of Rubens are equally derived. Political and religious causes separated the race into two nations and differentiated the art, but the political history is not more closely entangled than the artistic, and it is as difficult to give a clear conception of the earliest art of one without reference to the other, as it would be to write the history of Flanders and make no reference to Holland. It is only when the French Renaissance invaded the Low Countries that Belgium, having already ethnologically become in part French, began to develop an art which separates itself completely from the art of Holland; and this influence has so increased that to-day the art of Belgium is less Flemish than Gallic—the painters are more Walloon than the people.

The history of Professor Wauters, by slighting these relations, neglects an element essential to the elucidation of his subject. His patriotic pride is greater than his love of art. No one can belittle the honor due the Van Eycks, or obscure the fact that they were the prime movers in an artistic revolution; but it would have been more worthy an historian to have shown in their proper place the common sources of the ancestry of Rubens and Rembrandt, Teniers and Van Dyck, than to have dismissed the subject with a single paragraph of seventeen short lines:

"When speaking of Van Eyck and his sojourn at the Hague in 1422-24, we have suggested the probability of the direct influence which he, the head of the school of Bruges, *must have exercised* on the Dutch school then in its birth. Indeed, it is toward that period that we have the first record of Albert Van Ouwater, the earliest known painter of the northern provinces. Haarlem was the scene of the labors of Gérard de Saint Jean (1450), his pupil; the two panels which are attributed to this artist at the Imperial Museum of Vienna denote the influence exercised by the Flemish school of the end of the fifteenth century."

If, then, Van Ouwater was already known as painter when Van Eyck went to the Hague, there must be an artistic genealogy antedating that visit. What this was, and how far both painters were the result of a common tendency, as were the school of Cimabue and the contemporary school of Sienna, was worth the historian's study. He does, indeed, later in his work, admit practically the identity of the schools in two sentences (p. 178): "In its origin, the history of Dutch painting can hardly be separated from that of Flemish painting. Both sought inspiration from the same sources, and were guided by the same master; the result was that in the fifteenth century the seventeen provinces produced exactly the same art." Why not, then, have given us to understand clearly the common parentage and common course?

But Professor Wauters is rather a eulogist than an historian, and his eulogy runs rather into poetry than plain criticism. In speaking of Rubens he says:

"He is everywhere, and everywhere abundantly represented. He is everywhere, and everywhere triumphant. No matter what pictures surround him, the effect is invariable: those which resemble his own are eclipsed, those that would oppose him are silenced. Wherever he is, he makes you feel his presence; he stands alone, and at all times occupies the first place. . . . The same ardent brush which depicted the struggles of lions and Titans, painted garlands of cherubs bright with silver and pearl; he exposes all the coarseness of a village fair, and without an effort rises to the most sublime heights of art with Homer, Dante, Michael Angelo, and Shakespeare. . . . His weak points themselves proclaim his genius and his might; they are but the consequence of his rarest gifts, of his sumptuous coloring, his masterly dimensions, his astounding facility, his eloquence, his vitality. How gorgeous his coloring! How admirably all those tints of red, gold, blue, vermillion are blended! How they enhance the beauty of his pearly carnations! How powerful and stirring their harmony! What an irresistible hold they have on our senses! We are bewildered, delighted, bewitched, entranced! . . . His touch is masterly; his brush flies and scatters sparks on marble columns, breastplates, unfurled standards, brocaded silks, distant verdure, golden hair, and the luxurious show of his rosy-tinted carnations."

There are nearly four pages of this frantic effulgence of the pen—to invent a phrase that shall fitly characterize the rhapsody which Professor Wauters imagines to be criticism. Of course, after this, any other commendation is tame; and of Leys, the most remarkable painter of the modern Belgian (no longer Flemish) school, this modest sentence is the highest note of praise: "We do not fear to prophesy that some of the figures in the four large panels at the Hôtel de Ville will rank among the finest creations of the nineteenth century." In common with many other authorities, he errs, we believe, in making Alma-Tadema a pupil of Leys. There is good authority for saying that Alma-Tadema never was in the studio of Leys, although an admirer and follower of the great Belgian master.

The illustrations are copious, but, in common with all those in this series that we have thus far seen, coarse and ineffective. The addition of the monograms of the painters is a tribute to a branch of erudition once of some value, but which, now that pictures as well as monograms are thoroughly and systematically counterfeited, has no longer any meaning.

Italy, from the Fall of Napoleon I. in 1815 to the death of Victor Emmanuel in 1878. By John Webb Probyn. Cassell & Co. 1 vol., 8vo.

THE period marked in the title of this book is one of the most marvellous in the history of Italy, and will hereafter vie in romance and legend with the most heroic periods of Greece and Rome. Any one who was a witness of the state of Italy from 1815 to 1848, when Lamartine called it the "the land of the dead," and Metternich "a geographical expression," must look upon the change that took place from 1848 to 1870 as something bordering on the miraculous and supernatural.

On the fall of the Empire of Napoleon the First, Italy was cut up into eight principalities, by the so-called Holy Alliance of Kings, and handed over, bound hand and foot, to Austria and a number of kings and dukes, her dependants and minions, including the Pope, who were compelled to obey slavishly her slightest wish in the government of their small territories. Whatever movement for liberty took place in any of these States, if not suppressed at once by the local petty despots, was crushed by the overwhelming military force of Austria, who would march her armies from her formidable quadrilateral of Lombardy into any of their territories as a landlord among his tenants, sometimes without even the formality of asking leave.

The Revolution of 1848, begun in Sicily against the Bourbons of Naples and which then spread over Italy, took Europe by surprise; France followed in its wake, and then part of Germany and Hungary. All the small Italian despots, taken suddenly aback, pretended to yield to the Liberal movement, but abided their time for repression; except one, Charles Albert of Savoy. Something similar happened to Germany and Austria. But no sooner was there a Napoleon at the head of the French Government, though a nominal republic, than the old despotic powers combined together to smother the Liberal movement—Russia in Hungary, Prussia in Germany, Austria, France, and even Spain in Italy. In

less than two years, Austria, which had lost Milan and Venice, recovered them by force of arms, and occupied Modena, Tuscany, Parma, and Bologna, replacing the dukes on their thrones, but with Austrian garrisons. The King of Naples, the famous Bomba, crushed liberty by treachery and brute force in Naples and Sicily; and the French attacked Rome, and by force of arms restored the Pope to his throne, while Spain sent a division that occupied Ancona for the same purpose. Thus, nearly two-thirds of Italy was occupied by the Austrian armies, the Roman State by the French and Spanish; and Naples and Sicily groaned under the iron rule of the Bourbon of Naples, with his ten regiments of Swiss and Bavarian mercenaries.

Only in the northern corner, a little kingdom of four million souls held aloft a broken sword and a tattered flag, which Victor Emmanuel of Savoy had gathered on a bloody field of battle after a crushing defeat at Novara, March 23, 1849. His father, Charles Albert, who had taken the people's side against Austria, had been defeated on that day and abdicated, and Victor Emmanuel gathered up the broken sword and tattered flag, and assumed the task of liberating Italy, slowly but boldly, gathering strength from all sources—from the Liberal element at home, of whatever shade, from alliances abroad; gradually regaining what Piedmont had lost. Then he began with Cavour that system of Liberal reforms that attracted all the Italian patriots to the constitutional government of Piedmont and its young King. The alliance with France and England during the Crimean war opened the way to the recognition of the Italian question before Europe, 1855-'56. The marriage of Princess Clotilde with Prince Napoleon secured the alliance of France for the war of 1859, which dispossessed Austria of Lombardy, and caused the revolution of Tuscany, Parma, Modena, and Bologna, who annexed themselves to Piedmont. The year after, Garibaldi descended upon Sicily with his one thousand patriots, and overturned the throne of the last offshoot of the Bourbons of Naples, and bestowed a kingdom of eight millions on Victor Emmanuel, who was then proclaimed King of Italy. There remained only two states under foreign bayonets, Venice and Rome. The alliance with Prussia in 1866 opened the quadrilateral and the City of the Lagoons to the Italians; and the defeat of Sedan, causing France to recall her army of occupation from Rome, opened the gates of the Eternal City, and accomplished the unity of Italy in 1870. Eight years after, Victor Emmanuel died in the very capital of the new kingdom which he had liberated from foreign and domestic tyranny.

Mr. Probyn says in the preface to his book: "The purpose of this volume is to give a concise account of the chief causes and events which have transformed Italy from a divided into a united country. A detailed history of this important epoch would fill volumes, and will not be written for some time to come." Mr. Probyn has kept his word and has given us that and nothing more. But the subject is so pregnant with matter that his work, though accurate as to dates and the chronological course of events, is meagre in the extreme, and leaves the reader totally unsatisfied. Moreover, the "chief causes" are so superficially and lightly touched upon that they appear utterly inadequate to the events which they produced. We commend the book, therefore, simply as an epitome of the striking events that took place in Italy during the period under review.

Lessons on Practical Subjects for Grammar-School Children. By S. F. and C. W. F. Boston: Little, Brown & Co.

OPINIONS differ as to the wisdom of arranging the college curriculum with direct reference to the demands of every-day life, but in the case of the public schools the question is hardly an open one. The vast majority of their scholars must finish their education and go to work at about the age when preparation for college is begun, and it is essential that what knowledge they get should be immediately available. Holding this view, the authors of the little book above named have presented some of the elementary principles and most important facts of our economy in such a way as to be comprehensible to the youngest scholars. An outline is given of the subjects of money, bonds, taxation, corporations, and savings-banks, with much sensible advice upon such matters as strikes, habits of saving, etc., interspersed. The style of the book is extremely simple and clear, and although human beings generally insist upon being taught by experience in financial matters, yet if they have once listened to these plain lessons they may buy their experience cheaper and profit by it sooner.

We incline to think that it would have been better to select examples from actual history in many cases where imaginary instances have been taken. Thus, to illustrate the necessity of the introduction of money by supposed dealings between antediluvian tailors and bakers is to be guilty of an anachronism—although the responsibility for this illustration may be thrown upon Adam Smith—and it is certainly undesirable to give the impression, even to grammar-school children, that iron was generally employed as money before the other metals. We trust that prejudice and official regulations will not hinder the fair trial of this book in some of our schools. It can hardly fail to interest both teachers and pupils, and although the authors disclaim the intention of burdening scholars with another separate study, we should be glad to see their intention defeated. These matters are of enough importance to crowd grammar and geography into the background.

Labrador. A Sketch of its Peoples, its Industries, and its Natural History. By Winfrid Alden Stearns. Boston: Lee & Shepard. 1884. 12mo, pp. 295.

THIS is an excellent account of southern Labrador by one who has made three voyages to the coast and wintered upon it. Indeed, Mr. Stearns's relation of his winter experience at Bonne Espérance, near the southern entrance to the Strait of Belle-Isle, is the most original and valuable part of these sketches. At the same time the book is the only good guide to the coast from the Mingan Islands to the end of the Straits of Belle-Isle that we possess. So far as regards this region we can recommend it for its careful description of the better-known harbors and points of interest as far north as Château Bay opposite Belle-Isle and Newfoundland. The account of Mr. Stearns's third voyage, in which he went a few miles beyond Square Island, situated in about lat. 52° 30′ N., a little north of Cape St. Lewis, is very brief, and contains little that is noteworthy or novel.

The sketches of a Labrador home; of the average Labradorian, so hardy, rugged, and shiftless; of the winter scenes and amusements; the autumnal moving from the summer house on the shore to the more sheltered winter house up the bays; of the summer fishing; of winter and summer sports; and of the sudden breaking up of the ice and the incoming of spring at the beginning of June—all these characteristics of Labrador life and nature are faithfully sketched. We should have liked some new information regarding the Eskimo occupation of southern Labrador, although on p. 231 a mound containing five Eskimo graves is briefly described; and more about the ornithology and game birds, as well as the geological features of this interesting coast; but as it is, the book will prove indispensable to any one bound to "the Labrador" for a summer's cruise.

Some mistakes could have been avoided, such as "Dutch" for German, in referring to the German Moravians. On the last page Okkak is spelled Okkuk; Cape Chudleigh should read Cape Chidley uniformly. These are the most noticeable errors in what is a timely picture of a little-known region, a health resort for the summer which should attract more visitors to the coast, though the trip is always a stormy one, with dangers from fog and ice.

"*Boots and Saddles*"; or, Life in Dakota with General Custer. By Elizabeth B. Custer. Harper & Brothers. 1885.

MRS. CUSTER has appropriately taken for her title the military "call" that puts the cavalry in motion, for her book is a record of the nomadic life the ladies lead who follow our mounted regiments, constantly on the alert, and often on the march. Even peace gives little rest to officers, troopers, or wives. She has undertaken "to give a glimpse to civilians of garrison and camp life," as a general answer to the many questions constantly asked about the details of an existence that has so little in common with ordinary pursuits. That she has truthfully presented the domestic life of an army family, there is abundant internal evidence. Moreover, she has done it graphically. This refinement in the desert, these privations that become pleasure on account of those who share them, and the constant undercurrent of excitement that any day may ripple the surface and change the course of life, are enough to fill the spectator with surprise and to warm the participant's blood in healthy circulation. The book is breezy with the open air and cheery with horse and hound. It touches lightly the inevitable annoyances, and, while recounting incidents whose horror is fully measured, it passes on, without unnecessary loitering, to show the brighter side. Mrs. Custer has written a most vivid account of army life, and many of her experiences must be daily repeating themselves to the devoted wives now on the military frontier. She has given us a very pleasant glimpse into the inner courts of the sodality of the spur. But she has less to tell about lieutenants than lieutenant-colonels; and the fair girls whom yellow plumes and prancing horses attract westward, should read this book and count the cost of their prospective sacrifices before speaking the irrevocable words. Socially, all grades are equal, but subalterns and commanding officers with similar human desires have, from the exigencies of rank, very dissimilar facilities for their gratification.

Incorporated with these pages are two memorials: one of General Custer as he appeared to his wife, and one (entirely unconscious) of a fascinating and most loyal wife, always tender and true, whose constant thought was the pleasure and honor of him she loved. To those who have measured General Custer from the point of a man's observation, this newer view will be of great interest; and all who admire a guileless heart will be carried away by this transparent record, which is an effectual antidote to certain fiction lately published to the disparagement of ladies whom the bugles rally. We may be thankful for what Mrs. Custer has given us, but she has not told all her experiences of flood and field, and we may hope for a new volume with notes of her preceding campaigns.

A Lady's Ride Across Spanish Honduras. By Maria Soltera. With Illustrations. Edinburgh: Blackwood. 1884.

MARIA "SOLTERA," an English governess, landed

at Amapala, a port on the Pacific coast of Honduras. Tempted by a glowing pamphlet describing the advantages of a settlement in San Pedro Sula, a town about 200 miles to the north, she was on her way thither, alone, as her pseudonym indicates, to take charge of a school which was being erected for the colonists' children. Provided with a hammock, a mosquito net, a *mozo* or boy, three mules, and a muleteer, she set out on her hard, though not dangerous journey. After various mishaps, none of them serious, she reached San Pedro only to find that she had been grossly deceived. The colonists had nearly all left, and there was no school nor immediate prospect of one. There was nothing to be done then but to continue her ride to a port on the northern seaboard, whence she took passage in a steamer for New Orleans. Her account of her adventures is lively and entertaining, and she impresses one as having tact and courage not surpassed even by Miss Bird. She is enthusiastic in her praises of the magnificence of the mountain scenery of Honduras, and dwells gratefully on the uniform kindness with which she was treated by the people. Of the Indian women whom she met she draws a most attractive picture. There seems to be little enterprise among the natives, the business of the various places through which she passed being mostly in the hands of foreigners. Even the Alcalde of a town in the interior was a Scotchman by birth, and in another a Frenchman. The food of the people consists principally of *tortillas* (Indian cakes), plaintains, and occasionally fowls and dried venison. Their property is mainly in cattle, of which she saw many fine herds. At one village they were holding their annual *fiesta*, the chief features of which were a bull chase (the bull belonging to the captor) and the graceful *ronda* of the muleteers, so called "because the dancers are surrounded by their mules, which are all decked with their gayest trappings; some of these bearing panniers, sometimes filled with flowers, sometimes filled with babies." The Hondurians spoke very bitterly of the railway built by the English some years ago from Puerto Cortez on the Atlantic coast about a hundred miles into the interior. Many were led to invest in it and were utterly ruined by its failure, which was caused, they say, "by British mismanagement and not by ours." The greater part is unserviceable, and on that which is in working order trains run at intervals of a few days. The people are now looking eagerly to the United States for help. "We are hoping now for brighter days," said a cheery Spanish landlady. "America is bringing in both labor and money." A contract for the navigation of the Ulua, granted not long ago to two Americans, gives some ground for this hope.

Weird Tales. By R. T. W. Hoffmann. A new translation by J. T. Bealby. Charles Scribner's Sons.

THE disadvantages to which writers of short stories, as a class, are subject, disappear with authors whose forte is the description of the abnormal and grotesque. Poe is an instance of the popularity which such writers may enjoy for more than one generation; and so, perhaps, in a greater degree, is his prototype Hoffmann, whose tales have been translated, some of them, hundreds of times. Carlyle wrote, in 1827, that Hoffmann belonged to that class of "vivid and gifted literary men whose genius, never cultured or elaborated into purity, finds loud and sudden, rather than judicious or permanent, admiration." As a prophecy, this characterization is a failure; but there can be no doubt of its soundness as criticism. The present collection contains only twelve out of a total of fifty-two tales—the same number and, generally, the same stories as were embraced in the Boston edition of 1855. As regards the English, the new translation is commonplace, but has the advantage of being made from the original instead of through the French. But the memoir of the author, which fills sixty-seven pages, appears to have been purely perfunctory, and is very shabby reading after Carlyle's admirable, though brief, article.

Poems, Plays, and Miscellaneous Essays of Charles Lamb. With introduction and notes by Alfred Ainger. London: Macmillan & Co.; New York: A. C. Armstrong & Son. 8vo, pp. xxiii,-408.

To Mr. Ainger we are already indebted for the sympathetic monograph on Lamb in Mr. Morley's "English Men of Letters" series, and for admirable editions of the 'Tales from Shakspere' and the 'Essays of Elia.' In the present volume he has collected all of Lamb's other prose and verse of which the author himself or his literary executors authorized the collection; so that the possessor of this volume and of Mr. Ainger's edition of the 'Essays' has Lamb's complete works, so far, at least, as Lamb himself knew them. Mr. Ainger rightly holds that an author's wishes have some title to an editor's regard; and although he does not think that the world will willingly let die even the smaller scraps that fell from Lamb's table, he prefers to gather up these minor odds and ends in a volume apart and distinct from the regular works. After he has edited this supplemental volume of Eliana, we understand that he intends to prepare a complete collection of Lamb's letters—a service for which all lovers of Lamb will be duly grateful to him, seeing that none of the existing collections is either accurate or complete. In the notes to this, as to the preceding volume, Mr. Ainger has rescued from fugitive MSS. more than one of Lamb's epistles as characteristic as anything in the 'Essays of Elia.' Our editor's notes are models. In that to Lamb's paper on Wither, a poet whom he affected greatly, Mr. Ainger tells us that the paper was originally a series of marginal notes on a copy of Wither's 'Philarete,' now in the possession of Mr. Swinburne. The note to "Mr. H." sets forth the true reason of its failure in London, and records its success in the United States. In the introduction is given a poem of Lamb's hitherto unprinted. It only remains to say that the poems have been arranged for the first time in strict chronological order, and that the text, everywhere, has been carefully revised.

BOOKS OF THE WEEK.

Badeau, Gen. A. Military History of Ulysses S. Grant. From April, 1861, to April, 1865. In 3 vols. D. Appleton & Co.
Barrows, Isabel C. Proceedings of the National Conference of Charities and Correction, Eleventh Annual Session, St. Louis, 1884. Boston: G. H. Ellis.
Behrens, Dr. J. W. The Microscope in Botany. Illustrated. Boston: S. E. Cassino & Co.
Buckley, Dr. J. M. Oats or Wild Oats? Common-Sense for Young Men. Harper & Brothers.
Cox, Sir G. W. Lives of Greek Statesmen. Solon to Themistocles. Harper & Brothers.

New Books.

MILITARY MANNERS AND Customs. By J. A. Farrer, author of 'Primitive Manners and Customs.' 12mo, $1.50.

A most interesting, instructive, and scholarly work.

HOW TO DRAIN A HOUSE. Practical Information for Householders. By Col. Geo. E. Waring, jr., M. Inst. C. E., etc. 16mo, $1.25.

"A volume which should be in the hands of every man who owns a house or is about to build a house. . . . He treats the subject entirely from the view of the individual householder who has got so far that he knows bad drainage to be an enemy to the well-being of his household. . . . It is well worth the while of every householder to read what he has here set down from cover to cover."—*Boston Transcript.*

TAINE'S FRENCH REVOLUTION. Vol. III. By H. A. Taine, D.C.L., Oxon, author of 'A History of English Literature,' etc. Translated by John Durand. Vol. 3. $2.50. The complete work, 3 vols., $7.50.

AT THE SIGN OF THE LYRE. Poems by Austin Dobson Square 12mo. Uniform with "Vignettes in Rhyme." $2.00.

HENRY HOLT & CO., N. Y.

Prof. J. W. CHURCHILL, of Andover, says of Prof. E. N. KIRBY'S

Vocal and Action Language, Culture and Expression:

"Teachers and students of the art of public speaking, in any of its forms, will be benefited by a liberal use of this practical hand book."

Mailed, postpaid, on receipt of price, $1.25.

Students of elocution should consult our *Special* list of books adapted to their necessities, many of which have already attained high rank as class-books in schools, and in the hands of live teachers have been productive of good results. *Sent free.*

LEE & SHEPARD,
Publishers, Boston.

CATALOGUE for PRIVATE LIBRARY.—A blank-book of 240 pp., arranged with columns for entering Title, Author, Publisher, etc. Indexed through, alphabetically. Bound in boards, with leather back and corners; size, 8½ x 7¼. Price $2 50, post-paid. Sent on receipt of price, by Publisher of the *Nation.*

CRITICAL AND SOCIAL ESSAYS.—Reprinted from the *Nation*, and in some measure supplying the place of the first two volumes of the paper, now very scarce. Cloth, 12mo, price $1.50. Sent, post-paid, on receipt of price.
HENRY HOLT & CO., New York.

Goose-Quill Papers.

By Louise Imogen Guiney, author of 'Songs at the Start.

16mo, neat cloth, gilt top, price $1.00.

A collection of Essays, of which some of the appetizing titles are: "On the Good Repute of an Apple"; "An Open Letter to the Moon"; "On Teaching One's Grandmother How to Suck Eggs"; "Old Haunts"; "Vagabondiana"; "Hospitalities"; "Sweetheart"; "On the Beauty of Idleness"; "De Mosquitone."

Says the *Literary World:* "Miss Guiney is a native of Boston, a daughter of the late General Guiney. Her friends recognize in her intellectual character many of her father's brilliant traits. Her poetic gifts and acquirements are rare, while her insight and power of expression in prose are equalled by very few living writers."

NEW AND CHEAP EDITIONS OF Classic Works, printed in the best manner on good paper, and warranted not to incur an oculist's bill in the reading. Price 50 cents each.

THE MAN WITHOUT A COUNTRY, and Other Tales. By Edward E. Hale.

TREASURE ISLAND: a Story of Pirates and the Spanish Main. By R. L. Stevenson.

MY PRISONS Memoirs of Silvio Pellico, with an Introduction by Epes Sargent.

MIREIO: a Pastoral Romance in Rhyme. From the French of 'Mistral,' by Harriet W. Preston.

OUR AUTUMN HOLIDAY ON FRENCH Rivers. By J. L. Molloy.

PINK AND WHITE TYRANNY: a Society Novel. By Harriet Beecher Stowe.

*** Sold by all booksellers. Mailed, postpaid, by the publishers,

ROBERTS BROTHERS,
BOSTON.

The Nation.

NEW YORK, THURSDAY, MAY 7, 1885.

The Week.

THERE seems to be an impression afloat at the South that certain Mugwumps at the North are opposing vigorously, or are prepared to oppose vigorously, the clearing out of the Republican officials at the South, and especially in Virginia, by the present Administration. The Atlanta *Constitution* has a long article in a recent issue, intended to convince the said Mugwumps of the unsoundness of their position. Our answer is that we know of no such Mugwumps in this region. In our own opinion, often expressed, something like "a clean sweep" at the South, beginning with Virginia, is not only to be desired, but is the duty of the Administration. The Federal service in that quarter is and has been for twenty years utterly corrupt and corrupting, the Mahone part of it being the worst of all. To purge it thoroughly is one of the things for which President Cleveland was elected.

The Lawton incident has developed one feature which is both interesting and encouraging. Lawton is a Southern man, whose eligibility for Federal office was passed upon and decided affirmatively by an Attorney-General from the South. It was natural to suppose that the South would unquestioningly sustain Mr. Garland's decision, and Northern people expected to find his action heartily endorsed in that part of the country. Yet the fact is that, from the moment when the question was first raised, the stoutest advocate in the press of the view that the Fourteenth Amendment was an effectual bar to Lawton's appointment has been that prominent Southern Democratic journal, the Richmond (Va.) *Dispatch*, which now expresses its regret that the new Attorney-General "has gone astray from the right path of constitutional construction." Moreover, the *Dispatch* has not been alone among Southern newspapers in taking this position, which has been maintained by other journals of standing and influence. Considering all the motives which tend to make the South a unit in supporting the law officer of a Democratic Administration in such a matter, this division of sentiment on the question is an exceedingly hopeful sign. When representative Southern journals sustain the Fourteenth Amendment in this vigorous fashion, the country is furnished convincing evidence that the fruits of the war are safely garnered.

The recent decision of the Supreme Court in the Virginia coupon cases also illustrated the same tendency toward a breaking down of the partisan line in the consideration of broad issues. The question of State rights in its most extreme form was directly involved in this matter, and it might have been expected that the strong Republican bias of our highest bench would have produced a close approach to unanimity against the traditional Democratic side of that issue. It certainly might have been supposed that the one representative of the Democratic party in the court would plant himself firmly upon the Eleventh Amendment to the Constitution, which exempts a State from suit. In point of fact, Judge Field took the contrary ground, while it was from the lips of a Republican judge, speaking for three party associates as well as himself, that there issued a rather heated protest against the attempt of the majority of the court to treat the Eleventh Amendment "as a mere jingle of words, to be slurred over by cunning subtleties and artificial methods of interpretation, so as to give it a literal compliance, without regarding its substantial meaning and purpose." Entirely aside from the question as to whether the majority or the minority of the bench had the best of the argument in this matter, the fact that the division was not along party lines is matter for congratulation. Like the Southern dissent from Mr. Garland's decision, it indicates a disposition to regard new issues as they arise from an independent point of view, rather than to be governed by some ancient tradition, which is full of encouragement.

The latest "Democratic outrage" reported from Washington is found in the announcement that the clerks in the Pension Office did more work during April than in any previous month in its history, the increase amounting to an addition of nearly one-half, with the same force as before. There has never been any doubt among well-informed people that the average amount of work turned off every day by a Government clerk fell far below not only what he should accomplish, but also what the employee of any private establishment would have to render on penalty of dismissal for inefficiency; and this change in the Pension Office demonstrates the fact. The trouble was, that under the spoils system the political "striker" who forced his patron to give him a place in one of the departments, knew that he could keep it so long as his Senator or Representative backed him, even if he were lazy and negligent, and so he had no incentive to do his best. Now, on the other hand, the clerk is well aware that he is watched by a critical eye, and that incompetency will lead to his discharge, and so he goes to work in the same way as a man who wants to keep his place in a private business establishment. An incidental element in producing this better showing is the operation of the Civil-Service Law, which has been the door through which a considerable percentage of the present employees in the Pension Office reached their desks, and which has thus sensibly raised the level of ability.

Attorney-General Garland can hardly render the country a greater service than by perfecting and submitting to Congress the revision of the whole system for administering justice in the District of Columbia, which he is said to have in hand. There is no part of the country where such antiquated legal forms are to be found in common use, or where the statutes for the punishment of all sorts of crimes, from a bar-room murder to a wide-reaching conspiracy for defrauding the Government of millions, are in a more hopeless tangle. Causes of the greatest national importance are constantly brought before the courts of the capital, and yet, between the involved condition of such laws as exist and the wretched way in which juries are impanelled, miscarriage of justice has come to be the rule. The matter has reached the proportions of a national scandal during the last few years, and the present Administration will secure a strong claim to popular favor if it shall put an end to it.

The idea of choosing a Minister to China from the Pacific States is open to the serious objection that the Chinese Government holds the same opinion of all Californians that the Italian Government holds of all Ultramontanes. The most gentle Californian politician is in their eyes more obnoxious than the most abandoned ruffian from the Atlantic slope. He is associated, in their conceptions, with every sort of persecution, legal and illegal, of the hapless Chinese immigrants to this country. An Eastern man holding identically the same views on that subject will have a much better standing at Peking, and will be in much better position to take advantage of the slowly awakening spirit of the Empire, and to push American interests and American commerce in that important quarter of the globe. Any diplomatic representative who goes to China with a preconception of the inferiority of the Mongolian race, or who is believed to entertain such prejudices, will be handicapped from the outset, and will handicap all the interests of his country in the great trans-Pacific empire. What these interests are, may be inferred from the fact that China is in want of all the appliances of modern civilization, and that we are nearer to her than any other country capable of furnishing them. Hitherto her rulers have repelled the ingress of railroads, telegraphs, labor-saving machinery and implements, through fear of foreign domination and possible social revolution. Latterly these fears have been subsiding. The advantages gained over Russia in the Kuldja dispute, and more recently in the controversy with France, have raised the spirit of self-reliance and self-confidence among her rulers in a remarkable degree, and disposed them to look with more favor and less fear upon Western civilization.

In the years anterior to our anti-Chinese legislation the United States occupied the place of the most favored nation in the counsels of the Celestial Empire. Our ministers had the ear of the Government. Our engineers, our sailors, our soldiers, our merchants, and our instructors were the favorites of the court, and the confidential advisers of the official class. We had had no opium war with them; we held no possessions in contiguity with theirs; we had no burning reminiscences of any kind and no trade rivalries to bar the way to a thoroughly good understanding. American capital controlled the coastwise traffic of the Empire. American captains commanded the steam fleet on the inland waters American professors were in demand for Chinese colleges, and American colleges were sought by

Chinese students. American officers were wanted for Chinese armies. American trade was increasing and prospering in a market of 400,000,000 consumers. All this has been changed. Among the adverse influences which have conspired to place us in a position inferior to both England and Germany, nothing has been so baleful as the treatment accorded to Chinese immigrants and the disabilities imposed upon them by our laws. It is perhaps idle to look for any speedy change in the current of political opinion which shall ameliorate the condition of this class among us, or remove the stamp of degradation which we have set upon them; but we ought not to remind them of these things by sending to Peking a Minister whose very domicile is detestable to them, and whose home atmosphere is redolent of every species of outrage and humiliation upon them.

The troubles of Mr. Keiley seem to have no end. When he found himself in the Papal frying-pan he jumped into the Confederate fire, where he now is. But here he has been attacked by the *Catholic Mirror*, for putting himself in opposition to all the great authorities of the Catholic Church in holding that the Pope's claim to Rome has been destroyed by a popular vote. The poor man does not seem to have known that no vote, even about the proprietorship of territory, can stand against a Papal allocution. Moreover, he is required to believe that, in spite of the French occupation of Rome for twenty years, the Romans liked Papal rule. The only consolation we can offer Mr. Keiley is that there never was a more academical discussion than this about the Papal sovereignty, and that no matter what the Church doctors say, it will never be restored. The Papal lamentations about it will probably be kept up for some years longer, but they will gradually die out.

The *Herald* publishes a copy of the oath taken by James M. Morgan, our gallant Consul-General at Melbourne, when he was appointed acting midshipman in the navy on the 24th of October, 1860. This oath was in the usual form administered to army and navy officers, and contained the words: "that I will support the Constitution of the United States." Unless, therefore, Mr. Morgan's disabilities have been removed by a vote of two-thirds of Congress, he is disqualified from holding the office to which he has been appointed, or any other office under the United States. That his disabilities have not been removed must be inferred from the fact that the Charleston *News and Courier*, whose editor desires to be held solely responsible for Mr. Morgan's appointment, when asked for some explanation as to the oath and the disability, replied that no such oath was required of midshipmen in the year 1860, and that none was taken by Midshipman Morgan. The production of the oath itself, with the attestation of a justice of the peace at Annapolis, Maryland, is conclusive upon that point. If the disability had been removed, the editor of the *News and Courier* would undoubtedly have mentioned that interesting fact. If Mr. Morgan is still under disability, he will assuredly not be confirmed. The Senate has drawn a hard and fast line against that class of candidates, and it is not likely to make any exceptions in favor of the Blaine pamphleteers in the late campaign.

The principles of civil-service reform are steadily gaining ground in the filling of State as well as national offices. Two rather notable victories have been won within a few weeks in Pennsylvania. That State has now the first Democratic Governor for a quarter of a century, and plenty of old fogies in his party expected and desired that, whenever the term of a Republican office-holder by executive appointment expired, he would immediately name a "good Democrat" for the vacancy. But Governor Pattison has quite another idea of his duty in such cases. When he found that he must appoint a Superintendent of Public Schools, he looked into the matter, found that the man selected by his Republican predecessor had been an exceedingly capable and faithful official, and could do better work in the future than any new man, and so he named him for another term. When the Insurance Commissioner's term expired, he made a similar examination with a similar result, and he reappointed him also. There are doubtless a number of palæozoic politicians who think that the Governor might have "vitalized" the Democracy by giving these places to a brace of disreputable political hacks like Pillsbury; but Mr. Pattison is a young man and appreciates the fact that the world has changed somewhat since the days before the flood.

The Buffalo Common Council struck from the city estimates sent in by the Mayor an item of $1,250, for the expenses of executing the Civil-Service Act in the municipal service. They did not consider the item at all, but rejected it summarily, for the avowed purpose of defeating the law, being still the same unprincipled and shameless plunderers they were when Mayor Cleveland had to deal with them, and gave them his opinion of them in very plain English. A mandamus was then obtained directing them "to consider the item in good faith, with sound judgment and discretion, and if any misapprehension had intervened in its amount to correct it and apportion it to the probable necessities of the service for which it was designed," but admitting their authority "to alter or amend the estimate, extend, modify, or limit it." Of this authority the Common Council has now availed itself by cutting the estimate down, by a two-thirds vote, to $200, which is of course utterly insufficient to carry the law into effect. The rascals have thus "euchred," to use their own phrase, the civil-service reformers. These gentlemen, however, as well as the decent people of Buffalo generally, will find, as New Yorkers have found, that there is only one way of dealing with Aldermen and Common Councilmen in American cities in our day, and that is to take away from them all power over municipal expenses, and over appointments to office.

The Ohio Legislature, which expired on Monday, was one of the worst in the history of the State. It was the creation of the McLean political ring in Cincinnati and the Standard Oil monopoly, and almost to the last it was their faithful servant. At its first session it contemptuously cast aside George H. Pendleton, for the avowed reason that he had been untrue to his party in pressing the Civil-Service Reform Bill, and elected to the Senate the superannuated but wealthy Payne, after a canvass redolent of corruption. During the session just expired the Democratic majority passed a number of outrageously partisan measures intended to capture the political control of the chief cities—measures so bad that the Supreme Court, now in Democratic hands, was compelled to pronounce them unconstitutional—while the liquor interest had power enough to prevent the passage of any bill to take the place of the Scott Law taxing saloons, which the Democratic majority of the Supreme Court had declared null and void. Yet public opinion was potent enough to affect even such a body, which in its last hours did the State a great service by passing a comprehensive and apparently effective registry law applying to the cities of Cincinnati and Cleveland. For many years the elections in these places have been characterized by glaring frauds, which culminated in such open and shameless performances at the local contest in Cincinnati last month, that all honest men demanded safeguards against their recurrence. It is extraordinary and discreditable that a great State like Ohio should have gone on so long without even a pretence of a registry law, and it is scarcely less surprising that the duty of providing such a measure should have been neglected by so many Republican Legislatures, to be finally performed by the Democrats.

The recent local elections in Illinois possess a general interest in the evidence which they furnish of the growing faith in the high-license system as the best method of dealing with the liquor problem. The State has now tried for about two years a law which allows the fee for licenses in cities to be fixed at any sum from $500 to $1,000, and in the greater number of places where the issue was raised this spring the voters decided in favor of high figures. The Prohibitionists made a further exhibition of the folly which always leads them to oppose any practicable measure for checking intemperance, and struck hands with the lower class of saloon-keepers in voting for a nominal prohibition, which everybody knows cannot be enforced. In two or three places this curious combination was successful in defeating the restriction of high-license and providing for the reign of "free rum," which is certain to ensue; but in most cases the best elements of both parties united in supporting a system the wisdom of which has already been abundantly vindicated. Laws based upon the same principles have worked equally well in Michigan, Missouri, and other States in that section, and there is a good prospect that the high-license system will before long prevail generally throughout the West. There is no other part of the country where it could be applied to greater advantage than in New York, and yet the Legislature of this State seems more likely than not to relax still further the mildness of the present excise law.

The liquor problem is the burning issue in Massachusetts just now. The Bay State followed the example of Maine in making trial of the prohibitory theory, but it proved such a

failure and scandal in practice as to produce a political revolution in 1874. The Republicans in that year nominated a strong prohibitionist for Governor, while the Democrats chose a believer in license, and for the first time in more than a quarter of a century the Democratic candidate was elected. With him came into power a Legislature which repealed the prohibitory law, and substituted a system which allowed each city or town to decide by popular vote whether the sale of liquor should be licensed, and, if so, to determine through its municipal authorities how many licenses should be granted. During the ten years since this system was introduced, there has been great diversity in its application even to the same city, many places having voted one year in favor of license, the next against, and so on. Experience has conclusively proved that a rigorous application of the license plan is far more effective as a restriction upon drunkenness than a prohibitory law which public sentiment will not support; but the difficulty is to secure uniformity in such application. Just now there is a decided drift toward indiscriminate license. Thus Springfield, which began in 1875 with 158 licenses, and reduced the number by 1881 to 67, has, after a year of "no-license," gone to the other extreme and granted the prayer of all but a dozen of the 175 applicants, including a number who have been convicted of violating the law in past years. This is at the rate of one dealer for every 225 inhabitants, and the proportion is almost as great in several other large places in that part of the State, while many smaller towns have this year for the first time voted in favor of license. It would not be strange if the result should be a reaction in public sentiment which will enable the prohibitionists to succeed in their next annual attempt to secure from the Legislature another trial of their hobby, little as the cause of temperance would have to hope for from such a result.

The Civil-Service Reform Association is making an effort to arouse public sentiment against the Earl bill, which is pending in the Senate, having been pushed through the Assembly, although adversely reported from the Judiciary Committee. It is the old trick over again of trying to break down the civil-service regulations by getting an exemption for soldiers and sailors. "It proposes," say the Association, in a circular just sent out, "to allow heads of departments to fill the offices under them without regard to civil-service rules, provided they select men who served as soldiers or sailors in the late war. Under the mask of a patriotic discrimination in their favor, it is in reality utterly hostile to the vast majority of veterans, for it will deprive them of the positive advantages guaranteed by the present law. As the law now stands, every honorably discharged soldier or sailor is given a preference over other competitors of equal grade. Under the proposed change no ex-soldier or sailor, however great his services or ability, will be given a chance to secure a place unless backed by political influence. As there are probably more than ten times as many veterans as there are offices covered by the act (less than 13,000 in the whole State), it is plain to see that the object of the bill is to break down civil-service reform, by letting the Machine bosses fill every office with those of their henchmen who may have served in the war, to the exclusion of every other veteran who has not made politics a trade."

The lengthy pronunciamiento which was formulated at the recent conference of the Mormon Church, and was read at all the tabernacles in Utah, Idaho, and Arizona on Saturday, sounds more like a wail of despair than like the cry of boastful rejoicing which the country has grown accustomed to hear from that quarter. Its very tone shows that the leaders have lost much of their former confidence, and are seriously troubled over the prospect for the future. The explanation is not far to seek. Within a few weeks the Supreme Court of the United States has rendered two exceedingly important decisions. The one, while overruling certain actions of the Commissioners appointed under the Edmunds act, expressly sustained the constitutionality of that statute, and specifically affirmed the right of the general Government to modify or abridge the political rights of citizens of a Territory, to the end of developing it into a State founded upon the modern idea of the family relation. The other sustained the local Federal courts in excluding polygamists from grand and petit juries, and thereby securing the convictions of Mormon offenders by Gentile juries. Under this latter ruling the sentence of one dignitary of the Church to a term in the penitentiary has been reaffirmed, and within the past few weeks a number of others high in official rank have either been convicted, or have confessed judgment without risking a trial, while still others have sought safety in flight.

It is announced that the negotiations which had for some time been pending between France and Mexico for the establishment of a commercial treaty, are completely broken off. Coming so soon after the inaugural address of President Diaz, in which he expressed confidence that the treaty would be satisfactorily arranged, this is something of a surprise. Yet the *Diario Official* makes it clear that the positions of the two Governments were such that no agreement could be reached. France insisted that the treaty should be merely provisional, for an indefinite time, and voidable at the option of either country. She also made it a *sine qua non* that goods arriving in French bottoms should be placed on an equality with those imported in Mexican vessels. Mexico was willing to concede neither of these points, and besides felt obliged to offer no advantage to France which would conflict with any of the franchises conceded to the United States in the treaty recently ratified with that country. These obstacles proved insurmountable, and the French Minister showed that he considered the matter at an end by leaving the country. In connection with the question of Mexican commerce is to be noted the rapid decadence of the port of Vera Cruz. This is partly relative, since the immense importations of railway material have naturally fallen off almost altogether; but it is also absolute on account of the increasing competition of the American railway system and the diversion of ocean freights to the northern Gulf ports. This last is not to be wondered at, considering the extraordinary disadvantages under which vessels unloading at Vera Cruz have to labor. To the dangers of a stormy coast and an unsafe harbor the Mexican officials, not content with providing the most inadequate facilities for getting merchandise on shore, have added such petty and vexatious exactions as to make the chief port of entry of the republic the bane of shippers and sea captains alike. Nothing but the certain loss of commercial supremacy, unless some vigorous effort were to be made to retain it, could have induced the authorities to undertake the repair and enlargement of the harbor and the building of wharves, in accordance with the plans of Captain Eads, a work which now is languishing along in true Mexican style. But it is doubtful if these measures, adopted all too late, will prevent Tampico or some other port from ultimately drawing off the greater part of the ocean commerce.

We do not know that there is any good reason for giving out that Great Britain is likely, in the impending war with Russia, to resort to "paper blockades" and "to declare the Baltic closed," except the desire to attract attention to journalistic observations on a dry subject. This must be the excuse for a somewhat absurd article on this subject in the *Herald* last week. Great Britain has never taken any ground in favor of paper blockades since 1806, and is never likely to do so. Her interests as the greatest commercial as well as naval Power in the world are all on the side of the doctrine that "blockades must be effective." To advocate anything else would be to give weak naval Powers the right to do by mere proclamation what ought to be done by great fleets. Moreover, the rule that blockades must be effective was definitely laid down in the Treaty of Paris, and adhered to by Great Britain, in 1856. Even if she were disposed to revive paper blockades, it would be absurd to irritate neutrals by trying to do so now, inasmuch as the effective blockade of the Russian trading ports of importance is very easy. Consequently, Mr. Bayard's notification to the Colombian Government that he will not permit it to blockade its own ports on paper simply, though timely and proper, has no importance with regard to the coming conflict in Europe, and was not intended to have. If "it has already been reported from London that the British Government will declare the Baltic to be closed," the reporter being on his own showing an ignoramus, our esteemed contemporary may save itself the trouble of writing editorial articles on his sayings. The Powers owning the shores of the Baltic have claimed the right to close it to belligerent vessels when none of themselves is engaged in hostilities, but no outsider has ever put forward the pretension that he might either close it or declare it closed. The Black Sea was neutralized by the Treaty of Paris, but Russia broke this up, and reasserted her right to build fortresses on its shores, and keep a navy in it, in 1871. The Sultan has still the right to prevent war vessels from passing the Dardanelles, but he can always yield to superior force under protest, and this he will undoubtedly do in the present case. That is, he will allow England to pass the Dardanelles, because she can do him most damage if he refuses.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, April 29, to TUESDAY, May 5, 1885, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND on Thursday appointed Anthony M. Keiley, of Richmond, Va. (first appointed to the Italian Mission), to be Envoy Extraordinary and Minister Plenipotentiary of the United States to Austria-Hungary. On Friday he appointed John Goode, of Virginia, to be Solicitor-General, vice Samuel F. Phillips, resigned (Mr. Goode is a vigorous anti-Mahone Democrat); William M. Merrick, of Maryland, to be an Associate Justice of the Supreme Court of the District of Columbia, vice Andrew Wylie, resigned; Thomas M. Ferrall to be Collector of Internal Revenue for the First District of New Jersey, in place of William P. Tatem, suspended; and George Hayes to be Supervising Inspector of Steam Vessels for the Fifth District, in place of Mark D. Flower, suspended.

The President on Saturday appointed J Ernest Meiere, of Colorado, to be Consul of the United States at Nagasaki, Japan. Dr. Meiere was formerly a lieutenant in the Marine Corps. In 1861 he married a daughter of Commodore Franklin Buchanan. He was a Confederate soldier during the war, and afterward became a physician.

In view of the excellent records of the following consuls, the President has decided that they shall be retained: W. F. Grinnell at Bradford, England; Lyell T. Adams at Geneva; Samuel W. Dabney at Fayal.

President Cleveland recently said to a caller that all the mistakes of the Administration thus far could be directly attributed to yielding to the pressure for speedy action on appointments; that he had four years in which to transact the business before him, and he did not propose to be forced into inconsiderate action.

It is reported that when Mr. Keiley discovered that he could not be commissioned Minister to Italy he made an earnest plea to be sent as Consul-General to Paris. This was refused. There are said to be nearly one hundred applications for this position.

President Cleveland went to Gettysburg on Monday to attend a reunion of the Army of the Potomac.

The Mormon authorities have forwarded to the President a declaration of grievances and protest against the arrest and conviction of Mormons on the charge of unlawful cohabitation. Among other things they say: "We protest against unfair treatment on the part of the general Government. We protest against a continuance of territorial bondage, subversive of the rights of freemen and contrary to the spirit of American institutions. We protest against special legislation, the result of popular prejudice and religious interference. We protest against the conscience of one class of citizens being made the criterion by which to judge another. We protest against the breaking up of family relations formed previous to the passage of the Edmunds law, and the depriving of women and children of the support and protection of their husbands and fathers. We protest against the prosecution of persons, many of whom are infirm and aged, who entered into plural marriage before it was declared a crime, and have never violated any law."

United States Treasurer Jordan has already convinced his subordinates that he means to conduct his office upon business principles. He has requested the chiefs of divisions to notify their subordinates that he does not intend to make any changes for political reasons, and that efficiency will be the condition of their tenure.

The public-debt statement for April was issued in both the old and new forms. According to the old form, the reduction in the debt during April amounted to $5,464,596 38, while in the new form the amount of reduction is placed at $4,837,339 71. This discrepancy, amounting to $627,256 67, is due to the fact that in the new form two items, accrued and unpaid April interest on Pacific Railroad bonds, amounting to $298,037 56, and the amount of increase during the month in fractional and minor coins, aggregating $329,219 11, are treated, the first as liabilities, and the latter as assets unavailable for debt reduction.

A decision rendered by the United States Supreme Court on Monday affirms the decision of Judges Withey and Hammond of the Circuit Court, holding that the State of Tennessee and not certain railroad companies is liable for a large part of the State debt.

A settlement of the trouble at Panama was arranged on Wednesday by the Consular Corps in conjunction with Admiral Jouett, Commander McCalla, Aizpuru, the insurgent chief, and Colonels Montoya and Reyes, commanding the Colombian troops. Aizpuru surrendered, and promised, together with his followers, to retire from the city. According to the treaty agreed upon, the city, with all the revolutionary armament, was delivered over to the Government troops, under command of Colonel Reyes, on Thursday. Colonel Montoya assumed the civil and military Governorship of Panama until the reorganization of the State Government. All political offenders received full pardon, excepting those implicated in the recent burning of Colon. These latter will be apprehended and tried as criminals. The programme was carried out in an orderly manner, and the revolution was ended.

Admiral Jouett went to Colon on Friday. The contingents from the Pacific and North Atlantic fleets have returned to their ships. A detachment of the First Battalion, under Colonel Heywood, will remain at Panama until peace and good government shall have been assured.

Governor Hill, of this State, has vetoed the Census Appropriation Bill, holding that the census should be a mere enumeration of the inhabitants, and saying: "The responsibility for any failure to carry out the constitutional provision for an enumeration of the inhabitants must rest upon that branch of the Government which seeks, not to provide for an enumeration, but to impose on the people a collection of statistics which is elaborate, costly, and useless." It is said in the office of the Secretary of State that this veto will prevent the taking of the census. On Thursday Governor Hill signed the Niagara Park Bill, about which there had been much uneasiness.

In the Assembly at Albany on Thursday the Gas Bill was defeated by 52 to 64.

Superintendent of Prisons Baker transmitted to the Assembly on Monday night a communication showing the necessity of a further appropriation of $200,000 for the fiscal year in order to run the prisons.

The Buffalo Common Council on Thursday had a long fight over the estimate of $1,250 for the support of the City Civil-Service Commission. A mandamus had been granted ordering them to make the appropriation. They voted 18 to 8 to make the appropriation $200, and so virtually defeated the civil-service reformers.

The monument commemorative of Edgar Allan Poe, which has been erected in the Poets' Corner of the Metropolitan Museum of Art in this city, was unveiled with appropriate exercises at 3 o'clock on Monday afternoon. Algernon S. Sullivan, Edwin Booth, L. P. di Cesnola, and William Winter took part in the ceremony.

J. R. Osgood & Co., the Boston publishers, made an assignment on Monday. Liabilities $150,000.

General Grant continues to improve in health, and has resumed work on his book.

Gen. Irvin McDowell died in San Francisco on Monday night. He was born in Franklin County, O., October 15, 1818, and was graduated at West Point in 1838. He served in the Mexican war, being brevetted captain for his conduct at the battle of Buena Vista. At the beginning of the civil war he was engaged in organizing troops at Washington, but in May, 1861, he was appointed Brigadier-General of Volunteers and placed in command of the Army of the Potomac. He commanded the Federal forces at the first battle of Bull Run, and later was placed in command of the defences of Washington and commissioned as a Major-General of Volunteers. He engaged in the operations in northern Virginia, took part in the pursuit of General Jackson, and under Pope was present at the second battle of Bull Run. From July, 1864, to June, 1865, he was in command of the Department of the Pacific, and in the latter year was brevetted Major-General in the United States army. He was retired several years ago.

Commodore Cornelius K. Garrison died in this city on Friday afternoon. He was born on March 1, 1809, at Fort Montgomery, N. Y., where he received a very limited education. The foundation for his immense fortune was laid in San Francisco and the West, where he engaged in the steamship business. In 1860 the Commodore returned to New York a millionaire, and thenceforth was one of the foremost capitalists of the metropolis. He bought and built ships and invested capital in real estate, railroads, and telegraphs. At the outbreak of the rebellion he took a conspicuously patriotic stand for the Union. His ships were placed at the service of the Government, and he contributed largely to the raising and equipment of troops. He made an assignment about a year ago, but his estate proved to have a large surplus.

FOREIGN.

In the House of Commons on Thursday night the budget for 1885 was submitted. Last year the total revenue was £88,043,000, and the total expenditures were £89,092,000. The estimated expenditures for 1885-6 were £88,872,000, not including the vote of credit. With the income tax at 5d. in the pound sterling, the total revenue would be £85,180,000. There would be a reduction in the revenue of £40,000 on sixpenny telegrams. The deficit Mr. Childers estimated at £3,732,000, and, adding the vote of credit, together with reasonable allowances for supplementary estimates, the total deficit was estimated at £14,922,000. This forecast of the deficit by the Chancellor of the Exchequer created a sensation. It is the largest since the Crimean war. It is proposed to meet it as follows: The increase of the income tax to 8d. will, it is estimated, yield £5,400,000; the modifications of the probate and legacy duties and other property taxes, £150,000; the duties on spirits, £900,000; and the duty on beer, £750,000. Part of the remainder will be met by suspending payments toward the reduction of the national debt, and stopping the sinking fund and terminable annuities. The rest of the deficit, amounting to £2,812,000, will be dealt with next year.
